PUBLISHER'S NOTE

The Irish University Press Series of British Parliamentary Papers is a facsimile reproduction. The original documents in this volume have been reproduced by photo-lithography and are unabridged even to the extent of faithfully retaining the printer's imprint.

The contents of this volume have been printed in their entirety by Clarke, Doble & Brendon Ltd. at Plymouth in the United Kingdom.

As a result of the arrangement of the documents in subject sets and of the bringing together in a single book of a number of papers, some volumes in the Irish University Press Series may include the imprints of more than one printer.

REPORT.

THE SELECT COMMITTEE appointed to inquire how far the several HEREDITARY PENSIONS, ALLOWANCES, and PAYMENTS ought to be continued, having due regard to any just claims of the respective recipients, and to economy in the Public Expenditure, and further to inquire into the circumstances of HEREDITARY PENSIONS, ALLOWANCES, and PAYMENTS which have been Commuted since the 1st day of January 1881;——HAVE considered the Matters to them referred, and have agreed to the following REPORT:—

THAT pensions, allowances, and payments ought not in future to be granted in perpetuity, on the ground that all such grants should be limited to the persons actually rendering the services intended to be rewarded by such grants, and that such rewards should be wholly or in main part defrayed by the generation benefited by the services so recognised. That it is unjust that future generations should be burdened with payments to persons who have had no share in the original services.

That offices with salaries and without duties, or with merely nominal duties, ought to be abolished.

That all existing perpetual pensions, allowances, and payments, and all hereditary offices should be determined and abolished.

That in all such commutations the Lords of the Treasury should take into consideration the circumstances of such pension, allowance, or payment, and whether or not any real service had been rendered by the original grantee, or was now performed by the actual holder of the office.

That where no service, or merely nominal service, is rendered by the holder of an hereditary office, and where no service, or merely nominal service, was rendered by the original grantee of the pension, allowance, or payment attached to such office, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient.

That in all cases the method of commutation ought to involve and ensure a real and substantial saving to the nation.

That the rate of commutation usually adopted, of about 27 years' purchase, is too high.

That since the 1st January 1881, 330 pensions, payments, and allowances, amounting in all to the annual sum of 18,957 *l.* 9 *s.* 6 *d.*, have been commuted by the payment of 527,933 *l.* 18 *s.* 4 *d.*, and at rates of commutation varying from 10 years to 30 years' purchase.

That some of these pensions appear to have been commuted, notwithstanding formal objections in writing lodged with the Lords of the Treasury, and without sufficient inquiry into the matters stated in such objections.

29 *July* 1887.

PROCEEDINGS OF THE COMMITTEE.

Friday, 11*th February* 1887.

MEMBERS PRESENT:

Mr. Bradlaugh.	Sir Richard Webster.
Mr. Chance.	Mr. Whitley.
Mr. Mowbray.	Mr. Salt.
Mr. Mundella.	Mr. Edward Russell.
Mr. Arthur O'Connor.	Mr. Curzon.
Mr. James Stuart.	Sir Albert Rollit.
Mr. Vernon.	

Mr. MUNDELLA was called to the Chair.

The Committee deliberated.

[Adjourned till Friday, the 25th February, at Twelve o'clock.

Friday, 25*th February* 1887.

MEMBERS PRESENT:

Mr. MUNDELLA in the Chair.

Mr. Jennings.	Mr. Curzon.
Sir Albert Rollit.	Mr. Mowbray.
Mr. Bradlaugh.	Mr. Vernon.
Mr. Bryn Roberts.	Mr. Edward Russell.
Mr. Biddulph.	Mr. Chance.
Mr. Salt.	Mr. James Stuart.
Mr. Whitley.	Sir Richard Webster.

Sir *Reginald Welby*, K.C.B., was examined.

[Adjourned till Friday, the 11th March, at Twelve o'clock.

Friday, 11*th March* 1887.

MEMBERS PRESENT:

Mr. MUNDELLA in the Chair.

Mr. Jennings.	Mr. Arthur O'Connor.
Mr. James Stuart.	Mr. Mowbray.
Mr. Bradlaugh.	Mr. Vernon.
Mr. Chance.	Mr. Curzon.
Mr. Biddulph.	Mr. Bryn Roberts.
Mr. Whitley.	

Sir *Reginald Welby*, K.C.B., was further examined.

Room cleared.—The Committee deliberated.

Motion

Motion made, and Question, "That this Committee requests the First Lord of the Treasury to furnish statements showing how the sum of 633,333 *l.* 6 *s.* 9 *d.*, invested in the case of the Duke of Richmond, has been reduced to 86 *l.* 0 *s.* 9 *d.*, and showing in what lands and at what dates each purchase was made, showing parties, parcels, and purchase-money respectively, and also showing the trusts, if any, declared by deed in respect of such lands respectively, and giving the same particulars in all respects with regard to the sum of 229,000 *l.* invested in the case of the Duke of Grafton"—(Mr. *Bradlaugh*)—put, and *agreed to.*

[Adjourned till Wednesday, 4th May, at Two o'clock.

Wednesday, 4th May 1887.

MEMBERS PRESENT:

Mr. MUNDELLA in the Chair.

Mr. Bradlaugh.	Mr. Curzon.
Mr. Biddulph.	Mr. Whitley.
Mr. Jennings.	Mr. Mowbray.
Mr. Vernon.	Mr. William Lowther.
Mr. James Stuart.	Mr. Arthur O'Connor.
Mr. Chance.	

Sir *Reginald Welby*, K.C.B., was further examined.

Motion made, and Question, "That the Treasury be required to furnish to the Committee a statement of (so far as is recorded) the monies in respect of which the hereditary pensions, allowances, and payments, commuted since 1st January 1881, or not commuted, of which evidence has been given, were granted; of the date in each case when such services, and each of them, ceased to be performed, and of the liability (if any) still existing to perform services, and of the names of the persons so liable"—(Mr. *Chance*). —Question put.—The Committee divided:

Ayes, 5.	Noes, 5.
Mr. James Stuart.	Mr. Biddulph.
Mr. Jennings.	Mr. Curzon.
Mr. Arthur O'Connor.	Mr. Whitley.
Mr. Chance.	Mr. Mowbray.
Mr. Bradlaugh.	Mr. Vernon.

Whereupon the *Chairman* declared himself with the *Noes.*

[Adjourned till Friday, 22nd July, at Twelve o'clock.

Friday, 22nd July 1887.

MEMBERS PRESENT:

Mr. MUNDELLA in the Chair.

Mr. Bradlaugh.	Mr. Jennings.
Mr. Chance.	Mr. Arthur O'Connor.
Mr. Vernon.	Mr. Whitley.
Sir Richard Webster.	Mr. James Stuart.
Mr. Curzon.	Mr. William Lowther.
Mr. Mowbray.	

Sir *Reginald Welby*, K.C.B., was further examined.

[Adjourned till Friday next, at Two o'clock.

Friday, 29th July 1887.

MEMBERS PRESENT:

Mr. MUNDELLA in the Chair.

Mr. Bradlaugh.	Mr. Mowbray.
Mr. Esslemont.	Mr. Whitley.
Mr. Salt.	Mr. James Stuart.
Mr. Chance.	Mr. Jennings.
Sir Richard Webster.	Mr. William Lowther.
Mr. Vernon.	

DRAFT REPORT, proposed by Mr. *Bradlaugh*, read the first time, as follows:

"1. THAT pensions, allowances, and payments ought not in future to be granted in perpetuity, on the ground that all such grants should be limited to the persons actually rendering the services intended to be rewarded by such grants, and that such rewards should be wholly or in main part defrayed by the generation benefited by the services so recognised. That it is unjust that future generations should be burdened with payments to persons who have had no share in the original services. That the tenure of office by heirship is bad where real duties are attached to the office, as fitness for a particular duty is not always inherited.

"2. That offices with salaries and without duties, or with merely nominal duties, ought to be abolished.

"3. That all existing perpetual pensions, allowances, and payments, and all hereditary offices should at once be determined and abolished, the annual income being compulsorily commuted.

"4. That in all such commutations the Lords of the Treasury should take into consideration the circumstances of the origin of such pension, allowance, or payment, and whether or not any real service had been rendered by the original grantee, or was now performed by the actual holder of the office.

"5. That where no service, or merely nominal service, is rendered by the holder of an hereditary office, and where no service, or merely nominal service, was rendered by the original grantee of the pension, allowance, or payment, the office, pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient.

"6. That in all cases the method of commutation ought to involve and ensure a real and substantial saving to the nation.

"7. That the rate of commutation usually adopted, of about 27 years' purchase, has been far too high.

"8. That in the case of the commutation of post groats and white rents the annual payment of a sum of 630 *l.* 14 *s.* 2 *d.* to the Duchy of Cornwall, was by Treasury Minute of 15th February 1839 (which Minute was laid before Parliament pursuant to 1 & 2 Vict. c. 120) directed to cease on the 15th April 1841. That such sum of 630 *l.* 14 *s.* 2 *d.* has, nevertheless, been since continued and is still paid.

"9. That the Lords of the Treasury have not produced, and do not claim to possess, any minute or other authority for the continuance of this annual payment of 630 *l.* 14 *s.* 2 *d.*

"10. That the annual payment of 16,216 *l.* 15 *s.* 1½ *d.* to the Duchy of Cornwall appears to have been fixed in 1838, by the Lords of the Treasury, as the commutation money for the loss of the net income received by the Duchy as duties or profits on tin coinage, post groats, and white rents; but it also appears that the total net income of the Duchy of Cornwall, from all sources, was returned by the Receiver General of the Duchy of Cornwall in 1838 at 11,356 *l.* That in the return so showing the net income of the Duchy at 11,356 *l.*, there was included the receipts from tin coinage, post groats, and white rents.

"11. That since the 1st January 1881, 330 pensions, payments, and allowances, amounting in all to the annual sum of 18,957 *l.* 9 *s.* 6 *d.*, have been commuted by the payment of 527,933 *l.* 18 *s.* 4 *d.*, and at rates of commutation varying from 10 years to 30 years' purchase.

"12. That some of these pensions appear to have been commuted, notwithstanding formal objections in writing lodged with the Lords of the Treasury, and without any inquiry whatever into the matters stated in such objections."

DRAFT

DRAFT REPORT, proposed by Mr. *Bradlaugh*, read a second time, paragraph by paragraph.

Paragraph 1, amended, and *agreed to*.

Paragraph 2, *agreed to*.

Paragraphs 3—5, amended, and *agreed to*.

Paragraph 6, *agreed to*.

Paragraph 7, amended, and *agreed to*.

Paragraph 8, *disagreed to*.

Paragraph 9, *disagreed to*.

Paragraph 10.—Question put, That this paragraph stand part of the Report.—The Committee divided:

Ayes, 5.	Noes, 6.
Mr. James Stuart.	Sir Richard Webster.
Mr. Jennings.	Mr. Salt.
Mr. Chance.	Mr. Whitley.
Mr. Esslemont.	Mr. Mowbray.
Mr. Bradlaugh.	Mr. William Lowther.
	Mr. Vernon.

Paragraph 11.—Amendment proposed, in line 3, to leave out from the words "and at rates," to the end of the paragraph (inclusive)—(Mr. *Chance*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 7.	Noes, 4.
Sir Richard Webster.	Mr. James Stuart.
Mr. Salt.	Mr. Jennings.
Mr. Whitley.	Mr. Chance.
Mr. Mowbray.	Mr. Esslemont.
Mr. William Lowther.	
Mr. Vernon.	
Mr. Bradlaugh.	

Paragraph *agreed to*.

Paragraph 12, amended, and *agreed to*.

Question, That this Report, as amended, be the Report of the Committee to the House,—put, and *agreed to*.

Ordered, To Report, together with the Minutes of Evidence, and an Appendix.

LIST OF WITNESSES.

MINUTES OF EVIDENCE.

Friday, 25th February 1887.

MEMBERS PRESENT:

Mr. Biddulph.
Mr. Bradlaugh.
Mr. Chance.
Mr. Curzon.
Mr. Jennings.
Mr. Mowbray.
Mr. Mundella.
Mr. Bryn Roberts.
Sir Albert Rollit.
Mr. Edward Russell.
Mr. Salt.
Mr. James Stuart.
Mr. Vernon.
Sir Richard Webster.
Mr. Whitley.

THE RIGHT HONOURABLE A. J. MUNDELLA, IN THE CHAIR.

Sir REGINALD EARLE WELBY, K.C.B., called in; and Examined.

Chairman.

1. YOU are Secretary to the Treasury?—I am.

2. You have received a copy of the Order of Reference to this Committee?—I have.

3. You have also received a number of questions from Mr. Bradlaugh, who moved for this Committee, as to the matters on which he desires information?—I have; and perhaps the Committee would allow me to state that I have collected information upon the points to which the honourable Member has called my attention to the best of my power, but I shall ask the Committee not to consider the answers in all respects as so full and so final as they may be afterwards. There are several points requiring reference to other persons as to which I shall be glad to have the instructions of the Committee before proceeding further. I am speaking of those points in which the Treasury have not information of their own.

4. You wish us to understand that your evidence to-day will not be exhaustive, and that you may require further opportunity for reference and for conference with other bodies; is that so?—It is so; if the Committee would consider this examination as preliminary rather than final.

Mr. *Bradlaugh.*

5. Can you furnish the Committee with a complete list of all the hereditary pensions, payments, and allowances which, on the 1st of January 1881, were either charged on the Consolidated Fund, or were included in the Estimates and annually voted, or which were paid out of the interest on moneys invested on trust, showing in each case the precise origin, by grant or letters patent, and the grounds stated in each case for the original grant of such pension, payment, or allowance; and when any such were actually paid to persons other than the persons named as the recipients in the Finance Accounts; showing to whom (with name and address) such payments were made, and why; and, further, showing how many of these pensions, payments, and allowances have since been commuted, and at what rates?—In answer to the honourable Member, I have here a statement which, I think, covers most of the ground to which he has called attention, in the shape of three schedules. The question is as to hereditary pensions, payments, and allowances; and I may, perhaps, say that I have confined the statement to hereditary payments; that is to say, to payments passing from father to son, or to the next of kin in the line of succession. I mention that because it will not include a number of payments of a perpetual character which belong to corporations or to charities. The question will require to be rather widened (there is no difficulty in giving an answer to it) if those are to be added.

6. Then I understand you to say that this statement does not include such payments in perpetuity

Mr. *Bradlaugh*—continued.

petuity, as, for example, land revenue allowances?—Land revenue allowances, which are not hereditary in their character.

7. Such, for example, as the payment to the mayor and burgesses of Cambridge?—Exactly so.

8. Can you also furnish to the Committee the list of such payments, pensions, and allowances in perpetuity which are not hereditary?—Certainly.

9. Have you it with you?—No, I have not.

10. Could you prepare such a list by the next sitting of the Committee? — Certainly. In answering the question I may say that if I had had time for it I should have had this schedule now in my hand printed and circulated to the Committee before this meeting; I have not had time to do that, but probably the Committee would wish it to be printed for their own use at once.

Chairman.

11. It would be better that that statement should be put in?—I am prepared to do that.

Mr. *Bradlaugh.*

12. I will reserve the whole of my questions on that list until the list has been distributed, or I might put unnecessary questions, or questions which would already have been answered; so that I put no questions at present upon that list until it has been circulated amongst the Committee; then my next question is, why, as all the payments are alike described by the Treasury as permanent charges, they are commuted at varying rates?—The Acts under which the Treasury commutes leave a discretion to the Treasury, and that discretion the Treasury has exercised to the best of its ability in dealing with such cases. I think the honourable Member will notice that there are not many different rates. The Treasury decided that a large number of small payments for charitable and ecclesiastical purposes gave the Treasury a great deal of trouble, and were a source of expense to them, and that it was a great object to transfer the payment of them to bodies better able to deal with them. It was, in fact, an object of economy to get rid of such small payments. They were transferred, almost as a rule, to the Ecclesiastical Commissioners or to the Charity Commissioners, and both those bodies objected to take the trust over, if in so doing the terms involved a very serious loss of annual payment. After a good deal of consideration the Treasury came to the conclusion that in such cases as those they were justified in allowing a somewhat larger term than they were prepared to allow in the case of individuals. Further, in these cases generally, as far as the Treasury investigation could go, it was difficult to see any time apart from the direct interference of Parliament when these payments might be brought to an end. In most of the payments to individuals there was a possibility of the pension dropping; that point also the Treasury had in view when they were considering the terms to be awarded. I think, speaking broadly, the terms are to individuals about 27 years' purchase. In these other cases of perpetual payments they are genetally about 30.

Mr. *Bradlaugh*—continued.

Chairman.

13. I understand that, acting according to the discretion given to the Treasury, you have made the best bargain you could possibly make for the Treasury?—The best bargain, as the Treasury thought, for the public consistent with equity.

Mr. *Bradlaugh.*

14. Shall I be right in saying that there are instances in which the Treasury commuted at as low as 10 years' purchase?—I have been rather embarrassed to find the cases to which the honourable Member refers. I know of one, but are there more?

15. That is the very question I was going to put to you; the case of the Lutheran Chapel is commuted at 10 years, I think?—That was a peculiar case. In the investigations which took place it was found that these different charges, the German Lutheran Chapel payment, which had been held to be a perpetual payment, and which I think that the recipients understood it to be such, was not so; but the Treasury thought it hard upon the recipients to put a stop to it at once, so they gave them a sum of 10 years' purchase.

Chairman.

16. Was that an hereditary payment?—It was a payment for the keeping up of a chapel.

Mr. *Bradlaugh.*

17. Was not that returned to Parliament in a Return laid annually before Parliament, but not printed, among the ordinary permanent charges commuted during that year?—It had always been paid, and it was commuted.

18. That is to say, it was treated in that Return as a payment in perpetuity?—That is so. It ought undoubtedly to have had a note attached to it to explain what had been done.

19. You have mentioned 27 years and 30 years, and we have had the one instance of 10 years; can you say whether there are any other terms at which any, either of the hereditary or of the permanent charges, have been commuted since 1881?—I think I ought to amend what I have said. In various cases we have given consol price, which will be rather higher than 30 years. The Committee will see price upon the list of these perpetual payments which are not hereditary, and which will be added to the schedules which I have before me.

20. In your first answer you were good enough to tell the Committee that you had prepared a statement which covers most of the ground; does the statement cover the ground of showing the origin, by grant or by letters patent, and the grounds assigned for the grant?—I think so; but, inasmuch as this memorandum has been prepared in answer to the honourable Member's question, I should be glad if he would look through the Return first of all, and if he finds any omissions in it we shall be glad to make them good.

21. Then I will reserve all further questions

Mr. *Bradlaugh*—continued.

on that until I have seen it. You have spoken of Acts which leave discretion to the Treasury; is there any other statute now applying, or has there been since 1873 any statute applying to permanent charges except the 36th and 37th of the Queen, chapter 57?—And the Act of 1883.

22. Did the Act of 1883 apply to permanent or ordinary charges?—Permanent charges not determinable with the life of the holder.

23. What is the exact chapter?—Perhaps I may answer the honourable Member's questions as he put them. There is a power given to the Commissioners of Woods and Forests to commute pensions or permanent payments not exceeding 10 *l.* In 1866, in consequence of an Act which transferred the foreshores to the public from the Crown lands, an arrangement was made whereby an equivalent was given for the profit of the foreshores, and one of the considerations given was that nearly all the small permanent payments that hitherto had been charged upon the revenue of the Woods and Forests were transferred to the Consolidated Fund. I doubt, therefore, whether that power which I have spoken of as having been given to the Woods and Forests to redeem small payments up to 10 *l.* a year can be said to exist any longer, because the payments have been transferred to the charge of the Treasury.

24. Could you mention the exact reference to the statute under which the power existed in 1866; was it the 29 & 30 Vict. c. 62?—No; there was a power to commute all permanent charges and land revenues under an Act of 10 Geo. 4, c. 50, s. 52, and that Act should be read with 16 & 17 Vict. c. 56. In addition to that, there was an Act passed in 1856. It may be in the recollection of the Committee that a considerable discussion took place in 1856 upon a power which had been exercised by the Executive Government of redeeming certain hereditary pensions out of the gross revenues without bringing the payments before Parliament. That act of the Executive was very much questioned before the Public Moneys Committee, and although I am not able to say from actual knowledge that that is the case, I take it that in consequence of that discussion there was passed an Act, 19 & 20 Vict. c. 43, which authorised the Treasury to redeem out of the Consolidated Fund certain of these pensions, especially mentioning four of them. A discretion was given to the Treasury. I mention that because the honourable Member was alluding to my statement about a discretion: "In case the Commissioners of Her Majesty's Treasury shall agree with the persons or person entitled thereto for the absolute purchase of the said annuities" (which are given in the following schedule) "or parts of annuities, or any of them, or any part thereof respectively, for such sum or respective sums as may appear to the said Commissioners to be a just equivalent for the same."

25. Shall I be right in saying that prior to 1873 every time there was a commutation of what I will describe as hereditary pensions there was a special statute for one or more pensions authorising the Treasury?—No, I do not think so, because several pensions have been commuted without such an Act.

26. But in that very Act of 1856 are there not

Mr. *Bradlaugh*—continued.

several pensions specially mentioned?—These were the pensions alluded to in the Schedule to the Act of 1856: the Earl of Bath; the remainder of the pension to Henry of Nassau, which is generally called the Auverquerque pension; the annuity payable to the Duke of Grafton; and the annuity payable to the Duke of Schomberg.

27. That would be a moiety or a portion of the pension to the Earl of Bath?—They were nearly all portions then remaining.

28. The Duke of Grafton's was a special one, was it not?—I should call them all special.

29. I mean that in the Duke of Grafton's case there were a large number of pensions, all hereditary, to the same individual, and this specified some particular ones, did it not?—I do not quite follow you.

30. I will make the question clearer; there were two considerable payments in 1856-57 of commutation to the Duke of Grafton?—Yes.

31. Will you tell the Committee in respect of what they were made, what the payments were, how much in amount, and in respect of what they were made?—This pension that I am speaking of now was not the pension that was commuted at that time in respect to which that large payment was made; it was another one to the same individual.

32. Will you distinguish, for the information of the Committee, the pensions in respect of which the large payment was made, and the pension in that Act?—In the year ending the 31st March 1856 a pension charged on the gross revenue of the Excise of 9,000 *l.* a year, reduced by taxes to 7,191 *l.* 12 *s.* net, was commuted by the Executive Government without special authority from Parliament for the sum of 193,777 *l.*

33. You used the phrase, "by the Executive Government, without special authority from Parliament;" under what authority did the Treasury at that time act in commuting?—I believe they held that they were able, from precedent, to reduce what was really a charge upon revenue. You see this was a charge upon the gross Excise revenue, and they considered, rightly or wrongly, that they had the power to redeem a charge upon the gross revenue.

Chairman.

34, Was this a pension on the Excise?—On the Excise, payable out of the gross revenue of Excise before it reached the Exchequer.

Mr. *Bradlaugh.*

35. Shall I be right in saying that that was originally three pensions to members of the same family, with reversion to the survivor?—That was the case.

36. Beside the 9,000 *l.* gross which you have mentioned, was there about the same time, either the year before or after, another considerable pension to the Duke of Grafton?—I have mentioned to the honourable Member that that annuity was redeemed in the year ending the 31st March 1856. The Act which I have alluded to as empowering the Treasury to commute certain pensions named in the schedule, which pensions I have read out, was passed on the 7th of

Mr. *Bradlaugh*—continued.

July in the same year, that is to say, subsequent to that date; and that gave power to the Treasury to commute another pension belonging to the Duke of Grafton charged upon the Post Office revenue. The previous pension you will recollect, was charged upon the Excise. The amount of that annuity, or pension, was 3,384 *l.*

37. What was the gross amount of it?—I suppose the gross amount would be about 4,700 *l.*

38. Was that a pension which had been granted to another member of the family, and came by reversion to the Duke of Grafton?—I believe that was the case.

39. Can you say whether the sum paid in respect of this second pension, in addition to the 193,000 *l.*, was 125,000 *l.*?—I believe the honourable Member is right, but I have not got the figures.

40. Does your list show, beyond the two pensions which you have just told us were commuted to the Duke of Grafton, any other pensions which were payable to the Duke of Grafton in 1856?—Yes; a pension of 843 *l.*

41. That will be shown by your list; besides the pension of 843 *l.*, does your list show any other pension or allowance?—There is a question of a pension which is not up to the present in the schedules; but the honourable Member is aware, as I see from the question, that there was a large sum handed over to the Duke of Grafton invested in land.

42. I am not at present addressing myself to that, but am asking the question apart from that; you have mentioned one of 843 *l.*, one of a gross of 9,000 *l.*, and one of a gross sum of 4,700 *l.*; but besides those, was there not some other pension to the Duke of Grafton, Receiver of First Fruits and Tenths and Officer of the Pipe; perhaps that will refresh your memory?—There was another pension held by the Duke of Grafton, but which had ultimately passed out of the hands of the family; it had been sold.

43. Passed by sale; that is, a pension payable to the Duke of Grafton, but which had been sold by the family?—Which had been sold by the family.

44. Does your knowledge enable you to say whether or not the letters patent originating all this specified any consideration or not?—In return for which the pension was granted, do you mean?

45. In return for which the whole of these pensions were granted?—That I do not know; I am not able to say.

46. Supposing you are not able to tell the Committee, can you refer the Committee to any source from which they can get that information?—If the Committee will permit me, I will take note of the question, and see what information we have.

47. Then in addition to those pensions which you have mentioned, was there any other profitable hereditary allowance which the Duke of Grafton was in receipt of in 1856?—He had the enjoyment of certain lands which were bought out of moneys granted by Parliament in commutation of certain old duties which had been granted to the original Duke of Grafton.

48. Could you, at the next meeting of the Committee, furnish the exact particulars of that, or have you them with you?—I have not that with me in this schedule, but we can add it to the schedule.

49. Will you kindly furnish particulars showing what the profitable rights were, and what (if anything) was paid for the commutation of them?—Yes.

50. Then, in 1881, shall I be right in saying, as far as the Duke of Grafton is concerned, that the three which were then left alive were first 843 *l.*, in respect of the seals of the former Courts of Exchequer, Common Pleas, and Queen's Bench?—Yes.

51. Then a sum of 6,800 *l.* odd, in respect of butlerage and prisage, paid out of the interest of invested moneys?—That is to say, certain moneys had been laid out in lands, and it was whatever those lands produced.

52. Then I will say, paid originally out of the interest of invested moneys?—Yes.

53. Part of which invested moneys has since been laid out in land?—Yes.

54. And, in addition to that, the small pension which you say has passed out of the hands of the family by sale, of 62 *l.* 9 *s.* 8 *d.* in respect of the office of Remembrancer of First Fruits and Tenths and Officer of the Pipe?—Yes.

55. Have you any means of telling the Committee whether, in respect of the consideration for which the 843 *l.* and other pensions originated, there were any other permanent allowances to the Duke of Grafton?—At the present moment I am not aware of any; they do not occur to me.

56. Would you, between this and the next meeting of the Committee, kindly see whether there is any record of any other payment?—Yes.

57. What is the ordinary rate of commutation of pensions for life, or for a limited term?—The only case in which pensions are commuted are pensions of military, naval, and civil officers, who come before the Government Commutation Board, and the Commutation Board have a table which shows the number of years' purchase at which they commute a good life.

58. Have you that table with you; perhaps you will hand in a copy for the information of the Committee?—I will hand in a copy.

59. In the higher rates of commutation which you have mentioned to the Committee, and which apply, I think, to all the hereditary cases, has not the effect of the so-called commutation been to hand over to the pensioner a capital sum providing the full equivalent for perpetual payment practically?—Does the honourable Member mean that the recipient of the commutation money would, if he invested that sum, receive as much as he received previously from the Consolidated Fund in the shape of annuity?

60. Or even in some cases higher?—I should say not.

61. What would be your view?—I should say that the public in the case of these, which I call individual and hereditary pensions, have certainly made a profit.

62. Are you calculating your answer on Reduced Consols, or as they existed, say, in 1881?—I think the fair way is to take as a measure the price of Consols at the time when the commutation was made.

63. Perhaps

Mr. *Bradlaugh*—continued.

63. Perhaps if you have not made the calculation you might be able to answer that question more definitely at the next meeting of the Committee?—Quite so. I think it would be very desirable that the honourable Member and I should agree as to what the basis is; whether we are to make the calculation (as is, I think, the fair thing to do) comparing it with Consol price, at the time when the commutation was made.

64. In point of fact some of them will come before and some after the Reduced Consols?—The way in which I should work it out would be this: I will take a very early case, which looks a good one. There was a commutation made of a pension held by Lord Melbourne in 1825 or 1826. For that 25 years' purchase was given. If the honourable Member will allow me, I will put in the calculation which I shall make, comparing, on the basis of the price of Consols at the time of commutation, I will say, that grant with a grant made to Lord Cowper (I am taking anyone that comes into my head) and the ones that have been made since 1881.

65. Would it be in your power to add to that any information showing why the amount is higher, if I understand it rightly, than was paid in the case of Lord Melbourne?—Yes; I think the reasons were given; in fact there is a reason given in a Paper, which no doubt the honourable Member has seen, which is already before the House of Commons.

66. I am afraid I did not quite clearly express myself; if the reason is short, and you have it before you, will you give it to us?—Probably that will lead to a more complete understanding between us. In a Paper which is already before the House of Commons, laid before it on the 2nd of June 1856, No. 250, there is published a Treasury Minute dated the 13th of May 1853, and in the course of that Minute the Treasury state: "It is shown by Mr. Greenwood's memorandum" (Mr. Greenwood was the Solicitor to the Treasury at that time) "that the commutation of Earl Cowper's pension on the land revenue, recently sanctioned, is upon terms more favourable to the public, by the amount of several years' purchase, than that effected in Lord Melbourne's case in 1826, the prices of the public funds at each period being duly considered. The sum about to be paid to Lord Cowper is 26·613 years' purchase of the net amount of his pension, while the commutation proposed by his Lordship of his pension on the land revenue (viz., 1,595 *l.* 16 *s.* net per annum for 43,000 *l.*) is at the rate 26·945 years' purchase" (I take this particular instance because that is the rate, as the honourable Member knows, which has been followed since); "and as the price of stock has not materially varied since the commencement of the past month, the present offer is somewhat less to the advantage of the public than that recently accepted. Nevertheless, my Lords consider that it will be advisable to conclude the purchase on the terms proposed."

67. Besides the Acts to which you have referred, are you aware whether, prior to the Act of 1873, there were any other Acts under which the Treasury had authority to commute permanent charges?—Besides the Land Revenue Act, the 10th Geo. 4, c. 50, and the Act of 1856,

Mr. *Bradlaugh*—continued.

there was that power which has already formed the subject of conversation in the Committee, under which the Treasury had commuted certain pensions without any specific authority from Parliament for so doing, out of the gross revenue; and, in addition to that, I believe there were one or two small pensions which were commuted in pursuance of a Vote in Supply in or about the year 1833.

68. Excepting authority under Vote of the House, and excepting authority under statute, can you give the Committee any reference tracing the first exercise of the power to commute by the Treasury?—The first one was that to which I have just alluded, of Lord Melbourne, in the year 1826.

69. Is there any record to which you could refer the Committee showing the grounds on which the Treasury thought they had the right so to act?—This Paper which I have just mentioned, No. 250, of 1856, gives extracts from the Minutes.

70. I think those extracts are also given in a Return which was published in 1869; but what I rather wanted was, not only a record of the fact that they had done it, but to know whether, besides the Votes of the House, and besides the statutory powers, there is anything to which you can refer the Committee showing what, in the opinion of the Treasury, gave them authority to commute outside those?—I could refer the Committee to a very lengthy discussion which took place upon this very point before the Committee on Public Moneys in 1856. The case was very completely argued by two men who were very competent authorities on the subject. The witness against the Government, if I may say so, was Lord Monteagle, formerly Chancellor of the Exchequer.

71. It was Mr. Spring-Rice's Resolution on which the other Committee was appointed?—Yes. The defendant was Mr. Anderson, who was then head of the Finance Branch of the Treasury, and the point was discussed, and both men were subjected to very long cross-examination on the point; and probably I cannot refer the Committee to any place where they can better learn the reasons for and against the act of the Executive.

72. In what year is that Report?—In 1856.

73. Is the title of it the Report of the Committee on Public Moneys?—Yes.

74. It is not the ordinary Public Accounts Committee, such as we have now?—No, the Committee made all their inquiry in 1856 and reported alone in 1857; therefore, it is necessary to get hold of the 1856 volume.

75. Then your list that you have handed in will contain, I think, three sums: one of 100 *l.* 10 *s.* 10 *d.*, Duchy of Lancaster; one of 20 *l.*, the Duke of Rutland; and one of 60 *l.*, the Duke of Norfolk, as permanent charges?—It will.

76. Were those commuted to the Duchy of Lancaster and the Duke of Rutland in August 1883?—Yes.

77. And to the Duke of Norfolk in March 1883?—Yes.

78. Had those sums prior to that date been paid out of annual Votes of Parliament?—Since

Mr. *Bradlaugh*—continued.

the year 1856 they were paid out of annual Votes.

79. Were they always described, and are they described in the annual Return made by the Treasury of the commutation, as "Creation Fees"?—Yes.

80. Does your Paper which you have handed in show the origin and nature of those fees?—Yes, it gives shortly, as far as we can describe them, what those fees were.

81. What do you say they were?—I have before me a quotation from a very well-known book, Stubbs' Constitutional History, which perhaps will explain better than anything else the nature of these fees. Would the Committee like me to read it?

Chairman.

82. If you please?—It is stated in Stubbs' Constitutional History, Volume III., page 434, that, when a Duke was created, he generally received a pension of 40 *l.* per annum on his promotion, which was known as creation money. In the case of a Marquis the creation money was 35 *l.* (page 435). The same author states (page 436) "that the Earl's creation money, 20 *l.*, was a substitute for the third penny of the county, of which little is heard after the 13th century" (I believe the third penny of the county really belonged to the Earl as representing the Royal authority in the county); "and that the retention of this payment probably suggested the bestowal of creation money on those who were raised to the newer ranks of the Peerage. The creation money of a Viscount was 20 marks (page 526)."

Mr. *Bradlaugh.*

83. Have you made any research or had any research made beyond Stubbs?—No, we have not on the general question.

84. On this particular question, on the origin and nature of these three fees, I am limiting myself to now?—We have here a copy of letters patent under which the grant was made to the Earl of Rutland (*producing it*).

85. That will be handed in?—Yes.

86. Is it not a fact that these payments to the Dukes of Lancaster, Rutland, and Norfolk are not at all in respect of the creation fees to the Dukes, but are in respect of monies received by Earls of counties for administration of justice for centuries prior to the existence of a Duke in this country?—I do not think I should be prepared to answer the question as to the reasons for a payment dating so very far back, beyond what I have just stated.

87. But as you have referred to Stubbs, have you referred to any other authorities?—No; the honourable Member asked a question, and we referred to a well-known book for an ordinary description of the point he mentioned.

88. Stubbs there practically copies from Gibson's Political Index?—I was not aware of that.

89. Have you had your attention called to Coke's Institutes, Part I., Book III., Chapter 1, Section 248, or if not will you refer to it for the purpose of answering this question at the next meeting of the Committee; is not this fee, described as creation fee, really the survival of the third penny taken from before the Conquest by the Earls of each county having custody or guard of their counties out of the fees paid by suitors, and out of which the Earl then remunerated his Viscount or Sheriff holding the ancient County Court?—I think that is put briefly in Stubbs, is it not?

Mr. *Bradlaugh*—continued.

90. Stubbs rather puts it as creation fees?—He makes allusion to the fact that he thinks this particular creation fee replaced the third penny.

91. Only my question is directed to show that there was no creation fee, but a survival; and my next question then would be, can your learn for the Committee when the Earl ceased to have any duties in connection with these third pennies, whether the whole of the duties did not cease when courts were established by statute in this country, and whether in fact the three payments have not been survivals of forgetfulness?—The answer I should return to that question is this: that looking at these letters patent it would appear to me that the duties in respect to which this creation fee was created are not mentioned. It will be for the Committee on reading the letters patent to see whether that is the case or not.

92. The letters patent which you hand in are letters patent of the creation of dukedoms, are they not?—No; that is one to the Earl of Rutland (*producing it*).

93. The one in the case of the Earl of Rutland has no mention of payment at all, has it?—Yes, it speaks of 20 *l.* a year.

94. Will you now please tell the Committee under what Act of Parliament or by what authority those three sums have been commuted by the Treasury?—The Treasury considered that these came under the definition of an annuity "payable out of the Consolidated Fund," this is Section 2 of the Statute of 1873); "or moneys voted by Parliament either in perpetuity or for a period not determinable with the life of the individual to whom the same is for the time being payable.

95. I need not say these are not charged on the Consolidated Fund?—No; they are charged on the moneys voted by Parliament.

96. Have the moneys ever been voted by Parliament for a longer term than one year?—No.

97. Were they not always specific votes of that sum in that year without any reference to their continuance?—That would be the case, because, as the honourable Member is aware, since the year 1860 or 1861 all the voted moneys are only for services coming in course of payment within the year.

98. But shall I not be right in saying that in the very class in which those appear there was another payment which until it was commuted was described as an annuity, showing that it continued for more than one year as payable to the heirs of a particular individual?—Certainly; but exactly in the same way, if Parliament did not choose to vote that money, the annuity could not have been paid. In all these cases the Treasury would hold that the mere fact of Parliament voting the sum for the year does not injure the perpetual character further than this: that Parliament is supreme authority, and exactly in the same way Parliament can revoke the Act under

Mr. *Bradlaugh*—continued.

under which sums charged on the Consolidated Fund are paid.

99. May I understand you to put it that the Treasury say that these three sums were granted by Letters Patent, either in perpetuity or for a term not determinable with the life of the person on whom they were bestowed?—That would be the contention of the Treasury.

100. But you have also contended that outside the statutory authority, and outside the authority given by the Votes, there would be some authority in the Treasury illustrated in the discussion which you have explained took place in the Report of the Committee on Public Moneys?—I have only mentioned that as an historical fact. The honourable Member asked me under what circumstances pensions had been commuted, and, of course, it became necessary for me to state what had been the fact. I do not imagine that the Treasury at the present moment would regard that as a living power.

101. Then I take it that the Treasury have commuted in the past by virtue of some power, neither statutory nor by Vote of Parliament, and the Treasury claim no such power to-day?—That is my view. The honourable Member will see, when he reads this discussion which took place, that a certain amount of stress is laid upon the fact that many of these pensions were charged upon the gross revenue, and an argument *valeat quantum* was based upon that fact of a power on the part of the Treasury to relieve the gross revenue of a debt without coming to Parliament. I am not clear that even at that time the Treasury would claim power to redeem in that method a charge on the Consolidated Fund, or on Votes of Parliament. I think myself that the discussion is rather historical now, because I take it that the Treasury would not claim any such power.

102. If I may take it that the Treasury do not claim that power now, I will not ask another question on that; do you hand in to the Committee a copy of a Memorandum on the Penn and Marlborough pensions submitted to the Treasury on the 9th June 1884?—I have it here to hand in.

103. Was any investigation whatever, as far as you know, made by the Treasury into the allegations in that Memorandum?—The Memorandum handed in by the honourable Member on that occasion was considered at the Treasury at the time; but I suppose what the honourable Member asks is whether, in presence of what was done afterwards, any consequence was given to it.

104. That is hardly passing in my mind at the moment; I rather take the act without reference to the results for a moment?—I would say that the Memorandum which the honourable gentleman handed in was considered at the Treasury.

105. Is there any record to which you could refer the Committee of anything which was done upon it?—The honourable Member's question, I think, is "investigations into the allegations." The honourable Member will note my answer, which was that the Memorandum was considered. I am not able to lay before him or the Committee any investigations which followed upon it.

Mr. *Bradlaugh*—continued.

106. One of those pensions was payable to William Penn, I think?—Yes.

107. Was one of the allegations in the Memorandum handed in, that the persons to whom the Treasury proposed to pay the commutation money were not heirs?—Yes.

108. Was any step whatever taken to ascertain whether that allegation was true or not?—I have told the Committee that I could not lay before them a proof of investigations made upon the Memorandum handed in by the honourable gentleman; but the facts were these: An investigation had taken place into this point some five or six months before; the question had been referred to the legal advisers of the Treasury to tell them whether they considered the Penn pension in the nature of a perpetual payment, and whether the Treasury was justified in regarding the then recipient of the pension as a person in receipt of a perpetual pension; and the answer of the legal advisers of the Treasury to that (and those papers were in the hands of the Treasury at the time when the honourable Member's Memorandum was considered) was decisive, to the effect that the payment was a perpetual one, and that the Treasury was justified in dealing with the then recipient of the pension as in receipt of a perpetual pension.

109. Do I understand that the points as to the Penn pension stated in that Memorandum were submitted to the legal advisers of the Treasury in the statement which they advised upon?—I have been most careful in stating that this took place before his Memorandum was received; but all the facts, I believe, were referred to the legal advisers of the Treasury to advise upon. The ground upon which they went, I believe, was the Act of 1790, and upon that Act of 1790 they advised, and they also investigated the succession under which Colonel Stuart, who was the recipient of the pension at the time when commutation took place, was held to be the representative of the family; and they considered, and advised the Treasury upon the subject, whether there might probably be a lapse of the pension through lack of heirs.

110. The statement I presume submitted to the law officers was a written case?—The question was referred to the Solicitor to the Treasury to investigate and advise the Treasury as a lawyer would, upon the value of the title to the pension.

111. Was there any written statement before the Treasury upon which the Solicitor to the Treasury expressed his opinion?—I should like to look at the correspondence again before I attempt to answer with regard to a thing upon which I speak from memory.

112. I leave these matters until the next sitting of the Committee, and I will leave the questions on the Marlborough pension as well. Now, coming to the payment of 16,216 *l.* 15 *s.* 1½ *d.* now charged on the Consolidated Fund in perpetuity for the Duchy of Cornwall in lieu of tin coinage, post groats, and white rents, was that sum fixed in 1838?—It was.

113. Prior to the 1st October 1838 were the receipts from tin coinage, post groats, and white rents part of the income of the Duchy of Cornwall?—

Mr. *Bradlaugh*—continued.

wall?—Yes; the honourable Member's question shows that he is aware that one part of those was then under lease, but they formed part of the rightful income.

114. Can you say, or need we go to the Duchy of Cornwall representative for that, from what other sources besides his coinage, post groats and white rents, did the Duchy of Cornwall derive its net income, and to what amounts, for each of the 10 years prior to the 1st of October 1838?—The Treasury among their records have no information on that point. The honourable Member is aware that it is under an Act of 1838 that provision is made for the yearly laying before Parliament of the accounts of the Duchy of Cornwall. The honourable Member, no doubt, has referred and knows those Returns that are made yearly; I have here the first one, to which, of course, previous ones would be similar.

115. That would be for what year?—The year ending Michaelmas 1838.

116. Can you tell me what net income (the net only) of the Duchy of Cornwall is shown on that year; shall I be right in stating that the net income was 11,536 *l.*?—It looks very much like that here; I have not worked it out. I make out the expenditure to be about 13,000 *l.*

117. Does the Return you have before you enable you to say that in that sum of 11,536 *l.* there were not only included the receipts from tin coinage, post groats and white rents, whatever they were, but also rents of lands, fines on renewal of leases, royalties on minerals, and interest on investments?—Yes, all those headings appear here.

118. So that the payment in perpetuity of 16,216 *l.* 15 *s.* 1½ *d.* was in lieu of some portion only of 11,536 *l.*?—It formed part of a gross revenue of which the honourable Member is now stating the net.

119. Is a sum of 630 *l.* 14 *s.* 2 *d.* a part of the sum now paid of 16,216 *l.* 15 *s.* 1½ *d.*?—It is.

120. Was that sum precisely fixed in lieu of post groats for Cornwall?—That is the case.

121. Is it true that the Duchy of Cornwall, during the 10 years preceding the 1st of October 1838, received 10 *l.* per year and no more in respect of such post groats?—The post groats duty in Cornwall was granted by lease dated 31st July 1813 to Mr. Benjamin Tucker, to hold for a term of 17 years from the 5th July 1823, at the reserved rent of 10 *l.* per annum, expiring on the 5th April 1841.

122. Then, is that practically yes to my question?—Yes.

123. Did his late Majesty King William IV. signify, and how, and when, his pleasure that such post groats should cease on and from the 5th April 1841?—A Return was laid before Parliament under the Act 1 & 2 Vict. c. 120, the Commutation of the Tin Duties Act, stating the amount of the compensation payable on account of the repeal of the coinage duties on tin, and also a return of the gross annual payments, and of the costs, charges, and expenses to officers and others in respect of the tin coinage duties in the Duchy of Cornwall during the preceding 10 years. The reference number is 204, of the Session of 1839. Attached to that Return is a copy of a Treasury Minute, in which this is stated: "But, inasmuch as his late Majesty had expressed his intention that the post groats in Cornwall should cease after the 5th of April 1841, on the termination of the existing lease, and Her Majesty has been pleased to confirm such intentions, it does not appear to my Lords that the sum of 630 *l.* 14 *s.* 2 *d.* should be provided for beyond the 5th April 1841, and that the compensation should after that date be diminished by that amount."

Mr. *Bradlaugh*—continued.

124. Is there any more authoritative document or record showing that his late Majesty so signified?—We have no information of it, that I am aware of, at the Treasury; but the Treasury would consider that the Board of Treasury of that day would not have put such a statement as that upon a public record without sufficient authority.

125. So that you have really no doubt that his late Majesty King William IV. did signify his pleasure that such post groats should cease on and from the 5th April 1841?—That would be the view of the Treasury.

126. Then was Her present Majesty pleased to confirm such intention soon after her accession?—In the passage from the Minute which I have read that is stated also.

127. Did the Lords of the Treasury, by the Minute which you have just read, direct that the sum of 16,216 *l.* 15 *s.* 11½ *d.* should be diminished by the sum of 630 *l.* 14 *s.* 2 *d.* from the 5th of April 1841?—They stated that, "Inasmuch as the receipt of post groats in Cornwall, 630 *l.* 14 *s.* 2 *d.*, will cease on the 5th of April 1841, on the termination of the existing interest, this annual sum will be diminished by such amount from that date."

128. That is, in fact, a direction to diminish the larger sum you have named by that precise sum of 630 *l.* 14 *s.* 2 *d.* from the 5th of April 1841, is it not?—That would be the effect of it.

129. Is there any subsequent Treasury Minute relating to that sum?—After that date in the year 1841 there was some correspondence with the lessee of these post groats, which resulted in a continuation to him of the duties for another six months; and about that time, that is to say, in the course of the year 1841, the Council of the Duchy of Cornwall addressed a letter to the Treasury calling their attention to the fact that King William IV. and Her Majesty, as long as they had the usufruct of the revenues of the Duchy of Cornwall, that is to say, as long as a Duke of Cornwall did not exist, could waive their own individual rights to these post groats, but that they had no power to surrender the rights of those who came after them, or replaced them. In that decision the Treasury acquiesced.

130. I am afraid I did not make myself clear; my question was: Is there any Treasury Minute whatever of later date than the 15th of February 1839, relating to the sum of 630 *l.* 14 *s.* 2 *d.*?—No.

131. Do you put in the letter from the Duchy of Cornwall?—I think there is no objection to putting it in; but perhaps I may put it to the Chairman of this Committee whether it would not be desirable that I should have direct authority for putting it in.

132. Then I will reserve all further questions on

Mr. *Bradlaugh*—continued.

on that; now I ask you, do you put in the correspondence of 1841 that you have mentioned, between the Treasury and some other persons?—I will also take instructions on that point.

133. Then at present I simply ask for those, and the matter can be raised again; shall I be right in saying that the Treasury Minute of the 15th February 1839 was made under the special direction and authority of Parliament, as expressed by the 1 & 2 Vict. c. 120?—The Minute was made in pursuance of that Act.

134. And was reported to Parliament in pursuance of that Act?—And was reported to Parliament in pursuance of that Act.

135. Can you say whether this correspondence, whatever it may be when we see it, was ever communicated to Parliament?—I believe not.

136. Can you say whether any intimation was ever made to Parliament that the Treasury Minute of the 15th February 1839 had been disobeyed and disregarded?—I do not know that I am quite prepared to say "disobeyed and disregarded."

137. Perhaps that is a wrong way of putting it; can you say whether it is true that the fact has ever been communicated to Parliament that the payment had been continued in direct contravention of the Treasury Minute of the 15th of February 1839?—I am not aware that any intimation has been made to Parliament that the sum of 630 *l.* 14 *s.* 2 *d.* was not abated from the payment in question.

138. Would such a payment in ordinary course come before the Comptroller and Auditor General, or any such official?—At the present time, do you mean?

139. No; at any time between 1841 and now?—In 1841 there was no such auditor; until after the passing of the Exchequer and Audit Act there was no audit really of charges upon the Consolidated Fund.

140. In 1841 can you tell me whether there would have been any authority to whom the Treasury would have notified, say, payment in excess of the Vote?—The honourable Member's question is not quite in accordance with the financial procedure.

141. I will put what I have no doubt is an absurd case. In 1841 there was a payment of 500 *l.* to the heirs of Clarges; supposing 510 *l.* to have been paid either by accident, or negligence, or design, is there any person or any authority to whom that fact ought to have been notified by the Treasury at that time?—As the matter stood then, I think, taking this particular charge, it was a charge on the Consolidated Fund, was it not?

142. No; I do not know why, but it was always kept in the Votes?—I do not think in 1841 there would have been anybody to report that to Parliament.

143. When, in point of time, was the first period when it would have been the duty of the Treasury, if 510 *l.* had been paid in lieu of the 500 *l.* voted to the heirs of Clarges, to have communicated that fact to anybody, and to whom?—I will endeavour to put the statement more in accordance with our financial procedure. The

Mr. *Bradlaugh*—continued.

Treasury are, of course, bound not to exceed a grant of Parliament; but the whole control of Parliament is based upon a not implicit confidence that the Executive will always do what is right. Parliament, therefore, has established an independent officer in the shape of tho Comptroller and Auditor General, who now receives, and from the year 1868 has received, the accounts of each Vote with vouchers; and it is his duty to report to the House of Commons if any sum has been paid in excess of Parliamentary authority.

144. Then did the Treasury in 1868 draw, or have they at any time since, drawn the attention of the Comptroller and Auditor General to the fact that 630 *l.* 14 *s.* 2 *d.* had been paid beyond the authority of Parliament?—No; but I must call the honourable Member's attention to the fact that it is a question whether that is beyond the authority of Parliament. The Act, as I understand it, authorises the Treasury to commute the existing tin duties; that is a standing power which exists at the present moment. In consequence, as we learnt in this Treasury Minute of an intimated surrender by the Sovereign of his personal right in it, the Treasury stated that on the determination of those duties the sum payable out of the Consolidated Fund would be diminished by so much. The surrender has not proceeded. I should not be prepared to admit that it was in contravention of the Act.

145. But as a matter of fact, since 1868, have the Treasury ever drawn the attention of the Comptroller and Auditor General to the fact that this was ordered to be diminished on the 15th of February 1839, that no subsequent authority for its continuance ever emanated from the Treasury or from Parliament, and that it was notwithstanding paid?—No. I should explain that I think it would have been proper for the Treasury, after the receipt of the protest from the Duchy, to have renewed their direction for the discontinuance if they intended their previous order to stand. The order for the payment emanates from the Treasury, and the officers of the Treasury would follow the Standing Order until a further Order directed its discontinuance. Talking of what happened 40 or 50 years ago, I do not insist upon that view of the case, but I think that is extremely likely to have been so. I am not saying that it might not have been advisable or better to have a Minute on record, stating clearly the Treasury intention; but certainly, since the time when the payments was continued, that is to say, the birth of the Prince of Wales, the Treasury has not put upon record, as far as I am aware, its reasons for continuing the payment at the preceding rate.

146. Do I understand you that according to the practice of the Treasury when the Lords of the Treasury direct a payment to cease it continues, unless they make another Order?—In this case the direction for the payment is for 16,216 *l.*, and there is a future statement that on a given date it would cease.

147. Is not there a specific direction that the sum is to be diminished from the 5th of April 1841 by that sum?—"This annual sum will be diminished by such amount."

Mr. *Bradlaugh*—continued.

148. Is not that a specific direction?—But you see it was continued after that; it did not cease.

149. Coming back to my question, when the Treasury direct a payment to cease is it necessary that there should be a second direction of the Treasury in order that the cessation should have effect?—You see it was continued afterwards by Treasury Minute, as you are aware.

150. Pardon me; assuming the Treasury to direct some payment to cease, does that payment cease in consequence of that direction, or is it necessary to give a second direction to the same effect?—Certainly, it would be necessary now to give a second direction. The honourable Member is asking me about what took place 50 years ago, and of course he is asking me rather to guess what were the reasons for it. I am quite ready to say this: I find no record directing its continuation. I do find an intimation from the people responsible for the Duchy of Cornwall that the surrender made by the Sovereigns William IV. and Her Majesty, did not continue longer than that time. In consequence of that I see the continuation of the payment, and on that I should say that the Treasury must have acquiesced in the claim of the Duchy.

151. You have no knowledge of the acquiescence then, if I understand you rightly, except the inference from the fact that the money has always been paid, though it was directed not to be paid?—That is exactly the case.

Chairman.

152. But did you not say that there was a Minute directing the continuance?—There was a Minute directing a continuance for a time, because the lessee made some claim. This does not bear on the immediate point which the honourable Member is speaking of, but it was continued for a time in order to meet some claim of the lessee.

153. And your contention is that the waiver of the Sovereign's was a waiver, as far as they were personally concerned, of their own rights, but did not extend, there being no Prince of Wales at the time, to the rights of the heir?—That is how I understand it.

Mr. *Bradlaugh.*

154. But do I understand you to say that after the Treasury Minute of the 15th February 1839, directing this sum of 630 *l.* 14 *s.* 2 *d.* to cease, there was any Treasury Minute of any kind whatever directing it to continue?—There was a Treasury Minute for temporary continuance.

155. Will you kindly refer me to it?—That is the correspondence which the honourable Member has been speaking about.

156. Then when we get that correspondence will it show a Treasury Minute?—It will show a Minute for the temporary continuance beyond the 5th of April 1841.

157. For now long?—My recollection is for six months.

158. A continuance of the 630 *l.* 14 *s.* 2 *d.*?—For six months; that is my recollection of the continuance.

159. Have you looked at it lately?—Yes; I have not got it here, but I think I am correct in saying that. I have not been laying stress upon that, because it is only a temporary continuance, which I do not think has any great bearing on the point which I suppose the honourable Member is anxious to elicit.

160. I am afraid I did not understand you accurately. I thought the correspondence was with the lessee?—With the lessee for a continuance of this for a period beyond the 5th of April 1841.

161. But the lessee was the person who paid only 10 *l.* a year to the Duchy of Cornwall?—But he had been receiving this 600 *l.* a year.

162. This 630 *l.* 14 *s.* 2 *d.* from the Treasury?—From the Treasury, after 1838.

163. Do I understand that the Treasury by some Minute after the 15th of February 1839, gave Benjamin Tucker some right to receive the 630 *l.* 14 *s.* 2 *d.*?—Yes, for a period.

164. That sum then had been paid by the Treasury, do I understand, to Benjamin Tucker?—Up to the cessation of the lease.

165. And to the Duchy only the balance?—On the 10 *l.*, do you mean?

166. No. We have the sum of 16,216 *l.* 15 *s.* 1½ *d.*, of which the 630 *l.* 14 *s.* 2 *d.* was a part, and, as I understand you now to say, Benjamin Tucker, who was the lessee of the post groats, received direct from the Treasury?—No; I think I can make it clear. The whole sum of 16,216 *l.* was issued to the Duchy. They paid this sum, whatever it was, 630 *l.* odd, as long as the lease subsisted, to Mr. Tucker. When the lease ended on the 5th of April 1841, on some ground or other, a claim was put forward, as far as I recollect, by Mr. Tucker, and for a further limited time this sum was paid.

167. The claim by Benjamin Tucker is in writing?—It is in writing, I believe. I have not got it here. I am guarding myself a little in the matter, because not thinking it is very germane to the point which the honourable Member was asking a question upon, namely, whether the continuance of the post groats was payable to the Duchy of Cornwall, I did not take a note of the exact facts.

168. Did the Treasury take any cognisance whatever of the way in which this 630 *l.* 14 *s.* 2 *d.* went from the Duchy to Tucker, if it did go?—Not that I am aware of.

169. Then I do not quite follow (excuse my obtuseness) what the correspondence between Benjamin Tucker and the Treasury is?—I am not sure whether it was Benjamin Tucker himself, or whether it was Benjamin Tucker through the medium of the Duchy of Cornwall.

170. The latter probably is the case?—Yes; at all events it was a claim or petition for the continuance for a time of this sum.

171. Then, as I understand, in 1841 some petition, or claim, for a temporary continuance of the 630 *l.* 14 *s.* 2 *d.* is made either by Tucker, or by the Duchy on his behalf, or by the Duchy on their own account?—By the Duchy on his account.

172. And some temporary continuance for a period, you think, of about six months was then granted by the Treasury, which will appear in some correspondence?—Yes.

173. I do

Mr. *Bradlaugh*—continued.

173. I do not know what would be the habit of the Treasury in reference to a money grant; would it be recorded in any way?—In such a case as this a charge on the Consolidated Fund, an order is given to charge such a sum on the Consolidated Fund; and from that time forward the payments would be made under the authority of that grant. At the time I am speaking of the warrant would be sent to the Exchequer Office, and it would have been the duty of the Comptroller of the Exchequer, as he was then, to satisfy himself that the sum was in accordance with the authority given by Parliament before he authorised the issue out of the Exchequer.

174. How long would it be your official duty to know anything about these matters yourself; from what period?—I have had about 30 years' service in the Treasury.

175. When was your attention first personally drawn to any question about this 630 *l.* 14 *s.* 2 *d.*?—The attention of myself personally, when I received these questions of yours; I never, as far as I remember, had my attention drawn to it before.

176. Do you know any official of the Treasury, other than yourself, whose duty it would be to take cognisance of such a point if within the knowledge of the Treasury?—If the honourable Member presses it home, it is the business of the officers of the Treasury to be omniscient in all these matters, and if they are not omniscient, they must take the responsibility of having neglected something.

177. Whose duty, if it be the duty of anyone at the Treasury, would it be to draw the attention of the Comptroller and Auditor General to this sum of 630 *l.* 14 *s.* 2 *d.*?—It would not be the duty of anybody at the Treasury to call the attention of the Comptroller and Auditor General to a charge of that kind; the Comptroller and Auditor General is put there to find it out. But I think I know what the honourable Member meant; he wants to know who are the officers of the Treasury responsible, and I am quite prepared to answer. The persons immediately responsible, I should say, would be the heads, the people who have been successively at the head of the financial branch of the Treasury, and that is a post which I held for very nearly 15 years.

178. Shall I be fair in putting it, that as far as you have been concerned, you simply found that the payment had been going on for years before you held that position of responsibility, and that your attention was never directed to any question as to any portion of it until I raised it?—That was the state of things; I think, however, that now that attention has been drawn to it in the manner in which the honourable Member draws attention to it, I may admit that I think it extraordinary, out of the ordinary, that there was not a Minute at the time. I think that if I had seen the paper without the special attention that has been drawn to it now, I should have understood it myself, though not in a very formal manner, not a properly formal manner, as an acquiescence in that intimation; because I could hardly understand how it would be possible that when a body like the Duchy of Cornwall

Mr. *Bradlaugh*—continued.

intimated, did not ask, but intimated, that the post groats had not ceased (I think it comes to that), the Treasury if they dissented from it should not have answered the Duchy and given their reasons for such non-acquiescence in the contention of the Duchy.

179. I suppose you have had your attention drawn to the fact that the duties of Customs payable on tin, of which the post groats were a part, were absolutely directed to cease and to be abolished by the 1 & 2 Vict. c. 120?—Yes; and therefore what I ought to have said was that the compensation in lieu of it had not ceased. I said that the Duchy of Cornwall stated that the post groats had not ceased; but I should have said, the compensation in lieu of it.

180. Then I think we have got it now (I trust you understand that I am only trying to get at the facts in the matter), that there is no formal Treasury Minute whatever since that of the 15th February 1839?—Except that which relates to the temporary continuance of the post groats compensation.

181. And would that be a formal document?—That would be a formal document.

182. How are Treasury Minutes generally recorded?—Either on the paper itself, the letter that is written, or on a sheet of paper put with the letter, in addition to which a communication to another department, written in pursuance of the Minute, would be found in the record book for that department.

183. The record book is a book that contains a record of all Treasury Minutes, is it?—No, of all Treasury letters written in pursuance of the Minutes.

184. What is the distinction technically between a Treasury letter and a Treasury Minute?—A Treasury Minute is a Minute of the Board. The Lords of the Treasury read such and such a letter, and if it is necessary to do so they put on record their reasons for their decison. They then say, let a letter be written in such and such a sense, to such and such a department. The letter written would be found in the letter book of that department; for instance, the Duchy of Cornwall book. The Minute would only be found with the papers.

185. Then, in reference to the temporary continuance for this six months, or whatever the short period was, there is a Treasury Minute, is there, with the papers?—Yes, there is. The honourable Member will take my answer that I have looked at these papers, but I have not taken them as bearing very particularly upon the point that the honourable Member has in mind, and therefore I can only say that my recollection is that they are all in order, and regular.

186. But with the exception of this Treasury Minute for the continuance for the six months, is there any other Treasury Minute whatever for its continuance for any longer term?—Not in my knowledge.

187. Now, going back to the Grafton case, as to which you gave me a number of facts, I will refer you to the annuity, as to which I have not asked you anything yet except the fact of there being an annuity of 6,870 *l.* to the Duke of Grafton. Was a sum of 229,000 *l.* invested in the

Mr. *Bradlaugh*—continued.

names of trustees in order to secure the payment of that annuity?—That was so.

188. How much of that 229,000 *l.* is now existing so invested?—I believe the sum is stated in the Return to Parliament of 1881.

189. And, as far as you are aware, there has been no change, no more of the money sold out, since that date?—The Treasury, as such, would have no information upon that point.

190. Is not the First Lord of the Treasury one of the trustees of that money?—He is; but he does not, within my knowledge, put upon record in the Treasury his actions under the trust.

191. Have you any account in the Treasury showing how and at what times the sum of 229,000 *l.* was reduced to 30,555 *l.*?—No, we have not.

192. Have you any account in the Treasury showing that the difference between 30,555 *l.* and 229,000 *l.* was laid out in land?—As far as I am aware, we have no special information in the Treasury; I mean by special any information separate from that that is contained in the Acts of Parliament.

193. Is there any Act of Parliament which identifies the lands purchased with the portion of the 229,000 *l.*?—I do not think in the Grafton Act of Parliament that the lands are specified.

194. Then suppose the Grafton family to cease to-morrow, am I right in saying that these lands ought to revert to the Crown?—You are asking me a question for a lawyer; it turns upon the interpretation of the Act of Henry VIII., I believe.

195. But let us see; in the event of the failure of heirs in the Duke of Grafton would the Crown have had the right to that money, the 229,000 *l.*, in default of heirs male?—It is the case, I believe, that the Crown would have the reversion.

196. Have any steps been taken by the Treasury to see that the lands which have been purchased with the money which ought to revert to the Crown are capable of identification and recovery in the event of the reversion falling in?—I do not think that we have at the Treasury any information on this subject. All dealings on the express subject of these trusts form the subject, or have formed the subject, as far as any information that I have goes, of correspondence between the First Lord of the Treasury and the family trustees; and therefore anything, of course, that I have to say must cease there. Of course I can refer, if the Committee wish it, to the First Lord of the Treasury.

197. Then, although the Crown had the right to the body of the funds in safe custody, and the reversion of the body of funds on heirs male ceasing, is it true that no steps whatever have been taken by the Treasury to secure the running of the trust with unknown lands bought out of that money?—I have no information beyond the fact that the references are made to the First Lord of the Treasury, and I am not able to say what the First Lord of the Treasury has done.

198. Is there anyone on behalf of the Government, any permanent official (the First Lord of the Treasury is, of course, a temporary one), whose duty it would be to protect the interests of the State in that respect?—No, except under instructions from the First Lord of the Treasury.

199. I am afraid I must continue the examination a little further to make it clear; it is stated in the Return that the lands are "subject to the provisions of an Act of Henry VIII."; is the Act which the Treasury refer to in that Return the Act of the 34 & 35 Henry VIII., c. 20?—I have not got the reference to the Act.

200. Will you learn whether that is so by the next time the Committee meet?—Yes.

201. If that be so, as that is only an Act to "Imbarre feigned recoveries of land wherein the King's Majesty is in reversion," will you be kind enough to supply, if there be any information in the Treasury, such information as will identify the lands of which the Sovereign is in reversion?—I have made myself, I hope, intelligible to the honourable Member, that I have no knowledge, as a permanent officer of the Treasury, about this matter. The precautions taken may be complete. The only person to whom I can make reference, and I should ask whether it would be the wish of the Committee that I should do so, would be the First Lord of the Treasury.

202. But is there any permanent official at any time charged with the duty?—No, not that I am aware of. I do not know any permanent official to go to.

203. Is there any record whatever of any First Lord of the Treasury having communicated to the Treasury any reduction by selling out of the moneys?—No; not that occurs to me now.

204. Then I will ask you if you will be kind enough to search between this and the next meeting of the Committee, and ascertain when the last sum, if there is any record at the Treasury Office, was sold out?—Yes.

205. Whether it was when Lord Palmerston was First Lord of the Treasury, and whether any communication at all took place at that time?—Yes.

206. If you wanted to ascertain on behalf of the Crown what lands the Crown was entitled to in respect of this portion of the 229,000 *l.*, to whom would you go for information?—We could only act through the First Lord of the Treasury. The First Lord of the Treasury being in the trust could take his own steps for ascertaining the state of the trust, I presume.

207. As far as the Treasury is concerned, subject to any research on the last question I mentioned, it is a perfect blank at the Treasury as to any lands whatever subject to the trust mentioned in this Return, as reverting to the Crown in default of heirs male?—As far as I am aware that is the case.

208. Had you anything to do with the preparation of this Return of the 14th of February 1881?—No.

209. Would you know what official would prepare it?—It was prepared in what was my Department of the Treasury at the time.

210. From whom would the information be got that the lands "are vested in the same trustees, and settled to the same uses and for like interests as the Consols"?—I do not know that it would be

Mr. *Bradlaugh*—continued.

be got from there, but I should think that very probably that information was got from the solicitors to the trust themselves.

211. Would that mean the private solicitors of the Duke of Grafton?—I think in all probability so.

212. Would you search and see if there is any correspondence with the solicitors to the Duke of Grafton prior to the preparation of this Return?—Yes.

213. Then I shall have to go back to that after you have searched, and I will leave it for the present; there is a sum of 19,000 *l.* referred to in the same Return (at the bottom of page 2) to the Duke of Richmond; have you any account showing how and when the sum of 633,333 *l.* 6 *s.* 9 *d.* was reduced to 86 *l.* 0 *s.* 9 *d.*?—No; I have to give the same answer with regard to that, as far as the Department of the Treasury is concerned, as I have given in the case of the Duke of Grafton; but probably the honourable Member is aware that there is a great deal more information given in Acts of Parliament with regard to the lands bought for the Richmond property than for the Grafton.

214. You have referred in your answer to Acts of Parliament; I think there is one Act which schedules a form of declaration of trust which ought to be executed?—I believe there is.

215. Have the Treasury ever taken any steps whatever to see that any such declaration of trust has ever been executed?—Not that I am aware of.

216. The Treasury have no copy or record of any such declaration of trust?—No, not that I am aware of. The honourable Member will see that the First Lord of the Treasury is named as the official trustee.

217. But the First Lord of the Treasury is a fluctuating element?—Quite so; but it would be through him that the Treasury would be moved to take action; that is what it comes to.

218. But when so large a sum as 633,000 *l.* is dealt with, being reduced to 86 *l.* only, would the First Lord of the Treasury, in the common order, make no communication to the Treasury?—I presume that the First Lord of the Treasury would satisfy himself that all the steps that were being taken, and to which his assent as a trustee was required, were in accordance with the law, and carrying out the law.

219. But as it is in no sense a secret matter, would not the permanent officials see that the temporary official, the First Lord of the Treasury, was protected by some record of what was done?—That would emanate from the First Lord of the Treasury, not from his subordinates, I think. However, whatever the case may be, the particulars about which the honourable Member asks, are not, so far as I am aware, on record at the Treasury.

220. And are there no declarations of trust, or no intimations of any declarations of trust relating to these lands within the knowledge of the Treasury?—Not so far as I am aware.

Mr. *Bradlaugh*—continued.

221. I see the Return says that 86 *l.* 0 *s.* 9 *d.*, "is retained only to keep the trust account open"; does it occur to you what advantage there is in keeping the trust account open as to the 86 *l.* 0 *s.* 9 *d.*, and taking no precaution as to the 633,300 *l.*?—I do not know. I do not believe the Treasury had anything to do with the keeping of that 86 *l.* on the account.

222. But I suppose the money could not have got out of the Bank of England without the consent of the First Lord at the time being?—Quite so; I presume that the First Lord for the time being satisfied himself that he had performed his duty.

223. Are there any cases in which the First Lord has an official duty to perform with reference to payments small or large?—It used to be a very common thing, I think, to bring him personally into trusts of this kind.

224. And are there not in matters somewhat similar to this record of the action taken by the First Lord of the Treasury?—I do not know of any case; I have given you the two cases in which as far as that goes, whatever the right or wrong, there is the fact, that there are no records.

225. Then if we want any information as to the case either of the Duke of Rutland or the Duke of Grafton, there is no one whom you can suggest other than in the case of the Duke of Grafton, the solicitors with whom you have had some correspondence; would you have had correspondence with the solicitors of the Duke of Rutland about this?—No; I do not think that the Treasury would feel themselves at liberty. A communication might take place or it might not, but my view of the proper method of proceeding is only to proceed through the First Lord. If the Committee were to express any desire to know more about it, the only step which I consider is open to me is to convey to the First Lord the wish expressed by the Committee.

226. Supposing the Treasury to have written to the solicitors of the Duke of Rutland and the solicitors of the Duke of Grafton at the close of 1880 or in the early portion of 1881 with reference to each of these matters, would there be any record of those letters?—I think it extremely likely that this information given in the Return of 1881 may have been got through the First Lord at the time; that the First Lord was asked about it, and that he got it from the solicitors to the trusts, who would know about it.

227. Will you search whether there is any correspondence existing in relation to that?—I will.

228. Correspondence of the nature, for example, in the case of the solicitors to the Duke of Rutland, of, at first, absolute refusal to give information, pressure from the Treasury to them to give it, and information ultimately given?—I do not know of any such correspondence. I will search for any correspondence that there is.

Friday, 11*th March* 1887.

MEMBERS PRESENT:

Mr. Biddulph.	Mr. Mundella.
Mr. Bradlaugh.	Mr. Arthur O'Connor.
Mr. Chance.	Mr. Bryn Roberts.
Mr. Curzon.	Mr. James Stuart.
Mr. Jennings.	Mr. Vernon.
Mr. Mowbray.	Mr. Whitley.

THE RIGHT HONOURABLE A. J. MUNDELLA, IN THE CHAIR.

Sir REGINALD EARLE WELBY, K.C.B., re-called; and further Examined.

Mr. *Bradlaugh.*

229. WITH reference to the Schedule in Paper No. 3, page 2, the last item but one: "Duchy of Lancaster; Annuity in lieu of Prisage and Butlerage on Wines," can you tell me whether prisage and butlerage on wines there meant the right to take as much wine as the King pleased within the limits of the County Palatinate of Lancaster at such price as the King fixed originally?—I believe that is a correct statement of this old right of the Crown. I think the honourable Member will find it interpreted in some old books as finally commuted into a right to take one cask from before the mast and one cask from behind the mast in every ship importing wine.

230. And I think it was limited by resolution in the House of Commons early in the reign of William III. to one tun of wine out of every ten?—I was not aware of that limitation, but no doubt the honourable Member is right.

231. Shall I be right in saying that the annuity there was one of several annuities in relation to such rights of butlerage and prisage which were fixed about the end of last century, or the beginning of this, roughly?—There was a Report of a Commission, or rather I think of two Commissions, which reported in 1784, and again in 1797, that the dues of this kind were inconvenient for trade, and that it would be desirable to commute them; and in consequence of that there were a variety of commutations, as the honourable Member states. I think this commutation was not completed until very many years afterwards; but the Act which granted this commutation recites a previous Act empowering the Treasury to commute, and ratifies the Act of the Treasury under it.

232. Are the only survivals of permanent annuities in lieu of Prisage and Butlerage on wines the one to the Duchy of Lancaster, and the one to the Duke of Grafton?—The one to the Duke of Grafton is hardly now in the shape of an annuity; it is in land.

233. But whatever may be the legal position of the one to the Duke of Grafton, are the one to the Duke of Grafton, and this one to the Duchy of Lancaster, the only one now surviving?—There was a commutation (I am speaking now from memory) somewhere about the end of last century, of the right of Butlerage and Prisage in Ireland to the Earl of Ormonde, I suppose the Marquis of Ormonde now. There was an Act under which a sum of money or a sum in Consols was granted to Lord Ormonde in lieu. I am not able to say in what form it stands now, whether there is any trust connected with it, but there was such a commutation as well as these two.

Mr. *Bradlaugh*—continued.

234. From your researches of the case in the Marquis of Ormonde, do you think that there were similar investments with like trusts, as in the Grafton case?—I have not investigated the Ormonde case recently; and I am therefore speaking entirely from memory, and the only thing I can say is that my recollection is that there was an Act which fixed the commutation, and it is extremely probable that there may be something of the same limitations in that Act; but that I cannot speak to without reference to it.

235. Would you kindly cause search to be made for it, for the information of the Committee?—I will.

236. I do not find in any of your lists the payments charged on the Consolidated Fund, the Heritable Usher of Scotland, 242 *l.* 15 *s.*; and the Hereditary Keeper of Holyrood House, 133 *l.* 5 *s.* 4 *d.*; they are on page 64 of the Finance Accounts?—We omitted from the return payments which are stated as salaries. If the honourable Member will look at those payments, they are stated as salaries; a salary is assumed to be payment for service done.

237. So I presume; but would it not be that the payment to the Master of the Hawks which is given by you on page 8 of the Paper No. 1 is a salary?—Of course we have to make an interpretation for that. I suppose it is known that there are no hawks, and therefore we treated it as an allowance. Nothing would be easier than to put these allowances in, if the Committee thought that they came under the heading of the sums that ought to be returned.

238. The

Mr. *Bradlaugh*—continued.

238. The reference of our Committee is to inquire into Permanent Pensions, Allowances, and Payments; and I suppose they would come under the allowances or payments?—We took the meaning of the reference to the Committee to be Perpetual Pensions, that is to say, pensions for which practically no services are rendered, and that is the reason why we omitted these things which are classed as salaries.

239. Can you tell us whether there are any other permanent allowances or payments in perpetuity which you have also omitted for similar or other reasons?—There are two or three of these. If the honourable Member has got the Finance Accounts before him he will see that there are three or four offices of this kind in Scotland classed along with those to which he calls attention. Of course there is a separation between some of them. I think I am right in saying, that "Six Trumpeters," which you see is the next item, are not perpetual. There is one here which is stated to be hereditary, and I think the one which the honourable Member has mentioned in his question, "Heritable Usher," is so.

240. Would you kindly cause a list to be made for the Committee of the Permanent Payments and Allowances which you have omitted?—Yes, certainly. I should like to have somewhat of a definition of that. Now, for instance, perhaps the honourable Member will look at the Finance Accounts there. The salaries with which this is classed begin with "The High Commissioner to the General Assembly of the Church of Scotland." As long as the Church of Scotland exists, that office exists; at all events until Parliament abolishes it.

Chairman.

241. Certain returns you have not made, I understand you to say?—We have not put in certain payments which are classed as salaries.

242. And are they salaries that are hereditary?—Some of them are; a few of them are hereditary. If the Committee desire me to put in those that are hereditary that can easily be done, and that will be a guide to me as to which I am to return, if I may understand that I am to put in those salaries which are hereditary.

Mr. *Bradlaugh.*

243. Every payment or allowance, whether in the nature of salary or otherwise, which is hereditary; perhaps you would kindly prepare us such a list?—Yes.

244. Now, turning to Paper No. 1 (App. No. 1, p. 42), taking the first item, which relates to the representatives of Jeffery Lord Amherst, and directing your attention to the column "Origin," where it says that "the King was induced, subsequent to the war during which those services were rendered, to direct that a grant should be made to his Lordship, his heirs and successors, of a certain tract of land in that province," that is to say, Canada, I have to ask you whether the ground of the original grant of the pension of 3,000 *l.* to the representatives of Jeffery Lord Amherst was not that his late Majesty King George III. had proposed to grant to Sir Jeffery Amherst, afterwards Lord Amherst, the estates belonging to the Jesuits in Canada?—I believe that is the case.

Mr. *Bradlaugh*—continued.

245. Then, the description of the origin here is not verbally correct?—Of course, the descriptions given are almost necessarily of a somewhat general kind, and it may be desirable to put them out fuller. We have endeavoured to state what we thought was the necessary part of the description for it, and we do not pretend to a verbal reproduction.

246. Is not what I have just read to you less lengthy and more explicit?—That is a question of drafting.

247. But it is so, that the origin of the grant was an intended grant of the estates belonging to the Jesuits in Canada?—I believe that to be the case.

248. Now, have you had your attention directed to the Statute 1st Anne, s. 1, c. 7?—That is the statute which limits the power of alienation by the Crown, is it not?

249. Yes; now, can you tell me whether, pursuant to that statute, such a grant, if it had been executed by King George III., would not, in the words of the statute, have been "utterly void and of none effect"?—I do not think, if I may say so to the honourable Member, that my opinion upon the matter is of much value, because it must be a lawyer's interpretation: but possibly the honourable Member is aware that that statute in its interpretation had a limitation. For instance, probably the honourable Member is aware that it did not extend to Scotland, and it is open to contention, I should think, that it did not extend to Canada, which did not form part of the possessions of the Crown till nearly 50 years afterwards.

250. As a matter of fact it would be true that no grant was executed by King George III. to Sir Jeffery Amherst at all?—I gather so from the recital, but beyond that I do not know whether there was or whether there was not.

251. Then the ground of that pension is the failure to receive any benefit under a grant which was never made?—Yes, possibly so. The position of the Treasury was this: the Act of Parliament was their direction; they could not go behind the Act of Parliament as to whether the King was right or wrong in the method in which he caused the claims of Lord Amherst to be stated.

252. I think this pension was commuted by the Treasury in August 1885, was it not?—It was.

253. After considerable attention had been drawn in public to the objectionable character of this and other pensions?—Considerable attention had been drawn to various pensions. I do not recollect this particular pension being mentioned, but very probably it was so, within the knowledge of the honourable Member.

254. You were good enough to refer the Committee on the last occasion to an examination of Lord Monteagle before a Select Committee on Public Moneys, and I will refer you to Question 134 in that Evidence, and I will read to you a passage from Lord Monteagle's answer: "I think

Mr. *Bradlaugh*—continued.

"I think that the purchase and extinction of such allowances of a permanent kind charged on revenue is most desirable for the public service, but I think that Parliament has a right to be informed of that transaction, and of the terms under which it is carried into effect, so as to lend a sanction to the matter before it is finally completed;" do you agree in that view of Lord Monteagle's?—Yes, generally; but the Committee will recollect that between the time when Lord Monteagle gave that answer and the present time there has been a special authority given by Parliament to the Treasury to commute perpetual payments by means of a ten years' loan the condition attached being that the acts of the Treasury, the commutation acts of the Treasury, should be communicated to Parliament in the Session during which they take place. Therefore, Parliament has given to the Executive Government a discretion which was not in existence at the time when Lord Monteagle made that answer.

255. Referring to Paper No. 2 (App. No. 2, p. 57), and to the letter of Thomas Abbot, of the 8th of July 1841, have you been able to find whether there was any answer in writing ever made by the Treasury to that letter?—No, there was not; there is no official answer on record.

Mr. *Arthur O'Connor.*

256. What was done with the letter; what is the Minute upon it?—The letter bears upon it the word "Read." At that time the Board of Treasury sat, and papers were read before the Board, and it has been a very common minute upon papers, if no direction was given upon them at the time, to put "Read." But I can trace now no reason why no further directions were given upon the paper; anything I can say about that must be only conjecture on my part.

Mr. *Bradlaugh.*

257. Then shall I be right in saying that, as far as you are able to learn, there is no Treasury Minute whatever on the subject of the letter of the 8th of July 1841?—That is so.

258. And that the state of things in relation to that 630 *l.* 14 *s.* 2 *d.* is accurately represented thus: a Treasury Minute directing the payment to cease on the 5th of April 1841; a further Treasury Minute on the 7th of June 1841, directing a sum of 315 *l.* 7 *s.* 1 *d.* more to be paid; and no other Treasury Minute of any kind whatever on the subject?—Not that I can find.

259. Have you been able by any search to ascertain whether any, and if any what, negotiations took place with the late Duke of Marlborough for the commutation of the perpetual pension of 5,000 *l.* gross?—I have not been able to find any record.

260. Referring to Paper No. 1 (App. No. 1, p. 43), the first item on that page, "Duke of Marlborough," what provision, if any, has been made in the recent commutation as to the rights of the Crown in reversion to the Honour and Manor of Woodstock, and the Hundred of Wootton?—They are not affected by commutation; I think if the honourable Member has consulted the Acts he will see that the Pension Act and the Woodstock Act are two separate Acts. The Act affecting the Manor and Honour of Woodstock stands exactly as it did before the commutation, and is not affected by it.

Mr. *Bradlaugh*—continued.

261. And any rights that the Crown had, the Crown still has, and there has been no bargain as to those rights?—That is the case.

262. Now I will trouble you with one or two questions, simply on the evidence you gave last time, and I will refer you first to Questions 55 and 56 in the Minutes of Evidence; can you now inform the Committee further as to any other allowances or payments to the Duke of Grafton; you kindly promised to search whether there were any other payments; can you now inform the Committee further as to any other payments or allowances to the Duke of Grafton?—The only case which I have been able to find out is one of which, I think, the honourable Member is aware, namely, that the Duke of Grafton was made Perpetual Ranger of Whittlewood Forest. When that forest was disafforested, I think it was about 30 years ago, there was a commutation of his rights and privileges as Ranger for a certain amount of land, and that land was transferred to him as an estate.

263. Can you say the nature of the land transferred?—It was part of the forest; it included a lodge, a country seat, which he, as Ranger, had been able to occupy, and a certain amount of land. I think the land may be described as about 500 acres, which was given to him as a grant representing his rights as Ranger upon the disafforestation. Therefore I think, perhaps, as far as I understand the papers, 500 acres represents the money value of the rights and privileges.

264. Five hundred acres and Salcey Lodge, shall I be right in saying?—This is Wakefield Lodge. Wakefield Lodge is the house in Whittlewood Forest; probably it would be more convenient to the honourable Member, rather than learn from me second-hand the information about it, to refer to a full description of the transaction in a Report of the Commissioners of Woods and Forests.

265. In what year?—It is in the year 1858, the 36th Report of the Commissioners of Woods and Forests, presented to Parliament in the year 1858.

266. Shall I be correct in summarising it by saying that the result of that, as shown by that Report, was practically an additional money benefit to the Duke of Grafton of some 30,000*l.* or 40,000 *l.* in value?—His rights there were commuted for 500 acres.

267. And were there 240 acres, or something of that kind besides, with Salcey Lodge?—I do not find in that Report, and have not seen yet, the circumstances under which he became entitled to Salcey. I would like to mention that I see from these papers that the Duke of Grafton had, as the honourable Member says, some 200 or 300 acres in Salcey Forest, and the Lodge; but I do not see here, at all events, that that was part of the grant under which he was Ranger of Whittlewood. I will make an inquiry about it, because I have not found it in this place.

268. Then

Mr. *Bradlaugh*—continued.

268. Then perhaps you will kindly continue your researches on that, and let us have the result of it in a future meeting?—I will.

Mr. *Arthur O'Connor.*

269. What was the amount of land disafforested in connection with Wakefield Lodge?—The disafforesting was about 4,000 acres altogether. In the map of Whittlewood Forest made for the purposes of disafforestation the area is stated to be about 4,061 acres.

270. Whereabouts is it?—Whittlewood Forest is near Buckingham; Buckingham is about the nearest town to it, I think.

Mr. *Bradlaugh.*

271. Referring now to your answer to Question 196 on the same subject, have you made any reference to the First Lord of the Treasury, or otherwise, since you were before the Committee?—After the sitting of the Committee I stated the result of the questions which the Committee had put to me to the First Lord of the Treasury, and by his desire, and under his authority, I had some communication with the representatives of the Duke of Grafton and the Duke of Richmond.

272. Confining myself for a moment to the answer as to the Duke of Grafton (I will take the other separately), has the result of your communication with the representatives of the Duke of Grafton enabled you in any way to identify the lands purchased out of the 229,000 *l.* which you told us was invested?—The representatives of the Duke of Grafton empowered me to inform the First Lord, as one of the trustees, that they could give a statement of the sums sold out of the funds and invested in land, with dates, and the description of land bought. I may say, in addition to that, that under the Duke of Grafton Act of 1815 copies were directed to be deposited at the Land Revenue Office.

273. Is that the Act under which the moneys were invested?—It is the 55th George III., Chapter 56. It is a private Act. Here the Act is, if the honourable Member would like to look at it (*handing it to Mr. Bradlaugh*).

274. It is, "An Act for enabling the sale of all or any part of the Stocks already transferred in redemption of part of the annuity of 6,870 *l.*, payable out of the Consolidated Fund, in lieu of the duties of prisage and butlerage of wines;" and so on?—Yes.

275. Will you now finish your answer?—Copies of the transactions were to be deposited with the Land Revenue Office. I have made inquiry at the Land Revenue Office, and the copies deposited do not appear to be complete; but, I think, they are very nearly so, and I have a précis of them (it is not complete yet), which it may be convenient that I should put in. But perhaps the honourable Member will let me show it to him, and then he will be able to judge to what extent it meets his wishes.

276. What is it a précis of?—Of the sale and purchase transaction as deposited at the Land Office Revenue.

277. Now on that, referring you to the Return of the 17th of January 1881, page 3, can you say

Mr. *Bradlaugh*—continued.

why in that Return Parliament was referred to an Act of Henry VIII. as being the Act the provisions of which governed this land, when in reality the Treasury had before them the Act of the 55th George III., Chapter 56, of which they said nothing?—The only reason I can give for that is, that in that very Act which the honourable Member has open before him the Act of Henry VIII. is mentioned; I understand that that is the Act which gives a reversion to the Crown. I would refer the honourable Member to Section 3 of that private Act.

278. I see that this Statute of the 55th George III., Chapter 56, enacts that duplicates of all conveyances of land under this Act are to be deposited in the Land Revenue Office; has that been done?—That is what I have just been mentioning to the Committee; that under that direction copies of the transaction are directed to be deposited at the Land Revenue Office; and from the copies there has been prepared this précis which I am proposing to hand in.

279. I am not quite sure whether I have made myself clear; as a matter of fact, have you learned that duplicates of all the conveyances have been, or that some of them have not been, so lodged?—I mentioned before that, as far as our present searches go, the record does not appear to be complete; and it may be that two, three, or four have not yet been found.

280. Of the deeds, do you mean?—Of the deeds; but the greater part of them are on record there in accordance with the Act.

Mr. *Arthur O'Connor.*

281. How many deeds ought there to be altogether?—I can only give a guess at that; I should say that they were 10 or 12.

282. How many are missing?—That I cannot say. I should be able to supplement that, if the Committee wish to have it, by the Return which the representatives of the Duke would give; but that Return has not been given me yet; and it would not be given except upon an expression of the wish of the Committee to have it.

Mr. *Bradlaugh.*

283. Whose duty, if the duty of anyone, would it have been on the part of the Treasury to see that the provisions of this Act of 55th George III., Chapter 56, were carried out?—That would be according to the directions of the Act. Does the honourable Member find any directions in the Act as to seeing that that is carried out?

284. I cannot say that I do. Then the Treasury have no knowledge of anyone whose duty it was to see that, when a portion of the trust funds were sold out, they were really invested in lands subject to the same trusts?—There is no direction there upon the case. The Land Revenue Office, which has now no special interest that I am aware of in the matter, was directed by that, as I read it, to receive these copies when offered; but I do not see it put upon the Commissioners of Woods and Forests, or their subordinate in charge of the Land Revenue Office, that he is to keep a watch over the transactions

Mr. *Bradlaugh*—continued.

of the estates, or the trustees, and ascertain that every deed has been deposited with them. They were mere recipients of that which the representatives of the estate chose to deposit with them.

285. But the First Lord of the Treasury was a trustee?—Yes.

286. And had the power under this Act, by writing, to appoint a person to act for him in the matters of this Act?—Yes.

287. Do you know, as a matter of fact, whether any such appointment was ever made?—I believe no such appointment was ever made.

288. So that, as far as this Act is concerned, the duty would rest, as a trustee, with the First Lord of the Treasury, or, if he had appointed any one, with such appointee?—Whatever duties there were would rest with the First Lord of the Treasury, and no doubt, if a substitute had been appointed, the First Lord of the Treasury could delegate his duties, or part of them, to such substitute.

289. Did I gather from you that the representatives of the Duke of Grafton have already furnished to you, since the last meeting of the Committee, any statement of account, a statement showing how the 229,000 *l.* had been reduced to the sum of 30,555 *l.*?—No; the communication which I took to the First Lord of the Treasury was that on request a statement of that kind would be made out, and could be placed at the disposal of the Committee. It will remain for the Committee to express their wish.

290. Then, I understand that the representatives of the Duke of Grafton have undertaken, if this Committee request it, to make out a statement showing how the 229,000 *l.* has been reduced to 30,555 *l.*, and in what lands the moneys have been invested?—As I understand the case, they are prepared to state the amounts invested in lands, and the dates, and I have no doubt that they would put against that a short description of the lands themselves.

291. But a conveyance should contain, should it not, the full parcels in each case of the lands bought?—I should like to have the desire precisely put of the Committee as to such particulars as that, so that there should not be a mistake about it.

The Committee-room was cleared.

On the re-admission of the public:

Chairman.

292. The Committee has adopted the following resolution: "This Committee requests the First Lord of the Treasury to furnish statements showing how the sum of 633,333 *l.* 6 *s.* 9 *d.*, invested in the case of the Duke of Richmond, has been reduced to 86 *l.* 0 *s.* 9 *d.*, and showing in what lands and at what dates each purchase was made; showing parties, parcels, and purchase-money respectively; and also showing the trusts, if any, declared by deed in respect of such lands respectively; and giving the same particulars in all respects with regard to the sum of 229,000 *l.* invested in the case of the Duke of Grafton." That you will communicate to the First Lord of the Treasury, and get the statements furnished as soon as you can?—Yes.

Wednesday, 4th May 1887.

MEMBERS PRESENT:

Mr. Biddulph.
Mr. Bradlaugh.
Mr. Chance.
Mr. Curzon.
Mr. Jennings.
Mr. William Lowther.
Mr. Mowbray.
Mr. Mundella.
Mr. Arthur O'Connor.
Mr. James Stuart.
Mr. Vernon.
Mr. Whitley.

THE RIGHT HONOURABLE A. J. MUNDELLA, IN THE CHAIR.

Sir REGINALD EARLE WELBY, K.C.B., re-called; and further Examined.

Chairman.

293. I THINK you had better formally now put in the Papers you have been good enough to circulate to the Committee, that is, Papers 4, 5, 6, and 6 *a*?—I put in Papers 4, 5, 6, and 6 *a*.

Mr. *Bradlaugh.*

294. Have you, in addition, a Paper with reference to the Duke of Richmond's investments?—I have recently received from the representatives of His Grace a Paper which they request me to put in for the information of the Committee (*handing in the same*). The Committee will perhaps allow me in putting in this deed to call their attention to the last paragraph of it. Part of the money placed at the disposal of the Duke of Richmond of the day was allowed to be laid out in land in Scotland; and the last paragraph in this Paper says: "The effect of these deeds" (certain deeds of 1861) "was to bar the entail and resettle the Scotch estates, including the small proportion of property in Scotland, purchased under the Parliamentary trust, and the entail was thereby extended." The attention of the First Lord of the Treasury was called to those words, which may seem to interfere with the Parliamentary reversion or to affect the Parliamentary reversion. This Paper has only recently been completed, but the First Lord intends to communicate with the Duke of Richmond on the subject, to ascertain what the precise effect of that deed is.

295. The Paper you have just handed in does not appear, looking at it roughly, to be anything like as full as the Paper handed in with reference to the annuity of 6,870 *l.* to the Duke of Grafton?—No, it is not. I thought that perhaps the Committee would like to have this Paper printed, in order to consider whether there are any further questions which it is necessary to have answered. I may perhaps explain to the Committee that there was no requisition in the case of the Duke of Richmond to register his deeds at the Land Record Office, and no doubt that requisition in the case of the Grafton property has been of considerable use in enabling the representatives of the Duke of Grafton to collect and

Mr. *Bradlaugh*—continued.

put together the different transactions. The Duke of Richmond not being under that obligation, if he had to take out of his muniment room all the deeds relating to this property, it would put him to a very considerable amount of expense and would involve much time. I thought that possibly with that explanation the Committee would read the Paper put in, and would consider whether the information is sufficient. Perhaps, bearing in mind the cost that may be incurred, the Committee would limit further questions so far as is consistent with the object of the Committee.

Chairman.

296. I understand from you that there is no indisposition on the part of His Grace to afford adequate information to the Committee for the elucidation of the case?—Not the least.

297. And that it is simply from the fact that he has not been required to deposit all the documents connected with the estate with the Land Registry, that it is more difficult to frame such a statement as you have made in the Duke of Grafton's case?—He has no index to his deeds (that is what it comes to), and it means a search through all his deeds that are together.

298. Extending over a considerable period of time?—Yes.

299. And it would be a matter of considerable expense?—His representative thinks so.

300. Do you think that the form of information which he gives is sufficient for the purpose of this Committee?—That I do not like to express an opinion about.

Mr. *Bradlaugh.*

301. In the case of the Duke of Grafton, he has given the date and particulars of every deed, the amount of purchase money, and the short abstract of the parcels, and the short abstract of the trust, with remarks upon them?—Yes.

302. Would it be an expense of more than a shilling or two in relation to each deed, to take similar particulars from the deeds of the Duke of Richmond?—

Mr. *Bradlaugh*—continued.

Richmond?—Of course I am only able to inform the Committee what the Duke of Richmond's representative said to me. As the Chairman has pointed out, there is no indisposition whatever on the part of the Duke to place this information at the disposal of the Committee, but his deeds are not sorted; that is the difficulty about it; and it would require a considerable search, and that search would involve upon his part expenditure.

303. As a matter of fact, supposing it were not the case of the Duke of Richmond (you had some considerable experience, and therefore I ask you the question), should you think that it would cost more than a few shillings per deed at the outside to furnish the same particulars in the case of the Duke of Richmond that have been furnished in the case of the Duke of Grafton?—About that I do not feel able to offer any opinion; I really do not know what the cost would be.

304. Shall I be right in saying that there is the same provision in the case of the Duke of Richmond as in the case of the Duke of Grafton, that the First Lord of the Treasury should be one of the trustees?—Yes, I think that is so.

305. Then do I understand you to say that the Duke of Richmond has not furnished to the First Lord of the Treasury, since this Committee has met, the particulars of any one deed to which the First Lord of the Treasury ought to be a party?—That is to say, copies of those deeds to which the predecessors of the present First Lord of the Treasury have been parties? No. I think that is the honourable Member's question?

306. Yes, that is my question. And the Paper you hand in to day absolutely gives no clue whatever to any single deed relating to any portion of the property?—No; I think that is a correct description.

307. Shall I be right in saying that the form of deed which ought to have been executed (I am not saying that it has not been: I have no knowledge on the point), is set out in the Schedule to the Statute of the first of this reign, a private Act?—There is a schedule of the properties bought.

308. No, that is not my question; I have not made myself clear. Shall I be right in saying that in the Statute of the first of this reign there is a Schedule giving the draft of a trust-deed intended to apply to properties bought. It is the 1st of Victoria, chapter 34. The Return says: "The declaration of the trust executed by the trustees is set out in another schedule." In point of fact, it is not the declaration executed, but the draft of the declaration which should be executed?—I believe there is such a draft of a declaration of trust, but I should like to refer to the Act, if the Committee will permit me, in order to see whether that declaration of trust is not confined to the Scotch property.

309. Have you at the Treasury or has the First Lord any kind of record of any declaration of trust which has ever been executed with reference to any of the lands mentioned in this Paper?—I think I have informed the Committee before that there are no records connected with the

Mr. *Bradlaugh*—continued.

references made to the First Lord under the trust which we can find at the Treasury.

310. The only general question I have now to trouble you with is this: have you, on looking over the evidence which you have had to do, and since, been able to obtain any further information which you wish to add as to any of the matters; there were several on which you said you would try whether you could get further information?—One point on which I said I would endeavour to find some information is this: The honourable Member asked me a question about commutation of prisage and butlerage, and he also asked me whether I knew of any case at all similar to that of the Duke of Grafton, and I mentioned the case of Lord Ormonde, and the honourable Member then asked me if I could obtain some information about that. Perhaps he would like to hear a short description of the Ormonde case.

311. If you please?—I will give you the whole paragraph. The beginning of it is a description of Prisage: "Prisage was a right the King had by ancient prescription of taking to his own use, and at his own valuation, as much of all merchandise belonging to merchant strangers, out of every ship importing the same, as he had occasion for, under the name of prisage. Customs were both fixed and uncertain duties paid on importation and exportation, according to the value of the commodities. Native merchants paid customs only, except in the article of wine, on which they paid prisage. Merchant strangers paid butlerage but not prisage, and natives paid prisage but not butlerage. Prisage was either single or double in Ireland; single prisage was one tun, when the quantity imported amounted to or exceeded nine tuns, but was under 18 tuns, and double prisage was two tuns when the quantity amounted to or exceeded 18 tuns. At a subsequent period the importers by agreement paid a certain fixed duty in lieu of prisage in kind. Merchant strangers were prised until Edward I. remitted them all prisage whatsoever in consideration of their paying him and his heirs the sum of 2 *s.* per tun on all wine imported, called butlerage, because paid to the King's butler, and 3 *d.* per pound on all merchandises imported and exported, except on wool, skin, and leather, for which they were before subject to alien duties. The prisage of wine in Ireland was originally granted by Henry II. in the year 1177, to Theobald, son of Herveius Walter, to whom the King gave the hereditary butlership of Ireland. After the Restoration, King Charles II., by letters patent dated 22nd April 1662, granted to James, Duke of Ormonde, and his heirs male, certain royalties, &c., in the county of Tipperary. These letters patent were recited at length, and confirmed by the Irish Act, 14 & 15 Charles 2, c. 20, in the same year. Under this grant 3,500 *l.* a year, Irish currency, were paid to him for several years out of the Civil List for prisage and butlerage of wine under the authority of King's Letters. In the Civil List establishment of King George I., dated 23rd August 1715, to take effect from 25th March 1715, 3,500 *l.* was directed to be paid to the Duke of Ormonde for prisage. But the

Mr. *Bradlaugh*—continued.

the Irish Act, 2 Geo. I., c. 8, after reciting the British Act, 1 Geo. I., c. 17, by which the Duke of Ormonde was attainted of high treason for not surrendering himself to justice at or before 10th September 1715, annuls for ever the said letters patent, and declares all the possessions of the Duke of Ormonde, on 10th September 1715, to be forfeited to the King. Under the British Act, 7 Geo. I., c. 22, passed in June 1721, the forfeited estates of the late James, Duke of Ormonde, were for 50,000 *l.* purchased by his brother, the Earl of Arran. In 1733 the prisage duties were leased by him to the Crown for three years, from Michaelmas 1732, at the yearly rate of 4,000 *l.* This agreement continued to be renewed from time to time, till King George II., by his letter dated 9th April 1741, appointed a yearly sum to be paid during his pleasure to the Earl of Arran for these duties. In 1806 the Act 46 Geo. 3, c. 94, after reciting that it would tend to uniformity in the collection and application of the Revenue of Customs in Ireland if the duties of prisage and butlerage were re-vested in the Crown for the public service, with the consent of the Earl of Ormonde and Ossory, who was, or claimed to be, entitled to them, authorised the Treasury to treat with the Earl of Ormonde for the purchase of his rights in the prisage and butlerage of wines in Ireland. Under 50 Geo. 3, c. 101, the contract made for the purchase, at the price of 216,000 *l.* Irish, or 199,384 *l.* 12 *s.* 4 *d.* British currency, was confirmed, and this amount was granted by the Appropriation Act, 50 Geo. 3, c. 115, in 1810, and was paid out of supplies in the financial year 1811–12, when these duties became absolutely vested in the Crown."

312. I have the statute of the 1st of Victoria now, and you are quite correct. The draft trust-deed in that schedule I think was limited to the Scotch estates?—I thought so.

313. If you look at it you will see that it is so?—"Empowering the trustees to purchase lands in Scotland."

314. As far as the Treasury have means of knowing; you have no means of knowing that with regard to the Scotch estates any trust-deed in that form has ever been executed at all?—I have no means of knowing if any trust-deed in that form was ever executed; at the same time I have mentioned to the Committee the fact which the Duke of Richmond's Paper states at the close with regard to a deed executed in 1861.

315. But I see that while that is a general statement of the effect of these deeds, there is no recital of any deed by date or parties, showing that the solicitor who states that to be the effect has referred to any particular deed to get the trust from that?—No, there is nothing on the face of that to show it, but of course that is taken from a deed; I have seen the deed itself, but I do not pretend to know or give an opinion upon its contents.

316. Have you seen the deed sufficiently to tell the Committee anything about it?—No; the deed that I saw was an immense long deed of 30 or 40 pages.

317. That would be the deed applying to the Scotch property?—Yes.

Mr. *Bradlaugh*—continued.

318. Besides those properties set out in the first schedule of that Act, have you seen at all the deeds of trust relating to the other properties?—No; in fact, I only saw the outside of that with reference to that note made by the solicitor, because it was necessary that I should mention the fact to the First Lord.

319. The Scotch deed, when you saw it, was in the custody of the Duke's solicitor?—Yes, I think it was in the custody of the Duke's solicitor.

320. I am not aware of his name?—Messrs. Burch and Davidson.

321. As far as you know from your researches now, do the Papers which you have handed in to the Committee, from No. 1 to No. 6, inform the Committee as to every payment in perpetuity under the terms of the reference, whether hereditary, as you would distinguish them, or non-hereditary, as you drew some distinction on the last occasion?—We have tried to make our list as complete as possible, and I hope it is correct. I do not know any other place to go to to find any case that may have escaped us.

322. And you have nothing, as far as you know, to excite your suspicion that any have been overlooked?—No, nothing. There is one very small matter indeed; there have been one or two of these small perpetual payments that have not been paid for a great number of years; we practically look upon them as lapsed at the Treasury. There is a further correction which perhaps the Committee will allow me to make. I believe we made a mistake in stating the effect of the grant to the Duke of Richmond. The grant to the first Duke of Richmond was to the heirs of the Duke of Richmond; we made a mistake and put his "heirs male" in the Paper which has been circulated. My attention was called to the fact that there was such an error, and on looking at the Act, I see it is recited there, "his heirs," not "heirs male."

323. Have you a copy of the original grant at the Treasury or not, I do not mean the recital in the Statute?—No, I have not. My attention was called to the fact that it was the "heirs" and not the "heirs male" by the solicitor of the Duke.

324. Could you obtain for the Committee a copy of the grant with that material difference?—Certainly, I will take the instructions of the Committee as to that. Perhaps the honourable Member knows the preamble of the Act; and the Committee would be able to judge how far without sight of the original deed the preamble of the Act might be taken as sufficient. I quite understand the honourable Member's grounds, that he would not accept the statement of the recital; but if the Committee will allow me to read the words, perhaps they will see that it refers to an enactment to which we could refer at once. The words that I am alluding to are these: "Whereas by an Act of Parliament made and passed in the Session of the 39th and 40th years of the reign of His late Majesty, King George the Third" (I am now reading from the Act of 1868), "it was enacted that the annuity of 19,000 *l.* agreed upon as the consideration for such purchase of the said coal

Mr. *Bradlaugh*—continued.

duty as aforesaid should be issuing out of and charged upon the Consolidated Fund, and be paid to the Most Noble Charles, third and then Duke of Richmond, and the heirs male of his body, and in default of heirs male of his body, then unto the Right Honourable Lord George Henry Lennox, brother of the said Duke, and the heirs male of his body, and in default of heirs male of his body, then into the heirs of the body of the Most Noble Charles, first Duke of Richmond."

325. I have not that Act before me; if that is so enacted, that is an answer?—If the honourable Member would send for the 39 & 40 Geo. 3, c. 43, I think the answer would be sufficient.

326. Now I gather that, as far as you are aware, except those few pensions, as to which I do not ask you, which have lapsed and not been claimed for many years, you have given the Committee now references to every pension or payment, either hereditary or otherwise, in perpetuity?—That is our belief, and we think we have taken every means we know to satisfy ourselves.

Mr. *Jennings.*

327. I should like to ask you one or two questions on Paper No. 1. The list is complete, you say, so far as you know?—I think beyond No. 1 I have given you in another Paper.

328. That does not relate to pensions in the same category. Is there not a perpetual pension of 625 *l.* a year to Mrs. Sarah Hamilton and children, which is not in your list at all?—That is not a perpetual pension. You are speaking of a pension that appears, or did appear, in the Finance Account, are you not?

329. It is one of the hereditary pensions, is it not; a pension to Mrs. Sarah Hamilton and children, originally granted in 1797?—I think that is not a perpetual pension; what reason has the honourable Member for thinking so?

330. I have it from an old Parliamentary Return?—If the honourable Member has any reason to think so he may be correct. My impression is that it is not perpetual.

331. It is in the Parliamentary Return of 1876-77, "Miscellaneous Pensions;" it is a perpetual pension, I take it?—I think if we turn to the last volume of the Finance Accounts I shall be able to show the honourable Member that that has passed away. I will give the honourable Member the information, but my impression is that that has expired in ordinary course.

332. On page 6 of this Paper, No. 1 (App. No. 1, p. 46), there is an entry relating to the "Hereditary Chief Proclamator and Usher, G. H. W. Heneage"?—Yes.

333. As I understand this note, there was a Mr. G. H. W. Heneage who was the holder of these offices some years ago?—Yes.

334. Could you tell us what were the profits attached to those offices?—The amount that we paid him is the amount is the second column, 588 *l.* 6 *s.* 9 *d.*

335. Was that the salary?—That is the salary; that I think was the sum for which the profits of the office were commuted.

336. But I want to know what was the salary of the office?—That is all he received from us.

337. Do you know whether the duties of the

Mr. *Jennings*—continued.

office were of an onerous character at all?—I do not like to say now, but my impression is that it was a sinecure.

338. Could you tell us in what year the offices were abolished?—If the honourable Member will look at the description he will see that the offices were abolished by the Act 15 & 16 Victoria, chapter 73.

339. What I should like to know is were the receipts of this office greater than appears on this Paper, before the office was abolished?—I shall be able to get the information for the honourable Member. The abolition you will see took place a very long time ago. I shall be able to get for you what the basis of the compensation was.

340. Could you tell us on what ground the pension was awarded to Mr. Heneage, the office being itself a sinecure?—To the present Mr. Heneage.

341. On what ground was the pension awarded to a kinsman of the late Mr. Heneage?—It was an office that he held in perpetuity, and therefore when it was abolished he was entitled to compensation.

342. The office being no doubt a complete sinecure?—I should think it was. Without referring to the Papers of the time I should not be able to say that positively was a sinecure.

343. It was commuted, however, last year only, as I understand?—Yes.

344. For 15,852 *l.* 15 *s.*?—Yes. The honourable Member has asked me what the emoluments were on which he was awarded his 588 *l.* That took place when the Act passed.

345. As far as you know, no services whatever were rendered to the nation for this money, or for the salary attached to the office?—I do not like at the present moment to say that at the time the Act of the 15th & 16th Victoria was passed no duties were attached to the office; but from that time when the office was abolished of course he received the compensation sum for no services rendered.

346. So far as you know no services were rendered for this salary, or for this 15,852 *l.*?—If I say that it was a sinecure, I ought to know it positively.

347. But it appears, does it not, from the description here that it was a sinecure?—I should take it so.

348. And that no services were ever rendered to the nation for this money?—I have no doubt that Papers of the time when this annuity of 588 *l.* was awarded to Mr. Heneage in lieu of the emoluments of his office would enable me to answer the honourable Member's question.

349. Then on page 8 there is an entry of a pension paid to the Master of the Hawks of 965 *l.* a year?—Yes.

350. Is this still paid to the Duke of St. Albans?—Yes.

351. According to the note in the Paper I see that the Lords of the Treasury consider it "imperative" upon them to continue this payment?—The honourable Member will see that that is the opinion of the law officers on which the Treasury have acted.

352. You put it as the opinion of the law officers only?—"The right of the Duke of St. Albans

Mr. *Jennings*—continued.

Albans to the annuity was referred by the Treasury to the law officers in 1831, and they reported that the heirs of the first grantee of the office have such an interest in the salary granted as to render it imperative upon the Lords of the Treasury to make provision for continuing the annual payment."

353. So that practically this sum of money is to be paid for ever, so far as you know?—As far as we know.

354. And although all service for the money has long since ceased?—I presume the Duke of St. Albans does not keep hawks.

355. There are four falconers for whom 50 *l.* a year each is allowed, making 200 *l.*, and 600 *l.* a year is allowed for the "provision of hawks." I suppose neither hawks nor provision are provided; but what I wish to ascertain accurately is whether this expenditure on page 8 of 965 *l.* a year is to go on for ever and ever, without any break in it at all, so far as you know?—Of course in dealing with these questions, the Treasury act upon legal advice, and certainly my understanding is that we are advised that the Duke is entitled to payment.

Chairman.

356. I should like to ask whether you are aware whether the Duke of St. Albans has any duties of attendance on the Court or any Court duties devolving on him in consequence of the office that he holds?—No, I do not think so.

Mr. *Jennings.*

357. Then on page 9 there is a memorandum relating to the Dauverquerque pension; it was granted in 1694, I think?—Yes, it was.

358. Have you any information beyond that which you have given in this Memorandum, as to the services for which this pension was granted?—No. The honourable Member will remember that he, as Lord Grantham, was a well-known adherent of William III.

359. Yes, I am acquainted with what is stated in history of his career, but not with any services rendered to the nation for which he received 2,000 *l.* a year; history is silent as to that; I thought perhaps you might know?—No, I do not know that I have seen anything more than this fact; the King had the power of granting these pensions.

360. Then Lord Cowper appears to have received four-fifths of that annuity down to March 1853?—Yes.

361. Are you aware in what way he was connected with the Dauverquerque family?—I could not say now, but I think I should be able to trace it out if the honourable Member wishes it, and get the information.

362. I should like to know why 40,000 *l.* of the nation's money was paid to Lord Cowper for his interest in the pension?—I take it that he was a lineal descendant.

363. The sum of 375 *l.* 16 *s.* is still being paid to some one; to whom is that sum paid?—In the first column the honourable Member will see that it is now payable to L. L. Cohen.

364. Is he related in any way to the Dauverquerque family?—Perhaps the honourable Member will let me take these questions from him,

Mr. *Jennings*—continued.

and I will put in the answers as a further statement; at all events I can inform him what I am able to find out.

365. It is part of the business of this Committee to ascertain whether these hereditary pensions should be continued, and I want to ascertain if possible on what ground this money is being paid now. I should like to know therefore, why, and to whom, this 375 *l.* 16 *s.* is being paid after 40,000 *l.* has been given for commuting it?—For commuting a portion of it.

366. Then as to the Schomberg Pension, page 4, is 984 *l.* a year still being paid?—No, not quite. If the honourable Member will look, the four last payments are lettered (a) (b) (c) (d); and if he will look in the fifth column he will see that those represent sums that were commuted in 1883; that leaves 720 *l.*

367. Still being paid?—Yes.

368. To Mr. Powys and Mr. Gosling?—Yes.

369. Could you tell us what is the legal title of these persons to that pension?—That question also perhaps you will allow me to take down.

370. And whether they are descended from the Duke of Schomberg's family?—Yes, I will inquire as to that.

371. With regard to the Penn Pension, has the whole of it been commuted?—The whole of it has been commuted.

372. From 1790 to 1884, 4,000 *l.* a year was paid by the nation on account of the pension, was it not?—Yes.

373. And then 107,780 *l.* was paid to commute it?—Yes.

374. Is it not a fact that the persons to whom a pension and commutation were paid were not the heirs and descendants of William Penn at all?—I do not know that I can express any opinion upon that point. What is the case is that the Act of Parliament directed us to pay it to those persons, and I presume that Parliament was satisfied at that time that they represented William Penn.

375. And you have no means of knowing whether they were the heirs or descendants of William Penn or not?—No, we have none; we cannot go behind an Act of Parliament.

376. But there is no certainty whatever that this money ever went into the hands of any heirs and descendants of William Penn. As a matter of fact I believe there were no heirs or descendants of William Penn?—I do not know under what circumstances these gentlemen claimed.

377. Penn himself died in 1718?—Yes.

378. And the pension was not granted till 1790?—Yes. It is stated in the Act "that in consideration of the great extent of the losses and of the meritorious services of the said William Penn, it is worthy of the King's Royal munificence, and of the liberality of the British Nation; that a further provision should be made for the descendants of the said William Penn, and that the House of Commons has for that purpose resolved that the annual sum of 4,000 *l.* be granted out of the Consolidated Fund to the heirs and descendants of the said William Penn. The pension of 4,000 *l.* a year for ever was granted to certain trustees in trust as to

Mr. *Jennings*—continued.

three-fourths for John Penn, of Stoke Pogis, and his descendants, and as to one-fourth for John Penn, of Wimpole-street, and his descendants."

Chairman.

379. The persons who were supposed to be the heirs and descendants of William Penn were referred to in the Statute?—Yes.

380. And you cannot go behind an Act of Parliament?—No.

Mr. *Jennings.*

381. Then with regard to the Nelson Pension, on page 3 of this Paper, No. 1 (App. No. 1, p. 43), this pension is still being paid, I presume?—It is.

382. At the rate of 5,000 *l.* a year?—At the rate of 5,000 *l.* a year.

383. And has been paid at that rate since 1801?—Since the 46th of George III.; that would be 1806.

384. Do you know who were the direct descendants of Lord Nelson?—I believe he had no direct descendants. The present Lord Nelson represents Lord Nelson's brother, I think.

385. So that Lord Nelson had no legal direct descendants, as I understand it?—I believe not.

386. The pension has been paid ever since, however, to persons who were supposed to be his direct legal descendants?—I do not know whether you could call a collateral descendant a direct descendant; I should think not.

387. Can you tell us to whom the pension is paid now?—The present Lord Nelson; he is the great-nephew of the first Lord Nelson.

388. I did not quite understand from Mr. Bradlaugh's examination whether any pension is now being paid to the Duke of Grafton or the family, or has it entirely ceased?—I think it has entirely ceased.

389. Would it be convenient to you to tell us how much has been paid to the Grafton family on account of the pension which is now commuted, before it was commuted?—I doubt very much whether we should be able to say that, because in the case of a pension which he had in fee-simple he would be able to sell it without informing us about it; but if we have the information I will put it in.

390. You would not know what he sold it for; but would you know whether the nation had paid 4,000,000 *l.* to the Grafton family on account of his pension before it was commuted?—You mean the whole amount they have received?

391. On account of the particular Grafton Pension, I mean?—I suppose that it is a question of simple multiplication by the number of years.

392. I have reason to believe that 4,000,000 *l.* is somewhere near the amount; but mine is a mere conjecture, you understand?—Quite so.

393. Could you give us any information about the pension to Sir Thomas Clarges and heirs, which I do not see in your list; is that one of the extinct pensions also?—It is at the top of page 10 of the Return.

394. Then according to this Paper that has been entirely commuted?—That has been entirely commuted.

Mr. *Mowbray.*

395. I understood that the pension to the Nelson family was granted after the death of Lord Nelson, was it not?—Yes, the 46th of George III. would be after his death.

396. That is the Act under which the present pension is paid?—Yes.

397. And that Act was after the death of Lord Nelson?—Yes.

398. In fact, that Act refers, as appears in your statement, to the family of "the late Viscount Nelson," "being desirous to bestow on the family of the said Lord Viscount Nelson," and so on?—Yes. Lord Nelson had a brother, and after his death the title and the pension were granted to him.

Mr. *Jennings.*

399. It says here the direct legal descendants, and I want to know who they were?—"And such other persons as the title of Earl Nelson may descend to," you will see the statement says.

Mr. *Biddulph.*

400. About the pension to Penn's heirs, there has never been any dispute as to the fact that the gentleman who commuted it was the heir?—Before we commuted it we took legal advice about it, and we inquired with regard to the gentleman who then held it, Colonel Stewart, whether we might be assured that he had a legal title to it; we were advised so, and in consequence of that we commuted it.

Mr. *Bradlaugh.*

401. But you had at that time a written notice in which it was alleged that that gentleman was not the heir, and that the person who gave the notice was prepared to furnish proof of it?—The honourable Member I believe had addressed a letter to the Treasury upon the point; but of course we cannot go behind or act beyond our legal advice in the matter.

Mr. *Biddulph.*

402. But is it not the fact that a portion of that pension, of that 4,000 *l.*, was mortgaged, and had been for some time, and consequently no person would have advanced money upon it unless they had been satisfied that the person so mortgaging his pension was fairly entitled to it?—I do not know that we had the information before us that it was mortgaged.

Mr. *Chance.*

403. I want to inquire of you as to the present character of the commutation of the post groats of the Duchy of Cornwall. Will you tell me, first, have you been able to trace any statutory or other powers by which the Treasury had any right to commute pensions without any application to Parliament?—The question does not refer to the post groats now, does it.

404. No; I ask that question generally?—I think I have already stated to the Committee that the Treasury did on more than one occasion commute pensions, and therefore claimed the power of such commutation. The right to exercise such a power was discussed before the Committee on Public Moneys in 1856, and since that

Mr. *Chance*—continued.

that time I think I am right in saying that the Treasury has not commuted any pension except under authority from Parliament; but beyond that statement of fact I am not able to say; at least my opinion would not be worth much as to what the value of the Treasury claim is.

405. Will you tell me are you aware of the existence of any opinion of the law officers that there did exist at any time any statutory or other power to commute these pensions without coming to Parliament, that is, prior to the Act of 1873, of course?—I may put aside one point: a power had been granted to commute certain small pensions in the Woods and Forests Revenue, which I put aside, because it does not affect the main question. I should not be able to say from recollection whether an opinion of the law officers was taken before the commutation of the two or three pensions which are known to have been commuted upon Treasury authority alone. I think that in all probability such an opinion was taken, but I am not able so say so from recollection.

406. Would it be too much troubling you to ask you to make some inquiry whether such an opinion was taken?—I will make inquiry.

407. Now I presume that you have been many years in the Treasury?—Yes.

408. Then perhaps you will tell me if I am correct in stating that a Minute is usually written on a piece of paper and placed with the original papers, but that formerly a Minute Book was also kept, in which a note or copy of the Minutes was entered, and that that book was duly indexed?—The decision of the Treasury upon applications brought before it is recorded either on the back of the paper itself, or, as the honourable Member says, in a paper attached to it. In former years, in addition to this record, which would always of course be found with the papers, there was a regulation that the more important minutes should be recorded in separate books, in fact re-copied into separate books with a short notice of the paper upon which the record was made.

409. Am I right in stating that that separate book was indexed?—I think I can say that it was indexed.

410. Can you state whether that book was in existence as to minutes passed, say up to 1839?—I should think without any doubt it was.

411. Therefore, would there have been any considerable difficulty in discovering whether a minute had been passed in say 1840 or 1841, directing this sum of 630 *l.* for post groats to be stopped after a certain date?—Those fair minutes to which the honourable Member refers would not be a perfect record, because by no means all the minutes were recorded there. Therefore the fact of not finding it there would not be an exhaustive answer to the question.

412. Then can you state to the Committee, as a matter of fact, whether in that minute book the Minute of the 5th April 1841, directing the payment of this sum of 630 *l.* odd in lieu of post groats to be stopped, is or is not recorded?—I think it probably is recorded; but it is hardly necessary to consider that, because the minute is in a Parliamentary Paper; therefore there is no necessity to search our records.

Mr. *Chance*—continued.

413. You only think it is; you cannot positively state that it is?—I cannot positively state that it is; I should think we shall find it.

414. Therefore, not only was the Minute with the original papers, but it also existed in an indexed minute book?—I take it that was the case.

415. Is there any greater facility in existence for discovering the passing of any other Minute than there was for discovering the existence of this Minute?—The honourable Member will pardon me; I do not quite follow him, because his question rather leads up to the idea that this Minute was not discovered. But it was on record; there has been no plea that I know of that the Minute was lost.

416. What I want to get at is this; is there any other method of recording a Minute than the method which was adopted in your opinion with regard to this Minute of the 5th of April 1841; was it recorded in every respect as every other Minute is recorded?—I think so. The Minute to which the honourable Member is referring, which stopped the payment, is in the year 1839; he has now mentioned a Paper in 1841.

Chairman.

417. But the further Paper was in 1841?—The further Paper which came before the Treasury, and which has been put in to this Committee, was in 1841.

418. But are not those Papers to be found?—Those Papers are put in.

419. Was there a continuation of the payment, or was there any hiatus in the payment from 1841, at any period?—No, I believe there was no hiatus in the payment.

420. You assumed from that, in your former answer, that there was a subsequent decision of the Treasury, which might not be recorded upon the Minute Book, that the payment ought to be continued?—I have got no evidence to put before the Committee in confirmation of such an opinion. It is difficult for me to suppose that the payment would have been continued without some instruction. At the same time I wish the Committee particularly to understand that I have got no evidence whatever to offer in support of this opinion.

Mr. *Bradlaugh.*

421. As far as you are concerned there is an absolute gap of any authority after some month in 1841?—Yes.

Mr. *Chance.*

422. If such a Minute had been made in 1841 would you expect to find it either with the original papers or upon the indexed Minute Book?—Certainly, with the papers; and I wish the Committee further to understand that I do not wish to put it before them in any way that I assume the loss of a Minute; I do not believe that any formal Minute was made; the utmost I can go to is to suppose that some verbal direction was given, because it is rather difficult for me to understand how the payment continued to be made, without any direction, for years afterwards.

Chairman.

423. Have you in your experience in the Treasury found that payments have been made on verbal directions at any time?—No, the only thing, as I have mentioned to the Committee before, is that there has been a change in the method of doing business since then. At that time Boards of the Treasury used to be held, and the papers were brought in, were discussed, and were settled before the Lords of the Treasury. Of course in a case of that kind, when the principal officers of the Treasury were in the presence of the Lords of the Treasury, a verbal direction might be given, and accidentally not recorded. I mean that is a possibility, but I have no proof whatever that that was the case.

Mr. *Chance.*

424. Will you tell me am I right as far as you know in stating it to be the practice that minutes drawn by permanent officials were submitted to a Board of the Lords of the Treasury at which the Lords then present signed those minutes; whether that was or was not the practice in 1841?—No; the minutes I believe were at that time read before the Board; that was according to the general custom; a Board does not sign; the minutes are signed by the Secretary; the Secretary's signature represents the Board; the minutes were initialed by the Secretary.

425. At that date, 1841?—In 1841.

426. Then it is your evidence that in 1841 it was not the habit of the Lords of the Treasury as a rule to sign minutes of this character?—No, not as a Board; but I must make a qualification to that, in this respect, that one finds minutes initialed by the Chancellor of the Exchequer; that is, even at that time; and in the case of those minutes, that signature would simply mean that the Chancellor of the Exchequer had seen and was responsible for the paper, but he would not sign as a member of the Board present; the signature I believe of one member of the Board, *qua* member of the Board, means nothing at all.

427. Could you tell me whether the minutes of that date that were signed by the Chancellor of the Exchequer were for the most part minutes relating to the payment of sums of money?—No. I believe the same as now; important questions were referred to the Chancellor of the Exchequer, and if he approves of the decision he would put his initials by the side.

428. Then if this question as to the continuance of this payment of 630 *l.* had then been referred to the Chancellor of the Exchequer you would expect to find a minute signed by him authorising the continuance of this payment?—Certainly, I should.

429. And there is no such minute?—No, as I have said already.

430. Will you look at the 1 & 2 Vict. c. 120, and tell me whether I am correct in stating that the power to commute these payments under that Act was exhausted by one exercise of it?—As to the commutation, do you mean?

431. Yes?—I think so. I am not a lawyer; but I take it that in all probability the power of commutation was exercised once and for all.

432. Then am I correct in stating that so far as you can discover, there are no words in that

Mr. *Chance*—continued.

Act which would have authorised the Treasury authorities to have continued this payment?—I think that raises a different question, not the question of exercising the power of commutation again; but the power of continuing the commutation which has already been made. It is one thing to exercise a power of commuting, and I do not understand that throughout this there is any question of a re-commutation.

433. Am I correct in stating that under that Act of Parliament, the Treasury made a certain commutation, a portion of which commutation was the sum of 630 *l.* 14 *s.* 2 *d.*, the payment to end on a certain date, and that having exhausted their powers under the Act of Parliament, they proceeded to continue that payment ever since?—I should not accept that method of stating it.

434. Would you point out what in your opinion is the true method of stating it?—What I understood to be the position is, that there was a certain payment to which the Duke of Cornwall was entitled. If there was not a Prince of Wales who was also a Duke of Cornwall, the privileges of the Duchy were enjoyed by the reigning sovereign. King William IV. surrendered what he had a right to surrender, his own life interest; and after him, according to that Paper which has been laid before Parliament, Her Majesty surrendered her life interest; but neither William IV. nor Her Majesty had power to surrender the right of the Prince of Wales. In the meantime, in 1841, the Prince of Wales was born, and one way of stating the argument is that with his birth the surrender fell of itself. Unless the Prince of Wales gave up the right the Treasury were bound to pay.

Mr. *Bradlaugh.*

435. Would this be a way of putting it; the Act abolishes the right of every Duke of Cornwall to post groats from a particular date, in 1838?—In 1838.

436. But gave to the Treasury power to do something in the way of giving compensation in consequence of that abolition?—Yes.

437. That the Treasury exercised those powers and reported to Parliament how they had exercised them?—Yes.

438. Do you find in the Act anything giving the Treasury power to do anything after that?—I only see one power, a power to the Treasury to pay.

439. To pay what they had already decided to pay, and reported to Parliament that they were going to pay?—I see no power to discontinue that payment.

440. That is not quite the question I put; my question was, whether that Act authorised them to do something in consequence of the abolition of the post groats on a particular day, which particular day was in 1838?—Yes.

441. And I asked you whether they were directed to report to Parliament what they had done, and whether they did so report to Parliament what they had done?—Yes.

442. Then I asked whether you found any authority to the Treasury to do anything in that respect subsequent to that?—In that Act of Parliament. I am not a lawyer. I will only say

Mr. *Bradlaugh*—continued.

say that I see only one power to the Treasury, to pay.

443. What I wanted to get at was this; you find an absolute abolition of the post groats from a certain date in 1838; a direction to the Treasury to fix a certain payment in consequence of that abolition?—Yes.

444. A direction to the Treasury to report to Parliament what they had so fixed?—Yes.

445. A direction to the Treasury to pay what they had so fixed?—Yes.

446. Do you find any other direction to do anything else or power to do anything?—No, I do not; we are leaving out certain compensations.

Mr. *Mowbray.*

447. To whom does that Act of Parliament direct the Treasury to make the payment?—Perhaps I had better read the clause. It is contained in Clauses II. and III.: "And be it enacted that it shall and may be lawful for the Commissioners of Her Majesty's Treasury, and they are hereby required to ascertain the amount of the clear annual payments during the last ten years in respect of such Coinage Duties in the said counties of Devon and Cornwall, after deducting therefrom all costs, charges, and expenses to officers, and others during such period incurred in and incident to the ascertaining, managing, and collecting of such coinage duties." "And be it enacted, that in lieu of such coinage duties an annuity or yearly sum equal to the amount which shall be so ascertained to have been the average of such payments shall be issued out of and charged and chargeable upon the Consolidated Fund of the United Kingdom of Great Britain and Ireland and be payable, free and clear from all deductions and taxes whatsoever, quarterly on the 5th day of January, the 5th day of April, the 5th day of July, and the 10th day of October in every year, by equal portions, and be accordingly paid to Her Majesty and other the personage for the time being entitled to the revenues of the said Duchy of Cornwall."

Chairman.

448. Did you not on a former occasion submit some theory to the Committee, your own view, as to why this payment should be continued?—The view that I put forward about it was this: The Treasury had announced, as the honourable Member for Northampton has read out of Paper No. 2 in the Appendix, that King William IV. and Her Majesty had resigned their shares. In the course of 1841 it was pointed out to them by the Duchy of Cornwall that King William IV. and Her Majesty could only resign their shares in it.

449. Pointed out to the Treasury by the Duchy of Cornwall?—Yes, to the Treasury.

Mr. *Bradlaugh.*

450. Was anything more pointed out than in the letter of the 8th of July 1841 which is in this Paper?—This is the letter of which I speak: 8th of July 1841, a letter from the Council of the Duchy to the Secretary of the Treasury; "The Council took into consideration the Minute of your Board of the 15th of February 1839, authorising the issue out of the Consoli-

Mr. *Bradlaugh*—continued.

dated Fund of compensation for the coinage duties, abolished by the Act of 1st and 2nd of Her present Majesty, c. 120, and of the payment in lieu of the Post Groat Duty in Cornwall, until the expiration of the subsisting lease, and I am commanded to acquaint you that, although it appears both His late Majesty and Her present Majesty consented to abandon their claim to this duty, the Council consider it necessary to intimate to the Lords of the Treasury their opinion that this arrangement cannot prejudice the rights of the future Dukes of Cornwall to compensation in lieu of the Post Groat Duty."

Chairman.

451. Have you any record at the Treasury of any reply to that letter?—No.

452. And your assumption is that the way in which that letter was answered was by the Treasury agreeing to the contention of the Duchy of Cornwall, and paying the annuity from that time to this?—I have this remonstrance before me, and I think I said to the Committee before, that according to my view that is a very important remonstrance. I can hardly imagine that it was not taken into consideration, and I should be very much surprised to learn that the Treasury would have ignored a perfectly reasonable claim of that kind, a claim that demands most respectful consideration. I find the exact result which I should have expected under it; I mean the result if they did not reply by giving their reasons why they were obliged to adhere to their previous decision. As they did not do that, I should certainly expect to find that they would have continued paying the compensation. I find out that they did.

453. And you believe that by the payment they assented to the statements put forward by those representing the Duchy?—That is the only conclusion I can come to; but at the same time I wish you to bear in mind that I have no evidence of that.

Mr. *Bradlaugh.*

454. And I understand you to say that you should expect that to take place for the reason you gave. As a matter of fact the whole claim of any Duke of Cornwall to post groats had been abolished by superior authority, namely, Parliament?—Subject to compensation.

455. Subject to compensation; which by the statute abolishing it the Treasury were directed to fix, and report to Parliament?—Yes.

456. And which they did fix, a portion of the sum fixed being ordered to cease on the 5th of April 1841?—They fixed the amount which was payable, but they stated that they did not think it should be continued beyond the 5th of April 1841.

457. But is there not, either in that Paper or somewhere else, and have you not given evidence already to that effect, a Minute in express words directing the payment to be diminished, from the 5th of April 1841, by the sum of 630*l.* 14*s.* 2*d.*?—That is just the point.

458. Under statutory authority they gave a positive direction that it should cease from that day?—That is a matter of wording; there was no positive order. "It does not appear to my

Mr. *Bradlaugh*—continued.

Lords that the sum of 630 *l.* 14 *s.* 2 *d.* should be provided for beyond the 5th of April 1841, and that the compensation should after that date be diminished by that amount."

459. Do you not find there or somewhere else a direction that there should be an order made out for the ceasing?—Here are the words: "But inasmuch as the receipt of post groats in Cornwall, 630 *l.* 14 *s.* 2 *d.*, will cease on the 5th of April 1841, on the termination of the existing interest, this annual sum will be diminished by such amount from date."

460. That is an absolute date of diminution?—Where do the Treasury get power to do that?

Mr. *Chance.*

461. Would you be kind enough to tell me from what fund was this annual sum of 16,000 *l.* ordered to be found?—It was to be charged on the Consolidated Fund.

462. By what officer at that time, 1841; what was the title of the officer who would be charged with paying this sum?—The authority would be given.

463. No; what officer, I ask?—I must explain. The order is given under warrant; I think I am right in saying that at that time it would be signed by two Lords of the Treasury (considerable changes have taken place in the meantime, and I am speaking from memory), that the order to the Comptroller of the Exchequer would be either the warrant signed by two Lords, or a list of the payments to be made signed by the Secretary to the Treasury; but I think at that time it was under warrant with the signature of two Lords.

464. Was this warrant one which should be presented annually to the Comptroller of the Exchequer?—Quarterly.

465. And whose duty was it to prepare that warrant; some permanent official's, I suppose?—It would be prepared in what, I think, then was called the Revenue Branch, what we should now call the Finance Branch of the Treasury.

466. Was it the duty of any official in the Revenue Branch to compare that warrant with the authority under which the sum ought to be paid?—I should say so.

467. And that authority would be found in a Minute of the Treasury under the Act of Parliament?—Yes. I should say that under this Minute the warrant ought not to have contained that Charge; but I ought to add a further circumstance, that this particular form of charge, namely, the charges on the Consolidated Fund, had to be approved by the Comptroller of the Exchequer before he issued the money; it was one of the few instances in which the Comptroller of the Exchequer was practically able to exercise an antecedent check on expenditure; and it is a curious circumstance that it also passed him without authority.

468. But am I correct in stating that this warrant had quarterly to be prepared by an officer whose duty it was to go to the document that was the fountain of the authority to pay this annual sum and to ascertain whether such payment could legally be made?—The payments of course ought only to be put down on the

Mr. *Chance*—continued.

warrant under a standing authority; but as to consulting the original document, you must remember the possibilities of the case, the vast number of payments to be made to quarter; they naturally are carried on from quarter; but clearly I am quite prepared to admit as much as this, that the officer who prepared the warrant is responsible if he put down upon it payments for which there was no authority.

469. But the officer whose duty it was to prepare this warrant quarterly, was bound to ascertain whether there was a standing authority, to use your own expression, to pay this sum?—I think so.

470. Now may I ask you whether in order to discover whether there was or was not a standing authority, he would have to go to the Minute-book, or to the original Minute, or whether there was some book or document in which was collected the standing authority to pay, which was necessary for the due preparation of these warrants?—The ordinary form is that on an authority of this kind being given it would be an instruction to refer this Minute to the department preparing these warrants for officers of that department to take note of it, and of course their duty would to take note of this direction.

471. Then I am to understand that the authorities, the Minutes for the actual payments to be made, were referred to a department charged with the duty of preparing these warrants, and that it was the duty of that department to make some note of these Minutes in order that they might quarterly, or half-yearly, or annually, prepare the necessary warrants?—Yes, certainly.

472. Is there any note in that department of a Minute directing the continuance of this sum in existence?—I have not seen it, but I think the honourable Member will be aware that it must have been communicated to the department, otherwise the original payments could not have been made.

473. But I ask is there any note; of course the original Minute was a Minute directing the payment up to a certain date?—And, therefore, in consequence, these payments having been put upon these warrants, it is perfectly clear that the original Minute must have been communicated to the department, otherwise the order for payment would not have been given.

474. That is not my question; my question is this; is there on the books of the department charged with the preparation of these money warrants any note of any Minute authorising the continuance of the payment, which under the original Minute was to cease upon a certain day?—Not that I know.

475. So that you do not find a Minute either in the Minute-book, amongst the original papers, or on the books of this department charged with the preparation of the warrants?—I find no authority.

Mr. *Biddulph.*

476. Is there no system of audit of these pensions?—The system of audit at that time was very different from what it is now, and I have just

Mr. *Biddulph*—continued.

just mentioned the fact that all moneys were at that time issued, upon the direction of the Treasury, by the Comptroller of the Exchequer. It was the duty of the Comptroller of the Exchequer, before he obeyed the order of the Treasury, to see that the demand was in accordance with the Act of Parliament; that is to say, that if Parliament had granted we will say a million for the Army, that the order of the Treasury was within that million. If the order of Parliament contained in an Act was that

Mr. *Biddulph*—continued.

100 *l.* or 1,000 *l.* or 10 *l.* should be paid to a particular person, it was the duty of the Comptroller of the Exchequer to satisfy himself that that order was in accordance with the directions of Parliament before he issued the money. In this particular case the warrant containing this payment would go to the Comptroller of the Exchequer, and it would be his duty to ascertain that that payment was in accordance with the Act of Parliament before he issued the money.

Friday, 22nd July 1887.

MEMBERS PRESENT:

Mr. Mundella.	Mr. Mowbray.
Mr. Bradlaugh.	Mr. Arthur O'Connor.
Mr. Chance.	Mr. James Stuart.
Mr. Curzon.	Mr. Vernon.
Mr. Jennings.	Sir Richard Webster.
Mr. William Lowther.	Mr. Whitley.

THE RIGHT HONOURABLE A. J. MUNDELLA, IN THE CHAIR.

Sir REGINALD EARLE WELBY, K.C.B., re-called; and further Examined.

Chairman.

477. YOU hand in Papers Nos. 9 and 10?—I hand in Paper No. 9, illustrative of the Pendrell case; and No. 10, a Return for which the Committee asked, relative to the manner in which the money was employed in the case of the Richmond Estate, bought with the proceeds of the coal annuity.

478. And now you have completed all the returns that have been asked for by this Committee?—I believe I have given in all the returns that have been asked for.

Mr. *Chance.*

479. In your first statement I believe you included hereditary pensions and payments only?—Yes.

480. Did you then draw any distinction, and if so what, between hereditary and perpetual pensions?—I think there was a discussion in the Committee; and I think the honourable Member for Northampton pointed out that the wording of the Committee was large enough to include all perpetual payments, and then, at the desire of the Committee, we prepared further Papers, including perpetual payments.

481. But should I be correct in stating that in the Treasury books some distinction is taken between hereditary payments and perpetual payments?—No, I do not think that question has ever occurred to us before the discussion in this Committee; the distinction was only made by us, in consequence of what the honourable Member for Northampton brought before the Committee.

482. Now I believe that there is a discretion left to the Treasury, under the Commutation Acts, as to the amount of purchase money?—You mean the amount for which we may commute these perpetual payments.

483. Yes?—Yes; that is the case.

484. And I think you have already told us that the Treasury make the best bargain they can consistent with equity?—That is their endeavour.

485. In the commutations which took place since 1881, if you can recall some one individual case to your mind, was it a matter of bargain between the Treasury and the pensioner?—As a general rule I believe I am right in saying that the Treasury offered a sum. In some cases, where ecclesiastical payments were commuted, it might perhaps be said that there was a bargaining between the Ecclesiastical Commissioners and the Treasury, but in the case of those pensions payable to individuals I think I may say that the Treasury made the offer of what was practically 27 years' purchase, and it was for the holder of the pension, upon such proof as the Treasury might require, to leave or accept the offer.

Mr. *Chance*—continued.

486. Do you recollect any case, putting aside, of course, these ecclesiastical pensions, in which a different amount from that offered originally by the Treasury was paid to the commuter?—In speaking of the ecclesiastical pensions, I should include with them some charities which the honourable Member will understand would come under the same heading, and I think I am right in my recollection that, in certain cases, where the holder of the payment had been entitled to, what was considered a perpetual charge on land, 30 years' purchase was given. Those are the only exceptions that occur to me.

487. And in all the other cases the amount offered by the Treasury was accepted where any payment was made?—Where any commutation has been made I believe I am right in saying that 27 years' purchase has been paid.

488. Will you please tell me were the Treasury bound to consider the circumstances peculiar to each perpetual payment or pension in making this offer?—I should say so.

489. And to value that pension as nearly as they could?—The Act left the discretion to the Treasury to make the bargain, but the principle upon which the Treasury acted is that which the honourable Member described, namely, to pay such amount as was fair, taking into consideration the equity of the case.

490. I believe I am correct in stating that in the Act of 1873 the second section directs that the Treasury, "in entering into any such contract,

Mr. *Chance*—continued.

tract, shall have regard to the contingency (if any) of the determination of the annuity, and may surrender such contingency upon such terms as they may think reasonable"?—Yes.

491. And is it your evidence that these contingencies were considered by the Treasury?—I think I can say that in every case of commutation the Treasury Solicitor was desired to report as to the probability of the permanence of the pension, and that the Treasury accepted his report to that effect as a sufficient guarantee to them that they might consider the pension as practically not likely to revert to the Crown.

492. Are there any other circumstances which the Treasury consider from time to time in regard to each individual pension; do they confine their view wholly to the determinability of the pension, or do they consider any other circumstances connected with it?—The Treasury looked looked upon a perpetual payment charged upon the Consolidated Fund as roughly equivalent to Consol value, and in fixing the amount they offered a sum considerably less than Consol value. They wished thereby to allow a reasonable margin by which the bargain would not be unfavourable to the Consolidated Fund, and would cover those contingencies which might happen even though their solicitor had advised them that they might consider the pension as practically a perpetual payment.

493. Am I correct in stating that, by Section 2 of the Act of 1873, the Consol value is the extreme limit to which the purchase-money could go?—I think that would be the interpretation of the Section.

494. Would you turn to the Paper you kindly gave us, Paper No. 1 of the Appendix, and would you look at the first of those pensions, the Earl of Morley, 3,000*l.* a year; am I correct in stating that that is a pension in fee?—The honourable Member means, as I understand, by "a pension in fee," a perpetual pension. The pension is granted to the heirs and assigns of Lord Amhurst for ever.

495. And the terms of redemption were 26·945 years' purchase?—Yes.

496. Now would you look at a pension on page 5, the Duke of Grafton's; am I correct in stating that that pension was originally granted to the Duke of Grafton and his heirs male?—Yes.

497. And there also the terms of redemption were 26·945 years' purchase?—Yes.

498. Would you look at pension 3 on the same page, Sir E. Mostyn and Sir William Eden; am I correct in stating that that was a pension granted in tail general to the Earl and Countess of Lichfield for their lives and to the issue of the Countess in tail?—Yes.

499. And that there again the terms of redemption were 26·945 years' purchase?—Yes.

500. Then did the Treasury, as far as you know, in that case draw any distinction between the possibility of the determination of a pension granted in fee, a pension granted in tail male, or a pension granted in tail general?—The Treasury were guided in arriving at their determination by the report of their solicitor.

Mr. *Chance*—continued.

501. But so far as you can see was there any distinction drawn?—No, I do not think there was any distinction drawn between the two.

502. Can you tell me whether to your knowledge any consideration was given to any services which were renderable, at the time the pension was commuted, by any of the pensioners?—Does the honourable Member mean by that whether it was a payment for service actually rendered.

503. Yes?—To answer that question correctly one should read through each of the cases to see, but I do not think that any of these people were held to be rendering a service.

504. And was any consideration taken of the fact that when the pension was originally granted it was granted in consideration of a term of service to be rendered?—No, I do not think so, because my recollection is that the judgment of the Treasury was determined by the nature of the grant under which it was held, and on the advice of their solicitor as to whether it was in the nature of a perpetual grant or not.

505. Then I understand that no distinction was drawn between pensions where no service was agreed to be rendered, and pensions where originally a service was to be rendered, but that service had ceased to be rendered?—I think I should say that the honourable Member's interpretation is correct; but I should rather like, if he would not mind, that he should give me an instance to see that I unders and rightly what his question is.

506. I do not see any distinction at all?—I ought to say that, because there have been one or two cases which have not been commuted in which the question has arisen, and has been considered by the Treasury as to whether there was not a service dependent upon the pension; but I do not remember that case arising upon any of the pensions which have been commuted.

507. Now will you tell me on what consideration did the Treasury draw a distinction between the number of years' purchase in the case of the ecclesiastical and charitable perpetual payments and perpetual payments made to individuals?—The perpetual payments made to individuals really did not give much trouble to the Treasury; it was an offer to the holders if they liked to accept the terms which the Treasury offered; the trouble of paying them was infinitesimal. The only trouble generally that took place was on the death of a pensioner when the claim of the next person had to be substantiated. On the contrary there was an immense deal of trouble attending the payment of a large number of small sums for charities and ecclesiastical purposes, so much so, that it was an object with the Treasury to get rid of them; at least so the Treasury thought; but they had to negotiate with the Ecclesiastical Commissioners, to whom the charge was transferred, or with the Charity Commissioners, and I believe I am right in saying that in both cases those Commissioners declined to take less than Consol price.

Chairman.

508. Have you commuted any considerable number

Chairman—continued.

number of these ecclesiastical pensions?—A considerable number.

509. And still a considerable number remain?—There are still some remaining.

Mr. *Chance.*

510. Was any reduction made in the annual charge by reason of these commutations?—In those cases in which 33 years' purchase was given, which was equivalent to Consol price, of course there would be no reduction in the charge.

511. And in those cases all the advantage gained by the commutation was the saving of trouble in identifying people?—Yes, that was all.

512. Now would you turn to Paper 6A in the Appendix (App. No. 6); am I correct in stating that the annuity to the Duke of Grafton was capitalised, and powers given by Act of Parliament to invest the money so produced in the purchase of land?—That was the case.

513. And when that money was capitalised could you tell me whether it was under the control of the Treasury, or of any representative of the Treasury?—Does the honourable Member mean the act of capitsaliation?

514. When the money was capitalised did it remain under the effective control of any member of the Government or any officer of the Treasury; I mean, when it was invested in Consols was the name of any member of the Government or any officer of the Treasury entered for those Consols?—The Consols stood in the name of the First Lord of the Treasury with other trustees.

515. Then none of this money could have been afterwards applied in the purchase of land without the consent of the First Lord for the time being?—That I think would be the case.

516. And can you tell me whether any examination of the proposed purchase was made by the First Lord, or by any Treasury official on his behalf?—As far as our records go we have no notice on the subject; the Papers on the subject came to the First Lord of the Treasury for the time being, but as far as our records show it was not the custom to put them on record in the Treasury.

517. Was the money, when invested in Consols, accounted for or any record of it kept in the Treasury?—Not that we know of; there is no record of which I am aware.

518. Then am I right in assuming, looking at Paper 6A, in the middle of the first page (App. No. 6, p. 79), that there were purchases made on behalf of the Duke of Grafton of lands partly with his own money and partly from the proceeds of those Consols; take, for instance, the entry, "To complete purchase from Scrivenor"?—Yes.

519. And above that, "To complete the purchase from" a number of different individuals?—Yes. Perhaps the honourable Member will let me go back upon my last answer, and I may remind him that there was a provision made in the case of the Duke of Grafton, that purchases should be registered at the Office of Woods, and to that extent there was, or should have been, a record in the Office of Woods of transactions under the Trust.

Mr. *Chance*—continued.

520. But am I correct in stating from this Account 6A, that a number of purchases were made partly from the private moneys of the Duke, and partly from the proceeds of these Consols?—That, I believe, was the case, but the honourable Member is of course aware that this Return to which he is alluding is drawn up by the Duke's solicitors, and, therefore, I have no further means of knowing anything about it than what appears on the face of the Return.

521. Can you tell me how it happens that the perpetual pension, payable to the Hereditary Grand Falconer, has not been commuted?—There are several pensions which have not as yet been commuted, and no arrangement had been come to with the Duke of St. Albans when notice was given by the honourable Member for Northampton, of his intention to move in this matter; and from that time the Treasury have suspended all negotiations.

522. I believe negotiations were commenced?—Negotiations had been commenced.

523. And am I correct in stating generally that the amount of commutation money offered by the Treasury was considered by the representatives of the Duke to be insufficient?—I am not prepared to say to what extent the negotiation had progressed; it was a negotiation in course, and I do not think I am at liberty to state details. There had no determination been come to with regard to it.

524. Would you consider yourself at liberty to state what sum or what number of years' purchase was offered by the Treasury?—Perhaps I might ask the Committee for instructions. I am rather in doubt as to the answer that should be be given about an incomplete transaction, which may never come to a transaction.

Chairman.

525. What I understand from you is that negotiations had commenced for the commutation of this pension to the Duke of St. Albans, but were not complete?—That is the case.

526. And you are of opinion that it is undesirable at this stage to state how far those negotiations had gone?—Yes.

Mr. *Chance.*

527. Will you look at page 8 of Paper No. 1, (App. No. 1, p. 48) under the heading "Master of the Hawks"?—Yes.

528. You will see a line there, "Four falconers, at 50 *l.* per annum each, 200 *l.*; provision of hawks, 600 *l.*; provision of pigeons, hens, and other meats, 182 *l.* 10 *s.*" Will you tell me whether any expenditure is at present made by the Duke or by the representatives of the Master of the Hawks in respect of these three items?—I am not aware; the Treasury has no reason to know that there are any hawks kept. One part of the question I should not be able to give an answer to; the Duke may perhaps give something to nominal falconers, but we have no information before us to show that there is any establishment of hawks kept.

529. Should I be accurate in assuming that in approaching

Mr. *Chance*—continued.

approaching the consideration of a number of years' purchase to be given for a pension such as this, the Treasury would feel themselves bound to make inquiries into items such as those three items which I have just referred to?—I mentioned some time ago to the honourable Member, when he asked me whether the question of services had been taken into consideration, that I did not recollect that any pensions had been commuted in which the question of services arose; but I also mentioned that there were cases in which the Treasury had thought it necessary to consider the question and take advice as to the nature of the service, and I think I may say that this is one of them.

530. Looking at those entries, am I accurate in stating that the last three payments were given for specific objects or purposes; I read here, "The sums granted by the original patent were as follows, viz., master of hawks' salary, 391 *l.* 1 *s.* 5 *d.*; four falconers, at 50 *l.* per annum each, 200 *l.*," and so on; the last three of those items were granted by the patent for specific objects?—Apparently so.

531. And a total sum of 965 *l.* a year has been paid up to the present time, including these items?—Yes.

532. Are you aware whether the Treasury have taken any steps to ascertain whether those three sums are paid or are not paid for the specific objects for which they were originally granted?—Without having reference to the Papers, I am obliged to speak with some reserve; but I think my recollection is right that the Treasury have been advised that the Duke of St. Albans is entitled legally to those sums. I answered the question, because the word which the honourable Member quotes in this Return is somewhat vague; my recollection is that the opinion applied to the whole of the sum.

533. To put it generally, would you tell me whether in the case of any of these pensions, hereditary or perpetual, which were granted on condition of certain services being rendered, the pensioners are now rendering any service whatsoever as far as you are aware; for instance, the constable of Hillsborough Fort, mentioned on page 9; does he render any service as far as you are aware?—I find some difficulty in answering the question, because my memory may be wrong. I am under the impression that there have been inquiries about that case, and that the constable of the Hillsborough Fort does practically, or did a short time ago, keep some six people as warders, that is my recollection; but I will not be quite positive without referring again to the Papers.

Mr. *Mowbray.*

534. What is the meaning of the phrase "customary deductions" in that?—In old times there were very heavy fees deducted at the Exchequer upon the issue of the money, and some 40 or 50 years ago you will find that those fees were swept away, and that in the case of public payments of this kind the sum payable was reduced by the amount of them. For instance, there was a tax of 1 *s.* 6 *d.* in the pound upon all pensions and salaries. In the case of long established payments the sum was reduced to the net sum, as it was thought useless to pay 1 *s.* 6 *d.* into the Exchequer, and leave 18 *s.* 6 *d.* to go net to the holder.

Mr. *Mowbray*—continued.

Mr. *Bradlaugh.*

535. On that point I think a pension of 7,500 *l.* nominally, we may take as something like 6,800 and odd pounds really; that is speaking roughly?—Yes; that is about it.

Mr. *Mowbray.*

536. I should like to clear up a doubt in my own mind about the past groats; can you tell me what was the original authority under which the Duchy received these dues?—The title of the Duchy to receive these coinage duties, I presume, would be the charter which is referred to in the preamble of the Act of 1838, that is, the Act for the abolition of the duties in question. The wording of the preamble is; "And whereas, by Charter made and passed in the eleventh year of the Reign of His Majesty King Edward the Third, and duly confirmed by Parliament, the said coinage duties, together with certain other possessions, were thereby granted to the then Duke of Cornwall, and to the first-begotten son" and so forth, "and the same were thereby annexed and united to the Duchy of Cornwall for ever, to remain so that from the said Duchy they should at no time be in anywise severed." I take it that the Charter there mentioned is the title under which the Duchy of Cornwall levied those duties.

Mr. *Arthur O'Connor.*

537. Is the Act of Edward the Third, which is said to confirm the Charter, extant?—I have inquired whether that Act exists; and I am told that the Charter was promulgated in Parliament, and I am told that at that time, promulgation in Parliament was held equivalent to an Act.

538. There is no separate chapter confirming the Charter?—No separate chapter.

Mr. *Mowbray.*

539. Then I understand that under that Charter, as confirmed by Parliament, these dues were inalienable by the Duchy?—That is the contention of the Duchy, and that I should venture to submit is patent, as recited by the preamble.

Chairman.

540. Is that the explanation, in your opinion, of the continuance of the payment, after the letters which passed in 1841?—In the absence of the record on the Papers whether such was the case, the answer of any present officer of the Treasury can only be a supposition of what led the Treasury to continue the payment. It would certainly appear to the Treasury so clear, that the Treasury had not the power to alienate those dues, that we can only suppose that that was the reason why this payment was continued. But at the same time the Committee must clearly understand that, in saying that I do not put forward any evidence on the face of the Papers to that effect.

541. Is

Mr. *Mowbray.*

541. Is there anything in the Act of the 1st and 2nd of Victoria, abolishing these dues, and giving compensation in lieu of them, authorising any alienation of them from the Duchy?—I should say certainly not. If the Committee will turn to the 5th section of the Act, it runs to the following effect: "And be it enacted, That Her Majesty, and other the personage for the time being, entitled to the Revenues of the said Duchy of Cornwall, shall have such and the like, and no larger or other estate or title or power of disposition, or alienation, or interest, of and in the said annuity, as Her Majesty or other the personage for the time being entitled to the Revenues of the said Duchy of Cornwall, would have had in the said coinage duties." Therefore, if the Queen or the Treasury could not alienate the coinage duties, they could not alienate the annuity.

542. Then can you refer me to any authority, statutory or otherwise, under which the Treasury acted in reporting that the revenues of the Duchy would be reduced at the determination of the then existing lease to Mr. Tucker?—We know of no authority; and further than that, we should say that it would be assuming a most dangerous power if the Treasury, for whatever object or purpose, asserted that they could override an Act of Parliament.

543. If the Treasury had refused to pay to to the Duchy when a Duke of Cornwall came into existence this compensation in lieu of revenues to which the Duchy was entitled, would, in your opinion, the Treasury have had any defence to such a claim on the part of the Duchy?—Upon that of course the opinion of a layman is worth nothing at all; but certainly the opinion of the Treasury is that they would not have had a leg to stand on.

544. Then, if I understand you rightly, the Report to Parliament by the Treasury, and the Minute of 1839 was in fact *ultra vires*, and beyond the power of the Treasury?—Yes; the Treasury at the present day would not say that a blunder of the Treasury superseded an Act of Parliament, or gave a power which an Act of Parliament did not give.

Mr. *Arthur O'Connor.*

545. If it was recognised as a blunder?—Whether recognised or not, I think the blunder would not give the power.

Mr. *Bradlaugh.*

546. Now did the 1st Section of the Act of the 1st and 2nd Victoria, chapter 120, enact "that from and after the 10th day of October next" the duties were to be abolished?—The Act enacts "that from and after the 10th day of October next" the duties which would, but for this Act, be payable on the coinage of tin after that time "shall cease and determine."

547. Just before, does it not recite "that all duties so as aforesaid, payable on the coinage thereof, should cease"?—Yes, the recital of the Act is that.

548. That is just before the enacting words to which you have referred?—Yes.

Mr. *Bradlaugh*—continued.

549. Then, do I understand you to mean that after the 10th day of October 1838 there existed any duties which the Duchy of Cornwall had the right to enforce?—No, those duties were to cease by Act of Parliament.

550. Then what do I understand your previous answer to mean, that there were some duties which the Duchy or the Crown could not alienate?—I was reading the 5th section.

551. Yes, I know that; but I am asking you to reconcile that answer with the 1st section; the abolishing of the duties is from the 10th of October 1838?—The duties were abolished by Parliament.

552. Quite so; and even in the opinion of the Treasury, I suppose Parliament would be supreme over any right existing prior to the Statute?—Yes.

553. So that although there might have been some duties prior to the passing of this Act which were inalienable, those duties were directed specifically to cease by the Statute from the 10th of October 1838?—Quite so.

554. Then how from the 5th section do you make out that the Treasury had not a leg to stand upon in the Minute of the 15th of February 1839?—May I ask the honourable Member a previous question: will he show me the passage in the Act which gives the Treasury power to alienate any part of the compensation granted in lieu of the duties?

555. That is a matter which I will argue with the Committee afterwards. My question to you is, you having expressed the opinion, how do you make out that the Treasury had not a leg to stand upon in directing by their Minute of the 15th of February 1839, what the payment should be?—Because I see no power to do so in the Act.

556. Then do you take it that Section 2, which directed the Treasury to ascertain and report the clear annual payments for the last 10 years, had no value; do you take it that the direction to the Treasury to ascertain the amount of the clear annual payments during the 10 years preceding had no value?—That was a clear direction to the Treasury to collect certain information.

557. Did not the Treasury, in pursuance of that 2nd section, report that their tin coinage duties had only brought in 10 *l.* a year annually to the Duchy for 10 years?—Yes, that was the case.

558. And is not the 630 *l.* 14 *s.* 2 *d.*, whether rightfully or wrongfully paid, paid in respect of that which for 10 years previously had only realised 10 *l.* a year?—Under a lease which was just about to expire.

559. Is that so?—That is so.

560. And was not the direction to the Treasury by the 2nd and 3rd sections to calculate an annual sum based upon the clear annual payments during the last 10 years?—That the Treasury was to say what the clear annual payments were.

561. To the Duchy?—No, I see nothing about the Duchy. Perhaps the honourable Member will show me where the Duchy is mentioned.

562. "They are hereby required to ascertain the

Mr. *Bradlaugh*—continued.

the amount of the clear annual payments during the last 10 years, in respect of such coinage duties in the said counties of Devon and Cornwall"; and as a matter of fact did they not ascertain and report to Parliament that the only payment received in respect of the tin coinage duties for the 10 years previously had been a sum of 10 *l.* a year under lease?—To the Duchy? It is clear that the payments made on account of coinage duties included a payment made to Mr. Tucker, the lessee.

563. My question, was did they not report that the only sum paid to the Duchy in respect of such tin coinage for the 10 years prior had been 10 *l.* a year?—I should venture to answer the question by referring the honourable Member to the Treasury Minute, where it states, "During the same period, the average of the Post Groats received in tin coined in the Duchy of Cornwall, amounting to 630 *l.* 14 *s.* 2 *d.*, and of Post Groats and White Rent on tin in the county of Devon to 16 *l.* 19 *s.* 9½ *d.*"

564. Is it not the fact that in that very Return from which you are reading, the Treasury report that the only sum received by the Duchy in respect of that 630 *l.* 14 *s.* 2 *d.* was 10 *l.* a year under a lease?—I do not see that statement in the Minute.

565. I think I can find it for you. (*The Witness handed the Return to Mr. Bradlaugh.*)

566. Did they not report "The Post Groats Duty in Cornwall was granted, by lease dated 31st July 1813, to the late Benjamin Tucker, Esq., to hold for a term of 17¾ years from the 5th July 1823, at the reserved rent of 10 *l.* per annum, which will expire on the 5th April 1841"?—Yes, that is so; or rather that is an account which they rendered; that is not a Report or Minute.

567. Is not that Paper which you have in your hand a copy of the Paper which the Treasury laid on the table of Parliament under the direction contained in the 7th Section of 1st and 2nd Victoria?—Yes, it is a mere verbal difference. The honourable Member said, did not they report? These were the accounts they put in.

568. They were ordered to make a Return, and that is the Return in which that passage occurs?—Quite so.

Sir *Richard Webster.*

569. This lease was running during the reign of King William IV.?—Yes,

570. A Return was made in pursuance of some section, in accordance with the directions as to what money had been received or paid?—Yes.

571. I want to know whether there is any record of any compensation paid to the Duchy in gross, so as to bind the successors; any record of any compensation or capital sum paid to King William IV. so as to bind his successors?—No, there is no record that we know of that. Of course the precise answer to that would have to be obtained from the Duchy.

572. Is there anything that you know purporting to bind the successors to the Duchy of Cornwall?—No.

Mr. *Chance.*

573. I assume that the Act of Parliament and the Return made by the Treasury under the 7th section of that Act, formed part of one statutory transaction?—I do not know that I quite understand the meaning of the question. The Act ordered the Return to be made, and the Return was made under it.

574. In pursuance of the provisions of that Act; they formed one transaction?—The Return is made under the Act. I do not know that the Return gets any extra value which another Return would not have in consequence.

575. Is not the Return authorised by the Act?—Yes.

576. And the position of the Duchy of Cornwall is this: that although that Return authorised by the Act directed that the payment of 630 *l.* was to cease in 1841, the Duchy of Cornwall assumes that the transaction is valid, inasmuch as the sum of 630 *l.* has been received by them ever since; and declines to admit the validity of it so far as it directs that sum to cease?—The Duchy of Cornwall clearly disputed, in the letters before the Treasury, any power to alienate that sum.

577. Then I am correct in my statement, that so far as a general commutation was made, the Duchy of Cornwall has admitted that commutation to be valid, and has received monies under that commutation?—Yes, it has received the 630 *l.*

578. And that so far as by the very same Act of Parliament, a certain Return, and direction was ordered to be made, it has declined to admit the validity of that Return, and the direction given by the Treasury under it?—May I read the 7th section: "And be it enacted, That a Return of the amount of compensation ascertained to be due, and payable on account of the repeal of the said coinage duties on tin, together with a statement of all such compensations as shall be granted to the officers and others, whose emoluments shall be affected by the operation of this Act; and also a Return of the gross annual payments during each of the said 10 years in respect of such coinage duties; and also a Return of all the costs, charges, and expenses to officers and others during such period, incurred in and incident to the ascertaining, managing, and collecting of such coinage duties, shall be laid before both Houses of Parliament within 30 days after the commencement of the next Session of Parliament."

579. Am I correct in stating that that Return found that a certain payment should cease on a certain day?—No, not the Return.

580. The Treasury Minute under the Act?—The Treasury Minute was not under, but in consequence of, the Act.

581. Apart from the existence of the Act, have the Treasury any power to issue a Minute concerning these post groats and commutation money?—No, because the Minute was intended to carry out the intention of the Act.

582. And so far as the Act found a gross sum payable, the Duchy of Cornwall has recognised the validity of the transaction and of the commutation?—That is to say, it has received the money.

583. But

Mr. *Chance*—continued.

583. But so far as the Treasury, in consequence of carrying out (to use your words) the intention of that Act issued a Minute directing the sum of 630 *l.* to cease to be payable after 1841, the Duchy has declined to recognise that portion of the transaction?—They do not find any power given in the Act to the Treasury to alienate.

Chairman.

584. Am I right in assuming that if there has been any irregularity in the payment it has not been on the part of the recipients, but on the part of the Treasury?—Certainly. I think I have stated to the Committee from the commencement that the action of the Treasury is to us inexplicable.

585. Now is it not the fact that, when a settlement on the Prince of Wales's marriage was made, the income of the Duchy of Cornwall was ascertained, and that a sum was voted to make up that income to 100,000 *l.* a year?—I believe that was the case.

586. If that was the case the payment of this item is part of the sum that was ascertained as being part of the income of the Duchy?—Yes, that is the case.

587. So that, though there may have been an irregularity, the public revenue has not suffered on that account; the total charge has not been increased?—That would be the case.

Mr. *Bradlaugh.*

588. Do you mean that the income of the Duchy of Cornwall has always been maintained at precisely 100,000 *l.* a year?—No.

589. As a matter of fact has not the income of the Prince of Wales, taking the income of the Duchy of Cornwall, considerably exceeded 100,000 *l.* a year?—My answer was simply in answer to the question put by the Chairman, whether such and such was not the fact, at the time when the Prince of Wales's endowment was fixed by Parliament; was it not the fact that such and such figures were laid before Parliament, and Parliament made up the sum to reach 100,000 *l.*? My recollection on that subject tallies with that of the Chairman.

590. Then the only question I put upon that is, has not the income of the Prince of Wales, with the income of the Duchy of Cornwall as part of it, considerably exceeded that sum of 100,000 *l.*?—It is extremely likely; but without looking at their Returns I can only say that I should think it is the case.

Chairman.

591. With regard to Paper No. 1, in which you have given a list of pensions commuted since 1881, were not those pensions commuted, the whole of them, in Mr. Courtney's time, when he was Secretary to the Treasury?—A great number of them were.

592. Have any been commuted since?—A few of them were commuted, if I remember right, in Lord Frederick Cavendish's time.

593. The bulk of them in Mr. Courtney's time?—The bulk of them in Mr. Courtney's time, and subsequently.

Chairman—continued.

594. Do you think, in the public interest, it is desirable that all these hereditary and perpetual pensions should be compulsorily commuted?—My opinion is very strongly in favour of commutation, provided always that on reasonable evidence the Treasury can come fairly to the conclusion that it is a permanent payment.

595. Are these Ecclesiastical Returns that you have given us in Paper No. 3 (there is a considerable number of them) permanent payments in the view of the Treasury; they are given as perpetual pensions chargeable on the Consolidated Fund?—A payment made, as we believe, without intermission from the date of Charles II. we should consider permanent.

596. There are also a number of payments for the Scotch universities and for grammar schools, and for Cambridge and Oxford and elsewhere; do you consider it desirable that all those should be commuted?—Subject to the statement of it being fairly shown that they are in the nature of a perpetual payment, I think it desirable to commute them.

597. And do you think it is impossible to discriminate in commutation between those pensions or payments which are paid for services rendered, and others?—I think if there is a distinct service attached to the payment, making it in the nature of a salary, it would be the duty of the Treasury to ascertain, and take legal advice, as to whether such payment ought to be made, independent of the performance of the duty.

598. I see in the Scotch universities there are a certain number of bursaries; these are for the education, I suppose, of poor scholars; do you know whether they are so applied now; is there any record at all of the application of those funds; look, for instance, at St. Andrew's, Edinburgh, Aberdeen, Glasgow; you will notice a number of bursaries?—I have no reason to doubt that payments were made in accordance with the description there; but I could easily obtain information, and tell the Committee what nature of proof there was that they are so applied.

Mr. *Arthur O'Connor.*

599. May I ask if those particular charges are at all provided for in the Act of Union?—If the honourable Member will look at the "authorities," the Act of Union is not mentioned. I should be very much surprised if a deed of that kind was covered by the Act of Union. Perhaps the Chairman will allow me to say the reason why I think this commutation is useful.

Chairman.

600. I suppose all these payments entail a great deal of trouble on the Treasury?—Yes. But I will only mention one case, from the pure pounds, shillings, and pence point of view as a justification. I will take the first pension on the list here, Lord Melbourne's. A pension of his was commuted in 1826; it was commuted for 30,000 *l.*; and supposing that money had been borrowed in Consols at the time, and only the same sum had been paid as Lord Melbourne was receiving, in the intervening time the margin between the interest upon the Consols and the sum

Chairman—continued.

sum payable to Lord Melbourne as pension, would have extinguished by this time no less than 8,700 *l.* out of the sum of 30,000 *l.*

601. Is it not the fact that the tendency is for the rate of interest to become lower and lower, and consequently to increase the cost of commutation the longer it is deferred?—Yes. But I was going further than that. I was stating in this particular instance that supposing the same sum to have been set aside during all this period as was payable to Lord Melbourne before that time if no commutation had taken place, that sum would be now at all events not worth less than 30,000 *l.*; in consequence of the commutation, supposing us to have paid not a farthing more than we were paying to Lord Melbourne before the time, the Sinking Fund which has accumulated during that time would amount to the best part of a third of the sum. Clearly on that ground it appears to me, apart from getting rid of the trouble of the management of the pensions, that it is a fair financial operation.

Chairman—continued.

Sir *Richard Webster.*

602. Do you know what price Consols were at that time?—Consols were then at 78.

LIST OF APPENDIX.

Appendix, No. 1.

Papers handed in by Sir Reginald Welby, K.C.B.: PAGE

Hereditary Pensions, Payments, and Allowances.—Detailed Lists of all Hereditary Pensions, Payments, and Allowances, in Existence on 1st January 1881, which were either Chargeable on the Consolidated Fund or Payable from Voted Moneys, with an Explanation of the Origin in each Case, and the Grounds of the Original Grant; also, showing the Pensions, &c., which have since been Redeemed, the Date of Redemption, the Amount of Redemption Moneys, and how provided, and the Terms upon which the Redemption took place - - - - - - - - 42

Hereditary Pensions, &c., chargeable on the Consolidated Fund on 1st January 1881 - 42

Hereditary Pensions, &c., chargeable on the Consolidated Fund on 1st January 1881, formerly chargeable on the Land Revenue of the Crown - - - - - 47

Hereditary Pensions chargeable on Voted Moneys on 1st January 1881 - - - 50

Extracts from the Grants of Creation Money to the Duke of Norfolk - - - - 51

Letters Patent, dated the 18th of June, in the 17th year of Henry VIII., creating Thomas Maners Earl of Rutland, and granting him Creation Money of 20 *l.* a year - 52

Basis of Computation for Persons desiring to commute Pensions under the Pensions Commutation Act, 1871 - - - - - - - - - - - - - - 53

Memorandum on the proposed Commutation of the Marlborough and Penn Pensions, submitted to the Treasury, 9th June 1884, by C. Bradlaugh, Esq., M.P. - - - 53

PAPERS handed in by Sir *Reginald Welby*, K.C.B.

HEREDITARY PENSIONS, PAYMENTS, AND ALLOWANCES.

DETAILED LISTS of all HEREDITARY PENSIONS, PAYMENTS, and ALLOWANCES, in Existence on 1st January 1881, which were either Chargeable on the Consolidated Fund or Payable from Voted Moneys, with an Explanation of the Origin in each Case and the Grounds of the Original Grant; also showing the PENSIONS, &c., which have since been Redeemed, the Date of Redemption, the Amount of Redemption Moneys and how Provided, and the Terms upon which the Redemption took place.

HEREDITARY PENSIONS, &c., chargeable on the CONSOLIDATED FUND on 1st January 1881.

ORIGINAL GRANTEES.	Amount per Annum.	ORIGIN.		Date of Redemption.	Redemption Money.		Terms of Redemption.
					Amount.	How Provided.	
John, Lord Boringdon (Earl of Morley), and John Campbell, Esq., and their heirs and assigns, for the representatives of Jeffery, Lord Amherst.	£. s. d. 3,000 – –	43 Geo. III. c. 159 - -	It is recited in the Act 43 Geo. III., c. 159, that the King sent a message to the House of Commons acquainting them that in consideration of the eminent services of Jeffery, Lord Amherst, during his command in America, and particularly in the reduction of the Province of Canada, &c., the King, was induced, subsequent to the War during which those services were rendered, to direct that a grant should be made to his Lordship, his heirs and successors, of a certain tract of land in that province; but that in consequence of difficulties arising from local circumstances his intentions had not been carried into effect, and that his Majesty relied with confidence on the justice and liberality of the House of Commons to make such compensation to the representatives of the late Lord Amherst as under the circumstances of the case should appear to be adequate and proper. The pension of 3,000 *l.* a year is granted to the trustees named, and their heirs and assigns for ever, in trust for the purposes of the will of Jeffery, Lord Amherst, which are recited in the preamble of the Act.	August 1885 -	£ s. d. 80,835 – –	By creation of a ten years' annuity of 9,597 *l.* 12 *s.* 9 *d.* per annum, under 46 & 47 Vict. c. 1.	26·945 years' purchase.
Earl of Bath (held by the heirs of Captain Garth).	1,200 – –	Letters Patent of 16th August 1674.	Grant to John, Earl of Bath, and his heirs for ever, a pension of 3,000 *l.* a year in consideration of the great and eminent services done to Charles II. and his late royal father, Charles I., by the said John, Earl of Bath, and his father, Sir Bevill Grenville, who died at the battle of Landsdowne in defence of the Crown, against the rebels.	April 1883 -	32,334 – –	By creation of a ten years' annuity of 3,839 *l.* per annum, under 45 & 46 Vict. c. 72, sect. 15.	26·945 years' purchase.
Viscount Exmouth - - -	2,000 – –	54 Geo. III. c. 164 - -	It is recited in the Act, 54 Geo. III. c. 164, that the Prince Regent sent a message to the House of Commons, in which he declared that having taken into consideration the distinguished service performed by Vice-Admiral Edward, Lord Exmouth, in the course of the late war, and being desirous of bestowing upon the said Lord Exmouth a signal mark of his favour, and for this purpose to give and grant unto the said Lord Exmouth, and the heirs male of his body, to whom the title of Baron Exmouth of Canonteign, in the County of Devon, should descend, a net annuity of 2,000 *l.*, he recommended the House of Commons to consider of a proper method of enabling His Majesty to grant the same. The pension of 2,000 *l.* a year was granted in accordance with the Prince Regent's recommendation.	—	—	—	—

Duke of Marlborough - -	4,000 – –	Letters Patent of 22nd December 1702, 5 Anne, c. 4, and 19 & 20 Vict. c. 59.	It is recited in the Act, 5 Anne, c. 4, that the Queen sent a message to the House of Commons that she, in consideration of the great and eminent services performed by John, Duke of Marlborough, in the first year of Her Reign, as well by his prudent negociations as Her Majesty's Plenipotentiary at the Hague, as by his valour and good conduct in the command of the confederate armies abroad, thought fit to grant to him and the heirs male of his body, during Her Majesty's life, a pension of 5,000 *l.* per annum out of the revenue of the Post Office, and that an Act having passed this Session for settling the honours and dignities of the said Duke upon his posterity, and annexing the Honour and Manor of Woodstock and House of Blenheim to go along with the said honours, it would be very agreeable to Her Majesty if the pension of 5,000 *l.* per annum be continued and limited by Act of Parliament to his posterity, for the more honourable support of their dignities, in like manner as his honours and the Honour and Manor of Woodstock and House of Blenheim are already limited and settled. The pension of 5,000 *l.* a year was granted in lieu of the pension of like amount already granted during the Queen's life, and was made payable to the Duke for his life, then to Sarah, Duchess, for her life, then to the Duke's heirs male, then to each of his daughters and their respective heirs male, and to all others, in the same manner as the Duke's titles, honours, and dignities are by the Act, 5 Vict. c. 3, limited to go and be enjoyed.	August 1884 -	107,780 – –	By creation of a ten years' annuity of 12,796 *l.* 17 *s.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.
Earl Nelson - - - - -	5,000 – –	46 Geo. III. c. 146 -	The Act 46 Geo. III. c. 146, recites that the King had sent a message to the House of Commons, in which he declared that he had taken into his royal consideration the eminent and signal services performed by the late Vice Admiral Lord Viscount Nelson, in a long series of distinguished exploits, and particularly in the glorious and decisive victory of Trafalgar, in which he unfortunately fell; and that being desirous to bestow on the family of the said Lord Viscount Nelson, such considerable and lasting mark of his royal favour as might correspond with the sense His Majesty entertained of services so honourable to the British Navy, and so eminently beneficial to the interests of the nation; and for that purpose of granting to the Earl Nelson, and to the heirs male of his body, and such other persons on whom the title of Earl Nelson may descend, a net annuity of 5,000 *l.* during their respective lives. The pension of 5,000 *l.* a year was granted in accordance with the King's recommendation.	—	—	—	—
Heirs and descendants of William Penn.	4,000 – –	30 Geo. III. c. 46 - -	It is recited in the Act 30 Geo. III., c. 46, that King Charles the 2nd by Letters Patent granted to William Penn, Esquire, his heirs, and assigns, all that tract of land in North America, now or late called the Province or State of Pennsylvania. It is recited that all the estates, rights, and interests which were comprised in the said patent have become vested in John Penn, of Stoke Pogis, in the County of Bucks, Esquire, and John Penn, of Wimpole-street, in the Parish of Saint Marylebone, in the County of Middlesex, Esquire, and their descendants, with several remainders over in the proportion of three-fourths to John Penn, of Stoke Pogis, and one-fourth to John Penn, of Wimpole-street. It is recited that by an Act of the State of Pennsylvania, passed on the 27th November 1779, it was enacted that all the estate whereof the heirs and devisees, grantees, and others claiming as proprietaries of the Province of Pennsylvania, stood seized, or to which they were entitled on the 4th of July 1776, of, in, or to the soil and land within the said province, under the provisions of the said Charter or grant of the Crown to the said William Penn and his heirs, should be vested in the Commonwealth of Pennsylvania for the use and benefit of the citizens thereof, subject to the disposal of the then present or any future legislature of the said Commonwealth; and that it was thereby enacted (amongst other things), that the sum of 130,000 *l.* should be paid to the devisees and legatees of Thomas Penn and Richard Penn, Esquires, deceased, then late proprietaries of Pennsylvania respectively, and to the widow and relict of the said Thomas Penn, in proportions thereafter to be ascertained. It is stated that in consideration of the great extent of the losses above recited, and of the meritorious services of the said William Penn, it is worthy of the King's Royal munificence, and of the liberality of the British nation, that a further provision should be made for the descendants of the said William Penn, and that the House of Commons has for that purpose resolved that the annual sum of 4,000 *l.* be granted ont of the Consolidated Fund to the heirs and descendants of the said William Penn. The pension of 4,000 *l.* a year for ever was granted to certain trustees in trust as to three-fourths for John Penn, of Stoke Pogis, and his descendants, and as to one-fourth for John Penn, of Wimpole-street, and his descendants.	April 1884 -	107,780 – –	By creation of a ten years' annuity of 12,796 *l.* 17 *s.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.

Hereditary Pensions, &c., chargeable on the Consolidated Fund on 1st January 1881—*continued.*

Lord Rodney - - - -	2,000 - -	33 Geo. III. c. 77 - -	It is recited in the Act, 33 Geo. III. c. 77, that by the Act, 23 Geo. III. c. 86. entitled, "An Act for settling and securing a "certain Annuity on George, Lord Rodney, and the two next "Persons to whom the Barony of Rodney shall descend, in con-"sideration of the eminent Services performed by the said "George, Lord Rodney, to His Majesty and the Public," an annuity of 2,000 *l.* was granted to George Brydges Rodney, then Lord Rodney, since deceased, for the life of the said George Brydges, Lord Rodney, and after his death unto the two next succeeding heirs male of the body of the said George Brydges, Lord Rodney, on whom the said title of Lord Rodney should descend during their lives. On the King's recommendation the said pension of 2,000 *l.* a year is continued to all future heirs male of the body of George Brydges Rodney, late Lord Rodney, on whom the title of Lord Rodney should descend.	—	—	—	—
Duke of Schomberg - - -	- - -	Letters Patent dated 22nd December (8 Will. III.). Letters Patent dated 29th June 1715, and Act 1 Geo. I. No. 78.	The Letters Patent of 29th June 1715, recite that an Act had lately been passed in Parliament, intituled, "An Act to enable "His Majesty to grant Letters Patent to supply a defect in a "grant made by His Majesty King William the Third, unto "Maynhard, Duke of Schomberg and Leinster, of the annual "sum of 4,000 *l.* out of the revenues of the Post Office, until the "sum of 100,000 *l.* be paid." Grant to Maynhard, Duke of Schomberg and Leinster, and the heirs male of his body, and, for want of such issue, to the heirs of the body of the said Duke, and in default of such issue, to the right heirs of the said Duke, until the sum of 100,000 *l.* shall be paid, an annuity of 4,000 *l.*	(*a*) Aug. 1883	1,293 7 2	Voted moneys -	26·945 years' purchase.

The Act 1 Geo. 1, No. 78, recites that "Their late Majesties King William and Queen Mary, taking into their princely consideration soon after their accession to the Crown of England, the great and faithfull services performed to them and these kingdoms by the then Mareschall Frederick Duke of Schonburg, then Master General of their Ordnance and Captain General of their Land Forces (since deceased); and more especially reflecting upon his most prudent conduct under them, not only in the hazardous attempt which they had made into this kingdom for redeeming the same from Popery and arbitrary power, but also in his continued endeavours to serve them in order to the compleating a prosperous, happy, and settled condition of affaires in their kingdoms, and considering the great losses he had sustained on account of professing the Protestant religion, by the confiscation of his lands and possessions, and loss of his places and imployments in France, and by the destruction of his castles, lands, and territories in the County Palatine of the Rhine in Germany, and for other great and weighty considerations, being disposed to conferr, upon the said late Duke and his posterity a reward for his merritts which might create a lasting remembrance of the gracious sense they had of his services before mentioned; did fully resolve and determine to bestow upon the said late Duke or trustees, by his nomination, the full sume of one hundred thousand pounds of lawfull English money, to be paid out of the treasure which was or should be in the receipt of their Exchequer, by certain proportions and at certain daies or times long since past, which sume was to be laid out in the purchasing of lands of inheritance that were to be settled in trustees and their heires, so as that the profitts thereof might be enjoyed by the said Frederick Duke of Schonburg during his life, and after his decease by Charles, one of the sons of the said Duke (who was afterwards Duke of Schonburg), and the heires male of the body of the said Charles; and for default of such issue, then by Maynhard, now Duke of Schonburg and Leinster, another son of the said Duke Frederick, and the heires male of the body of the said Maynhard lawfully begotten or to be begotten, and for default of such issue then by the heires male of the body of the said late Duke Frederick lawfully begotten or to be begotten; and for default of such issue, then by the right heires of the said late Duke Frederick for ever."

Earl of Kinnoul - - -	676 - 4 -	Letters Patent of 19th July 1673.	These Letters Patent of 19th July 1673, recite some earlier Letters Patent, formerly granted by Charles I. to James, Earl of Carlisle, since deceased, and his heirs, from whom William, Earl of Kinnoul, and his heirs, had derived to himself a title, claim, and interest in the Caribean Islands and other islands mentioned in the said Letters Patent; recite an agreement with the Earl of Kinnoul for the surrender of his title; recite an Order in Council of 13th June 1663, directing the payment to the Earl of Kinnoul of 500 *l.* a year for seven years, and thenceforward to the said Earl and his heirs, 1,000 *l.* a year for ever out of the King's Revenue of 4½ per cent. at Barbadoes: recite the non-payment of the sums granted by the Order in Council; reserve the consideration of the payment of the arrears due, but direct that there be paid to the said William, Earl of Kinnoul, the sum of 600 *l.* per annum for five years, and that at the expiration thereof the full sum of 1,000 *l.* per annum be duly paid unto him and his heirs for ever.	May 1883 -	18,220 4 -	By creation of a ten years' annuity of 2,163 *l.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.
Duke of Grafton - - -	843 - -	Act 8 & 9 Vict. c. 34 -	It is recited in the Act, 8 & 9 Vict. c. 34, that the office of Receiver General and Controller of the Seals of the Courts of King's Bench and Common Pleas was, by Letters Patent under the Great Seal, dated the 30th of April, in the 25th year of King Charles the Second, granted to Henry, Earl of Euston, afterwards Duke of Grafton, in tail male. It is recited that by the Act, 6 Geo. IV. c. 89, it was recited that the office in question was then held by a person entitled thereto under the said grant, and that under the provisions of the last-named Act the Treasury had agreed with the late and "present" Duke of Grafton to purchase the said office for an annuity of 843 *l.*, payable to the Duke of Grafton. A pension of 843 *l.* a year is granted, payable to the "present" Duke of Grafton during his life, and at his decease to be continued from time to time to such person or persons as would have been entitled to the fees, profits, and advantages of the said office of Receiver General and Controller of the Seal of the said Courts under the Letters Patent recited above, if the same had not been abolished by the Act first above quoted.	August 1883 -	22,714 12 8	By creation of a ten years' annuity of 2,696 *l.* 18 *s.* 9 *d.*, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.
Sir E. Mostyn - - -	786 18 8	7 Wm. IV., and 1 Vict. c. 30.	These pensions were granted by the Treasury under the provisions of Section 26 of the Act, 1 Vict. c. 30, to the joint holders of the office of Custos Brevium of the Court of Common Pleas, which was abolished by that Act. They consist of the following separate allowances, viz. :—	July 1884 -	21,000 - -	By creation of a ten years' annuity of 2,493 *l.* 7 *s.* 6 *d.* per annum, under Act 46 & 47 Vic. c. 1.	26·6858 years' purchase.
Sir Wm. Eden - - -	786 18 8	- Ditto - - -		May 1884 -	21,203 18 4	By creation of a ten years' annuity of 2,517 *l.* 12 *s.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.

Total - - £.	1,573	17	6

By Letters Patent, dated the 14th of December, in the 29th year of the reign of King Charles the Second, the office of Custos Brevium of the Court of Common Pleas was granted, subject to certain life estates then subsisting, to the Earl and Countess of Lichfield for their lives, and to the issue of the Countess in tail. At the time of the grant of the pension of 606 *l.* 10 *s.* in 1838, the joint holders of the office were, as to one-half, Sir E. Mostyn; as to one quarter, Sir W. Eden; and as to the remaining quarter, Mr. C. Browning. In 1865, on the death of Mr. Browning, Sir W. Eden became entitled to his share.

Hereditary Pensions, &c., chargeable on the Consolidated Fund on 1st January 1881—*continued.*

Officer of the Pipe, payable to R. Harrison.	62 9 8	3 & 4 Will. 4, c. 99 -	The freehold office of Remembrancer of First Fruits and Tenths of the Clergy in the Court of Exchequer was granted to Marmaduke Gibbs. in trust for the Duke of Grafton, under Letters Patent of 24th January, 31 Car. 2. The office was sold by the Duke of Grafton in 1765, and, after passing through various hands, was purchased by R. Harrison in 1798. Compensation, calculated on the average of the last 10 years, was granted in 1835 for the loss of certain fees under the Act 3 & 4 Will. 4, c. 99. On Mr. Harrison's death, in July 1835, the Treasury were advised that the office was originally granted in fee, and that they were bound to continue the annuity in perpetuity.	—	—	—	—
Hereditary Chief Proclamator and Usher, G. H. W. Heneage.	588 6 9	15 & 16 Vict. c. 73 - -	The offices of Hereditary Chief Proclamator, Court of Common Pleas, and Hereditary Chief Usher, Court of Exchequer, were abolished by the Act 15 & 16 Vict. c. 73, of which Section 22 enacted that a fit and proper compensation should be awarded to G. H. W. Heneage, Esq, the holder of the two offices, during his life, and after his death to such person or persons as would have been entitled to hold such offices, or either of them, upon satisfactory proof of his, her, or their being so entitled by the payment of such annual sum as the Lords of the Treasury might find to be a fair and reasonable compensation (taking into consideration the profits of the last 30 years) for the loss of right of appointing certain officers in the Courts of Common Pleas and Exchequer. Under this section a pension of 588 *l.* 6 *s.* 9 *d.* a year was awarded to Mr. G. H. W. Heneage. On his death, in 1876, the Treasury was advised that the pension was properly payable to his son, Mr. Clement Walker Heneage Subsequently, in 1885, the Treasury was advised that the pension might properly be redeemed on the basis of a perpetuity.	April 1886 -	15,852 15 -	By creation of a 10 years' annuity of 1,882 *l.* 5 *s.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.
Sir Edward Hulse - - -	10 4 6	5 & 6 Will. 4, c. 82 -	By the Act 3 & 4 Will. 4, c. 74, certain offices connected with Fines and Recoveries in the Court of Chancery were abolished, and several lords of liberties, and other persons, lawfully entitled to receive certain sums or fines, payable on the alienation of land and other hereditaments by fine or recovery, were wholly deprived thereof. By the Act 5 & 6 Will. 4, c. 82, s. 7, the Treasury was empowered to award such annual or other compensation as in their discretion should seem just and reasonable. Under this provision the Treasury awarded the compensation allowance of 10 *l.* 4 *s.* 6 *d.* a year, now received by Sir Edward Hulse. In 1875 the Treasury was advised that this and other similar annuities were payable in perpetuity.	—	—	—	—

Heirs of Thomas Warren, now payable to Georgiana M. Archer.	Berks - - -	£. s. d. 12 7 2	Pension Deed, 30 Car. 2 - - - - - - - - - - - - This pension, which (free of deductions) stands at the sum of 13 *l.* 6 *s.* 8 *d.* a year, was originally charged upon the Manor of Saundervillc and Bray, in Southmoreton, in the county of Berks, and the obligation to pay it devolved upon the Crown, in consequence of the attainder of Sir Francis Eaglefield, of whose estates the said manor formed part. Sir Francis Eaglefield, being a zealous Catholic, left England shortly after the accession of Queen Elizabeth, without having obtained the royal licence, and never returned to his allegiance. His estates were surveyed, and seized into the possession of the Crown, but were not definitely forfeited until after the passing of an Act in the 28th year of Elizabeth for the attainder of Sir Francis Eaglefield on account of his complicity in the treasonable plots devised by the emissaries of Spain. The pension was originally granted by an Indenture of Covenant, dated the 17th of January, in the 13th year of Henry VIII., made between Margaret Warren, widow, and Thomas Warren, heir of the said Margaret, of the one part, and Thomas Eaglefield of the other part, and it was made payable to them and their heirs, for the use of the said Margaret and Thomas Warren, and of the heirs of the body of the said Thomas lawfully begotten, and in the event of the failure of such issue the pension was to cease.	—	£. s. d. —	—	—
Owner of Cheshunt Park, now payable to F. J. Prescott and others.	Hertford - -	26 15 -	By Letters Patent, 14th February 1661, Cheshunt Park was granted by Charles II. to the Duke of Albemarle free of tithe, with a proviso that if the Vicar at any time made good his claim to tithes, the owner should receive an annuity of 28 *l.* 10 *s.* (net 26 *l.* 15 *s.*) from the Crown. No tithe was claimed until the year 1827, when the Vicar instituted a successful suit against Mr. T. A. Russell, the then owner, who in his turn claimed the annuity, to which the Law Officers pronounced him entitled. The Vicar, however, by bringing this action forfeited an annuity of 57 *l.*, charged on the Land Revenues, which had been granted by King James I.	—	—	—	—
Lord of the Liberty of Furness, now payable to E. Wadham.	Lancaster - -	9 - -	Certain lands in Muchland, *alias* Aldingham, in Lancashire, were forfeited to the Crown on the attainder of Henry Grey, Duke of Suffolk, in 1554. Prior to such forfeiture they were subject to an annual payment of 10 *l.* payable to the Lord of the Liberty of Furness. Since the date of the forfeiture the net sum of 9 *l.* has been paid annually to the Lord of the Liberty of Furness. Until 1868 it was paid from the Land Revenues, but in that year it was transferred to the Consolidated Fund, under the authority of the Act 29 & 30 Vict. c. 62, and the Treasury Warrant of 30th June 1868 (Parl. Paper, No. 457, of 1868).	—	—	—	—

Master of the Hawks, payable to the Duke of St. Albans.	City of London -	965 – –	By Letters Patent, dated 5th July 1684, James II. granted this office to the ancestor of the Duke of St. Albans and his heirs for ever, charging the salary and expenses upon revenues at the disposal of the Crown. The right of the Duke of St. Albans to the annuity was referred by the Treasury to the Law Officers in 1831, and they reported that the heirs of the first grantee of the office have such an interest in the salary granted as to render it imperative upon the Lords of the Treasury to make provision for continuing the annual payment. The sums granted by the original Patent were as follows, viz. :—	—	—	—	—
			Master of Hawks, salary - - - - - - £. 391 1 5 Four Falconers, at 50 *l.* per annum each - - 200 – – Provision of Hawks - - - - - - 600 – – Provision of Pigeons, Hens, and other Meats - 182 10 – TOTAL - - - £. 1,373 11 5				
			This amount has been reduced by office fees and other deductions to 965 *l.* a year. It was charged on the Land Revenues under the Act 3 & 4 Will. 4, c. 86, and the Treasury Warrants of 12th September 1833 and 14th February 1834. It was subsequently transferred to the Consolidated Fund, under the authority of the Act 29 & 30 Vict. c. 62, and the Treasury Warrant of 30th June 1868 (Parl. Paper, No. 457, of 1868).				
Lord of the Manor of Taynton -	Oxford - - -	1 10 –	This annuity was a charge upon Payne's Farm, Whichwood, Oxfordshire. The land was purchased by the Crown (subject to the charge) in 1862. It was transferred to the Consolidated Fund under the Act 29 & 30 Vict. c. 62, and the Treasury Warrant of 30th June 1868.	7 Feb. 1883	45 – –	Voted moneys -	30 years' purchase.
Lord of the Manor of Appuldurcombe, Isle of Wight.	Southampton - -	2 1 10	The Governors of the Isle of Wight held in former times the Castle of Carisbrook and some land near Newport, and received the rents and profits as part of the emoluments of the office. On the death of the Earl of Malmesbury, who was Governor up to 1841, the castle and land were transferred to the management of the Office of Woods and Forests, subject to the payment of certain annual charges. Among these the following items were payable in one sum to the Lord of the Manor of Appuldurcombe, viz. :—	March 1885	62 15 –	Voted moneys -	30 years' purchase.
			Payment to the reeve of the manor of Aspe - £. 1 – – Payment to the reeve of Hyton - - - - 10 – Payment for decayed rent - - - - - 1 – 9½ 2 10 9½ Deduct for Land Tax - - - 8 11½ Net payment - - - £. 2 1 10				

039. A rent resolute issuing out of the Castle of Fillingharne, now payable to the trustees and executors of the late Earl of Dysart.	South Wales -	75 10 –	By grant of 20th July, in the third year of Charles I., the Castle and Manor of Fillingharne were sold, and a charge thereon of 80 *l.* a year (net 75 *l.* 10 *s.*), payable to heirs or assigns of the Earl of Northumberland (to whom it was granted by King Philip and Queen Mary on the 16th August, in the fourth and fifth years of their reign), was transferred to the Exchequer and afterwards charged on the Land Revenues of South Wales.	—	—	—	—
Dauverquerque, Seignor, Henry de Nassau, now payable to L. L. Cohen.	South Wales - -	375 16 –	By Letters Patent, dated 9th June 1694, King William III. and Queen Mary II. granted a pension of 2,000 *l.* a year to Henry de Nassau, Lord D'Auverquerque, his heirs and assigns for ever, in consideration of his many and faithful services. Lord Cowper, who held four-fifths of this annuity (1,600 *l.* gross or 1,503 *l.* 4 *s.* net), offered to sell his portion, in March 1853, for 40,000 *l.*, which was accepted.	—	—	—	—
Hillsborough, Constable of the Fort of, now payable to the Marquis of Downshire.	Ireland - - -	216 13 4	By Letters Patent, dated the 16th of December 1660, Charles II. appointed Arthur Hill, and his heirs and assigns for ever, Constable of the Fort of Hillsborough, county Down, charging the salary and expenses on the revenues of His Majesty, his heirs and successors within the Kingdom of Ireland, viz. :—	—	—	—	—

	£.	*s.*	*d.*
Salary of Constable, 3 *s.* 4 *d.* per diem - -	60	16	8
Salary of 20 warders, 6 *d.* per diem each - -	182	10	–
TOTAL - - - £.	243	6	8

After customary deductions the net amount payable is 216 *l.* 13 *s.* 4 *d.* a year.

The Law Officers reported in 1832 that in their opinion the Patent was valid, and that it was necessary to make provision for the pay of the Constable and Warders. The Report of the Select Committee on Civil List Charges in 1833 accordingly recommended that the charge should be borne by the Land Revenues, care being taken that no stronger title or assurance should be given than already existed by Letters Patent. The charge was transferred to the Land Revenues under the authority of the Act 3 & 4 Will. 4, c. 86, and the Treasury Warrant of the 12th of September 1833. The charge was subsequently, in 1868, transferred to the Consolidated Fund under the authority of the Act 29 & 30 Vict. c. 62, and the Treasury Warrant of 30th June 1868 (Parl. Paper, No. 457, of 1868).

Hereditary Pensions chargeable on Voted Moneys on 1st January 1881.

Clarges' Annuity - - -	500 – –	By Letters Patent, dated the 18th of December 1676, Charles II. granted to the Duke of Richmond and his heirs a duty of 1 *s.* per chaldron on all coals exported from the Tyne and consumed in England. In 1799 an annuity of 19,000 *l.* was made chargeable on the Consolidated Fund by way of compensation for, and for the purchase of, this duty, popularly known as the Richmond shilling. The Duke's interest in this 1 *s.* duty on coals was charged with the payment of 500 *l.* a year to Sir Thomas Clarges, his heirs and assigns. Under 39 Geo. 3, c. 84, this annuity was charged upon the gross Customs duties on coal; and 39 & 40 Geo. 3, c. 43, confirmed this arrangement. On the repeal of the London port duty on coals, by 1 & 2 Will. 4, c. 16, legislative sanction for the continued payment from revenue was accidentally omitted. The opinion of the Law Officers was therefore taken, and they reported that, although there existed no power by law to make payment out of any branch of revenue, Sir Thomas Clarges' rights were good, and it was the duty of the Government to provide for the pension. The pension was accordingly charged to Votes in Supply.	August 1883	13,472 10 –	By creation of a 10 years' annuity of 1,600 *l.* per annum, under Act 46 & 47 Vict. c. 1.	26·945 years' purchase.
Creation Fees payable to—						
Duchy of Lancaster - -	100 10 10	It is stated in Stubbs' Constitutional History, Vol. III., p. 434, that when a Duke was created he generally received a pension of 40 *l.* a year on his promotion, which was known as "creation money." In the case of a Marquis the creation money was 35 *l.* (*ibid.* p. 435). The same author states (p. 436) that the Earl's creation money, 20 *l.*, was a substitute for the third penny of the county, of which little is heard after the 13th century, and that the retention of this payment probably suggested the bestowal of creation money on those who were raised to the newer ranks of the Peerage. The creation money of a Viscount was 20 marks (*ibid.* p. 526). The creation money formerly payable to the Duchy of Lancaster was made up of the following items, viz.:—	August 1883	2,709 1 10	Voted moneys -	26·945 years' purchase.
Duke of Rutland - -	20 – –		August 1883	538 18 –	ditto - -	26·945 years' purchase.
Duke of Norfolk - -	60 – –		March 1883	1,616 14 –	ditto - -	26·945 years' purchase.

	£. s. d.	
County of Lincoln - - - - - - - -	20 – –	a year.
Ditto - Nottingham - - - - - - -	20 – –	,,
Ditto - Derby - - - - - - - -	20 – –	,,
Ditto - Hertford or Essex - - - - -	40 10 10	,,
TOTAL - - £.	100 10 10	

No information is preserved in the Duchy of Lancaster Office of the origin of these grants, but it is presumed that their origin might be traced by a search in ancient records.

The creation money formerly payable to the Duke of Rutland, amounting to 20 *l.* a year, was granted to Thomas Maners on his creation as Earl of Rutland by Letters Patent, dated the 18th of June, in the 17th year of Henry VIII. A copy of the Letters Patent is annexed.

The creation money formerly payable to the Duke of Norfolk consisted of the following sums, viz.:—

	£. s. d.	
As Earl of Surrey - - - - - - - -	20 – –	a year.
,, Duke of Norfolk - - - - - - - -	40 – –	,,
TOTAL - - £.	60 – –	

The creation money of 20 *l.* a year attached to the Earldom of Surrey was originally granted by Letters Patent, dated 28th June 1483. The creation money of 40 *l.* a year attached to the Dukedom of Norfolk was originally granted by Letters Patent, dated 1st February in the fifth year of Henry VIII. They were forfeited by attainder in 1546, restored by Act of Parliament in 1553, again forfeited by attainder in the 13th year of Elizabeth, and again restored by reversal of the attainder in 1603. Extracts from the grants certified by the Record Office are annexed.

EXTRACTS from the Grants of Creation Money to the Duke of Norfolk.

KING Richard the Third granted the Earldom of Surrey, with 20 *l.* per annum creation money for the said Earldom, unto Thomas Howard, son and heir of John, then Duke of Norfolk, and to the heirs male of his body lawfully begotten, to be paid yearly by the Sheriffs of the counties of Surrey and Sussex, out of the rents, issues, and profits arising within the said counties. — Earl of Surrey created 28th June 1483.

King Henry the Seventh confirmed the said Grant of King Richard the Third unto the said Earl Thomas, who enjoyed the said Earldom and creation money until the fifth year of Henry the Eighth, when he, being then created Duke of Norfolk, and had 40 *l.* per annum creation money for that dignity granted to him and the heirs male of his body lawfully begotten, to be paid out of the rents, issues, and profits arising within the counties of Norfolk and Suffolk, surrendered the said Earldom of Surrey during the life of Thomas, his son, in favour of such son, who enjoyed successively both the said titles and creation monies until the 38th year of Henry the Eighth, when both the said Earl Thomas, the son (being then also Duke of Norfolk, after the death of his said father), and Sir Henry Howard, Knight of the Garter, his son and heir, otherwise called Harry, Earl of Surrey, were attainted in Parliament. — 3rd Nov. 1491. 8 Henry 7. — 5 Henry 8. A.D. 1514. — A.D. 1546.

Thomas Howard, Knight, son of the said Sir Henry Howard, otherwise Harry, Earl of Surrey, was restored in blood by Act of Parliament, as to inherit the said Earldom of Surrey and Dukedom of Norfolk, and by virtue thereof enjoyed the aforesaid several creation monies from the said first year of Queen Mary until the 13th year of Queen Elizabeth, when both he and Philip, Earl of Arundel, his son and heir, were attainted, which attainder was afterwards reversed, first King James. — 1 Queen Mary. A.D. 1553. — 13 Elizabeth. A.D. 1590. — 1 James. A.D. 1603.

The said creation money of 20 *l.* per annum has been paid to the Duke of Norfolk for the time being, up to and including the payment due November, 1859, and application for the subsequent payments stood in abeyance in consequence of the death of the then Duke, which happened in November 1860. Application was made to the Paymaster General on the subject by letter from Messrs. Few & Co., dated 4th March, 1865.

Covent Garden, 9 April 1866.

IN the Great Roll (of the Pipe) of the twentieth year of the late King Henry the Eighth in Item Norfolk, and in the Account of Sir William Paston, Knight Sheriff, from the Feast of Saint Michael the Archangel in the said twentieth year, unto the same Feast of Saint Michael the Archangel, in the twenty-first year of the same King (amongst other things) is contained as follows :—

Norfolk.—The same Sheriff oweth 1,182 *l.* 1 *s.* 8¼ *d.*

Paid into the Treasury 106 *l.* 13 *s.* 4 *d.*, in two tallies, by the said Sheriff for the issues of his bailwick, and to Thomas, now Duke of Norfolk, son and heir male begotten of the body of Thomas, late Duke of Norfolk, who the King, on the first day of February, in his fifth year, by the name of the most illustrious Thomas, Earl of Surrey, his most dear cousin, and Earl Marshal of England, and Treasurer of England, erected, created, enobled, made and ordained as Duke of Norfolk. That the same Duke might be able more honorably to bear becomingly his noble estate according to the said name of Duke of Norfolk, the said King gave and granted for himself and his heirs to the aforesaid Duke of Norfolk and his heirs males issuing of his body, forty pounds rent yearly to be received from the farms, issues, profits, and commodities whatsoever of the King's counties of Norfolk and Suffolk, by the hands of the Sheriff of the same counties for the time being, at the terms of Easter and Saint Michael, by equal portions, viz., 40 *l.* for the terms of Easter in the 20th year of this King, and of Saint Michael, in the 21st year, by the King's Writ, which is amongst the common business of the year of this King of Michaelmas Term Roll, and Letters of Acquittance of the said Duke for receipt thereof.

Translated from the Latin copy, extracted from the Great Roll of the Pipe, by

Charles Devon.

Queen-square, Bloomsbury,
April 1865.

Gentlemen, Public Record Office, 14 April 1866.

In reply to your letter of 12th April, transmitting two extracts from Grants of Creation Money to the Duke of Norfolk, I am directed to state that the extracts (herewith returned) agree, with trifling corrections, with the originals.

I am, &c.

MEMORANDUM on the proposed Commutation of the MARLBOROUGH and PENN PENSIONS, submitted to the Treasury, 9th June 1884, by *C. Bradlaugh*, Esq., M.P.

THE Committee on Pensions, appointed by resolution of the House of Commons of 8th December 1837, did distinguish between pensions where "real and meritorious services had been rendered" by the grantee, and pensions which had originated without such justification; and such Committee did recommend that some pensions should be abolished, that in some the term of the grant should be limited to a shorter period than that which was originally fixed, that others should be reduced in amount. That this recommendation was acted on by Parliament.

The Marlborough Pension.

That the original grantee, being then Earl of Marlborough, Lieutenant General and sworn Privy Councillor of William III., traitorously furnished to James II., in 1693, an account of the warlike preparations of William III., with particulars of the fleet and army, and how these were to be employed, well knowing that such information was communicated to the King of France.

That on the 4th May 1694 the Earl of Marlborough treacherously communicated to the French King, through James II., details of a secret expedition against the harbour of Brest; that in consequence of this communication Brest was secretly fortified and garrisoned by the French, and the English expedition was repulsed with great slaughter.

That subsequent to the above treasons, the Earl of Marlborough received large sums of money from the Court of France.

That in the reign of Queen Anne, the Duke of Marlborough, being then Captain General of the Forces, embezzled and applied to his own use two sums of 282,366 *l.* 9 *s.* 7 *d.*, and 177,695 *l.* 17 *s.* respectively received by him for the purpose of the British and

foreign forces under his command, and further that during the same period he received by way of bribe from the bread contractor large sums of money each year, averaging annually about 6,500 *l.*, and amounting altogether to more than 60,000 *l.*

The evidence for the above consists in main part of the written letters of Marlborough, of memoranda in writing by James the Second, and of the Journals of the House of Commons.

The Penn Pension.

That the proprietary right of the Penn family (at the time of the Declaration of Independence) in the State of Pennsylvania, under Letters Patent of Charles II., were on the 27th November 1779 fixed at 130,000 *l.*, which sum was duly paid to the heirs of W. Penn, by instalments of 15,000 *l.* per annum, with interest.

That Colonel W. Stuart is not the heir or nearest descendant in blood of William Penn.

The evidence for the above can be obtained from the official records of the State of Pennsylvania, and the genealogical table of the Penn family.

Appendix, No. 2.

PAPERS handed in by Sir *Reginald Welby*, C.B.

CORRESPONDENCE relating to the continuance of the COMPENSATION ALLOWANCE of 630 *l.* 14 *s.* 2 *d.* a Year in lieu of POST GROATS received on TIN coined in the County of *Cornwall* after the 5th of April 1841.

— No. 1. —

LETTER from the Duchy of Cornwall Commissioners, dated the 5th of April 1841, 7383—41.

Duchy of Cornwall, Somerset-place,
5 April 1841.

Sir,

I HAVE the honour to transmit herewith a memorial to the Special Commissioners for managing the affairs of the Duchy of Cornwall, dated 15th May 1840, and a letter dated 27th ultimo from Mr. T. S. Tucker, Executor of Benjamin Tucker, Esq., deceased, late Lessee of the Post Groat Duty in Cornwall, which was abolished by an Act of Parliament made in the 1st and 2nd of her present Majesty, cap. 120.

Upon reference to the Treasury Minute, dated 15th February 1839, by which compensation is awarded to the Duchy for the loss sustained by the abolition of the Tin Coinage Duties, it will be perceived that the compensation awarded for the loss of the Post Groat Duty, 630 *l.* 14 *s.* 2 *d.* per annum, would cease on the 5th instant.

Under the lease of these Duties from the Duchy, which expires on the 6th instant, the Lessee was entitled to the Post Groats on all Tin coined at the Christmas and Lady Day Coinages; the compensation awarded by their abolition commenced by a quarterly payment on the—

Enclosure 1, in No. 1.

LETTER from Mr. *J. S. Tucker* to the Duchy of *Cornwall.*

POST GROATS.

Sir, 5, Pump-court, 29 March 1841.

I HAVE the honour to inform you that, on the 18th instant, I, at the suggestion of the Council for regulating the Duchy of Cornwall, addressed the Treasury respecting the inaccuracy in the sum paid as compensation for the abolition of this duty, and that by a letter in reply, dated the 24th instant, the Lords Commissioners of the Treasury have informed me that my application should be to the Council for regulating the affairs of the Duchy of Cornwall.

I have therefore to request that you will do me the favour of laying this information before the Council, together with my renewal of the application which I have already submitted, and which I humbly conceive I can rightly make to the Council alone, as it is with the Council as representing the Duke of Cornwall, and not with the Board of Treasury, that my relation as lessee existed, and as it was the officers of the Duchy, and not I, who negotiated the arrangement in which they consented that my lease under the Duchy should cease.

I have, &c.
(signed) *J. S. Tucker.*

Thomas Abbot, Esq.,
&c. &c. &c.
Duchy of Cornwall.

Enclosure 2, in No. 1.

MEMORIAL from Mr. *J. S. Tucker* to the Duchy of *Cornwall*, dated the 15th of May 1840.

To the Special Commissioners for managing the affairs of the Duchy of Cornwall, the memorial of Jedidiah Stephens Tucker, sole acting executor of the last will and testament of Benjamin Tucker, Esq., humbly sheweth:—

That your memorialist, as such executor, was entitled, for the benefit of the devisees in that will mentioned, to all the interest and profit arising from an unexpired term of a lease of the Post Groat Tin Coinage Duty, which was demised to the said Benjamin Tucker, on the 31st of May 1813, for the term of 17 years and three-quarters from the 5th of July 1823.

That by arrangements entered into between the officers of the Duchy of Cornwall and the Board of Treasury, to facilitate the passing the Act of Parliament abolishing the coinage duties on tin, the Post Groat payments were, by the consent and act of the said officers, relinquished; whereby they caused the said lease to be thereafter entirely profitless. That your memorialist therefore became entitled to a full indemnity for the loss he should incur; and that certain payments on account of the said indemnity have been made to him by the said officers.

But your memorialist most humbly submits that if such payments shall cease at the termination of the lease, the sum which he will then have received will be less than what was due by, at least, 315 *l.* 7 *s.* 4 *d.*, because those payments being made quarterly, the commencement of them was not, as it should have been, at the end of the first quarter immediately after the last Post Groat payment, but was delayed for half a year.

Your memorialist further submits that an average of the annual value of the Post Groats was calculated, and is adopted by the said officers of the Duchy; and that it clearly shows that, had not the coinage duties ceased, between the last Post Groats actually paid and the termination of the lease your memorialist would, according to that average, have received 1,892 *l.* 2 *s.* 6 *d.*; that owing to the period at which the quarterly payments of compensation commenced, at the expiration of the lease they will amount to only 1,576 *l.* 15 *s.* 2 *d.*; whereas, if the two preceding quarters had been included, they would have completed the total to 1,892 *l.* 2 *s.* 6 *d.*, viz., the exact sum which by the average was shown to be due.

Your memorialist thinks it to be his duty to at once humbly invite your attention to this error in the payments, and he prays such relief as may be just and fair.

And your memorialist, as in duty bound, will for ever pray.

5, Pump-court, Temple,
15 May 1840.

(signed) *J. S. Tucker.*

— No. 2. —

TREASURY MINUTE, dated the 7th of June 1841.—(9178—41.)

Let a charge be made on the Consolidated Fund of the sum of 315 *l.* 7 *s.* 1 *d.*, and direct Mr. Sargent to pay over that sum to the Receiver General of the Duchy of Cornwall.

Acquaint the Council for the Duchy, and state that the Receiver General may, any time after the 5th July next, receive the said sum to enable him to pay to the executor of the late Mr. Tucker the sum due on the lease of Post Groat Duties.

— No. 3. —

LETTER from the Duchy of *Cornwall*, of the 8th of July 1841.—(14,554—41.)

POST GROAT DUTY.

Duchy of Cornwall, Somerset House,
8 July 1841.

Sir,

I HAVE submitted to the Council for the Duchy of Cornwall your letter of the 14th ultimo, informing me that the Lords of the Treasury had authorised the issue of 315 *l.* 7 *s.* 1 *d.* to the Receiver General of the Duchy in order to pay the executor of the late Mr. Tucker, lessee of the Post Groat Duty, for the half-year's compensation to the conclusion of the lease.

The Council took into consideration the Minute of your Board of the 15th February 1839, authorising the issue out of the Consolidated Fund of compensation for the coinage duties, abolished by the Act of 1st and 2nd of Her present Majesty, c. 120, and of the payment in lieu of the Post Groat Duty in Cornwall, until the expiration of the subsisting lease, and I am commanded to acquaint you that, although it appears both His late Majesty and Her present Majesty consented to abandon their claim to this duty, the Council consider it necessary to intimate to the Lords of the Treasury their opinion that this arrangement cannot prejudice the rights of the future Dukes of Cornwall to compensation in lieu of the Post Groat Duty.

I have, &c.
(signed) *Thomas Abbot.*

C. E. Trevelyan, Esq.,
&c. &c. &c.

Appendix, No. 3.

PAPER handed in by Sir *Reginald Welby*, K.C.B.

Corporation of Berwick, for repairs of Bridge - -	90 9 –	Letters Patent of the 23rd July, in the 18th year of Charles II.	These Letters Patent granted to the Corporation of Berwick-upon-Tweed and to their successors for ever an annuity of 100 *l.*, payable out of the customs of Berwick or Newcastle-upon-Tyne, with a proviso that they should, at their own costs and charges, support and repair the bridge built over the Tweed by King James I., and that they should expend the whole of the money arising from the said pension in maintaining the said bridge in repair, for which they should give security by the conveyance of the Manor of Tweedmouth, in the County of Durham. James II., by Letters of Privy Seal, dated 22nd August 1685, directed that the same annuity should be paid out of any duties not appropriated by Parliament. (*See* Report of Select Committee on Civil Government Charges, No. 337, of 1831, Appendix 7, p. 51.)	—	—	—	—
Earl of Derby, Thomas Cholmondley and William Banck, to be distributed among the Incumbents and Schoolmasters of the Isle of Man, now payable to the Bishop of Sodor and Man.	89 9 –	Letters Patent of 19th April of 27 Charles II.	These Letters Patent granted an annuity of 100 *l.* (since reduced by fees and other deductions to 89 *l.* 9 *s.*), charged on the hereditary excise "to be employed and disposed towards the maintenance of such poor ministers in the Isle of Man as shall be found to stand in most neede thereof."	—	—	—	—
Compensation for the loss of the privilege of Printing and Vending Almanacks :							
Payable to Oxford University - - - -	500 – –	44 Geo. III., c. 98 -	These annual allowances were first made payable under the provisions of the Act 21 Geo. III., c. 56, s. 10 :—	—	—	—	—
Payable to Cambridge University - - -	500 – –						

"X. And whereas the power of granting a liberty to print almanacks, and other books, was heretofore supposed to be an inherent right in the Crown: and whereas the Crown hath, by different charters, under the Great Seal, granted to the Universities of Oxford and Cambridge, among other things, the privilege of printing almanacks: and whereas the Universities did demise to the Company of Stationers of the City of London their privileges of printing and vending almanacks and calendars, and have received an annual sum of One thousand pounds and upwards, as a consideration for such privilege: and whereas the money so received by them has been laid out and expended in promoting different branches of Literature and Science, to the great increase of religion and learning, and the general benefit and advantage of these realms, and whereas the privilege or right of printing almanacks has been, by a late decision at law, found to have been a common right, over which the Crown had no control, and consequently the Universities no power to demise the same to any particular person or body of men, whereby the payments so made to them by the Company of Stationers have ceased and been discontinued; be it therefore enacted by the authority aforesaid, that, from and after the twenty-fourth day of June, one thousand seven hundred and eighty-one, there shall be issued paid, and applied in every year out of the monies which shall arise by the duty hereinbefore granted, the sums of moneys following, to the two Universities of Oxford and Cambridge, that is to say, the sum of five hundred pounds to the University of Oxford, and the sum of five hundred pounds to the University of Cambridge, which said several and respective sums of money shall be, and are hereby charged upon the duty hereinbefore granted [*i.e.*, upon almanacks], and shall be paid thereout yearly and every year, at the two usual feasts, that is to say, the feast of the Nativity of Saint John the Baptist, and the birth of our Lord Christ, the first payment to be made, on the feast of the birth of our Lord Christ after passing this Act, by the Receiver General of His Majesty's Stamp duties, free and clear of all fees, dues, duties, fares, and deductions whatsoever."

The duty upon almanacks having been repealed by the Act 44 Geo. III. c. 98, the allowances in question (*see* Schedule C. of the Act) were made payable out of general stamps revenue, and continued to be so paid until the year 1858, when, under the provisions of the Act 19 & 20 Vict. c. 59, the allowances ceased to be defrayed out of Gross Revenue, and were charged upon Votes of Parliament.

List of Perpetual Pensions Chargeable on Voted Moneys on 1st January 1881—*continued.*

Creation Money payable to the Bursar of Trinity College, Cambridge, for the Counties of Cambridge and Hunts.	5 6 8	Grant made by Edward II., confirmed by Charter of Henry VIII.	The following extract from a letter of the Bursar of Trinity College, Cambridge, dated the 3rd of December 1881, explains the origin of this grant, which appears to have nothing in common with the "Creation Fees":—	—	—	—	—

EXTRACT from a LETTER from the BURSAR of TRINITY COLLEGE, CAMBRIDGE, dated the 3rd of December 1881.

MY Lords desire to be furnished with certified copies of Extracts from the original Grant of King Edward II., and from the Charter of King Henry VIII., so far as they relate to the payment of 5 *l.* 6 *s.* 8 *d.*, known as the Cambridge and Hunt's Pension.

I am not aware that the original grant, made by Edward II., is in existence, but the following extracts from the documents relating to the University and Colleges of Cambridge, published in 1852 by direction of the University Commissioners, will be sufficient to show the history of the payment from a period not much later than the date of the original grant.

"*Close*, 20 *Edw*$^{d.}$ 2, *m.* 2.—Sheriff of Cambridge is ordered to pay the King's Scholars, studying in the University of Cambridge, the arrears of "the sum of money granted to them by the King for their daily support, and also the allowance from henceforth, 14 Dec."—(Documents, vol. 1, p. 7.)

"*Close*, 7 *Edw*$^{d.}$ 3, *p.* 1, *m.* 26.—Sheriff of Cambridge is to pay out of the issues of his bailiwick the arrears due to John de Langetoft, Warden "of the King's Elemosinary Scholars in the University of Cambridge, for the rent of the houses which they inhabit for the two last years, 4 Feb."—(Documents, vol. 1, p. 10.)

"*Close*, 7 *Edw*$^{d.}$ 3, *p.* 1, *m.* 18.—Sheriff of Cambridge, out of the issues of his bailiwick, is to pay to John de Langetoft, Warden of the King's "Elemosinary Scholars in the University of Cambridge, ten marks, which are in arrear for the rent of their houses for the last two years, "7 April." Also to pay to the said Warden and Scholars the arrears of their wages, 2 April."—(Documents, vol. 1, p. 10.)

Similar writs were issued on the 29th of June and 9th of August of the same year.

After the foundation of King's Hall, 11 Edward 3, we find the order made for the special payment which is the subject of inquiry by my Lords.

"*Close* 13, *Edw.* 3, *p.* 1, *m.* 44.—Sheriff of Cambridge to pay Thomas Powys, Warden of the King's Elemosinary Scholars in the University of "Cambridge, the arrears due for two robes granted to him by the King; and also in future to provide him the price of two robes a year. "20 Feb."—(Documents, vol. 1, p. 12, repealed, p. 14.)

Again,

"*Close*, 26 *Edw.* 3, *m.* 6.—Sheriff of Cambridge and Hunts is to allow Thomas Powys, Warden of the King's Elemosinary Scholars in the "University of Cambridge, three pence a day and two robes a year. 8 Nov."—(Documents, vol. 1, p. 19.)

"*Patent*, 35 *Edw.* 3, *p.* 3, *m.* 18.—Grant to Master John de Shropham, Warden of the King's Elemosinary Scholars in the University of "Cambridge, of 4 *d.* a day for his wages, and eight marks a year for two robes. 28 Oct."—(Documents, vol. 1, p. 22.)

Patent, 37 *Edw.* 3, *p.* 2, *m.* 8.—Appointment of Nicholas de Drayton as Warden of the King's Elemosinary Scholars in the University of Cambridge. Grant to the said Nicholas of 4 *d.* a day for his wages, and eight marks a year for two robes. 1 Dec."—(Documents, vol. 1, p. 23.)

"*Patent*, 38 *Edw.* 3 *p.* 2 *m.* 1.—Grant to Nicholas de Roos, Warden of the King's Elemosinary Scholars of his Hall in Cambridge of 4 *d.* a day "for his wages and eight marks a year for his robes. 12 Jan."—(Documents, vol. 1, p. 24.)

"*Close*, 39 *Edw.* 3 *m.* 15.—Sheriff of Cambridge is to pay to Nicholas de Roos, Warden of the King's Elemosinary Scholars in the University "of Cambridge, the arrears due to him of 4 *d.* a day for his wages and eight marks a year for two robes, and to pay him hereafter the said 4 *d.* "a day and eight marks a year. 10 Oct."—(Documents, vol. 1, p. 24.)

The same grant of eight marks (5 *l.* 6 *s.* 8 *d.*) a year for robes was made to Richard Ronhale (14 Nov., 49 Edw. 3; Documents, vol. 1, p. 25), and to Thomas Hetersete (15 Oct., 9 Rich. 2; Documents, vol. 1, p. 30). On 5th Nov., 2 Hen. 4, the "Sheriff of Cambridge is commanded to pay "Richard de Dereham, Warden of the College of the King's Scholars in the University of Cambridge, the arrears of eight marks per annum for "robes due since the 6th October in the first year of the King's reign, when he was appointed, and eight marks per annum in future."—(Documents, vol. 1, p. 35.)

On 21st July, 3 Hen. 5, the "Sheriff of Cambridge is commanded to pay Richard Dereham, Warden of the College of the King's Scholars in "the University of Cambridge, the arrears of eight marks per annum granted to him for robes on the 5th of June, the day of his appointment, "and to pay him the same sum annually."—(Documents, vol. i, p. 39.)

The same grant of eight marks a year for robes was made to Richard Holme.—(*Ibid.*)

My Lords will, I trust, be of opinion that my original statement is correct, that the payment in question made by the Sheriff of Cambridge and Hunts to Trinity College, had its beginning in a charge made upon the revenues of the Sheriff by Edward II. for the support of the King's Scholars at Cambridge, although the special purpose for which the contribution was to be made and its exact amount were not defined till 20 Feb., 13 Edw. 3, and 28 Oct., 35 Edw. 3.

If my Lords should still desire to be furnished with certified copies of any of the documents above mentioned, the College will endeavour to obtain them.

In my last letter I stated that this payment of 5 *l.* 6 *s.* 8 *d.* per annum, by the Sheriff of Cambridge and Hunts, which was one of the original endowments of King's Hall, was confirmed to Trinity College on its foundation by Henry VIII. in his Charter of Donation, dated 24 Dec., 38 Hen. 8. This Charter is printed in full in the Documents, &c., above-mentioned (Vol. III., pp. 365, &c.), and from it I quote the following extract (p. 379), which I have compared with the copy in the College muniment room and found to be verbally identical with it:—

"Necnon totum illum annualem redditum quinq librar sex solidor and octo denarior eidem nup Auli Regie dudum spect an' and

SALARIES Charged on the CONSOLIDATED FUND payable to HEREDITARY OFFICERS.

ORIGINAL GRANTEES.	Amount per Annum.	ORIGIN.	Date of Redemption.	Redemption Money.		Terms of Redemption.
				Amount.	How provided.	
Heritable Usher of Scotland, now payable to Hugh James Rollo for the Trustees of the late Miss Mary Walker.	£. s. d. 242 15 –	It is stated in the Report of the Select Committee on Civil Government Charges (No. 337), of 1831, Appendix 21, p. 97, that Sir Patrick Walker then held this office by a Charter from the Crown to him and his heirs and assignees whatsoever, and that the date of his appointment was 1st May, 1805. In accordance with the recommendation of that Committee, the salary of this office has been charged on the Consolidated Fund, under the provisions of the Act 2 & 3 Will. IV., cap. 116.	—	£. s. d. —	—	—
Duke of Hamilton, Hereditary Keeper of the Palace, Holyrood House.	45 10 –	It is stated in the Report of the Select Committee on Civil Government Charges (No. 337), of 1831, Appendix 21, p. 97, that King Charles the First made a grant to the ancestor of the Duke of Hamilton of the office of Keeper of the Palace of Holyrood House, with power to appoint a Deputy Keeper and Porter. Upon the accession of George the First, His Majesty granted a salary of 46 *l.* per annum in place of certain allowances of money and grain formerly enjoyed by the Principal Keeper, and it is stated that this salary had been continued in all the establishments of the succeeding Sovereigns. The salaries attached to the said offices of Deputy Keeper and Porter at the time of the Union between England and Scotland are stated to have been 50 *l.* and 37 *l.* 15 *s.* 6 *d.* a year respectively, and it is stated that these salaries had been continued the same in all the establishments of the Sovereigns subsequent to Queen Anne. In accordance with the recommendation of that Committee, the salaries of 45 *l.* 10 *s.* attached to the office of Hereditary Keeper of Holyrood, and those of 50 *l.* and 37 *l.* 15 *s.* 6 *d.* attached to the offices of Deputy Keeper and Porter respectively, have been charged on the Consolidated Fund, under the provisions of the Act 2 & 3 Will. IV., cap. 116.	—	—	—	—

ESSEX:

Appendix, No. 1. Granted to Humphrey de Bohun Earl of Hereford and Essex and the heirs of his body from whom it descended by inheritance to Henry V. and became parcel of the Duchy.

LINCOLN:

Appendix, No. 2. Granted to Henry Earl of Lancaster and Lincoln from whom it descended by inheritance to Henry IV. and became parcel of the Duchy.

DERBY:

Appendix, No. 3. Granted to Henry Duke of Lancaster and Earl of Derby from whom it descended by inheritance to Henry IV. and became parcel of the Duchy.

NOTTINGHAM:

Appendix, No. 4. Granted to Henry IV. Duke of Lancaster and Earl of Derby and became parcel of the Duchy.

Appendix, No. 5. In 1763 The right of the Duchy was recognised by the Exchequer in proceedings taken by the Duchy for payment of these sums which had not been paid owing to the Sheriffs being in surplusage.

J. G. D. E.

Duchy of Lancaster Office,
24 March 1887.

APPENDIX, No. 1.

PIPE ROLL 42 Edward III.

THE same Sheriff [of Essex and Hertford] renders Account, &c. And to Humphrey son and heir of William de Bohun late Earl of Northampton kinsman and heir of Humphrey de Bohun then Earl of Hereford and Essex deceased for those Forty pounds ten shillings and ten pence yearly which the Lord Edward late King of England father of the now King granted to Humphrey de Bohun then Earl of Hereford and Elizabeth his wife and the heirs of the body of the same Humphrey To be received from the Issues of the County of Essex by the hand of the Sheriff of the same County for the time being for the third penny of that County Twenty pounds five shillings and five pence for the term of Michaelmas this 42nd Year &c.

Appendix, No. 2.

Charter Roll 23 Edward III.

Extract.

For Henry Earl of Lancaster.

The King to the Archbishops, Bishops, Priors, Earls, Barons, Justices, Sheriffs, Reeves, Ministers and all his bailiffs and faithful subjects Greeting &c. Grants to him the title of Earl of Lincoln And that the said title may not be called altogether void and useless we have given and granted and by this Our Charter have confirmed to the aforesaid Earl under the name of the Earl of Lincoln Twenty pounds to be received by him and by his heirs every year of the hands of Our Sheriff of Lincolnshire for the time being for the third penny of that County at the terms of St. Michael and Easter by equal portions for ever as Thomas late Earl of Lancaster uncle of the aforesaid Earl received such £. 20 for the third penny of the said County of Lincoln whilst he lived Wherefore we will and firmly command for Us and our heirs that the aforesaid Earl and his said heirs under the name of Earl of Lincoln for ever may have and receive every year the said Twenty pounds of the hands of the Sheriff of Lincolnshire for the time being for the third penny of that County &c. These being Witnesses &c. Given by the hand of the King at Westminster on the twentieth day of August [23 Edward III.].

Appendix, No. 3.

Pipe Roll 42 Edward III.

The same Sheriff [of Nottingham and Derby] renders Account &c. And to John Duke of Lancaster who married Blanche daughter and heir of Henry late Duke of Lancaster for these Twenty pounds yearly rent which the late King granted to the aforesaid Henry under the name of the Earl of Derby to be received to him and his heirs every year from the issues of the said County of Derby at the Feasts of Easter and St. Michael equally by the hand of the Sheriff of the said county for the time being for ever Twenty pounds by Writ of the King allowed to the Sheriff in the Roll aforesaid and two Letters Patent of acknowledgment of Robert atte More Receiver of Tuttebury.

Appendix, No. 4.

10 Elizabeth Pipe Roll.

The same Sheriff [of Nottingham] renders Account And to Elizabeth now Queen of England Duchess of Lancaster from all those Twenty pounds yearly by the Lord Edward late King of England progenitor of King Henry late Earl of Lancaster, Derby and Lincoln and his heirs to be received under the name of the Earl of Derby at the Feast of Easter and St. Michael by equal portions by the hand of the Sheriff of that county for the time being for ever £. 20 &c. for the 11th of the same Queen by Writ of King Henry V. enrolled on the Memoranda of 1st Year of his Reign for the term of Holy Trinity Roll 10 which is among the Communia of the year aforesaid by pretext of a certain Act of Parliament the Lord the King at Westminster 7th November held in the first year for the Duchy of Lancaster and enrolled on the Memoranda Roll *ex parte* Remembrancer under the third Year of King Henry VIII. to wit among the Records of Holy Trinity Roll 24 and Letter of Acquittance of William Eade Esq. Receiver General of the same Duchy.

Easter Term in the Third Year of the Reign of King George the Third 1763.

Tuesday the 10th day of May.

England upon motion this day made unto this Court by Mr. Hussey on behalf of his Majesty in Right of his Duchy of Lancaster it was alledged that his said Majesty in Right of his said Duchy is intitled to have receive and be paid by the respective Sheriffs out of the issues and profits of their several counties the several yearly sums called creation money hereafter mentioned that is to say By the Sheriffs of Essex and Hertford £.40 10 *s.* 10 *d.* The Sheriff of Derby Twenty pounds The Sheriff of Nottingham Twenty pounds and by the Sheriff of Lincoln Twenty pounds That payment had been made by the said respective Sheriffs on account thereof and which had been allowed to them respectively on stating their accounts in this Court as hereafter mentioned that is to say By the Sheriffs of Essex and Hertford the sum of £. 40 10 *s.* 10 *d.* for each of the 1st 2d 3d and 4th years of the Reign of King James the 2d and for each of the 1st 2d 3d 4d and 5th years of the Reign of King William the 3d By the Sheriff of Derby the said annual sum of Twenty pounds from year to year down to the year ending at michas. in the 6th year of the Reign of his late Majesty King George the first By the Sheriff of Nottingham the sum of Twenty pounds for each of the 3d 4th and 5th years of the reign King James the 2d and for each of the 1st and 4th years of the reign of King William the 3d and by the Sheriff of Lincoln the annual sum of Twenty pounds from year to year down to the year ending at michaelmas in the 33d year of the reign of his late Majesty King George the 2d That the said several sums were and ought to be first paid by the said respective Sheriffs out of such issues and profits of their respective counties as should come to their hands and it was further alledged by the said Mr. Hussey that the respective Sheriffs of the said counties for the year ending at michaelmas last had given in charge to them respectively and had respectively received by such issues and profits more than sufficient to pay and satisfy the sums so respectively claimed from them and that Forster Bainbridge Gentelman the Attorney of the said Duchy (duly authorized under the seal of the said Duchy for receiving the said annual sums) had demanded of the undersheriffs of the said respective counties for the said year ending at michaelmas last or their agents the respective annual sums which became due to his said Majesty on account of the said creation money for the year which ended at michaelmas last But that they had severally refused or declined to pay the same It was therefore prayed that the several Sheriffs of Essex and Hertford Derby Nottingham and Lincoln for the year ending at michaelmas last may forthwith respectively pay unto his Majesty's said Attorney for his Majesty's use the said respective sums of £. 40 10 *s.* 10 *d.* £. 20 £. 20 and £. 20 Whereupon and upon hearing of Mr. Yates one of his Majesty's Council learned of his said Duchy likewise on behalf of his said Majesty and upon reading the counterpart of the Great Roll of the Pipe containing the several allowances hereinbefore mentioned and also upon reading the Certificate of William Dickenson Esq. the Deputy Foreign Apposer of this Court and the Affidavits of the said Forster Bainbridge and Francis Russell Gentelman

It is this day Ordered by the Court that the said Sheriffs of Essex and Hertford and the said Sheriffs of Derby Nottingham and Lincoln do and shall forthwith respectively pay unto the said Attorney of his said Majesty for his said Majesty's use the respective sums of £. 40 10 *s.* 10 *d.* £. 20 £. 20 £. 20 which became due to his said Majesty on account of the said creation money for the year ending at michas. last unless his Majesty's Attorney General upon notice of this Order being given to Philip Carteret Webb Esq. the Sollicitor of his Majesty's Treasury or the said Sheriffs on the like notice being given to them their undersheriffs or agents respectively shall on the first day in the next Trinity Term shew unto this Court good cause to the contrary.

By the Court.

I certify that the foregoing is a true and authentic copy.

Peter Turner,
Assistant Keeper of the Public Records.

11 March 1887.

Appendix, No. 6.

PAPERS handed in by Sir *Reginald Welby*, K.C.B.

ANNUITY OF £. 6,870 TO THE DUKE OF GRAFTON.

SCHEDULE of Particulars of LANDS Purchased out of the Proceeds of Sale of the greater part of the Sum of 229,000 *l.* Consols, referred to in Parliamentary Paper, No. 80, of 1881, and showing how this Sum has been reduced to 30,555 *l.* 10 *s.* 8 *d.* (Stock).

Date of Deed.	Names of Parties.	Amount of Purchase Moneys.	Properties Conveyed.	Trusts Declared of Freehold.	Remarks.
		£. s. d.			
2 April 1817	John Christopher Mansel, the Most Noble George Henry Duke of Grafton; Trustees :— The Right Hon. Robert Banks Earl of Liverpool (First Lord of Treasury), the Most Hon. John Jefferies Marquis Camden, the Right Hon. William Earl of Lonsdale, and the Right Hon. John Charles Villiers.	1,300 – –	A small farm containing about 38 acres, in the parish of Passenham, Northampton (no plan).	To the trusts declared by the Acts of Parliament of 46 & 55 George III., concerning the dividends on the bank annuities, whereby pension was commuted, and to go and remain to same uses as said dividends would have gone.	This Deed recites the history of the pension of 6,870 *l.*, and its commutation by 229,000 *l.* Stocks 3 per Cent. Consols, which might be laid out in land; and this seems to be the first purchase of any such land.
24 July 1818	The Right Hon. Thomas Earl of Clarendon, Sir Robert John Buxton, the Right Hon. John Lord Crewe (Executors, &c. of late Augustus Henry Duke of Grafton), the Most Noble George Henry Duke of Grafton. The above-mentioned Earl of Liverpool, Marquis Camden, Earl of Lonsdale, and J. C. Villiers, the trustees, under 55 Geo. III.	40,730 10 –	Manor of Pottersbury, county Northampton, with houses, the rectory of Pottersbury and tithes and hereditaments, &c. The land contains in all about 1,156 acres (no plan).	Similar trusts - - - -	This Deed recites that 2,017 *l.* 3 *s.* 6 *d.* Stock had been sold out to pay for (above) purchase and expenses. *The manor of Silverston and certain lands known as Bathurst Woods, and containing* 413A. 2R. 16P., *forming part of the lands comprised in this Deed, were exchanged, through the Inclosure Commissioners, for other lands in Whittlewood Forest, containing* 422A. 2R. 15P., *belonging to Lord Southampton.*
26 June 1824	The Most Noble George Henry Duke of Grafton. The above-mentioned trustees (Mr. Villiers having become Earl of Clarendon).	5,450 – –	Messuage, farms, and hereditaments in and near Roade and Pottersbury, county Northampton (no plan, and quantities not always stated, apparently over 110 acres).	Similar trusts - - - -	This Deed recites that 56,353 *l.* 5 *s.* Consols had been sold out for purchases of freehold in Northampton and expenses, but without specifying what.
27 Aug. 1825	The Most Noble George Henry Duke of Grafton, Caroline Scrivenor, William Keep, and John Keep, trustees of late Joseph Scrivenor, and the above-mentioned trustees.	5,838 12 – 2,979 – –	Lands and houses, &c. at Pottersbury, Cosgrave, and Deanshanger, county Northampton, about 66 acres (no plan). Messuages, &c. at Pottersbury, Yardley Gobion, and land at Abthorpe.	Similar trusts - - - -	This Deed recites that 62,385 *l.* Consols had been sold, &c., as above.

ANNUITY OF £. 6,870 TO THE DUKE OF GRAFTON—*continued.*

Date of Deed.	Names of Parties.	Amount of Purchase Moneys.	Properties Conveyed.	Trusts Declared of Freehold.	Remarks.
		£. s. d.			
14 July 1827	The Most Noble George Henry Duke of Grafton; Thomas Kerby, William Cleaver, and Henry Elliott, trustees of will of J. M. Kerby, Henry Elliot, and Catherine his wife; John Parkinson, Theodosia Stovin, John Sparrow Stovin, Thomas Baker, Henry Elliott, John Godfree, John Elliott, Samuel Deacon, and the Right Hon. George Canning (First Lord of the Treasury); the Marquis Camden, the Earl of Lonsdale, the Earl of Clarendon, Samuel Jones, Thomas Atkinson, Thomas Farrer.	8,000 – – 12,000 – – 3,560 – – 800 – –	Manor of Abthorpe, county Northampton, with sundry rights, members, and appurtenances; about 100 acres of woodland at Silverstone, and about 50 acres in or near Salcey Forest, and other lands, quantity not stated; a moiety of a house, &c. in Pottersbury, and of about 1 A. 1 R. 36 P. there. The whole quantity appears to be about 573 acres.	Similar trusts - - - -	This Deed recites that 72,385 *l.* Consols had been sold out and invested in freeholds in county Northampton (including costs), leaving 156,615 *l.* 0 *s.* 3 *d.* per Cent. Consols. *The 50 acres in Salcey Forest have been acquired by the Crown under the Indenture of 24 February 1859, presently mentioned, and an award mentioned therein, and the purchase money, 1,250 l., invested in the names of the Trustees of the Prizage Fund in 1,302 l. 1 s. 8 d. Consols.*
11 Mar. 1828	John Hall and Elizabeth his wife, William Whitlock, William Drayson, the Most Noble George Henry Duke of Grafton, the Duke of Wellington as First Lord Commissioner of the Treasury, the Marquis Camden, the Earl of Lonsdale, the Earl of Clarendon, W. G. Elliott, and John Parkinson.	8,500 – – 1,600 – –	A messuage, &c. in Pottersbury, county Northampton, with about 3 A. 0 R. 1 P., and lands in Paulersbury and Whittlebury. The whole quantity appears to be about 163 acres.	Similar trusts - - - -	This Deed recites that 101,717 *l.* 18 *s.* 4 *d.* Consols had been sold out for purposes above mentioned, leaving 127,283 *l.* 18 *s.* 4 *d.* *This portion of the property in this conveyance, called Nicholas Wood and Stoney Hill, were sold in 1857 to Lord Southampton, and the purchase money, amounting to 673 l., added to the Prizage Fund.*
29 Aug. 1829	Richard Harrison, Richard Kitelee, Henry Burt, John Burt, John Newman, John Godfree, John Parkinson, Thomas Burt, John Elliott, Mary Grimsdick, Thomas Tarry, Isaac Lovell, John Sheppard, Thomas Stuckfield, George Henry Duke of Grafton, the Duke of Wellington as First Commissioner of Treasury, the Marquis Camden, the Earl of Lonsdale, the Earl of Clarendon, Thomas Farrer, and W. L. Farrer.	4,800 – – 2,750 – – 1,772 3 6	Farm house and lands in Greens Norton, five allotments in Paulersbury, an allotment in Hartwell containing 51 A. 0 R. 27 P. The whole quantity appears to be about 173 acres.	Similar trusts - - - -	Recites that 114,271 *l.* 18 *s.* had been sold out of the 3 per Cent. Consols to buy freeholds and pay costs, leaving 114,728 *l.* 2 *s.*
25 July 1837	George Henry Duke of Grafton, John Parkinson, George FitzRoy, William Viscount Melbourne (First Lord of the Treasury), John Jefferies Marquis Camden, William Earl of Lonsdale, and John Charles Villiers Earl of Clarendon.	2,850 – –	Farm house and land containing 48 A. 3 R. 37 P. in Yardley Gobion, Pottersbury, county Northampton; Red Lion Inn, Plumb Park Inn, and messuages and garden in Pottersbury; piece of ground called the Pightle in Pottersbury; piece of ground part in Pottersbury and part in Whittlebury, containing two acres (no plan).	Similar trusts - - - -	Recites that 125,273 *l.* 1 *s.* 1 *d.* Consols had been sold out and invested in freehold estates in Northampton, and paying costs, leaving 103,726 *l.* 18 *s.* 11 *d.* Consols.

7 Oct.	1840	James Attenborough, Robert Attenborough, Thomas Smith, Ann Amos, George Henry Duke of Grafton, William Viscount Melbourne (First Lord of Her Majesty's Treasury), John Jefferies Marquis Camden, William Earl of Lonsdale, Joseph Law, and John Parkinson.	8,130 – –	Messuage in Blakesley, county Northampton, several closes of ground in Blakesley containing 123 A. 1 R. 8 P. (no plan).	Similar trusts - - - -	Recites that 127,773 *l.* 1 *s.* 1 *d.* Consols had been sold and invested in freehold estates in Northampton, and paying costs, leaving 101,226 *l.* 18 *s.* 11 *d.* Consols.
19 Oct.	1841	Thomas Chambers, John Shepheard, George Henry Duke of Grafton, the Right Hon. Sir Robert Peel, bart. (First Lord Commissioner of Her Majesty's Treasury), and William Earl of Lonsdale.	11,950 – –	Messuage and lands in Stoke Bruerne and Shutlanger; farmhouse and lands at Woodend, Blakesley, containing in the whole about 213 A. 3 R. 15 P.	Similar trusts - - - -	Recites that 139,180 *l.* 12 *s.* 1 *d.* Consols had been sold and applied in the purchase of freehold estates in Northampton, and payment of costs, leaving the sum of 89,819 *l.* 7 *s.* 11 *d.* Consols.
19 Oct.	1841	Richard Edward Sheppard, John Iliffe, George Worley, George Henry Duke of Grafton, the Right Hon. Sir Robert Peel, bart. (First Lord Commissioner of Her Majesty's Treasury), and William Earl of Lonsdale, Mary Ann Worley and said John Iliffe, William Jenkinson, and John Parkinson.	750 – –	Piece of ground in Blakesley, county Northampton, containing 10 A. 0 R. 5 P.	Similar trusts - - - -	Similar recital.
2 Sept.	1857	The Queen's Most Excellent Majesty, the Hon. Charles Alexander Gore, Henry Duke of Grafton, the Right Hon. Henry John Viscount Palmerston, Lord Charles Fitzroy, the Hon. Edward Gordon Douglas Pennant, the Hon. and Rev. Augustus Frederick Phipps, and William James Farrer.	43,000 – –	Lands in the parishes of Whittlebury, Paulersbury, Pottersbury, Passenham, and Deanshanger and Lillingstone Dayrell, in the counties of Northampton and Buckingham, containing 762 A. 0 R. 32 P. (plan annexed),	Similar trusts - - - -	Recites that 152,107 *l.* 5 *s.* 2 *d.* Consols had been sold and invested in the purchase of freehold estates in Northampton, and in payment of costs, leaving 74,723 *l.* 16 *s.* 6 *d.* Consols. *This sum was reduced by sale of* 46,178 *l.* 16 *s.* *Consols, for purchase money and costs, to* 28,545 *l.* 0 *s.* 6 *d.* *Consols.*

— „ By Order of Exchange the manor of Silverston and Bathurst Woods, comprised in Indenture of 24th July 1818, and containing 413 A. 2 R. 16 P., were exchanged with Lord Southampton for other lands in Whittlewood Forest, containing 422 A. 2 R. 15 P. (*See* Note, p. 75.)

7 Aug. „ By an Indenture of Conveyance of this date, between Henry Duke of Grafton, first part, Charles Lord Southampton, second part, and Jacob Burt, third part, Nicholas Wood, containing 11 A. 3 R. 28 P., and Stoney Hill, containing 4 A. 2 R., were conveyed to Lord Southampton.

9 Dec. „ And by a Deed Poll of this date, under the hand and seal of Henry Duke of Grafton, after reciting that Nicholas Wood and Stoney Hill had been conveyed, under deed of 11th March 1828, to the uses of the Prizage Fund; and in order to reimburse the Prizage Fund, Henry Duke of Grafton had caused same to be valued, and such value was found to be 673 *l.*, and accordingly that sum was invested in 708 *l.* 8 *s.* 6 *d.* Consols in the names of the trustees of the Prizage Fund. This, added to the 28,545 *l.* 0 *s.* 6 *d.* Consols, increased that stock to 29,253 *l.* 9 *s.*

24 Feb. 1859 By Indenture between Henry Duke of Grafton, first part, Edward Geoffrey Smith Stanley Earl of Derby, First Commissioner of Her Majesty's Treasury, Lord Augustus Charles Lennox FitzRoy, the Hon. Edward Gordon Douglas Pennant, the Hon. and Rev. A. F. Phipps, and Wm. James Farrer, esq., second part, the Hon. Charles Alexander Gore, the Commissioner of Her Majesty's Woods, Forests, and Land Revenues, of the third part, and the Queen's Most Excellent Majesty, fourth part, after reciting Indenture of 14th July 1827, being the conveyance of (*inter alia*) 50 acres in Salcey Forest, it was witnessed that in consideration of 1,250 *l.* the said Duke of Grafton, with the approbation of the parties of the second part, conveyed the said land in Salcey Forest by its then description to Her Majesty The Queen, her successors and assigns, as part and parcel of the possessions of the Land Revenues of the Crown.

This sum of 1,250 *l.* was, on the 5th April 1859, invested in £. 1,302 1 8 Consols,
in the names of the Trustees of the Prizage Fund, which, added to the 29,253 9 – Consols,

make up the present Total of - - - £. 30,555 10 8 Consols.

GRAFTON ESTATES.

The title under which the Duke of Grafton held Salcey Lodge and the lands in and adjoining Salcey Forest, containing altogether 216 A. 1 R., referred to on page 26 of the 36th Report of the Commissioners of Woods and Forests (Parliamentary Paper, No. 380 of 1858), as having been purchased by the Crown for 9,500 *l.*, is explained in the following letter from Mr. Frederick Hellard, a Principal Clerk in the Office of Woods and Forests.

(Grafton Estates.)

Office of Woods, &c., 1 and 2, Whitehall-place, S.W.,
18 March 1887.

My dear Sir,

THE title to the lands, &c., at or near Salcey, purchased by the Crown for 9,500 *l.*, is complicated, and cannot be explained very shortly.

The purchase to which you refer comprises Salcey Lodge and lands to the extent of 218 A. 1 R. 25 P., and rights of sporting over Hazleborough Woods, which then belonged to the Crown.

The Duke of Grafton was entitled under the letters patent 25 Car. II. for an estate in tail male to certain estates in Northamptonshire and elsewhere, and to the underwood growing in Whittlewood and Salcey Forests, and under the letters patent of 11 Anne he was similarly entitled as Master of the Game to rights over Hazleborough Woods belonging to the Crown, and formerly part of Whittlewood Forest.

His eldest son, the Earl of Euston, was entitled for life under letters patent 41 Geo. III. to the office of Warden and Ranger of Salcey Forest.

The Act 6 Geo. IV. c. cxxxii., authorised the disafforestation and enclosure, &c., of Salcey Forest, and the Act 7 Geo. IV. c. xvi., authorised the subdivision and exchange of certain allotments made under the first Act, and in other respects supplemented the latter.

The recitals in these Acts give some information as to the claims of the Duke and his son, and in the first Act it is mentioned that the Earl of Euston desired that the compensation for his rights might be allotted to the Duke of Grafton in tail male in the same way as the compensation in respect of the Duke's rights.

Accordingly, three allotments containing 79 A. 0 R. 34 P., 42 A. 0 R. 19 P., and 31 A. 0 R. 29 P., respectively (the last including Salcey Lodge), were made by the award, dated 1st July 1826, to the Duke in satisfaction of his and his son's rights under the letters patent of 25 Car. II. and 41 Geo. III., and a further allotment of 50 acres was made to J. Parkinson for raising the Duke's share of costs.

This last allotment was sold by Parkinson to the trustees of the Prizage Fund, and is comprised in the conveyance of 14th July 1827, set out in the Schedule already supplied to you, but this fact seems to have been overlooked, for under the award of 30th April 1828, made under the second Act, an exchange was effected between the Crown and the Duke of Grafton, whereby the Crown acquired some allotments containing 84 A. 0 R. 29 P., and also the before-mentioned allotments of 79 A. 0 R. 34 P., and 42 A. 0 R. 19 P., and also 47 A. 3 R. 15 P., part of the 50 acre allotment, and the Duke acquired in lieu allotments containing respectively 138 A. 3 R. 14 P. and 2 R. 9 P., which were parts of the allotments previously made to the Crown. Then in 1829 this Department granted to the Duke 12 A. 2 R. 18 P., further part of the Crown allotment in exchange for the same quantity granted by the Duke, being part of the 138 A. 3 R. 14 P. acquired by him under the exchange of 1828.

The mistake seems to have been discovered in 1858, and an order of the Inclosure Commissioners was then made, dividing the allotment of 138 A. 3 R. 14 P. as follows:— 35 acres to the trustees of the Prizage Fund in lieu of the 47 A. 3 R. 15 P. which belonged to them, but was acquired by the Crown under the exchange of 1828, and the remainder to the Duke.

Thus in 1859 the trustees of the Prizage Fund owned 37 A. 0 R. 25 P., and the Duke as tenant in tail male under the grant of 25 Chas. II. owned Salcey Lodge and 135 A. 2 R. 10 P. of allotted lands. These together amount to 172 A. 2 R. 35 P., and formed part of the lands conveyed, and the remaining 45 A. 2 R. 30 P. conveyed were, I gather, parts of the estates originally granted by the letters patent of 25 Chas. II.

The purchase of the lands, &c., other than those owned by the Prizage Fund, was made under the powers of the Land Revenue Act, 10 Geo. IV. c. 50, which enable persons who may not be absolute owners to make a good title (*see* Sec. 53, *et seq.*). The purchase money of 9,500 *l.* was paid into Court on 25th January 1859, and subsequently invested in Consols on the accounts, viz.:—

£. 1,250 on the account of the Trustees of the Prizage and Butlerage Fund, and 8,250 *l.* on an account entitled "The Entailed Estates of the Duke of Grafton and the Commissioners of Her Majesty's Woods, Forests, and Land Revenues."

The former sum is of course merged in the larger sum standing to the account of the same trustees, but the latter sum still remains invested as above mentioned, the dividends being received by the Duke of Grafton for the time being.

Yours, &c.

C. C. Puller, Esq. (signed) *Frederick Hellard.*

Appendix, No. 7.

PAPER handed in by Sir *Reginald Welby*, K.C.B.

1887.

THE PARLIAMENTARY TRUST OF HIS GRACE THE DUKE OF RICHMOND AND GORDON, K.G.

STATEMENT of CONSOLIDATED 3 PER CENT. BANK ANNUITIES, representing the Annuity of 19,000 *l.* funded or redeemed under the provisions of the Act of Parliament, 39 and 40 George III., c. 43, and of the Application of the Proceeds of Sale of such Consols in the Purchase of Lands, prepared by Messrs. *Davidson, Burch & Co.*

The total sum of Consols for which the annuity of 19,000 *l.* was funded or redeemed was 633,333 *l.* 6 *s.* 9 *d.* Stock, made up as follows, viz.:—

	£.	*s.*	*d.*
Purchased on the 27th November, 1801, as representing the redemption of the annual sum of 6,333 *l.* 6 *s.* 8 *d.*, part of the annuity of 19,000 *l.*	211,111	2	3
Purchased on the 14th November, 1809, as representing the redemption of the annual sum of 6,333 *l.* 6 *s.* 8 *d.*, further part of the said annuity of 19,000 *l.*	211,111	2	3
Purchased on the 15th July, 1824, as representing the redemption of the annual sum of 6,333 *l.* 6 *s.* 8 *d.*, the residue of the said annuity of 19,000 *l.*	211,111	2	3
TOTAL £.	633,333	6	9

By the Act of Parliament, 39 & 40 Geo. III., cap. 103, the Trustees were authorised to sell out certain portions of the said sum of 633,333 *l.* 6 *s.* 9 *d.* Consols, and invest the proceeds in the purchase of real estates to be settled, conveyed, and assured to the use of such persons and for such estates as the said annuity of 19,000 *l.* would have stood limited in case the same had not been funded and redeemed.

In exercise of the powers conferred by the last-mentioned Act of Parliament, the Trustees, at various times prior to the year 1837, sold out the aggregate sum of 485,434 *l.* 14 *s.* 7 *d.* Consols, and invested the proceeds of sale in the purchase of the following estates, which were conveyed to the uses corresponding to those affecting the annuity as prescribed by the Act of Parliament.

The Estates purchased consisted of the following particulars, viz.: —

Parishes.	Farms.	Arable Land.			Meadow Land.			Down Land.			Total.

A piece or parcel of land, with a messuage or dwelling-house, stable yard, gardens, and field, situate on the north part of the City of Chichester, and called the Gray Fryars -											10	0	26
								Total - - -			11,563	2	25

The original sum of 633,333 *l.* 6 *s.* 9 *d.* Consols became reduced by the sale of the 485,434 *l.* 14 *s.* 7 *d.* Stock, for the purpose of the above purchases, to the sum of 147,898 *l.* 12 *s.* 2 *d.* Consols.

Under the further powers conferred by the 1 Vict. c. 34, the above balance of Consols, viz., 147,898 *l.* 12 *s.* 2 *d.* Consols, was sold out prior to the year 1868, and the proceeds invested as to part in the purchase of further lands in the county of Sussex, and as to other part in the purchase of lands in the counties of Banffshire and Inverness-shire, in Scotland, the whole of the purchases in England being conveyed to the uses affecting the original annuity, and as to the lands purchased in Scotland in the form prescribed by the Act.

The following was the complete Schedule of the Sussex Estates purchased as above, and conveyed to the uses of the Trust, viz.: —

Parishes.	Farms, &c.	Arable Land.			Pasture Land.			Down and Wood Land.			Total.

The lands purchased in Scotland consisted of,—

The lands and barony of Strathavon, in the parish of Kirkmichael, Banffshire.

Portions of the lands and barony of Auchindown, and estate of Glenrinnes, in the parishes of Cabrach, Mortlach, and Aberlone, Banffshire.

The barony of Kincardine, in Inverness-shire.

In 1850 the then Duke of Richmond, by virtue of the powers conferred upon heirs of entail in Scotland by the Act of 11 & 12 Vict. c. 36, with the necessary consents, and under the authority of the Court of Session, resettled his Grace's estates in Scotland, including the properties so purchased in Scotland as above mentioned.

Upon his Grace the present Duke of Richmond and Gordon succeeding to the Scotch estates on his father's death, he completed his title to the lands as heir of entail to his father by a Crown Charter of Resignation of the 13th April, 1861.

The effect of these deeds was to bar the entail and resettle the Scotch estates, including the small proportion of property in Scotland purchased under the Parliamentary Trust, and the entail was thereby extended.

Appendix, No. 8.

PAPER handed in by Sir *Reginald Welby*, K.C.B.

ANNUITY OF £. 19,000 TO THE DUKE OF RICHMOND.

THE following is a Copy of the LETTERS PATENT of 18th December, 1676, referred to on page 2 of the Parliamentary Paper, No. 80, of 1881, granting to *Charles*, Duke of *Richmond*, 12*d.* per Chaldron on COALS shipped at *Newcastle*:—

CHARLES THE SECOND by the Grace of God King of England Scotland France & Ireland Defender of the Ffaith To ALL TO WHOM these presents shall come Greeting WHEREAS the Governors Stewards & Brethren of the ffellowship of the Hostemen of the Town of Newcastle upon Tyne in the County of Newcastle upon Tyne by their Writing sealed as well with their Common Seal as with the Common Seal of the Mayor and Burgesses of the s^d^ Town of Newcastle upon Tyne bearing date the 8th day of April in the two & fortieth year of the Reign of the late Queen Elizabeth Did for them and their successors give and grant unto the said late Queen her Heirs & Successors To the use of the s^d^ late Queen her Heirs & Successors for ever for each & every & for such & so many Chaldrons of Sea Coals Stone Coals or Pit Coals of the Water Measure of Newcastle upon Tyne afores^d^ as at any time or times thenafter should be sold shipped carried or vended by any person or persons whatsoever forth or out of the Haven or River of Tyne belongs to the aforesaid Town of Newcastle to be spent within the Realm & not transported beyond the seas the several sums of Twelve pence of lawful money of England to be paid by the said Governors Stewards & Brethren & their successors unto the s^d^ late Queen her Heirs and Successors before any Ship or other Vessels wherein any such Coals sho^d^ be Laden sho^d^ at any time or times thenafter be cleared or discharged forth of the Customhouse of the s^d^ late Queen in the s^d^ Town of Newcastle—Coals sold & conveyed from the s^d^ port of Newcastle to Hartlepoole to be employed & spent in & about such Salt panns as then were in Hartlepool afs^d^ & appertaining to the Lord Lumley his Heirs & Ass^s^ or any of the Burgesses of the said Town of Newcastle only excepted AND WHEREAS in & by one Indre. bearing date the nine & twentieth day of March in the 12th year of our Reign made or ment^d^ to be made between us of the one part & John Visc^t^ Mordant Sir Tho^s^ Peyton Bart. IN WITNESS whereof we have caused these our Letters to be made Patents. WITNESS ourself at Westminster the 18th day of Decr in the nine and twentieth Year of our Reign. By Writ of Privy Seal. PIGOTT.

Appendix, No. 9.

PAPER handed in by Sir *Reginald Welby*, K.C.B.

PENDRELL PENSION.

THIS pension consists of a considerable number of Fee Farm Rents formerly payable to the Crown, but granted by Letters Patent of the 24th of July, 27th Car. II., to Sir Walter Wrotesley, Bart., Richard Congrave, and John Gifford, Esquires, in trust for—

(As to £. 100 per annum) Mary, Widow of Richard Pendrell and Richard Pendrell's heirs ;

(As to £. 100 per annum) William Pendrell and his heirs ;

(As to 100 marks per annum) John Pendrell and his heirs ;

(As to 100 marks per annum) Humfry Pendrell and his heirs ;

(As to 100 marks per annum) George Pendrell and his heirs ;

(As to £. 50 per annum) Elizabeth Yates and her heirs ;

with benefit of survivorship to the others on failure of heirs of any one of the beneficiaries, and with reversion to the Crown on failure of all issue.

The Treasury ascertained in 1869 that Mr. Walter Peter Gifford, the then owner of Chillington, was the representative of the survivor of the original Trustees, and that Mr. George Robinson of Whiston, Shiffnall, then acted as receiver of the rents in question. The Treasury have reason to believe that in 1869 the recipients were in number about twenty, and that there was then no probability of any failure of heirs.

The following is a copy of the Letters Patent of the 24th of July of 27th Car. II. referred to above, viz. :—

QUINTA PARS PATEN DE ANNO REG CAROLI SECUNDI VICESIMO SEPTIMO.

D Con Waltero Wrotesley Bar @ al

(13)

(signed) *John Kipling.*

Appendix, No. 10.

PAPER handed in by Sir *Reginald Welby*, K.C.B.

ANNUITY OF £. 19,000 TO THE DUKE OF RICHMOND.

1887.

THE PARLIAMENTARY TRUSTEES OF THE GOODWOOD ESTATES.

SCHEDULE of PARTICULARS showing the dealings with certain SUMS of CONSOLS amounting together to £. 633,333. 6. 9. transferred into the Names of the PARLIAMENTARY TRUSTEES in exchange for an ANNUITY of £. 19,000 charged upon the Consolidated Fund, showing how this Sum, with certain additions thereto, arising from Sales and Enfranchisements, has been reduced to £. 241. 12. 5., like Stock now standing in the Trustees' Names.

N.B.—It will be seen from the following particulars that the application of the proceeds of the Sales of Stock is not entirely accounted for. There must necessarily have been other considerable items for legal expenses, surveyors' charges, and the like, and it may be that there are some early purchases which have not been traced, but the Schedule is made as complete as the time given for its preparation would allow.

Date of Transfer, Sale, or addition to Stock.	STOCK TRANSACTION.	Amount of Stock received or dealt with.	Amount of Cash realised by Sale of Stock,	Particulars of Purchases, all Freehold, except where otherwise stated.	To whom Conveyed.

N.B.—Various exchanges of some of the properties originally acquired have from time to time been made under the powers of the Acts relating to the Trust, as well as under Inclosure Acts, but the result has not practically affected the value or quantity of the estates.

Appendix, No. 11.

MEMORANDUM handed in by Sir *Reginald Welby*, K.C.B.

INFORMATION furnished in pursuance of certain Questions asked in course of Examination.

1.—The Heneage Pension. 2.—The Dauverquerque Pension.
3.—The Schomberg Pension.

1.—HENEAGE PENSION.

THE Act 15 & 16 Vict. c. 73, s. 22, empowers the Treasury to grant to "G. H. W. "Heneage during his life, and after his death, to such person or persons as would have "been entitled to hold (the offices of Hereditary Chief Proclamator in the Court of "Common Pleas and Hereditary Chief Usher in the Court of Exchequer), or either of "them, upon satisfactory proof of his, her, or their being so entitled, such annual sum as "the Commissioners may find to be a fair and reasonable compensation for the loss of the "said offices."

Compensation allowance fixed at 588 *l.* 6 *s.* 9 *d.* per annum, being the full amount of the average profits of the office during 30 years preceding their abolition.

On the death of Mr. G. H. W. Heneage, the same compensation allowance was continued to his son, Mr. Clement W. Heneage, who afterwards commuted it.

2.—DAUVERQUERQUE PENSION, FORMERLY CHARGED ON LAND REVENUES.

Lord Cowper held four-fifths of this pension (1,600 *l.* gross, 1,503 *l.* 4 *s.* net) by descent, the first Lord Cowper having been grandson of the first grantee, Henry de Nassau, Seignor D'Auverquerque.

Mr. L. L. Cohen is one of four trustees who purchased the remaining one-fifth (400 *l.* gross, 375 *l.* 16 *s.* net) in 1868 from the executors of T. F. Schroeder, who held the same in 1853, but there is nothing to show how he came by it.

3.—SCHOMBERG PENSION.

The Countess of Holdernesse (afterwards Countess Fitzwalter) was one of two daughters of Maynard, Duke of Schomberg. She inherited half the original pension of 4,000 *l.* a year, and purchased the other half from her sister, thus acquiring the whole.

She and her second husband, Earl Fitzwalter, sold 1,000 *l.* a year, part of the pension, to Thomas Walker. This 1,000 *l.* a-year passed in equal moieties in 1774 to his descendants, Emma, Countess of Tankerville, and Mary, wife of John Aubrey.

Both moieties were sold to Richard Michell (1774 and 1778). On his death the 1,000 *l.* a-year was divided equally between his two daughters, Charlotte, wife of Frederick West, and Louisa, wife of Philip Lybbe Powys.

The latter portion (500 *l.* a-year) has passed by descent in the Powys family ever since.

The former portion (500 *l.* a-year), held by Mrs. Frederick West, was sold in 1792 by her and her husband to Robert Gosling, from whom it has descended to the present holder.

[*N.B.*—In this Index the Figures following the Names of the Witnesses, and those in the Analysis of Evidence of each Witness, refer to the Questions in the Evidence; the Figures following *App.* refer to the Pages in the Appendix; and the Numerals following *Rep.* to the Pages in the Report.]

A.

ABERDEEN UNIVERSITY. Perpetual payment of 320 *l.* a year to the University of Aberdeen as compensation under the Copyright Act, *App.* 58——Several perpetual payments transferred to the Consolidated Fund from the Land Revenuesof the Crown, *ib.* 68.

Almanacks (*Oxford and Cambridge Universities*). Annual amount chargeable on voted moneys in respect of compensation to the Universities of Oxford and Cambridge, for loss of the privilege of printing and vending almanacks; origin of the charge, *App.* 69.

Amherst, Lord. Concurrence generally in a statement that the origin of the grant of a pension of 3,000 *l.* to Lord Amherst and his successors was that George III. had previously proposed a grant of certain land in Canada, this proposal not having been carried out, *Sir R. E. Welby* 244-247. 250, 251——Doubt whether at the time of the foregoing proposal the power of alienation by the Crown was limited as regards Canada by the statute 1st Anne, s. 1, *ib.* 248, 249.

Function of the Treasury merely to carry out the provisions of the Act under which the pension was granted to Lord Amherst; they cannot go behind the Act, *Sir R. E. Welby* 251——Statement on the subject of the commutation of this pension, *ib.* 252-254.

Paper handed in by Sir Reginald Welby, setting forth the origin of the pension of 3,000 *l.* a-year to Lord Amherst, *App.* 42.

Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *App.* 42.

Appuldurcombe (*Isle of Wight*), *Lord of the Manor of.* Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the grant in this case, the date and amount of redemption, &c., *App.* 48.

B.

Bath, Earl of. Paper handed in, on the part of the Treasury, containing particulars relative to the original grant to the Earl of Bath, *App.* 42.

Information as to the date of redemption, the amount, how provided, and the number of years' purchase, *App.* 42.

Berwick, Corporation of. Annual amount chargeable on voted moneys in respect of grant to the corporation of Berwick; origin of the charge, *App.* 69.

Report, 1887—*continued.*

Bradlaugh, C. (*Member of the Committee*). Statement to the effect that consideration was given at the time to a Memorandum submitted to the Treasury by Mr. Bradlaugh relative to the Penn and Marlborough pensions, and the proposed commutation thereof, *Sir R. E. Welby* 102–111.

Memorandum submitted to the Treasury by Mr. Bradlaugh, on 9th June 1884, respecting the proposed commutation of the Marlborough and Penn pensions; statement therein as to several acts of treachery and corruption on the part of the original grantee of the Marlborough pension, *App.* 53, 54.

C.

Cambridge University. Annual amount chargeable on voted moneys and paid to the university in respect of compensation for the loss of the privilege of printing and vending almanacks; origin of the charge, *App.* 69.

Carrickfergus Castle. Amount of perpetual payment charged on the Consolidated Fund in this case, and authority for such payment, *App.* 58.

Charitable Payments. Numerous small payments of a permanent character for charitable purposes which were commuted by the Treasury at about thirty years' purchase, after negotiation with the Charity Commissioners, to whom the payments were transferred from the Treasury, *Sir R. E. Welby* 12, 13——Enhanced rate given for the commutation of these payments, as causing much trouble at the Treasury, *ib.* 485, 486. 507–509.

Particulars respecting sundry perpetual payments, &c., chargeable on the Consolidated Fund on 1st January 1881, having been transferred from the land revenues of the Crown under the Act 29 & 30 Vict. c. 62; amount and terms of redemption, *App.* 59–68.

Cheshunt Park (*Herts*), *Owner of.* Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the grant to the owner of Cheshunt Park (now payable to F. J. Prescott and others), *App.* 47.

Chief Proclamator (*Court of Common Pleas*) *and Chief Usher* (*Court of Exchequer*). See *Heneage, G. H. W.*

Clarges Annuity. Entire commutation of the pension to Sir Thomas Clarges and his heirs, *Sir R. E. Welby* 393, 394.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of this pension or annuity, and the amount and rate of redemption, *App.* 50.

Cohen, L. L. See *Dauverquerque Pension.*

Commutation of Pensions, &c.:

Discretionary powers vested in the Treasury as to the rates of commutation of permanent charges; statutory and other authority under which this power has been exercised by the Treasury (to the best of its ability), on different occasions, *Sir R. E. Welby* 12–36. 57–74——Term of about twenty-seven years given in the case of individual pensions; conclusion that on the basis of the price of consols at the time of commutation the public were gainers, *ib.* 12, 13. 57–66——Circumstance of thirty years' purchase having been given in some cases of ecclesiastical and charitable payments, *ib.* 12, 13. 485, 486. 507–509 —— Instances of more than thirty years having been paid, consols price having been given, *ib.* 19.

Absence of any claim on the part of the Treasury at the present time to commute without statutory power or Vote of Parliament, *Sir R. E. Welby* 100–102 —— Special authority given by Parliament to the Treasury as regards commutations since the discussion on the subject before the Select Committee on Public Monies, *ib.* 252–254.

Further statement as to the grounds upon which prior to the Act of 1873 the Treasury exercised the power of commutation of pensions without previous application to Parliament; probability that the opinion of the law officers was taken, *Sir R. E. Welby* 403–406. 430–432 —— Discretionary powers in the Treasury under the Commutation Act as to the terms in each case, *ib.* 482–492.

Belief that the rule has been to offer twenty-seven years' purchase where perpetual payments or pensions have been granted to individuals, *Sir R. E. Welby* 485. 487 —— Further statement as to thirty years' purchase having been given in some cases of charitable and ecclesiastical payments of a perpetual character, *ib.* 485–486.

Full

Report, 1887—*continued.*

Commutation of Pensions, &c.—continued.

Full consideration given to the contingency (if any) of the determination of the annuity; report in each case by the Treasury Solicitor as to the probability of the permanence of the pension, *Sir R. E. Welby* 490–501. 504—— View of the Treasury that a perpetual payment charged upon the Consolidated Fund was roughly equivalent to consol value; interpretation of the Act of 1873 as limiting the purchase money to consol value as the maximum, *ib.* 492, 493.

Different terms of the original grants in certain cases, whilst in all of them the terms of redemption were the same (nearly twenty-seven years' purchase), *Sir R. E. Welby* 494-501 ——Higher commutation in the case of ecclesiastical and charitable payments, as causing much trouble at the Treasury, *ib.* 507–509——Non-reduction in the annual charge in cases where thirty-three years' purchase has been given; advantage in the saving of trouble, *ib.* 510, 511.

Strong opinion of witness in favour of commutation, provided the Treasury can be satisfied that the annual payment is permanent, *Sir R. E. Welby* 594–596. 599-601.

Particulars respecting hereditary pensions, &c., redeemed since 1881, together with the date of redemption in each case, the amount of redemption money and how provided, and the terms upon which the redemption took place, *App.* 42-50.

Basis of computation for persons desiring to commute pensions under the Pensions Commutation Act of 1871; *App.* 53.

Particulars respecting sundry perpetual pensions, &c., chargeable on the Consolidated Fund on 1st January 1881, having been transferred from the Land Revenue of the Crown under the Act 29 & 30 Vict. c. 62; amount and terms of redemption, *App.* 59–68.

Resolution of the Committee that all existing perpetual pensions, allowances, and payments, and all hereditary offices, should be determined and abolished, *Rep.* iii ——In all such commutations the Lords of the Treasury should take into consideration the circumstances of such pension, allowance, or payment, and whether or not any real service had been rendered by the original grantee, or was now performed by the actual holder of the office, *ib.*

Further resolution of the Committee that in all cases the method of commutation ought to involve and ensure a real and substantial saving to the nation, *Rep.* iii —— Conclusion that the rate usually adopted, of about twenty-seven years' purchase, is too high, *ib.*

Total of 330 pensions, payments, and allowances, amounting to the annual sum of 18,957 *l.* 9 *s.* 6 *d.*, commuted since 1st January 1881 by the payment of 527,933 *l.* 18 *s.* 4 *d.*, and at rates varying from ten years to thirty years' purchase, *Rep.* iii.

Resolution that some pensions appear to have been commuted, notwithstanding formal objections in writing lodged with the Lords of the Treasury, and without sufficient inquiry into the matters stated in such objections, *Rep.* iii.

See also *Charitable Payments.* *Dauverquerque Pension.* *Ecclesiastical Payments.* *Grafton, Duke of.* *Marlborough, Duke of.* *Melbourne Pension.* *Penn Pension.* *Richmond and Gordon, Duke of.* *St. Albans, Duke of.*

Cornwall, Duchy of:

Annual payment to the Duchy of Cornwall since 1838, as fixed in that year, and charged upon the Consolidated Fund, of a sum of 16,216 *l.* 15 *s.* 1½ *d.* in lieu of tin coinage, post groats, and white rents, *Sir R. E. Welby* 112 —— Several sources of income (besides the receipts from post groats, tin coinage, and white rents) included in the net income of the Duchy in 1838, and in previous years, *ib.* 113–118——Inclusion since 1838 of a sum of 630 *l.* 14 *s.* 2 *d.* in lieu of post groats in the gross payment of 16,216 *l.*; receipt of only 10 *l.* a year by the Duchy in the ten previous years in respect of post groats, *ib.* 119–122.

Intention expressed by King William IV., and confirmed by Her Majesty, that the payment in respect of post groats should cease on and from the 5th April 1841; Treasury Minute of 15th February 1839 to the foregoing effect, *Sir R. E. Welby* 123–128. 133, 134. 146–151 —— Subsequent correspondence, in 1841, between the lessee of the post groats and the Treasury, which led to the continuance of the payment for another six months from the 5th April 1841; further Treasury Minute giving effect to this arrangement, *ib.* 129, 130. 148–172. 180–186.

Protest from the Duchy in 1841 against the discontinuance of the payment in respect of post groats, the Treasury having acquiesced therein, and the payment having been continued down to the present time; examination hereon as to the action of the Treasury in the matter, *Sir R. E. Welby* 129–186——Absence of any Treasury Minute respecting the continuance of the payment subsequently to the extension for six months in 1841, *ib.* 130. 145. 186.

Report, 1887—*continued.*

CORNWALL, DUCHY OF—continued.

Statement as to no intimation having been made to Parliament of the continuance of the payment, though in direct opposition to the Treasury Minute of 15th February 1839; denial that it was the duty of the Treasury to bring the matter before the Comptroller and Auditor General, *Sir R. E. Welby* 133-145. 173-178.

Circumstance of witness during his long service at the Treasury having never had his attention drawn (till quite recently) to the matter now under inquiry in the case of the Duchy of Cornwall, *Sir R. E. Welby* 173-179.

Absence of any Treasury Minute with reference to a letter from Thomas Abbot (on the part of the Duchy), dated 8th July 1841, as regards the payment of 630 *l.* 14 *s.* 2 *d.* in respect of post groats; the last Minute was that on 7th June 1841, directing payment for six months, *Sir R. E. Welby* 255-258.

Explanation of the practice of the Treasury in 1841, and at the present time in regard to the recording and signing of Minutes; statement hereon as to there being no record of any Minute or any decision of the Treasury authorising the continued payment in respect of post groat duty subsequently to 1841, *Sir R. E. Welby* 404-429. 470-475 ——Probability that some verbal instruction was given, which was not recorded as to the continuance of the payment, *ib.* 420-423.

Examination in detail with further reference to the action of the Treasury in continuing the payment for post groats after their abolition in 1838 by Act of Parliament; grounds upon which the Treasury probably concurred in the remonstrance of the Duchy against the discontinuance of the payment, *Sir R. E. Welby* 430-476——Effect of the birth of the Prince of Wales in 1841 in reviving the claim to the continuance of the payment; that is, in his capacity as Duke of Cornwall, *ib.* 434. 447-453.

Check in 1841 and subsequent years through the Comptroller of the Exchequer in the matter of the annual charge on the Consolidated Fund in respect of the continued payment in lieu of post groats, *Sir R. E. Welby* 467. 476.

Further examination in detail respecting the claim of the Duchy to the continued payment since 1841 of post groats or tin coinage duties, and the grounds upon which the Treasury concluded it was not in their power to alienate the sum in question from the Duchy, *Welby* 536-584——Statement on the subject of the income of the Prince of Wales, on his marriage, in right of the Duchy having been made up to 100,000 *l.* a year, *ib.* 585-590.

Letter from the Duchy of Cornwall to the Treasury in April 1841, enclosing letter and memorial from Mr. J. S. Tucker, respecting continued payment for two quarters from Lady Day, 1841, of the annual rate of compensation for loss sustained by the abolition of the post groat duty, *App.* 55, 56.

Treasury Minute of 7th June 1841 directing payment of 315 *l.* 7 *s.* 1 *d.* out of the Consolidated Fund to the Receiver General of the Duchy, *App.* 57.

Letter from the Duchy to the Treasury, dated 8th July 1841, stating that the abandonment by King William IV., and by Her present Majesty, of their claim to the duty cannot prejudice the rights of the future Dukes of Cornwall to compensation in lieu of the post groat duty, *App.* 57.

Total of 16,216 *l.* 15 *s.* as the annual payment out of the Consolidated Fund as compensation for the loss of duties on the coinage of tin, *App.* 58.

Cowper, Lord. See *Dauverquerque Pension.*

Creation Fees (*Duchies of Lancaster, Rutland, and Norfolk*). Examination respecting three annual payments in respect of creation fees to the Duchy of Lancaster, the Duke of Rutland, and the Duke of Norfolk, respectively, which were commuted by the Treasury in 1883; reference to Stubbs' Constitutional History as explaining the nature of these fees, *Sir R. E. Welby* 75-99——Contention of the Treasury that the foregoing sums were granted in perpetuity, or for a term not determinable with the life of the person on whom they were originally bestowed, *ib.* 94-99.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of these payments, *App.* 50——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Customary Deductions from Pensions. Information respecting the "customary deductions" from pensions in former years in respect of fees, these having been abolished, *Sir R. E. Welby* 534, 535.

Report, 1887—*continued.*

D.

Dauverquerque Pension. Explanation as to the number of years' purchase given on commutation of the annual payment to Lord Cowper (in respect of the Dauverquerque pension); more favourable terms to the public than in the case of the Melbourne pension with reference to the price of consols at the time, *Sir R. E. Welby* 64-66——Doubt as to the services for which the Dauverquerque pension of 2,000 *l.* a year was granted by the King to Lord Grantham in 1694, *ib.* 357-359.

Conclusion that Lord Cowper, who received 40,000 *l.* in commutation of four-fifths of the Dauverquerque pension (*App.* 49), was a lineal descendant of the original grantee, *Sir R. E. Welby* 360-362. 365.

Information to be obtained by witness respecting a payment of 375 *l.* 16 *s.* a year still being made to Mr. L. L. Cohen as part of the foregoing pension, *Sir R. E. Welby* 363-365.

Particulars in Paper submitted by Sir Reginald Welby relative to the amount and origin of the pension to Henry de Nassau, Lord D'Auverquerque; payment now made to L. L. Cohen in respect of portion of the original grant, *App.* 49——Acceptance of the offer of Lord Cowper in March 1853 to sell for 40,000 *l.* his portion of the amount, which was four-fifths of the whole, and amounted, net, to 1,503 *l.* 4 *s.*, *ib.*

Memorandum handed in by Sir Reginald Welby containing further information relative to this pension, *App.* 107.

Documentary Evidence. Belief that the Papers handed in by witness (*App.* 42 *et seq.*) include every pension or payment under the terms of the reference to the Committee; every effort has been made at the Treasury to make the list as complete as possible, *Sir R. E. Welby* 321, 322. 326.

Downshire, Marquis of. See *Hillsborough Fort.*

Dublin (Lord Mayor and Citizens of). Amount of perpetual payment charged on the Consolidated Fund in this case, and authority for such payment, *App.* 58.

Duchy of Cornwall. See *Cornwall, Duchy of.*

Dysart, Earl of. Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the grant now payable to the trustees and executors of the late Earl of Dysart in respect of rent issuing out of the Castle of Fillingharne (Wales), *App.* 49.

E.

Ecclesiastical Payments. Sundry small payments of an ecclesiastical character which have been commuted by the Treasury at about thirty years' purchase after negotiation with the Ecclesiastical Commissioners, *Sir R. E. Welby* 12, 13——Explanation as to so much as thirty years' purchase having been given in some cases, *ib.* 485, 486.

Considerable trouble given at the Treasury by the numerous payments for ecclesiastical and charitable purposes, so that it was deemed expedient to get rid of them by commutation at a higher rate than any given to individual pensioners, *Sir R. E. Welby* 507-509——A considerable number of ecclesiastical charges have been commuted, but some still remain, *ib.* 508, 509——Permanency of any ecclesiastical payment made since the time of Charles II., *ib.* 595.

Particulars of an ecclesiastical character respecting sundry perpetual payments, chargeable on the Consolidated Fund on 1st January 1881, having been transferred from the Land Revenue of the Crown under the Act 29 & 30 Vict. c. 62; amount and terms of redemption, *App.* 59-64.

Eden, Sir William. Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the grant to Sir William Eden in respect of a certain office and appointments which have been abolished, *App.* 45——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Edinburgh University. Amount of perpetual payment charged on the Consolidated Fund in this case, and authority for such payment; that is, as compensation under the Copyright Act, *App.* 58——Transfer of perpetual payments from the Land Revenues to the Consolidated Fund, *ib.* 68.

Report, 1887—*continued*.

Educational Payments. See *Schools.*

Exmouth, Viscount, Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the pension to Lord Exmouth, *App.* 42.

F.

Fees (*Deductions from Pensions*). Explanations respecting certain fees or "customary deductions" in former years from the pensions when issued from the Exchequer; subsequent reduction of the gross payments by the amount represented by these fees, which were swept away, *Sir R. E. Welby* 534, 535.

Fillingharne Castle (*South Wales*). Particulars relative to the amount and origin of a certain grant in respect of the Castle of Fillingharne, *App.* 49.

Furness (*Lancaster*), *Lord of the Liberty of.* Information in Paper submitted by Sir Reginald Welby relative to the grant to the Lord of the Liberty of Furness, now payable to E. Wadham, *App.* 47.

Future Generations. Conclusion of the Committee that it is unjust that future generations should be burdened with payments to persons who have had no share in the original services for which grants in perpetuity have been made, *Rep.* iii.

G.

Glasgow University. Amounts of perpetual payments charged on the Consolidated Fund in this case, and authority for such payments, *App.* 58. 68.

Goodwood Estates. See *Richmond and Gordon, Duke of.*

Grafton, Duke of:

Information respecting several pensions or payments to the Duke of Grafton, the authority under which commuted, and the amount of the purchase-money in each case, *Sir R. E. Welby* 26. 28–56——Net pension of 7,191 *l.* 12 *s.* to the Duke of Grafton in the year 1855–56, charged upon the Excise, which was commuted for the sum of 193,777 *l.*, *ib.* 30–34——Additional pension (net) of 3,384 *l.*, charged upon the Post Office, which was commuted in 1856 for 125,000 *l.*, *ib.* 35–39.

Further payment of 6,800 *l.* out of money invested in land, produced by commutation of prisage and butlerage duties on wine, *Sir R. E. Welby* 41. 47–49. 51–53——Additional pension of 843 *l.*, together with a small pension of 62 *l.* 9 *s.* 8 *d.*, the latter being in respect of the office of Remembrancer of First Fruits and Tenths and Officer of the Pipe, and having passed out of the hands of the family by sale, *ib.* 41–43. 54–56.

Inability of witness to state whether the letters patent under which the Duke of Grafton's pensions were granted specified whether any consideration was given, *Sir R. E. Welby* 44–46.

Investment of a sum of 229,000 *l.* in the name of trustees for securing the annuity of 6,870 *l.* to the Duke of Grafton, this sum having been reduced to 30,555 *l.* by investments in land, but without any account thereof being kept at the Treasury, *Sir R. E. Welby* 187–207—— Explanation that information on the foregoing point can probably be obtained through the First Lord of the Treasury, as being one of the trustees, or through the solicitors of the Duke of Grafton, *ib.* 190–212. 225–227.

Reversion to the Crown in the event of failure of heirs in the Grafton family; belief, however, that there are no means at the Treasury of identifying the lands purchased out of portion of the sum of 229,000 *l.*, *Sir R. E. Welby* 192–207—— Doubt as to there being any copies of correspondence at the Treasury with the solicitors to the Duke of Grafton respecting investments in land, *ib.* 225–228.

Transfer of 500 acres of land, with Wakefield Lodge, to the Duke of Grafton in commutation of his rights and privileges as Perpetual Ranger of Whittlewood Forest; that is, when the disafforestation took place, some thirty years ago, *Sir R. E. Welby* 262–266. 269, 270—— Doubt as to the circumstances under which between 200 and 300 acres in Salcey Forest, together with Salcey Lodge, were transferred to the Duke of Grafton, *ib.* 267, 268.

Recent communication of witness, at the instance of the First Lord of the Treasury, with the representatives of the Duke of Grafton upon the subject of their supplying particulars

GRAFTON, DUKE OF—continued.

culars of purchases of lands out of moneys invested for his pension, *Sir R. E. Welby* 271, 272——Undertaking given by the representatives of the Duke to furnish certain particulars, if so requested by the Committee; resolution to this effect adopted by the Committee both as regards the Duke of Grafton and the Duke of Richmond, *ib.* 272. 282. 289-292.

Direction under the Duke of Grafton Act of 1815 (55 Geo. 3, c. 56) that copies of all deeds relating to purchase of land should be deposited in the Land Revenue Office; imperfect compliance with this requisition, there being several missing copies, *Sir R. E. Welby* 272-282——Statement to the effect that the duty was not thrown upon the Land Revenue Office to see that all the transactions were recorded in the office, but only to receive the deeds or copies that were sent; question hereon whether the First Lord of the Treasury might not, as trustee, have taken steps for ensuring the deposit of copies of all the transactions, *ib.* 283-288.

Belief that the Grafton pension has now entirely ceased, having been all commuted, *Sir R. E. Welby* 388——Large aggregate amount paid to the Grafton family before the final commutation; probability that as much as 4,000,000 *l.* has been paid, *ib.* 389-392.

Statement to the effect that there is no account on record at the Treasury respecting the capital fund invested in consols in the case of the Grafton annuity, or the purchases of land made out of such fund, *Sir R. E. Welby* 512-517——Belief that the land in question was purchased partly with the private money of the Duke, and partly with the proceeds of the consols, *ib.* 518-520.

Further particulars in Paper supplied by Sir Reginald Welby relative to the pension of 843 *l.* granted to the Duke of Grafton, *App.* 45—— Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Paper submitted by Sir Reginald Welby, containing particulars of lands purchased out of the proceeds of sale of the greater part of the sum of 229,000 *l.*, consols, and showing how this sum has been reduced to 30,555 *l.* 10 *s.* 8 *d.* (stock), *App.* 75-77.

Letter from Mr. Frederick Hillard, dated Office of Woods, &c., 18th March 1887, explaining the title under which the Duke of Grafton held Salcey Lodge and the lands in and adjoining Salcey Forest, *App.* 78.

Statement (prepared by Messrs. Farrer & Co.) showing the dealings with the Prisage Fund of 229,000 *l.*, and the payments in detail in respect of land, &c., *App.* 79-82.

Grand Falconer and Master of the Hawks. See *St. Albans, Duke of.*

H.

Hamilton, Mrs. Sarah. Impression that a pension of 625 *l.* a year to Mrs. Sarah Hamilton and her children was not perpetual, and has expired in the ordinary course, *Sir R. E. Welby* 327-331.

Harrison, R. (*Officer of the Pipe*). Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the payment to Mr. R. Harrison in respect of this office, *App.* 46.——*See* also *Grafton, Duke of.*

Hawks, Master of. See *St. Albans, Duke of.*

Heneage, G. H. W. Salary of 588 *l.* 6 *s.* 9 *d.*, formerly paid to Mr. G. H. W. Heneage, as Hereditary Chief Proclamator and Usher; belief that this office, which was held in perpetuity, was a sinecure, *Sir R. E. Welby* 332-348——Commutation, in 1886, of the pension to Mr. Heneage, for the sum of 15,852 *l.* 15 *s.*, the pension having been fixed on the abolition of the office by the Act 15 & 16 Vict. c. 73, since which period no services have been rendered, *ib.* 335-348.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the grant to Mr. Heneage, as Hereditary Chief Proclamator and Usher, *App.* 46——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Memorandum handed in by Sir Reginald Welby containing further information relative to this pension, *App.* 107.

Hereditary Pensions, &c. Detailed lists of all hereditary pensions, payments, and allowances in existence on 1st January 1881, which were either chargeable on the Consolidated Fund or payable from voted moneys, with an explanation of the origin in each case and the grounds of the original grant, *App.* 42-50.

Particulars respecting salaries charged on the Consolidated Fund payable to hereditary officers in Scotland, *App.* 71.

Report, 1887—*continued.*

Hereditary Pensions, &c.—continued.

Resolution of the Committee that pensions, allowances, and payments ought not in future to be granted in perpetuity, on the ground that all such grants should be limited to the persons actually rendering the services intended to be rewarded by such grants, and that such rewards should be wholly or in main part defrayed by the generation benefited by the services so recognised, *Rep.* iii.

Further resolution of the Committee that all existing perpetual pensions, allowances, and payments, and all hereditary offices, should be determined and abolished, *Rep.* iii.

See also *Commutation of Pensions.* *Grafton, Duke of.* *Heneage, G. H. W.* *Marlborough, Duke of.* *Penn Pension.* *Richmond and Gordon, Duke of.* *St. Albans, Duke of.*

Heritable Usher of Scotland. Annual amount and origin of the salary paid in respect of this office, *App.* 71.

Hillsborough Fort. Impression that some expenses are incurred in return for the pension paid to the Constable of Hillsborough Fort, *Sir R. E. Welby* 533.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the payment to the Marquis of Downshire as Constable of the Fort of Hillsborough, *App.* 49 — Transfer of the charge, in 1868, from the Land Revenues to the Consolidated Fund, *ib.*

Holyrood Palace. Annual amount and origin of the salary paid in respect of the office of Hereditary Keeper of the Palace, *App.* 71.

Hulse, Sir Edward. Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the compensation payment made to Sir Edward Hulse in respect of certain offices connected with fines and recoveries in the Court of Chancery, which offices have been abolished, *App.* 46.

I.

Isle of Man. Annual amounts chargeable on voted moneys in respect of grants to incumbents and schoolmasters of the Isle of Man; origin of the charge, *App.* 69.

K.

King's Inn Library (Dublin). Amount of perpetual payment charged on the Consolidated Fund in this case, and authority for such payment, *App.* 58.

Kintoul, Earl of. Paper handed in on the part of the Treasury containing particulars relative to the original grant to the Earl of Kintoul, and the terms of redemption, *App.* 45.

L.

Lancaster, Duchy of. Information as to the origin of the payment to the Duchy of Lancaster under the head of creation fees, *Sir R. E. Welby* 75-99——Explanation as regards an annuity to the Duchy in lieu of prisage and butlerage on wines, that this was a commutation many years ago of certain rights of the Crown in former times, *ib.* 229–231.

Particulars in Paper submitted by Sir Reginald Welby relative to the amount and origin of the creation fees payable to the Duchy of Lancaster, *App.* 50——Particulars also as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Total of 803 *l.* as the perpetual charge or annuity in lieu of prisage and butlerage on wines, the authority being under the Act 2 & 3 Will. 4, c. 84, *App.* 58.

Papers submitted by Sir Reginald Welby in explanation of creation money paid to the Duchy under different heads, the total being 100 *l.* 10 *s.* 10 *d.* yearly, *App.* 72–74.

Land Revenues of the Crown. Particulars respecting sundry perpetual payments, chargeable on the Consolidated Fund on 1st January 1881, having been transferred from the Land Revenues under the Act 29 & 30 Vict. c. 62; amount and terms of redemption, *App.* 59–68.

Lapsed

Lapsed Payments. Instances of a few small perpetual payments of grants which have not been paid for a great number of years and are considered to have lapsed, *Sir R. E. Welby* 322.

Life Pensions. Resolution of the Committee that where no service or merely nominal service is rendered by the holder of an hereditary office, and where no service or merely nominal service was rendered by the original grantee, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient, *Rep.* iii.

Lutheran Chapel. Explanation of the circumstances under which a term of only ten years was given in respect of a payment, not perpetual, to the German Lutheran Chapel, *Sir R. E. Welby* 14-18.

Paper submitted by Sir Reginald Welby containing particulars relative to this payment and its redemption, *App.* 59.

M.

Marlborough, Duke of. Inability of witness to find any record of negotiations with the Duke of Marlborough respecting the commutation of the perpetual pension of 5,000 *l.* gross, *Sir R. E. Welby* 259——Explanation that the Act relating to the Honour and Manor of Woodstock, and the Crown rights in respect thereof, are not in any way affected by commutation, *ib.* 260, 261.

Paper handed in on the part of the Treasury containing particulars relative to the original grant, *App.* 43——Particulars in this Paper as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Statements in Memorandum by Mr. C. Bradlaugh, submitted to the Treasury in June 1884, relative to several acts of treachery, corruption, and embezzlement of public monies on the part of the first Duke of Marlborough, *App.* 53, 54.

Marsh's Library, St. Patrick's, Dublin. Amount of perpetual payment charged on the Consolidated Fund in this case, and authority for such payment, *App.* 58.

Master of the Hawks. See *St. Albans, Duke of.*

Melbourne Pension. Statement as to the number of years' purchase of former pensions to Lord Melbourne and Lord Cowper respectively, *Sir R. E. Welby* 64-66——First instance, in Lord Melbourne's case, in 1826, of the exercise of Treasury power to commute without an Act or Vote of Parliament, *ib.* 68.

Statement showing that the commutation of Lord Melbourne's pension in 1826 for 30,000 *l.* was a good financial operation for the Treasury in view of the price of consols at the time, *Sir R. E. Welby* 600–602.

Mostyn, Sir E. Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the pension to Sir E. Mostyn on the abolition of the office of Custos Brevium of the Court of Common Pleas and certain other appointments, *App.* 45——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

N.

Nelson, Lord. Payment of the Nelson pension of 5,000 *l.* a-year since the Act 46 Geo. III. in 1806, the present Lord Nelson being the great nephew of the first Lord Nelson; direct authority in the Act for this payment as continued, *Sir R. E. Welby* 381–387. 395–399.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the pension to Lord Nelson, *App.* 42.

Norfolk, Duke of. Explanations respecting "creation fees" paid to the Duke of Norfolk, *Sir R. E. Welby* 75-99.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the creation fees payable to the Duke of Norfolk, *App.* 50——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Extracts from grants of creation money to the Duke of Norfolk at different periods, *App.* 51, 52.

O.

Officer of the Pipe. Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the payment now made to Mr. Harrison in respect of this office, *App.* 49.——*See* also *Grafton, Duke of.*

Origin of Grants and Pensions. Detailed lists of all hereditary pensions, payments, and allowances in existence on 1st January 1881, which were either chargeable on the Consolidated Fund or payable from voted moneys, with an explanation of the origin, in each case, and the grounds of the original grant, *App.* 42-50.

Ormonde, Lord. Commutation, about the end of the last century, of the rights of the Earl of Ormonde in respect of prisage and butlerage on wines in Ireland; Act of Parliament in this case under which a sum of money, or a sum in consols, was granted to Lord Ormonde in lieu of these rights, *Sir R. E. Welby* 233-235.

Full information procured by witness, since his former examination, respecting prisage and butlerage on wines, with special reference to Ireland and the grant to the Duke of Ormonde; sundry details hereon, *Sir R. E. Welby* 310, 311.

Oxford University. Annual amount chargeable on voted moneys in respect of compensation to the university for loss of the privilege of printing and vending almanacks; origin of the charge, *App.* 69.

P.

Parliamentary Control. See *Commutation of Pensions, &c. Treasury.*

Pendrell Pension. Paper handed in by Sir Reginald Welby containing information relative to the Pendrell pension, and the amounts to be paid to different members of the family and their heirs, *App.* 92.

Copy of the letters patent setting forth the original grant; large number of the fee-farm rents, formerly payable to the Crown, of which the pension is made up, *App.* 92-97.

Penn Pension. Consideration given by the Treasury at the time to a Memorandum handed in by Mr. Bradlaugh in June 1884 on the Penn and Marlborough pensions; previous reference of the question of perpetuity of the Penn pension to the legal advisers of the Treasury, who held that it was in the nature of a perpetual payment, *Sir R. E. Welby* 102-111—— Conclusion of the legal advisers of the Treasury in the foregoing case that Colonel Stuart, who was the recipient of the pension at the time of the commutation, was legally entitled thereto in perpetuity as the representative of the Penn family, *ib.* 108-111.

Commutation in 1884 of the whole of the Penn pension of 4,000 *l.* a year (paid since 1790) for the sum of 107,780 *l.*, *Sir R. E. Welby* 371-373—— Doubt whether the persons to whom the pension was paid were the heirs or descendants of William Penn; reference to the Act of Parliament as the authority upon which the payments were made by the Treasury, *ib.* 374-380——Legal advice taken by the Treasury before commuting the Penn pension in favour of Colonel Stuart as the rightful claimant, *ib.* 400-402.

Paper handed in on the part of the Treasury containing particulars relative to the original grant, *App.* 43——Particulars also as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Memorandum submitted to the Treasury by Mr. Bradlaugh, in June 1884, respecting the Penn pension; statement thereon that Colonel W. Stuart is not the heir or nearest descendant in blood of William Penn, *App.* 54.

Perpetual Payments. Statement proposed to be put in containing various particulars in connection with hereditary pensions, payments, and allowances; addition to be made thereto in respect of payments which are perpetual, but not hereditary, *Sir R. E. Welby* 5-11. 19, 20.

Inclusion of all perpetual payments as well as hereditary payments in the Paper furnished to the Committee; non-distinction between the two in the Treasury books, *Sir R. E. Welby* 479-481.

Conclusion that a payment without intermission from the time of Charles II. must be considered permanent, *Sir R. E. Welby* 595.

Remembrancer of First Fruits and Tenths. See *Grafton, Duke of.*

Richmond and Gordon, Duke of:

Statement as to the Treasury having no record of the transactions whereby a sum of 633,333 *l.* 6 *s.* 9 *d.* for providing an annuity of 19,000 *l.* to the Duke of Richmond has been reduced to 36 *l.* 0 *s.* 9 *d.*; information obtainable through the First Lord as one of the trustees, *Sir R. E. Welby* 213–326.

Witness has recently communicated with the representatives of the Duke of Richmond on the subject of their supplying particulars of purchases out of moneys invested for payment of his pension, *Sir R. E. Welby* 271, 272——Resolution adopted by the Committee as to the Treasury furnishing particulars in respect of purchases of lands, &c., *ib.* 292.

Paper handed in to the Committee, as recently supplied to witness by the representatives of the Duke of Richmond, containing information respecting the lands purchased out of the sum invested for securing the annuity of 19,000 *l.*, *Sir R. E. Welby* 294—— Legal question raised upon the foregoing Paper, and upon certain deeds in 1861, whether the Parliamentary reversion was not affected by the latter, *ib.* 294. 314-320—— Much less full information in this Paper than in that supplied by the Duke of Grafton's representatives; absence of any obligation upon the Duke of Richmond to register his deeds at the Land Record Office, *ib.* 295. 301. 306.

Considerable expense necessary (as witness has been informed) if the Duke of Richmond were required to search through all his deeds in order to supply full particulars respecting the lands and purchases in question; entire readiness of the Duke to furnish full and adequate information, *Sir R. E. Welby* 295–303.

Statement on the subject of the First Lord of the Treasury, as one of the trustees, not having furnished the Treasury with copies of any deeds, there being no record of any declaration of trust which has ever been executed; explanation hereon as to the draft trust deed having been limited to the Scotch estates, *Sir R. E. Welby* 304-309. 312–320.

Explanation that the original grant in the case of the Duke of Richmond was to the heirs and not to the "heirs male," as inaccurately stated in one of the Papers from the Treasury, *Sir R. E. Welby* 322–324——Reference to the Act 39 & 40 Geo. 3, as showing that the grant was to the "heirs" of the Duke, *ib.* 324, 325.

Statement (prepared by Messrs. Davidson, Burch & Co.) showing how the sum of 633,333 *l.* 6 *s.* 9 *d.* Consols was made up; that is, in order to meet the annuity of 19,000 *l.*, *App.* 83.

Information respecting the lands purchased, where situated, their extent, description, &c., *App.* 83-86.

Copy of the Letters Patent of 18th December 1676, granting to Charles, Duke of Richmond, 12 *d.* per chaldron of coal shipped at Newcastle-upon-Tyne, *App.* 87–92.

Further Paper handed in by Sir Reginald Welby, as supplied by the Parliamentary Trustees of the Goodwood Estates, respecting the dealings with the Consols transferred to the trustees in exchange for the annuity of 19,000 *l.*, and showing how this sum, with certain additions arising from sales and enfranchisements, has been reduced by purchases of land, &c., to 241 *l.* 12 *s.* 5 *d.*, *App.* 98-106.

Rodney, Lord. Information in Paper submitted by Sir Reginald Welby, relative to the amount and origin of the pension to Lord Rodney, *App.* 44.

Rutland, Duke of. Statement in explanation of the annual payment, under the head of creation fees, to the Duke of Rutland, *Sir R. E. Welby* 75–99.

Rutland, Duke of—continued.

Doubt as to any copies of correspondence at the Treasury with the solicitors to the Duke of Rutland respecting investments in land, *Sir R. E. Welby* 225–228.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the creation fees payable to the Duke of Rutland, *App.* 50——Particulars as to the date of redemption, the amount, how provided, and the number of years' purchase, *ib.*

Letters Patent, of the 17th year of Henry VIII., creating Thomas Maners Earl of Rutland, and granting him creation-money of 20 *l.* a year, *App.* 52.

S.

St. Albans, Duke of. Reference to the payment to the Master of the Hawks as having been treated as an allowance, no service being rendered in return for such payment, *Sir R. E. Welby* 237——Opinion of the law officers of the Treasury in 1831 to the effect that it was imperative upon the Treasury to continue the annual payment of 965 *l.* to the Duke of St. Albans, as Master of the Hawks, *ib.* 349–353. 355——Belief that hawks are not kept by the Duke, and that no duties are imposed upon him in connection with the office in question, *ib.* 354–356.

Circumstance of negotiations having commenced, before the motion in the House for the appointment of the present Committee, for commutation of the payment to the Duke of St. Albans; witness does not feel at liberty to state the terms offered by the Treasury, *Sir R. E. Welby* 521–526.

Further statement that it is improbable that any services are rendered or expenses incurred in respect of the office of Hereditary Grand Falconer or Master of the Hawks; belief, however, that the Treasury have been legally advised that the Duke of St. Albans is entitled to the total payment of 965 *l.* a year, *Sir R. E. Welby* 527–532.

Information in Paper submitted by Sir Reginald Welby relative to the amount and origin of the payment in respect of the office of Master of the Hawks, *App.* 48—— The annual sums granted by the original Patent were 391 *l.* 1 *s.* 5 *d.* as salary, 200 *l.* for four falconers, 600 *l.* for provision of hawks, and 182 *l.* 10 *s.* for provision of pigeons, hens, and other meats, *ib.*——Total of 1,373 *l.* 11 *s.* 5 *d.* under the original grant, which has been reduced by office fees, &c., to 965 *l.*, *ib.*

St. Andrew's University. Amounts of perpetual payments charged on the Consolidated Fund in this case, and authority for such payments, *App.* 58. 68.

Salaries (*Permanent or Hereditary*). Statement as to witness having omitted from the Treasury returns all permanent payments which are classed as salaries, though some of these are hereditary; further return to be submitted, including all hereditary payments, *Sir R. E. Welby* 236–243——Instances of hereditary payments in Scotland which have been classed as salaries, *ib.* 236. 239, 240.

Particulars respecting salaries charged on the Consolidated Fund payable to hereditary officers in Scotland, *App.* 71.

Salcey Forest. See *Grafton, Duke of.*

Schomberg, Duke of. Commutation in 1883 of some of the payments comprised in the Schomberg pension of 984 *l.* a year, *Sir R. E. Welby* 366——Payments to the amount of 720 *l.* a year still being made in respect of the foregoing pension, the recipients being Mr. Powis and Mr. Gosling; information to be supplied as to whether these are descendants of the Schomberg family, *ib.* 366–370.

Paper handed in on the part of the Treasury containing particulars relative to the original grant, *App.* 44——Particulars also as to the date of the redemption, the amount, how provided, and the number of years' purchase, *ib.*

Memorandum handed in by Sir Reginald Welby containing further information relative to this pension, *App.* 107.

Schools. Approval of commutation in the case of perpetual payments to grammar schools, *Sir R. E. Welby* 596–598.

Particulars respecting sundry perpetual payments chargeable on the Consolidated Fund on 1st January 1881, having been transferred from the Land Revenue of the Crown under the Act 29 & 30 Vict. c. 62; amount of redemption, *App.* 64–67.

Scotch Universities. Approval of commutation of certain payments for the Scotch universities, &c.; expediency of check by the Treasury where a distinct service is attached to any such payments, *Sir R. E. Welby* 596–598.

Scotch Universities—continued.

Returns containing particulars as to perpetual payments to the Universities of Aberdeen, St. Andrew's, Edinburgh, and Glasgow, *App.* 58. 68.

Services in Return for Pensions. Doubt whether in any case of commutation the terms have been affected by the fact that no service was being tendered in return for the pension, *Sir R. E. Welby* 502–506. 529——Expediency of check by the Treasury where a distinct service is attached to any payment to universities or grammar schools, &c., *ib.* 596–598.

Statement in memorandum by Mr. Bradlaugh as to the Committee appointed by the House of Commons in December 1837 having distinguished between pensions where "real and meritorious services had been rendered" by the grantee, and pensions which had originated without such justification, *App.* 53.

Resolution of the Committee that pensions, allowances, and payments ought not in future to be granted in perpetuity, on the ground that all such gants should be limited to the persons actually rendering the services intended to be rewarded by such grants, and that such rewards should be wholly or in main part defrayed by the generation benefited by the services so recognised, *Rep.* iii——Conclusion also that it is unjust that future generations should be burdened with payments to persons who have had no share in the original services for which grants in perpetuity have been made, *ib.*

Further resolution of the Committee that offices with salaries and without duties, or with merely nominal duties, ought to be abolished, *Rep.* iii——In all such commutations the Lords of the Treasury should take into consideration the circumstances of such pension, allowance or payment, and whether or not any real service had been rendered by the original grant or was now performed by the actual holder of the office, *ib.*

Further resolution of the Committee that where no service, or merely nominal service, is rendered by the holder of an hereditary office, and where no service, or merely nominal service, was rendered by the original grantee of the pension, allowance, or payment attached to such office, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient, *Rep.* iii.

Treasury:

Explanation as to the statutory and other authority under which a discretionary power has been vested in, and exercised by, the Treasury as to the rates of commutation, *Sir R. E. Welby* 12–36. 57–74——Discussion before the Select Committee on Public Moneys in 1856 as to the power exercised by the Treasury in redeeming hereditary pensions out of the gross revenues without bringing the matter before Parliament, *ib.* 24. 33, 34. 69–74——Commutation of several pensions by the Treasury without special authority under any such Act as that of 1873, *ib.* 25.

Discretion given to the Treasury under the Act 19 & 20 Vict. c. 43 (1856), as to redeeming the annuities or pensions to the Earl of Bath, the Duke of Grafton, the Duke of Schomberg, and to Henry of Nassau, *Sir R. E. Welby* 26, 27. 36——Right of commutation first exercised by the Treasury, without an Act of Parliament, in Lord Melbourne's case in 1826, *ib.* 68.

Explanation as regards former commutations without statutory power or vote of Parliament discussed before the Committee of 1856-57, that the Treasury do not claim any such power at the present time, *Sir R. E. Welby* 100–102——Obligation upon the Treasury not to pay in excess of grants of Parliament; check applied through the Comptroller and Auditor General, *ib.* 143.

Special authority given by Parliament to the Treasury as regards commutation of pensions since the date of the Committee on Public Moneys, when Lord Monteagle submitted that the terms should first be approved by Parliament, *Sir R. E. Welby* 252–254.

TREASURY—continued.

Explanation with further reference to the exercise by the Treasury of the power of commutation previously to the Act of 1873; the opinion of the law officers was probably taken, *Sir R. E. Welby* 403-406. 430-432.

Explanatory statement as to the former and present practice of the Treasury in regard to the recording and signing of minutes in reference to warrants for payment of pensions, *Sir R. E. Welby* 407-429. 470-475—Further explanation of the practice at the Treasury in connection with warrants for payment of pensions out of the Consolidated Fund; duty of the officer who prepares the warrant to see that there is authority for the charge, *ib.* 461-476.

Discretion left to the Treasury under the Commutation Act as to making the best bargain in commuting any perpetual payment or pension, due regard being had to the equity of each case, *Sir R. E. Welby* 482-492—Explanation that there is a report by the Treasury solicitor on each case as regards the permanence of the pension, this question being duly considered, *ib.* 490-501. 504.

Grounds for the view of the Treasury that a perpetual charge upon the Consolidated Fund was roughly equivalent to consols value, *Sir R. E. Welby* 492, 493—Enhanced rate given by the Treasury in the case of charitable and ecclesiastical payments, these causing much trouble to the Department, *ib.* 507-509.

Commutation of numerous pensions when Mr. Courtney was at the Treasury, a few having been commuted when Lord Frederick Cavendish was Secretary, *Sir R. E. Welby* 591-593.

Resolution of the Committee that some pensions appear to have been commuted notwithstanding formal objections in writing lodged with the Lords of the Treasury, and without sufficient inquiry into the matters stated in such objections, *Rep.* iii.

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence.)—Explanation that witness has collected information for the Committee on various matters referred to him by Mr. Bradlaugh, but is not fully prepared to be finally examined thereupon on the present occasion, 1-4—Statement proposed to be put in, containing various particulars in connection with hereditary pensions, payments, and allowances; addition to be made thereto in respect of payments which are perpetual, but not hereditary, 5-11. 19, 20.

Discretionary powers vested in the Treasury as to the rates of commutation of permanent charges; statutory and other authority under which this power has been exercised by the Treasury (to the best of its ability) on different occasions, 12-36. 57-74—Numerous small payments, of a permanent character, for charitable and ecclesiastical purposes, which were commuted by the Treasury at about thirty years' purchase, after negotiation with the Charity Commissioners and Ecclesiastical Commissioners, to whom the payments were transferred, 12, 13.

Term of about twenty-seven years given in the case of individual pensions; conclusion that on the basis of the price of consols at the time of commutation the public were

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence)—*continued.*

were gainers, 12, 13. 57-66——Explanation of the circumstances under which a term of only ten years was given in respect of a payment, not perpetual, to the German Lutheran Chapel, 14-18——Instances of more than thirty years having been paid, consols price having been given, 19.

Statutory power under which the Commissioners of Woods and Forests have commuted sundry small pensions or permanent payments not exceeding 10 *l.*; 23, 24——Discussion before the Select Committee on Public Moneys in 1856 as to the power exercised by the Treasury in redeeming hereditary pensions out of the gross revenues without bringing the matter before Parliament, 24. 33, 34. 69-74——Discretion given to the Treasury under the Act 19 & 20 Vict. c. 43 (1856), as to redeeming the annuities or pensions to the Earl of Bath, the Duke of Grafton, the Duke of Schomburg, and to Henry of Nassau, 26, 27. 36.

Information respecting several pensions or payments to the Duke of Grafton, the authority under which commuted, and the amount of the purchase-money in each case, 28-56——Net pension of 7,191 *l.* 12 *s.* to the Duke of Grafton in the year 1855-56, charged upon the Excise, which was commuted for the sum of 193,777 *l.*; 30-34——Further pension (net) of 3,384 *l.* to the Duke of Grafton, charged upon the Post Office, which was commuted in 1856 for 125,000 *l.*; 35-39——Additional pensions to the Duke of Grafton of 843 *l.* and 62 *l.* 9 *s.* 8 *d.*, the latter having passed out of the hands of the family, 40-43. 50. 54-56——Further payment of about 6,800 *l.* out of money invested in land, produced by commutation of Prisage and Butlerage duties on wine, 41. 4749. 51-53——Inability of witness to state whether the letters patent under which the Duke of Grafton's pensions were granted specified whether any consideration was given, 44-46.

Statement as to the number of years' purchase of former pensions to Lord Melbourne and Lord Cowper; more favourable terms to the public in the latter case on the basis of the price of consols at the time, 64-66——First instance in Lord Melbourne's case in 1826 of the exercise of Treasury power to commute without an Act or Vote of Parliament, 68.

Examination respecting three annual payments, in respect of creation fees, to the Duchy of Lancaster, the Duke of Rutland, and the Duke of Norfolk, respectively, which were commuted by the Treasury in 1883; reference to Stubbs' Constitutional History as explaining the nature of these fees, 75-99——Contention of the Treasury that the foregoing sums were granted in perpetuity or for a term not determinable with the life of the person on whom they were originally bestowed, 94-99.

Explanation as regards former commutations without statutory power or Vote of Parliament discussed before the Committee of 1856-57, that the Treasury do not claim any such power at the present time, 100-102.

Consideration given by the Treasury, at the time, to a memorandum handed in by Mr. Bradlaugh in June 1884 on the Penn and Marlborough pensions; previous reference of the question of perpetuity of the Penn pension to the legal advisers of the Treasury who held that it was in the nature of a perpetual payment, 102-111——Conclusion of the legal advisers of the Treasury in the foregoing case that Colonel Stewart, who was the recipient of the pension at the time of the commutation, was legally entitled thereto in perpetuity as the representative of the Penn family, 108-111.

Payment to the Duchy of Cornwall since 1838, as fixed in that year and charged upon the Consolidated Fund, of a sum of 16,216 *l.* 15 *s.* 1½ *d.*, in lieu of tin coinage, post groats, and white rents, 112——Several sources of income (besides the receipts from post groats, tin coinage, and white rents) included in the net income of the Duchy in 1838 and in previous years, 113-118——Inclusion since 1838 of a sum of 630 *l.* 14 *s.* 2 *d.*, in lieu of post groats, in the gross payment of 16,216 *l.* 15 *s.* 1½ *d.*; receipt of only 10 *l.* a year by the Duchy in the previous ten years in respect of post groats, 119-122.

Intention expressed by King William IV. and confirmed by Her Majesty, that the payment in respect of post groats should cease on and from the 5th April 1841; Treasury Minute of 15th February 1839 to the foregoing effect, 123-128. 133, 134. 146-151——Subsequent correspondence, in 1841, between the lessee of the post groats and the Treasury which led to the continuance of the payment for another six months from the 5th April 1841; further Treasury Minute giving effect to this arrangement, 129, 130. 148-172. 180-186.

Protest from the Duchy in 1841 against the discontinuance of the payment in respect of post groats, the Treasury having acquiesced therein, and the payment having been continued down to the present time; examination hereon as to the action of the Treasury in the matter, 129-186——Absence of any Treasury Minute respecting the continuance of the payment subsequently to the extension for six months in 1841; 130. 145. 186.

Statement as to no intimation having been made to Parliament of the continuance of

Report, 1887—*continued.*

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence)—*continued.*

the payment, though in direct opposition to the Treasury Minute of 15th Febrnary 1839; denial that it was the duty of the Treasury to bring the matter before the Comptroller and Auditor General, 133–145. 173–178——Obligation upon the Treasury not to pay in excess of grants of Parliament; check applied through the Comptroller and Auditor General, 143——Circumstance of witness during his long service at the Treasury having never had his attention drawn (till quite recently) to the matter now under inquiry in the case of the Duchy of Cornwall, 173–179.

Investment of a sum of 229,000 *l.* in the name of trustees for securing the annuity of 6,870 *l.* to the Duke of Grafton, this sum having been reduced to 30,555 *l.* by investments in land, but without any account thereof being kept at the Treasury, 187–207——Explanation that information on the foregoing point can probably be obtained through the First Lord of the Treasury, as being one of the trustees, or through the solicitors of the Duke of Grafton, 190–212. 225–227——Reversion to the Crown in the event of failure of heirs in the Grafton family; belief, however, that there are no means at the Treasury of identifying the lands purchased out of portion of the sum of 229,000 *l.*; 192–207.

Statement as to the Treasury having no record of the transactions whereby a sum of 633,333 *l.* 6 *s.* 9 *d.* for providing an annuity of 19,000 *l.* to the Duke of Richmond has been reduced to 86 *l.* 0 *s.* 9 *d.*; information obtainable through the First Lord as one of the trustees, 213–226—— Doubt as to any copies of correspondence at the Treasury with the solicitors to the Duke of Rutland or the Duke of Grafton respecting investments in land, 225–228.

[Second Examination.]—Explanation as regards an annuity to the Duchy of Lancaster in lieu of Prisage and Butlerage on Wines, that this was a commutation many years ago of certain rights of the Crown in former times, 229–231——Commutation about the end of the last century of the rights of the Earl of Ormonde in respect of Prisage and Butlerage in Ireland; Act of Parliament in this case, under which a sum of money, or a sum in consols, was granted to Lord Ormonde in lieu of these rights, 233–235.

Statement as to witness having omitted from the Returns all permanent payments which are classed as salaries, though some of these are hereditary; further Return to be submitted, including all hereditary payments, 236–243——Instances of hereditary payments in Scotland which have been classed as salaries, 236. 239, 240——Reference to the payment to the Master of the Hawks as having been treated as an allowance, no service being rendered in return for such payment, 237.

Concurrence generally in a statement that the origin of the grant of a pension of 3,000 *l.* to Lord Amhurst and his successors was that George the Third had previously proposed a grant of certain land in Canada, this proposal not having been carried out, 244–247. 250, 251——Doubt whether at the time of the foregoing proposal the power of alienation by the Crown was limited as regards Canada by the Statute, 1 Anne, s. 1; 248, 249——Function of the Treasury merely to carry out the provisions of the Act nnder which the pension was granted to Lord Amhurst, 251.

Special authority given by Parliament to the Treasury as regards commutation of pensions since the date of the Committee on Public Moneys when Lord Monteagle submitted that the terms should first be approved by Parliament, 252–254.

Absence of any Treasury Minute with reference to a letter from Thomas Abbot (on the part of the Duchy), dated 8th July 1841, as regards the payment of 630 *l.* 14 *s.* 2 *d.* to the Duchy of Cornwall in respect of post groats; the last Minute was on 7th June 1841, directing payment for six months, 255–258.

Inability of witness to find any record of negociations with the Duke of Marlborough respecting the commutation of the perpetual pension of 5,000 *l.* gross, 259——Explanation that the Act relating to the Honour and Manor of Woodstock, and the Crown rights in respect thereof, are not in any way affected by commutation, 260, 261.

Transfer of 500 acres of land, with Wakefield Lodge, to the Duke of Grafton in commutation of his rights and privileges as Perpetual Ranger of Whittlewood Forest; that is, when the disafforestation took place some thirty years ago, 262–266. 269, 270——Doubt as to the circumstances under which between 200 and 300 acres in Salcey Forest, together with Salcey Lodge, were transferred to the Duke of Grafton, 267, 268.

Recent communication of witness, at the instance of the First Lord of the Treasury, with the representatives of the Duke of Grafton and the Duke of Richmond, upon the subject of their supplying particulars of purchases of lands out of moneys invested for pensions, 271, 272——Undertaking given by the representatives of the Duke of Grafton to furnish certain particulars, if so requested by the Committee (resolution to this effect adopted

Report, 1887—*continued.*

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence)—*continued.*

adopted by the Committee, both as regards the Duke of Grafton and the Duke of Richmond), 272. 282. 289–292.

Direction under the Duke of Grafton Act of 1815 (55 Geo. III. c. 56) that copies of all deeds relating to purchases of land should be deposited in the Land Revenue Office; imperfect compliance with this requisition, there being several missing copies, 272-282 ——Statement to the effect that the duty was not thrown upon the Land Revenue Office to see that all the transactions were recorded in the office, but only to receive the deeds or copies that were sent; question hereon whether the First Lord of the Treasury might not, as trustee, have taken steps for ensuring the deposit of copies of all the transactions, 283-288.

[Third Examination.]—Paper handed in to the Committee, as recently supplied to witness by the representatives of the Duke of Richmond, containing information respecting the lands purchased out of the sum invested for securing the annuity of 1,000 *l.*; 294 ——Legal question raised upon the foregoing Paper, and upon certain deeds, in 1861, whether the Parliamentary reversion was not affected by the latter, 294. 314-320——Much less full information in this Paper than in that supplied by the Duke of Grafton's representatives; absence of any obligation upon the Duke of Richmond to register the deeds at the Land Record Office, 295. 301. 306.

Considerable expense necessary (as witness has been informed) if the Duke of Richmond were required to search through all his deeds in order to supply full particulars respecting the lands and purchases in question; entire readiness of the Duke to furnish full and adequate information, 295-303——Statement on the subject of the First Lord of the Treasury, as one of the trustees in the case of the Duke of Richmond, not having furnished the Treasury with copies of any deeds, there being no record of any declaration of trust which has ever been executed; explanation hereon as to the draft trust deed having been limited to the Scotch estates, 304–309. 312–320.

Full information procured by witness, since his former examination, respecting Prisage and Butlerage on wines, with special reference to Ireland and the grant to the Duke of Ormonde; sundry details hereon, 310, 311.

Belief that the Papers handed in by witness include every pension or payment under the terms of the reference to the Committee; every effort has been made at the Treasury to make the list as complete as possible, 321, 322. 326——Instances of a few small perpetual payments or grants which have not been paid for a great number of years, and are considered to have lapsed, 322.

Explanation that the original grant in the case of the Duke of Richmond was to the heirs and not to the "heirs male," as inaccurately stated in one of the Papers from the Treasury, 322–324——Reference to the Act 39 & 40 Geo. 3, as showing that the grant was to the "heirs" of the Duke, 324, 325.

Impression that a pension of 625 *l.* a year to Mrs. Sarah Hamilton and her children was not perpetual and has expired in the ordinary course, 327-331.

Salary of 588 *l.* 6 *s.* 9 *d.* formerly paid to Mr. G. H. W. Heneage as Hereditary Chief Proclamator and Usher; belief that this office, which was held in perpetuity, was a sinecure, 332–348——Commutation in 1886 of the pension to Mr. Heneage for the sum of 15,852 *l.* 15 *s.*, the pension having been fixed on the abolition of the office by the Act 15 & 16 Vict. c. 73, since which period no services have been rendered, 335–348.

Opinion of the law officers of the Treasury in 1831 to the effect that it was imperative upon the Treasury to continue the annual payment of 965 *l.* to the Duke of St. Albans as Master of the Hawks, 349-353. 355——Belief that hawks are not kept by the Duke of St. Albans, and that no duties are imposed upon him in connection with the office in question, 354-356.

Doubt as to the services for which the Dauverquerque pension of 2,000 *l.* a year was granted by the King to Lord Grantham in 1694; 357-359——Conclusion that Lord Cowper, who received 40,000 *l.* in commutation of four-fifths of the Dauverquerque pension, was a lineal descendant of the original grantee, 360–362. 365——Information to be obtained by witness respecting a payment of 375 *l.* 16 *s.* a year still being made to Mr. L. L. Cohen as part of the foregoing pension, 363–365.

Commutation in 1883 of some of the payments comprised in the Schomberg pension of 984 *l.* a year, 366——Payments to the amount of 720 *l.* a year still being made in respect of the foregoing pension, the recipients being Mr. Powis and Mr. Gosling; information to be supplied as to whether these are descendants of the Schomberg family, 366–370.

Commutation in 1884 of the whole of the Penn pension of 4,000 *l.* a year (paid since 1790) for the sum of 107,780 *l.*; 371-373——Doubt whether the persons to whom the

pension

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence)—*continued.*

pension was paid were the heirs or descendants of William Penn; reference to the Act of Parliament as the authority upon which the payments were made by the Treasury, 374-380.

Payment of the Nelson pension of 5,000*l.* a year since the Act 46 George III., in 1806, the present Lord Nelson being the great-nephew of the first Lord Nelson; direct authority in the Act for this payment as continued, 381-387. 395-399.

Belief that the Grafton pension has now entirely ceased, having been all commuted, 388——Large aggregate amount paid to the Grafton family before the final commutation, 389-392.

Entire commutation of the pension to Sir Thomas Clarges and his heirs, 393, 394——Legal advice taken by the Treasury before commuting the Penn pension in favour of Colonel Stewart as the rightful claimant, 400-402.

Further statement as to the grounds upon which, prior to the Act of 1873, the Treasury exercised the power of commutation of pensions without previous application to Parliament; probability that the opinion of the law officers was taken, 403-406. 430-432——Explanation of the practice of the Treasury in 1841 and at the present time in regard to the recording and signing of Minutes; statement hereon as to there being no record of any Minute or any decision of the Treasury authorising the continued payment to the Duchy of Cornwall in respect of post groat duty subsequently to 1841; 407-429. 470-475——Probability that some verbal instruction was given, which was not recorded, as to the continuance of the payment, 420-423.

Examination in detail with further reference to the action of the Treasury in continuing the payment for post groats after their abolition in 1838 by Act of Parliament; grounds upon which the Treasury probably concurred in the remonstrance of the Duchy against the discontinuance of the payment, 430-476——Effect of the birth of the Prince of Wales in 1841, in reviving the claim to the continuance of the payment; that is, in his capacity as Duke of Cornwall, 434. 447-453.

Explanation of the practice at the Treasury in connection with warrants for payment of pensions out of the Consolidated Fund; duty of the officer who prepares the warrant to see that there is authority for the charge, 461-476——Check in 1841 and subsequent years through the Comptroller of the Exchequer in the matter of the annual charge on the Consolidated Fund in respect of the continued payment to the Duchy of Cornwall in lieu of post groats, 467. 476.

[Fourth Examination.]—Inclusion of all perpetual payments as well as hereditary payments in the Papers furnished to the Committee; non-distinction between the two in the Treasury books, 479-481——Discretion left to the Treasury under the Commutation Act as to making the best bargain in commuting any perpetual payment or pension, due regard being had to the equity of each case, 482-492.

Further statement as to thirty years' purchase having been given in some cases of charitable and ecclesiastical payments of a perpetual character, 485, 486——Belief that the rule has been to offer twenty-seven years' purchase where perpetual payments or pensions have been granted to individuals, 485. 487 — Full consideration given to the contingency (if any) of the determination of the annuity; report in each case by the Treasury solicitor as to the probability of the permanence of the pension, 490-501. 504.

View of the Treasury that a perpetual payment charged upon the Consolidated Fund was roughly equivalent to consol value; interpretation of the Act of 1873 as limiting the purchase-money to consol value as the maximum, 492, 493——Different terms of the original grants in certain cases, whilst in all of them the terms of redemption were the same (nearly twenty-seven years' purchase), 494-501——Doubt whether in any case of commutation the terms have been affected by the fact that no service was being rendered in return for the pension, 502-506. 529.

Considerable trouble given at the Treasury by the numerous small payments for ecclesiastical and charitable purposes, so that it was deemed expedient to get rid of them by commutation at a higher rate than was given to individual pensioners, 507-509——Non-reduction in the annual charge in cases where thirty-three years' purchase has been given; advantage in the saving of trouble, 510, 511.

Statement to the effect that there is no account or record at the Treasury respecting the capital fund invested in consols in the case of the Grafton annuity or the purchases of land made out of such fund, 512-517——Belief that the land in question was purchased partly with the private money of the Duke of Grafton, and partly with the proceeds of the consols, 518-520.

Circumstance of negotiations having commenced, before the motion in the House for the appointment of the present Committee, for commutation of the payment to the Duke of St. Albans; witness does not feel at liberty to state the terms offered by

Report, 1887—*continued.*

Welby, Sir Reginald Earle, K.C.B. (Analysis of his Evidence)—*continued.*

by the Treasury, 521–565——Further statement that it is improbable that any services are rendered, or expenses incurred in respect of the office of hereditary Grand Falconer or Master of the Hawks; belief, however, that the Treasury have been legally advised that the Duke of St. Albans is entitled to the total payment of 965 *l.* a year, 527–532.

Impression that some expenses are incurred in return for the pension paid to the Constable of Hillsborough Fort, 533——Explanations respecting certain fees, or "customary deductions," in former years from the pensions when issued from the Exchequer; subsequent reduction of the gross payments by the amount represented by these fees, which were swept away, 534, 535.

Further examination in detail respecting the claim of the Duchy of Cornwall to the continued payment since 1841 of post groats or tin coinage duties, and the grounds upon which the Treasury concluded it was not in their power to alienate the sum in question from the Duchy, 536–584——Statement on the subject of the income of the Prince of Wales on his marriage in right of the Duchy having been made up to 100,000 *l.*, 585–590.

Commutation of numerous pensions when Mr. Courtney was at the Treasury, a few having been commuted when Lord Frederick Cavendish was Secretary, 591–593——Strong opinion of witness in favour of commutation provided the Treasury can be satisfied that the annual payment is permanent, 594–596. 599–601——Conclusion that a payment without intermission from the time of Charles II. must be considered permanent, 595.

Approval of commutation of certain payments for the Scotch Universities and for grammar schools, &c.; expediency of check by the Treasury where a distinct service is attached to any such payments, 596–598——Statement showing that the commutation of Lord Melbourne's pension in 1826, for 30,000 *l.*, was a good financial operation for the Treasury in view of the price of consols at the time, 600–602.

Whittleworth Forest, Ranger of. See *Grafton, Duke of.*

Woods and Forests. Statutory power under which the Commissioners of Woods and Forests have commuted sundry small pensions or permanent payments not exceeding 10 *l.*, which were charged upon the Land Revenues of the Crown, *Sir R. E. Welby* 23, 24——Explanation respecting the transfer to the Consolidated Fund in 1866 of numerous small permanent payments hitherto charged upon the revenues of the Woods and Forests, *ib.* 23.

Return containing particulars respecting the payments transferred from the Land Revenues, *App.* 59–68.

PERPETUAL PENSIONS.

RETURN to an Order of the Honourable The House of Commons, dated 20 July 1888;—*for*,

COPY "of TREASURY MINUTE, dated the 19th day of July 1888, upon the REPORT of the COMMITTEE of the HOUSE OF COMMONS, appointed in 1887, to consider the Question of PERPETUAL PENSIONS."

Treasury, 20 July 1888.

W. L. JACKSON.

MINUTE on PERPETUAL PENSIONS, dated 19th July 1888.

THE First Lord and the Chancellor of the Exchequer call the attention of the Board to the Report presented in 1887 by the Committee of the House of Commons on Perpetual Pensions.

The Committee recommend—

1. That pensions, allowances, and payments ought not in future to be granted in perpetuity.

2. That offices with salaries and without duties, or with merely nominal duties, ought to be abolished.

3. That all existing perpetual pensions, allowances, and payments, and all hereditary offices, should be determined and abolished.

4. That in all such commutations, the Lords of the Treasury should take into consideration the circumstances of such pension, allowance, or payment, and whether or not any real service had been rendered by the original grantee, or was now performed by the actual holder of the office.

5. That where no service or merely nominal service is rendered by the holder of an hereditary office, and where no service or merely nominal service was rendered by the original grantee of the pension, allowance, or payment attached to such office, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient.

6. That in all cases the method of commutation ought to involve and insure a real and substantial saving to the nation.

7. That the rate of commutation usually adopted of about twenty-seven years' purchase is too high.

The Committee observe, in conclusion, that in recent years some pensions appear to have been commuted, notwithstanding formal objections in writing lodged with the Treasury, and without sufficient inquiry into the matters stated in such objections.

The First Lord and the Chancellor of the Exchequer state to the Board that Her Majesty's Government concur with the Committee in thinking—

1. That pensions, allowances, and payments ought not in future to be granted in perpetuity. Recommendation 1.

2. That offices with salaries and without duties, or with merely nominal duties, ought to be abolished. Recommendation 2.

3. That all existing perpetual pensions, allowances, and payments should be determined and abolished. Recommendation 3.

Her

Her Majesty's Government of course can only speak for themselves. It is not in their power to bind their successors or Parliament, but the First Lord and the Chancellor of the Exchequer point out that the policy recommended by the Committee has practically been adopted both by previous Governments and by the House of Commons.

In 1883 the Government asked the House of Commons to grant, in accordance with precedent, life annuities to Lord Wolseley and Lord Alcester in recognition of their military services in Egypt. There was, however, such an expression of dissent in the House of Commons from a grant in that form, that the Government withdrew their proposal, and asked instead the grant of a capital sum. Parliament approved this manner of recognition. There can be little doubt that the precedent thus laid down will be followed by future Governments, and will find favour with Parliament.

Further, at the instance of the Government, Parliament in 1873, and again in 1883, passed Acts acknowledging the expediency of redeeming pensions, annuities, and annual payments payable out of the Consolidated Fund or moneys provided by Parliament, and not determining with the life of the individuals to whom they are for the time being payable; and under the special powers conferred by those Acts upon the Treasury, 330 pensions, amounting in all to 18,957 *l.* a-year, have been commuted between the years 1881 and 1887. It may, therefore, be safely asserted that the recommendation of the Committee indorses and supports the policy already adopted by Parliament and the action of the Treasury.

The First Lord and the Chancellor of the Exchequer advise the Board to continue a course of action which has thus far commanded general approval. The remaining pensions and payments due to individuals are sixteen in number, involving a yearly cost of nearly 12,000 *l.*, while further annuities, amounting to between 23,000 *l.* and 24,000 *l.* a-year, are mainly payable to bodies or corporations. The First Lord and the Chancellor of the Exchequer considered that the circumstances of each of these annuities should be considered, and an offer of redemption made. In the event of refusal, Parliament should be informed.

The First Lord and the Chancellor of the Exchequer note that the paragraph of the Committee's Report now under consideration contains a recommendation that all hereditary offices should be determined and abolished, and they state that Her Majesty's Government would not be able to accept that recommendation without qualification. An hereditary office must, in most cases, be abolished by Act of Parliament, and if an hereditary office, purely honorary in its nature, causes no expense to the State, and no inconvenience to administration, its abolition could be directed to no useful end, and would reflect somewhat ungraciously both upon the Crown and upon Parliament.

Recommendations 4 and 5.

4 and 5. The Committee recommend that in all commutations of existing pensions, allowances, and payments, the Lords of the Treasury should take into consideration the circumstances of such pensions, whether or not any real service had been rendered by the original grantee, or is now performed by the actual holder of the office, and that where no service or merely nominal service is rendered by the holder of an hereditary office, and where no service or merely nominal service was rendered by the original grantee of the pension, allowance, or payment attached to such office, the pension, allowance, or payment shall in no case continue beyond the life of the present holder or recipient.

The First Lord and the Chancellor of the Exchequer state that Her Majesty's Government are not prepared to commit themselves to a pledge which might bring the public faith into question.

A Committee of the House of Commons, which inquired, in 1838, into the subject of pensions reported that—

> Before the reign of Anne, the Sovereigns of England appear to have exercised a right to alienate or incumber the various branches of their hereditary

hereditary possessions, and they quoted judicial opinions to that effect. The Act 1 Anne, cap. 7, sec. 5, restrained the power of the Crown to alienate the revenue.

This Committee further stated that, with respect to certain life pensions, they had before them the opinions of the English and Irish Law Officers, affirming that the grants in these cases were legal and binding, and ought not therefore to be disturbed. They proceeded: "When grants of this description have been legally made and are legally operative, your Committee consider that the economical benefit to be derived from the reduction of a few questionable pensions, could be but an imperfect compensation for the evil effects of disturbing these important principles, upon which are founded the permanence and security of all property."

The Committee recommended, it is true, that a few pensions should lapse or be modified. These, however, were not perpetual pensions, but pensions granted by the Sovereign, and therefore requiring a re-grant on the accession of a new Sovereign.

Her Majesty's Government concur in this conclusion of a strong Committee of a House of Commons which, in economical tendencies, has certainly not been surpassed by its successors. They do not propose to discontinue a grant which they are assured is legally and permanently binding, but they consider that the Treasury should not commute a pension until it has been assured by the highest authority that the payment of such pension is legally and permanently binding. Hitherto, the opinion of the Solicitor of the Treasury has been obtained upon each case proposed for commutation. Her Majesty's Government propose that the Treasury, in presence of the recommendation of the Committee of 1887, shall take the opinion of the Law Officers upon each such case, and shall be advised (1) whether the grant is legally binding, and (2) whether it is permanently, or likely to be permanently, so binding; the latter question being addressed to the possible contingency of reversion from failure of heirs.

Her Majesty's Government do not consider that they would be justified in asking Parliament to deprive an individual of a grant to which he is legally entitled, on the grounds of the imperfect service upon which the grant was founded. They are of opinion that the Treasury, on being satisfied that a pension or similar payment is legally binding, and is likely to be for practical purposes permanent, should propose to the holder reasonable terms of commutation, and that it should be the duty of the Treasury to report the facts to Parliament if those terms should be refused.

Recommendations 6 and 7.

6 and 7. The Committee of 1887 consider that in all cases the method of commutation ought to involve and insure a real and substantial saving to the nation, but that the rate of commutation usually adopted of about twenty-seven years is too high.

The First Lord and the Chancellor of the Exchequer believe that the Treasury has always endeavoured to commute these perpetual payments upon terms favourable to the State, and they are satisfied also that the terms hitherto concluded with the persons entitled to those payments have been favourable to the public.

The perpetual pensions payable to individuals have, of late years, been commuted in round figures at twenty-seven years' purchase. That is to say, the Treasury buys for 2,700 *l.* a perpetual charge on the Consolidated Fund of 100 *l.* a-year. As the Treasury has for some years past been able to borrow at 3 per cent., it follows that in buying up such a charge at twenty-seven years' purchase the Treasury substitutes a perpetual annuity of 81 *l.* for a perpetual annuity of 100 *l.*, and makes thereby a saving for the nation of about 19 per cent. That saving would be increased if the Treasury, as seems probable, should be able to borrow at $2\frac{3}{4}$ per cent. Therefore the terms of commutation which have been concluded show, in the words of the Committee, a real

and substantial saving to the nation. Moreover, the terms hitherto offered by the Treasury have been voluntarily accepted by the payees, and thus, while public faith has been scrupulously maintained, the State itself has obtained material benefit. In such circumstances, my Lords cannot agree that the terms hitherto given to individuals have been too high.

The First Lord and the Chancellor of the Exchequer propose therefore (1) that holders of pensions, allowances, or payments which the Law Officers of the Crown consider to be permanent in character, but to which no obligation of an onerous kind attaches, should be invited to commute such pensions, allowances, or payments on the same terms as have been accepted in the numerous cases already commuted, and that the case should be reported to the House of Commons if those terms are refused; (2) that holders of pensions, allowances, or payments held in like manner to be of permanent character, but to which an onerous obligation not performed or imperfectly performed attaches, should be offered in like manner such terms as their Lordships on full consideration think just, subject in case of refusal to like report to the House of Commons; (3) that holders of perpetual allowances granted in respect of offices requiring discharge of useful service punctually performed should be offered, upon proper conditions, reasonable terms of commutation according to the circumstances, the circumstances in case of refusal being reported to the House of Commons; and (4) that special cases not falling fairly within the foregoing classification should be subjected to special consideration.

The First Lord and the Chancellor of the Exchequer regret that the Committee should have arrived at the conclusion that some pensions have been commuted, notwithstanding formal objections in writing lodged at the Treasury, and without sufficient inquiry into the matters stated in such objections.

The inquiries which the First Lord and the Chancellor of the Exchequer have made lead them to the belief that care was taken in each case to investigate the circumstances of the grant, and any objection which may have been lodged against it.

They may, perhaps, notice two of the objections taken to pensions which were at the time in course of commutation, viz., that of the Duke of Marlborough, and that of the heirs of W. Penn. The objection made against the former of these pensions contains charges against the first Duke of Marlborough, founded upon his own letters, memoranda of James II., and the Journals of the House of Commons. The Lords of the Treasury could only reply to such an objection that the Act of Parliament under which they commute pensions did not constitute them a Court of Appeal upon disputed issues of history, or empower them to set aside an Act of Parliament. They were advised that the Duke's pension was legally payable under authority of an Act of Parliament, and they obeyed the Act of Parliament.

The objection in the case of the heirs of W. Penn assumed that the proprietary right of the Penn family had been already satisfied, and asserted on the faith of State Records in Pennsylvania and the genealogy of the Penn family, that there were nearer heirs to Penn living than those to whom the pension was paid. In this case the Treasury could only state that an Act of Parliament imposed upon them the duty of paying the pension to certain persons, viz., the legal holders of the pension at the time of commutation. The Act did not empower the Treasury to set aside its directions in order to ascertain whether there were nearer heirs in existence.

These objections need only be stated in order to show the danger of their nature. They assume that the Treasury has the power of setting aside the directions of an Act of Parliament. The First Lord and the Chancellor of the Exchequer cannot accept it as a legitimate charge against the Treasury, that it paid and commuted pensions in accordance with the authority of Parliament.

My Lords agree with the First Lord and the Chancellor of the Exchequer. Let a copy of this Minute be laid before the House of Commons, and let the recommendations of the First Lord and of the Chancellor of the Exchequer be acted upon, when the Minute has lain for one month upon the Table, during the sitting of the House.

Treasury,
July 1888.

PERPETUAL PENSIONS.

COPY of TREASURY MINUTE, dated 19th July 1888, upon the REPORT of the COMMITTEE of the HOUSE OF COMMONS, appointed in 1887, to consider the Question of PERPETUAL PENSIONS.

COMMISSIONS.

VICTORIA, R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith :

To our trusty and well-beloved Sir Matthew White Ridley, Baronet; Our right trusty and right well-beloved cousin Adelbert Wellington Brownlow, Earl Brownlow; Our right trusty and well-beloved Nathaniel Mayer, Baron Rothschild; Our right trusty and well-beloved Ralph Robert Wheeler, Baron Lingen, Knight Commander of Our Most Honourable Order of the Bath; Our right trusty and well-beloved Councillor George Sclater-Booth; Our right trusty and well-beloved Councillor, Henry Hartley Fowler; Our trusty and well-beloved Sir Edward Cecil Guinness, Baronet; Our trusty and well-beloved Algernon Bertram Freeman-Mitford, Esquire, Companion of Our Most Honourable Order of the Bath; Our trusty and well-beloved John Cleghorn, Esquire; Our trusty and well-beloved Alfred Spalding Harvey, Esquire; Our trusty and well-beloved Charles Edward Lewis, Esquire; Our trusty and well-beloved Arthur O'Connor, Esquire; and Our trusty and well-beloved Peter Rylands, Esquire; Greeting!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into the Establishments of the different Offices of State at Home and Abroad :

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these presents authorise and appoint you, the said Sir Matthew White Ridley, Adelbert Wellington Brownlow, Earl Brownlow, Nathaniel Mayer, Baron Rothschild, Ralph Robert Wheeler, Baron Lingen, George Sclater-Booth, Henry Hartley Fowler, Sir Edward Cecil Guinness, Algernon Bertram Freeman-Mitford, John Cleghorn, Alfred Spalding Harvey, Charles Edward Lewis, Arthur O'Connor, and Peter Rylands to be our Commissioners for the purposes of the said inquiry.

And We do hereby authorise and empower you, or any five or more of you, to inquire into the numbers, salaries, hours of labour, superannuation, cost of the staff, and the administration, regulation, and organisation of the said offices.

You will state whether, in your opinion, the work of the different offices is efficiently and economically performed; whether it can be simplified; whether the method of procedure can be improved; and whether the system of control is deficient or unnecessarily elaborate.

As ten years have now elapsed since the adoption of the scheme of organisation recommended by the Playfair Commission, the time has come when the working of the scheme may, with advantage, be reviewed. You will, therefore, report whether the scheme has been fairly tried; whether its provisions have met the requirements of the Service, and deserve confirmation, and whether any modifications are needed to give it complete development.

Lastly, you will examine the non-effective charge of the Civil Service, and advise whether the present Pension Scales and Regulations are equitable alike to the State and to its servants.

And for the better effecting the purposes of this Our Commission We do by these presents give and grant unto you, or any five or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all

such books, documents, registers, and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do further by these presents authorise and empower you, or any five or more of you, to visit and personally inspect such places in our United Kingdom and abroad as you may deem expedient for the more effectual carrying out of the purposes aforesaid.

And We do by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any five or more of you, may, from time to time, proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any five or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us, under your hands and seals, or under the hands and seals of any five or more of you, your opinion upon the several matters herein submitted for your consideration.

And for the purpose of aiding you in such matters, We hereby appoint Our trusty and well-beloved Horace George Walpole, Esquire, Companion of Our most Honourable Order of the Bath, Assistant Under Secretary of State to Our Principal Secretary of State for India, to be Secretary to this Our Commission.

Given at Our Court at Saint James's the twentieth day of September, one thousand eight hundred and eighty-six, in the fiftieth year of Our reign.

By Her Majesty's command,

HENRY MATTHEWS.

VICTORIA, R.

Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith:

To Our trusty and well-beloved Robert William Hanbury, Esquire; Our trusty and well-beloved Harry Lawson Webster Lawson, Esquire; and Our trusty and well-beloved John William Maclure, Esquire; Greeting!

Whereas We did, by Warrant under Our Royal Sign Manual, bearing date the twentieth day of September, one thousand eight hundred and eighty-six, appoint Our trusty and well-beloved Sir Matthew White Ridley, Baronet, together with the several Gentlemen therein mentioned, or any five or more of them, to be Our Commissioners to inquire into the Establishments of the different Offices of State at Home and Abroad:

And whereas one of Our Commissioners so appointed, namely, Peter Rylands, Esquire, has since deceased, and two other of Our said Commissioners, namely, Sir Edward Cecil Guinness, Baronet, and Arthur O'Connor, Esquire, have humbly tendered unto Us resignations of their appointments as two of Our said Commissioners:

Now know ye, that We, reposing great confidence in you, do by these presents appoint you, the said Robert William Hanbury, Harry Lawson Webster Lawson, and John William Maclure, to be three of Our Commissioners for the purpose aforesaid in the room of the said Peter Rylands, Sir Edward Cecil Guinness, and Arthur O'Connor, in addition to and together with the other Commissioners whom We have already appointed.

Given at Our Court at Saint James's the thirtieth day of November, one thousand eight hundred and eighty-seven, in the fifty-first year of Our reign.

By Her Majesty's commands,

HENRY MATTHEWS.

REPORT.

MAY IT PLEASE YOUR MAJESTY:

1. Before stating the conclusions at which we have arrived upon the question whether it is, or is not, desirable to amalgamate the Customs and Inland Revenue Departments, it would appear desirable to state how the management of the two Departments is at present constituted, and to refer to the principal changes that have taken place therein during the last 50 years.

2. Previously to the year 1833 the national revenue was collected by four Boards, viz., the Boards of Customs, of Excise, of Taxes, and of Stamps.

3. In 1833 the two last-mentioned Boards were united into one, and in 1848 the Board of Stamps and Taxes was united with the Board of Excise, under the more general designation of the Board of Inland Revenue.

4. Previously to 1846 there were nine Commissioners for the Board of Customs; at the present time the Board consists of a Chairman, a Deputy Chairman, and one Commissioner.

5. In 1833 the number of Commissioners for the three Boards of Excise, Stamps, and Taxes was, upon the amalgamation of the two latter, reduced from 16 to 13, and on the consolidation with the Excise in 1848 the number was further reduced to six. At the present time, the Board of Inland Revenue, which controls Stamps, Taxes, and Excise, consists of a Chairman, a Deputy Chairman, and three Commissioners.

6. In 1862 a Select Committee of the House of Commons was appointed to "inquire "whether it would be practicable and advantageous to consolidate any of the establish- "ments now governed by the Boards of Inland Revenue and Customs respectively; "or to unite any portion of the duties performed by their officers, with a view to "economy in the collection of the public revenue, and to simplicity of arrangement.

7. This Committee took evidence during the sessions of 1862 and 1863, and, in July of the latter year, reported the evidence so taken to the House, having failed to agree upon a report.

8. Together with the minutes of evidence they presented two draft reports, the general character of which can be sufficiently understood by a perusal of the following short extracts from each.

Paragraph 66 of the draft report prepared by the Chairman, the late Mr. Horsfall, was as follows:—

"In reviewing the evidence, your Committee believe the proposed consolidation "practicable, and that it would tend to great economy in the cost of collection, "efficiency in the service, and simplicity of arrangement in transacting business "with the public. Already several beneficial results have attended the labours of "your Committee; the forms of documents in the Customs have been much reduced "and simplified; steps are being taken to remedy the grievances complained of with "regard to British spirits, and the export of beer; and arrangements are under "consideration for a more economical sale of stamps, either by the postmasters, or by "the collectors of revenue. Every fresh simplification, however, is but another step "towards consolidation."

9. Paragraphs 46 and 59 of the other draft report prepared by the late Lord Cardwell run as follows:—

"46. Your Committee cannot, therefore, report to the House that the balance of "evidence, as regards the number and weight of the witnesses whose opinions have "been given before them, is in favour of the extensive change proposed; while the "facts to which your Committee have referred show conclusively that the desire of "effecting retrenchments, as changes in the law, and consequently in the practice of "both Departments, have rendered such retrenchments possible, has been steadily "kept in view by successive Governments from 1833 down to the present time.

* * * * * * *

"59. Your Committee, therefore, abstain from recommending the proposed con- "solidation of the two departments, and conclude their Report by recommending:—

"1st. That the inconvenience complained of by the dealers in British spirits should "be considered with a view to its removal by Parliament."

"2nd. That the favourable consideration of the Treasury should be given to changes " like those suggested bythe Board of Inland Revenue and the Post Office respectively, " for the union of branches of the service now distinct."

"3rd. That the respective Boards should be directed to continue the system of con- " solidation and retrenchment by which, in past years, so many separate departments " have been united, with a view to such further consolidation and retrenchments as it " may from time to time be found possible to effect, with a due regard to the efficiency " of the service, the convenience of the trading community, and the security of the " public revenue."

10. In 1880, a Departmental Committee, presided over by Mr. Holms, M.P., one of the Lords of the Treasury, was appointed by that Board "to inquire into the bonding " systems of the Customs and Inland Revenue Departments, and also as to the reduc- " tion of Customs establishments at minor ports."

This Committee laid down :—

I. That the regulations for bonding goods in the warehouses of the Customs and Inland Revenue should be absolutely assimilated.
II. That in districts where there are duplicate establishments, all of them should, as far as practicable, be transferred to one Revenue Board.
III. That in each town, or port, the number of bonded warehouses should, as far as possible, be reduced to the actual requirements of the trade.
IV. That Customs Establishments at minor ports should, as far as practicable, be abolished, or reduced to a lower class (*i.e.*, to the class of creeks or parts of larger ports).

Sub-Committees, consisting of members of the two departments, were subsequently appointed to carry out these recommendations, with the result—

I. That an unified code of warehousing regulations for the two departments was issued in 1885.
II. That the system of warehousing accounts was practically assimilated.
III. That the number of duplicate warehousing establishments, *i.e.*, of the two Boards in the same place, was reduced from 35 to 7 (exclusive of a few warehouses occupied by distillers), and the bonded warehouses at 41 minor ports were transferred from the Customs to the Inland Revenue Board.

App. pp. 221, 222. 11. The principal arguments for and against amalgamation will be found stated in the Memoranda submitted to us by the Inland Revenue and Customs Departments respectively.

12. Briefly they may be recapitulated as follows. For amalgamation :—

That the unified code of warehouse regulations has now been in use in the two departments since 1885, but that it is inevitable that where the instructions have to be interpreted by the local officers of two separate departments, some diversities of practice will arise.

That 97 per cent. of the Customs Revenue is collected through their warehouses, and that the warehouses of the two departments could economically and without difficulty be transferred to the management of one Board.

That each successive previous amalgamation has resulted in great economy to the State.

That a concentration of the work of the two departments would lead to great economies, not alone in the more highly paid classes of officers engaged in the supervision of the outdoor officers, but also in the indoor staff of the respective departments, and that it may fairly be assumed that the whole Revenue business might be managed by one Board : one Secretariat : one Legal, one Accounting, and one Receiving Department.

That amalgamation would be departmentally advantageous—

1. By securing absolute uniformity of practice as regards the warehousing code of instructions.
2. By putting an end to the correspondence constantly taking place between the two Boards on warehouse questions ; and
3. By putting an end to the constant questions and comparisons by the officers of the two departments charged with almost, if not quite identical, duties, who are now in receipt of different scales of pay, and have different official prospects.

That public opinion is largely favourable to such a concentration of revenue business, and that there can be little doubt that it would be hailed as a great administrative reform.

13. On the other hand it is urged against amalgamation—

That in consequence of the changes introduced since 1862, no difficulty is now felt by the public in having to deal with two Departments, and that the feeling in favour of amalgamating the services, which at one time prevailed amongst mercantile men, has ceased. App. p. 222.

That if the business now transacted at the Custom House in London was moved to Somerset House, the utmost inconvenience would be caused to merchants, whose offices have in many cases been selected on account of their proximity to the Custom House, and whose personal attendance there, is by law in many instances compulsory.

That it is not believed that any facilities could be obtained by exporters under an amalgamated Board which could not be equally well obtained while the administration of the two departments is separate.

That out of 4,485 established officers in the Customs, only 1,215 are engaged on similar duty in the two departments, and that 1,143 of those 1,215, who are employed on warehouse accounts, would not be affected by amalgamation, as that number does not exceed the requirements of the Customs service, and, if it did, its reduction could be effected independently of any question of amalgamation.

That practically the only reduction in expense which might result from amalgamation would be—

1. In the head-quarters staff.
2. In the collectors at those ports at which at present both departments have collectors.

That the utmost saving to be expected would be, at the head-quarters staff 6,000*l.*, at the ports 5,345*l.*, or a total of 11,345*l.* a year.

That against this possible saving has to be set the fact that the scales of salary in the two departments vary at every point, and that in an amalgamated service these variations could not continue; and that, if salaries are levelled up, any saving effected by amalgamation would be nearly, if not entirely, absorbed, while if salaries are levelled down, such levelling down cannot be accomplished for several years, and, in the meantime, the same duties will be performed by officers in receipt of different scales of pay—a state of affairs difficult to maintain in the face of the organised agitation likely to arise.

That a Chancellor of the Exchequer is in a better position, if he has the advantage of the different views sometimes taken by two separate departments on questions that come before them, than he would be if he had to rely on the judgment of a single administrator, whose knowledge, though extending over a wide area, would probably, for that reason, be not so minute or thorough.

That no *bonâ fide* amalgamation can be accomplished unless the officers in the respective departments are capable of becoming rapidly qualified to undertake all the detail duties in the amalgamated department, and that no such interchange of duties is possible in the Customs and Excise, long special training being necessary in much of the work of each department.

And finally, that an amalgamated department will afford a wider and easier ground for combination and agitation than is the case when the two services are distinct. That even as things now are, of late years, different grades of the services have combined and agitated for increased salaries; public meetings have been held, and pressure has been brought to bear on members of Parliament, both at elections and in the House of Commons; and that if amalgamation is decided upon, the Government must be prepared to deal with an agitation for increased pay organised on an extended basis.

14. In considering the question before us, we have taken evidence from—

The Inland Revenue, pp. 1–22, 67–72, 78–95, 109–115, 120–131, 150–152, 157–162, 173–193.

The Customs, pp. 22–32, 36–60, 95–98, 115–120, 131–136, 152–157, 193–218.

The Secretary to the Treasury, pp. 60–67.

Mr. Gladstone, pp. 32–35.

Mr. Childers, pp. 72–78.

Trade witnesses, pp. 98–108, 136–149, 162–172.

15. Upon the conflicting views that have been put before us, we observe, in the first place, that the question of amalgamation, or consolidation, is not so much one of principle as of degree: and that its desirability or the reverse must be determined by the probability of its resulting in

1. A Substantial Reduction in Expenditure.
2. Increased Efficiency of Administration.
3. Additional Convenience to Traders.

16. Further, the collection of the whole Revenue of the Country (exclusive of the Post Office) is so important a matter that alterations in its management should not be lightly undertaken, and certainly no change should be made unless some strong and positive reason in its favour is shown, and unless it is clearly demonstrated that the proposed change is both safe and prudent.

17. The *onus probandi* thus lying with the advocates of amalgamation, we are of opinion that no case has been made out before us sufficient to justify so important an experiment.

We are not insensible to the weight of general considerations that may be advanced in favour of an united control of services which come into contact at many points; but, setting aside for the present reasons of policy which tend in the opposite direction, we are satisfied that the Customs and Inland Revenue of the country is now, as a whole, collected at a reasonable cost, and in a manner which, taking into consideration all the circumstances of the case, cannot be regarded as inconvenient to the taxpayers.

18. In saying this, we are not expressing an opinion that further changes may not yet be made to facilitate the collection of the revenue, such as have of late years been going on; but we are dealing merely with the question as it might be affected by a consolidation of the Customs and Inland Revenue Boards.

Pp. 98, 105, 136, 142, 162, 168, 169, 251.

19. Having carefully weighed the expressions of opinion which we have received both orally and in writing from traders who are brought into contact with both the departments, we cannot say that any grievances have been proved before us which are the consequences of separate control, or any inconveniences established which cannot apparently be easily remedied by departmental improvements, and by some provision for more united action on the part of the two Boards as to certain portions of their respective functions (such as warehousing), to which we subsequently refer. The indirect consequences of Mr. Horsfall's Committee, and the subsequent action of the Treasury, with that of the two departments concerned, have materially simplified regulations, removed impediments, and facilitated the operations of trade. From the point of view, therefore, of convenience to traders, it appears to us that no case for amalgamation has been substantiated.

20. The principal arguments however in favour of the change are derived from the administrative improvements which it is alleged could be effected in respect both of economy and efficiency.

21. Amalgamation, as generally understood, consists of a fusion of the two Boards, with one Chairman, one Secretariat, one Legal, one Accounting, and one Receiving Department, and it is urged that though a detailed scheme cannot, for obvious reasons, be put forward by either the Inland Revenue or the Customs, yet, that in course of time, a united Board would be able not only to work with a reduced staff of highly paid officers at head-quarters, but also to fuse the lower branches of the service, where work is analogous, to make the work interchangeable, to reduce numbers, and to establish one homogeneous staff of Revenue Officers with similar scales of pay for the same or similar work.

22. The amalgamation of the Boards of Stamps and Taxes in 1834 led to an immediate economy of 18,342*l.* per annum, but a very large proportion of the reduction was effected in respect of the Commissioners themselves, who were nine in number, and was carried out at a time when there was a much larger opportunity for reform than exists at present. It is pointed out, moreover, by Sir R. Welby, that whereas, before amalgamation, those two branches of the revenue establishments cost together 123,000*l.*, and immediately afterwards 105,000*l.*, yet 13 or 14 years later, the cost had risen to 147,000*l.*

Upon this point he stated in reply to question 22,182:—

"Take the amalgamation of the Stamps and Taxes, which produced a saving of about 18,000*l.* a year. In 1834 the constitution of offices was very different to what it is now. Many of the old fashioned habits and abuses of the last century were still existing. It was a very facile reform to make. I do not

" remember exactly what the number of Commissioners was, but the two Boards, I should think, then had " about 10 or 12 Commissioners.

" 22,183. You are speaking of 1834 now?—Yes, of 1834. The consequence is, that you might get a " considerable proportion of that 18,000*l.* a year out of the mere reduction of the Board without anything " more. So, again, there is a curious fact connected with that reform. I do not know whether it has struck " the Commission. The Commission are probably aware of the leading figures of that amalgamation. The " two different branches of the revenue cost, before amalgamation, together 123,000*l.*; after amalgamation " they cost 105,000*l.*; 13 or 14 years later, when the Stamps came to be amalgamated with the Excise, the " amalgamated branch had risen to 147,000*l.*

" 22,184. From 105,000*l.*?—From 105,000*l.*, or 24,000*l.* or more over the top expenditure before amalgam- " ation. Of course, I should add that the income tax had been imposed in the meantime, though the expense " of the income tax at head-quarters is not very large, inasmuch as the collection, as the Commissioners are " aware, is given to local officers. I mention that as a thing that may be explained, but as a thing that it is " very necessary to have explained when an appeal is made to the success of the old amalgamation."

23. In 1848, again, the amalgamation of the Boards of Stamps, Taxes, and Excise showed a saving of nearly 31,000*l.*, but an analysis of the details, as given in the Appendix, p. 221, establishes the fact that the reductions then effected were principally in the number of higher officers, at that time very numerous, and that there is no probability of reductions upon anything like the same scale in respect of the present Customs and Inland Revenue establishments being now effected. It is not to be forgotten that great reforms have taken place in recent years in both these establishments, and though we are of opinion, that some reductions are still possible at head-quarters, and probably also to a limited extent at some of the ports, it appears to us that these improvements could equally well be effected without amalgamation.

24. It is notorious that large reorganisations have seldom realised the expectations of economy which at the time have been anticipated, and it is a matter of experience that when two services are consolidated, the tendency is inevitable for the higher rates of salary, where there is a difference, to be generally adopted.

In departments of the magnitude of those under consideration, a very small levelling up in the salaries of officers, when brought on to a common establishment, would very quickly counterbalance any but the most substantial economies which might be effected by a reduction in numbers. Sir R. Welby, 22, 188, &c.

The evidence given before us does not justify us in drawing the inference that a scheme of amalgamation could be satisfactorily and economically worked out.

25. It is urged that if the amalgamation of Stamps and Taxes with the Excise was possible, and has in fact been satisfactorily accomplished, it is *à fortiori* desirable to amalgamate the Customs and the Excise, those two services being much more in *pari materiâ*.

But it is to be observed that though in the former case the Boards and some of the higher officers have been amalgamated, yet the services, in certain particulars, are still practically distinct. And though it may appear probable that a consolidation of the Customs and Excise would have been *in the first instance* the more natural course, with the Stamps and Taxes united under another Board, the case is different now when the whole of the Inland Revenue of the country is administered by one Board, and when such a fusion would mean that the whole of the taxation collected by the Customs and Inland Revenue Boards would be under one control.

26. The Chairman of such a Board would occupy a position far above that of any present permanent civil servant, and however strongly it might be laid down that it should not be made a political office, there would be great danger of its becoming one. Nor do we think the argument ought to be ignored, which insists upon the advantage which is to be attached to the criticism from different points of view upon taxation proposals, which is now by the maintenance of two departments at the command of the Chancellor of the Exchequer. It is true that Mr. Gladstone in his evidence does not attach importance to this consideration. But we cannot help thinking that the conditions and circumstances to which his evidence refers were exceptional —not the least exceptional perhaps being his own personality—and it certainly appears to us that, though the Chancellor of the Exchequer can, and of course frequently does, consult official experts, subordinate to the Chairmen of the Customs and Inland Revenue Boards, yet that he is likely to gain by having the assistance of two chief administrators of the revenue, whose advice and whose criticisms must to a great extent start from different and sometimes conflicting standpoints. Mr. Gladstone. 21,443.

It must be recollected that the Chancellor of the Exchequer is always a political officer, and it must occasionally happen that he is not possessed of any large financial training or experience.

27. There remains also the general consideration that, the collection of revenue from dutiable articles imported into the country, and the carrying out of regulations at the ports affecting all imports, is *primâ facie* distinct and different work from the collection of revenue arising within the country, and it may be desirable from this point of view that the Customs Board should remain autonomous, though, of late years, Customs duties have in many respects been simplified. The Merchandise Marks Act, the Contagious Diseases (Cattle) Acts, the Sea Fishing Boats Act (Scotland), and the Wines Act, may be cited as recent additions to the special work of this branch of the service.

28. It is urged that a reduction of staff could be effected at the outports, where there are collectors both of Inland Revenue and Customs, by entrusting the control of both services to the same officer. And further that there are some districts where an officer of either service, whose presence is necessary, but whose time is not fully employed, might economically do the amalgamated work. Upon this point we call attention to the observations of the Customs Board, in which we generally concur. We have received no evidence to justify us in thinking that the saving in this respect would be considerable or beyond the sum of about 5,000*l.* there estimated.

App., p. 224–5.

29. We think that if the Boards were brought into closer relation as we hereafter suggest, opportunities might be found for mutual help between the Departments in the distribution of work, especially in that of collecting as distinct from assessing, but we have received no proof that in either department there are to any great extent officers who have leisure to do the work of the other. And, moreover, both services are sufficiently technical in many respects to require considerable training and experience, which is of great advantage to the chief officers who have the control of their several districts, and who ought to be thoroughly acquainted with the details of all the several branches.

30. Even if we were in favour of the amalgamation of the Boards, we could not endorse the suggestion that the united Board should sit at Somerset House, and the present Customs House buildings be sold, the Customs staff being accommodated in rooms now vacant at Tower Hill. We do not believe that the present work of the Customs Board could be done satisfactorily at Somerset House. The premises on Tower Hill are, we believe, inadequate, and we are convinced that the removal of the controlling authority from the neighbourhood where it is at present located would meet with most strenuous opposition from the trading community of the port of London, who would be most seriously inconvenienced by it.

31. A leading argument in favour of the complete amalgamation of the services is drawn from the system of bonded warehouses. It is said that though a unified code of warehouse regulations has been in use since 1885, it is inevitable that diversities of practice, and consequent administrative inefficiency and inconvenience to traders, will arise from its interpretation by two separate Boards, and by the local officers responsible to those Boards; and it is further urged that as 97 per cent. of the Customs revenue is collected through their warehouses, a transference of the management of all the bonded warehouses would carry with it without difficulty the consequent amalgamation of the two Boards.

Sir A. West. 20,750. 20,944. 20,955–6.

32. The evidence with regard to conflicting interpretations does not establish anything very serious, nor does the stated fact that 76 changes have been made in a code of 633 paragraphs since 1885 prove more than that experience has suggested improvements, and that a body of such minute and varied regulations, so recently codified, should be, from time to time, re-edited, and made as simple and plain as possible.

Customs paper p. 228. Sir A. West. 20,962–3. Sir A. West. 20,834.

33. With respect to the fact that 97 per cent. of the Customs revenue is collected through their warehouses, it is to be remembered that out of 4,485 Customs officers, only 1,215 are employed in the warehouses, and that, outside of those warehouses where the duties are not interchangeable, the multifarious work of the Customs in relation to all imports, whether dutiable or not, amounts to fully two-thirds of their total responsibilities. A great variety of work also is done by the Customs for other departments

of the Government. There are, for instance, the Ships Registry; the receipt of light dues for the Trinity House, and the Board of Trade; the duties of Superintendent of Mercantile Marine and Receiver of Wreck, and enrolment of men in the Royal Naval Reserve; the supervision of the landing and importation of cattle, for the Veterinary Department of the Privy Council; the supervision of the landing and loading of explosives, for the Home Office; the collection of trade statistics; and in time of war between countries with which the United Kingdom is at peace, the most difficult, pressing, and responsible duties both by day and night, under the Foreign Enlistment Act. The taking over of these duties from the Customs by the various departments concerned would necessitate an increase of staff for those purposes; and it appears to us that it would be the reverse of economical not to continue to make use of the Customs officers stationed at the various ports to perform these duties which come readily to their hands.

34. As regards the number of bonded warehouses, and the co-existence at the same place of duplicate establishments, there are now, Inland Revenue warehouses at 156 places, Customs warehouses at 58 places, and Inland Revenue *and* Customs warehouses at 9 places, viz.:—

	Number of Warehouses,	
	Inland Revenue.	Customs.
Liverpool - - -	2	107
London - - -	23	73
Newcastle - - -	14	16
Glasgow - - -	26	22
Leith - - -	11	49
Belfast - - -	8	20
Cork - - -	21	3
Dublin - - -	70	13
Limerick - - -	1	3
	176	306

It is desirable that the recommendations of the Bonded Warehouses Committee, 1880, already alluded to in paragraph 9, should constantly be borne in mind, and that duplicate establishments should, as far as practicable, be transferred to one Revenue Board: but, in face of the facts disclosed in the above list, it would cause great inconvenience and discontent were all the Customs Warehouses at *e.g.*, Liverpool and London to be transferred to the Inland Revenue Board, and the same reason would operate against a transference to the Customs of all the warehouses at the ports. The guiding principle of the transference which has hitherto taken place has been that to the Inland Revenue should be handed over the warehouses at ports where there were no direct importations of dutiable goods. But whether further steps in this direction be possible or not, there is no ground, as regards the cost of warehousing proper, for supposing that the management of either Board is more expensive than that of the other; or that consolidation would effect any economy in this respect. Sir A. West, 21,008–11.

35. It does not appear that the correspondence between the two departments is large. In the year ending September 30, 1888, the letters, including some on unimportant subjects, and 22 in relation to the new wine duty, amounted to only 179, and in the preceding year to 120. Customs paper, p. 229.

36. Some of the Inland Revenue witnesses have laid stress upon an alleged rivalry between the departments which, as they have said, leads, or may lead, some of the officers of either department to deal too easily with traders, in order to secure a larger volume of business, where a choice of warehouses is possible. Such a rivalry is altogether denied by Customs witnesses, and no specific cases have been brought to

our notice. It would, of course, be most objectionable, and would imply a dereliction of duty on the part of public servants, of which we are glad to say we have no definite evidence.

37. It is, on the other hand, not to be denied that we observe in the relations of the two Boards some indications of a want of co-operation, which cannot be otherwise than prejudicial to the public service. Should it, however, be now definitely decided that the fusion of the two Boards, and of the respective services, is not to be carried out, we believe that a good deal of this feeling will cease. And we are further of opinion that effective co-operation of the two Boards can be secured by making regulations for the meeting at stated intervals of a joint committee of the Boards, for the determination of certain questions common to both of them, the constitution, procedure, and duties of such committee being from time to time defined by the Treasury.

38. Such questions would comprise, for instance, the administration of the warehousing code, and of all points arising under it; and the economies which might be effected by a mutual allocation of analogous work, and a consequent reduction of staff.

39. With the Treasury, of course, would rest as now the ultimate decision between any conflicting opinions; but we have every confidence that if the two Boards are brought into regular contact, as we have suggested, many questions would be settled without that arbitrament, and that a co-operation would ensue between the two departments which would be of great advantage to the public service.

40. We have not gone into the details of the organisation of either the Inland Revenue or the Customs departments; nor, in view of all the recent inquiries and reforms, does such an examination appear to us necessary. The evidence, however, which we have taken, with a view of determining as to the expediency of amalgamation leads us to the following observations.

41. It is, we think, of advantage that the ultimate decision on administrative questions of great importance to the taxpayers of the country should be dealt with as now by a body of men of high official position, among whose numbers might be found some who have a knowledge of men and of affairs acquired otherwise than in the exclusive training of a Revenue Department.

42. With this view, and to provide for there being always at least two Commissioners in attendance at all times of the year, as well as for inspection duties, we are of opinion that the Customs Board should consist as at present of a chairman, a deputy chairman, and one other Commissioner. We are not prepared to recommend the reduction of the Inland Revenue Board to so small a number, but we consider that a chairman, a deputy chairman, and two Commissioners should be sufficient to carry on its duties.

43. A secretariat, and an accounting department are necessary in both offices. As regards the legal departments, both the present solicitors agree that the amalgamation of their offices is desirable. In this view we concur, and are of opinion that one chief legal officer, of the status of the present solicitors, would be sufficient to advise upon all revenue questions, including the Customs and Inland Revenue Bill of each year. This would enable one of the existing solicitorships to be abolished on the occurrence of a vacancy, leaving—as at present—one assistant solicitor in each department, who, with their respective staffs, would be under the control of the one chief legal officer. His position, in fact, towards the Customs and Inland Revenue Boards would be somewhat analogous to that occupied by the Principal of the Inland Revenue Laboratory towards other Civil Departments of the State. This officer undertakes the Government chemical work generally; and we think the Customs work should also come to him, as does, *e.g.*, the work of the Board of Trade and India Office.

44. The dealing in this manner with such chemical and legal questions as might come before the respective Boards would be facilitated by the joint committee of the Boards which we have before recommended.

45. It having been suggested to us that the office of the Receiver General might be abolished, we invited the attendance of that officer, and received from him explanations

respecting the present work and organisation of his department, and proposals for absorbing into it the whole of the work now done in the five London collections. We referred Sir A. Slade's evidence to Sir Algernon West, and the latter's criticisms thereon will be found appended, page 297.

The result of this consideration of the subject has been that the Treasury have had placed before them by the Inland Revenue Board a scheme under which the Excise license duties within a given area round Somerset House, and the tax payments into Revenue within a larger area round Somerset House, should be paid to or through the Receiver General. The scheme involves the ultimate abolition of the office of Receiver General, and effects an immediate saving of about 800*l.* a year. We recommend its adoption.

46. We have received numerous memorials from the various grades in the two departments, and although these have little or no bearing upon the question of amalgamation, we thought it desirable, not only to give them full consideration, but also to hear evidence from representatives of those different classes of revenue servants who desired to amplify or explain the suggestions in those memorials. [App. p. 254 to 294.]

The observations of the chairmen of the respective Boards upon the evidence and statements so submitted to us will be found in the Appendix, p. 296 to 320.

47. We find it exceedingly difficult to deal with these complaints. Our instructions are to see if the work of the State is efficiently and economically performed, but though we have given audience to these various classes of officers—an audience which we felt it inexpedient in the public interests to refuse—and have carefully considered their evidence, we do not feel ourselves in a position to report in detail upon it. It would require much more accurate and technical knowledge than can possibly be at our command before we could give opinions adverse to those entertained by responsible heads of offices who are so thoroughly acquainted with the details and nature of the work and with the character and ability of their officers.

48. Apart from questions of minor importance, the general nature of the cases laid before us has been twofold. It has been urged, in the first place, that recent reorganisations have diminished the number of the higher officers, and lessened, as well as retarded, promotion, and that compensation is therefore due for loss of prospects to those who had entered the service expecting to rise as their seniors may have done; and, secondly, it is represented that the salaries are inadequate for the due performance of the very responsible duties which fall to the lot of many of the revenue officers.

49. As regards compensation for loss of prospects, there may, no doubt, be special cases where something in the nature of a definite contract can be shown; but, as a general rule, it should be understood that reductions in offices not required must be made from time to time to suit the requirements of the public service, and that no officer has an actual right to a higher scale than that of the class he may be in. Every opportunity should be taken, when changes are necessary, to reward good service and promote meritorious officers; but it is impossible to adopt the principle that a mere loss of prospects, more or less remote, should entitle a public servant to compensation.

50. We are prepared to recognise to the fullest extent the efficient and responsible work done by the various classes of Customs and Inland Revenue officers, among whom it would be invidious to make distinction. We think that that work is not too highly paid, especially when it is remembered that a great deal of it is faithfully performed under circumstances admitting of great temptation to dishonesty. We are bound, however, to observe, though we should not wish to push the argument of supply and demand too far, that there does not appear to be any lack of fit and proper candidates for employment in the two Revenue Departments.

We observe with satisfaction that some of the points raised before us during the course of this inquiry have already been dealt with since the date of the appointment of this Commission. There are other matters of detail, such, *e.g.*, as the private clerks of the Surveyors of Taxes, the various horse and travelling allowances, the hours and overtime of the Customs outdoor officers, the condition of some of the premises, and various minor suggestions contained in Mr. Murray's careful analysis of

the cases of the Customs officers, which we think must be left to the Revenue Boards, and to the Treasury to deal with, in such manner as to meet, so far as is reasonable, the pleas of the memorialists.

All which we humbly submit for your Majesty's gracious consideration.

HORACE WALPOLE, *Secretary.*
5th June 1889.

I am in favour of the complete amalgamation of the Customs and Inland Revenue Departments, and so far I differ from the above Report, otherwise I adopt it.

CHARLES E. LEWIS.

I am unable to agree to the main recommendation of this Report, viz., that it is inexpedient to amalgamate the departments of Customs and Inland Revenue. The case for and against this development of the policy carried out in the consolidating schemes of 1833 and 1848 has been put before us in reference to (1) financial economy; (2) administrative efficiency; (3) commercial convenience. On all these points I believe the balance of evidence and opinion is in favour of amalgamation.

The advantages of concentrating the collection of the national revenue in the hands of one department of State are so obvious, and have so often been considered by Chancellors of the Exchequer, that it was incumbent upon those who are in favour of either delaying or altogether preventing such a consummation to show strong reasons against it. I respectfully submit that the general upshot of their evidence only went to prove that the revenue is not collected with any greater waste or inconvenience than the existence of two departments with duplicate machinery for that purpose renders necessary. It is quite fair to state, at the same time, that much has been done to simplify and cheapen the process of dealing with that part of the trade of the country which falls under their separate or joint regulation.

It is, however, remarkable that all but one of the trade witnesses who appeared before the Commission expressed themselves strongly in favour of amalgamation. Mr. Sedgwick speaking for the tea merchants was only so far opposed to it that he deprecated the introduction of unskilled officers into the staff that "have been "educated up to the requirements of the tea trade." Mr. Gilbey, who stated that during last year his firm had contributed 394,000*l.* to the revenue, complained of the delay and uncertainty caused by the duplicate system of examination and the constant reference of small points of difference to the two Boards. Mr. Wills, who said that his was the only firm in the United Kingdom, engaged in the tobacco trade, that did business with both Customs and Inland Revenue, pointed out that the divergence of revenue laws enforced by the two departments, as well as the difference in their interpretations of the code and methods of analysis, are prejudicial to the interests of the trading community. He also stated that there was no concerted action between the

Mr. Sedgwick, 23325.
Mr. Gilbey, 23026. 23093. 23103.
Mr. Wills, 24820. 24830–1. 24900.

two departments in following up smuggled tobacco. Although it may be contended that the various causes of grievance might be removed by departmental reforms, and do not call for the introduction of unity of control and supervision, if only without it a spirit of cordial co-operation could be infused into the relations of the two Boards, yet weight should, certainly, be attached to the decided opinion of important branches of trade that no satisfactory settlement can be arrived at short of consolidation. Unfortunately experience shows that a sudden change is not likely to be effected in the established relations of the two departments, especially as regards their local representatives, on the footing of mutual independence, if not jealousy.

The administrative question has been somewhat confused on account of the prevailing impression among the officers of Customs that in case of amalgamation their service would be absorbed, if not abolished. For instance, Mr. Scott, collector of Customs at Glasgow, was opposed to the idea of amalgamation, but in the course of his evidence stated it would be a public advantage if all the warehouses at Glasgow were under the Customs. In the same way Mr. Riddell, Customs collector at King's Lynn, whilst opposing amalgamation, thought it would be a good thing if the warehouses of the Inland Revenue at Boston were transferred to the Customs, and further expressed his belief that the whole of the extra duty could be performed by the present staff. As a rule the officers of Customs began by stating they were against amalgamation, whatever admissions they afterwards made; on the other hand, all the officers of Inland Revenue expressed themselves in its favour, on the ground that the work could be done more efficiently by one staff with one head, both at the principal and the small ports. It was the opinion most of the witnesses that economies might be effected in the cost of supervision by reducing the number of officers and concentrating their powers and functions.

Mr. Scott, 23988–9. Mr. Riddell, 24666–7. 24604–5.

In reference to the large cost of the Solicitors' offices in the two departments, both Sir William Melvill and Mr. Follett were impressed with the public waste and inconvenience of dual action in respect to identical matters of administration, and both are in favour of complete amalgamation. "I have always thought," said the Solicitor to the Customs, "that the existence of two Revenue Boards for work which is so very "cognate, especially with regard to indirect taxation, that is the Customs and the "Excise, was an unbusinesslike arrangement and rather cumbersome."

Mr. Follett, 22935.

There are now nine ports in the United Kingdom at which there are duplicate warehousing establishments. In Liverpool 107 warehouses are under Customs and only 2 under Inland Revenue; in Belfast there are 20 under the former and 8 under the latter; in Leith the proportion is 49 to 11. Even if it be undesirable to fuse together the two departments there seems to me to be no valid reason why the recommendation of the Departmental Committee of 1880 should not be carried out universally, viz., "that in districts where there are duplicate establishments, all of them should be "transferred to one Revenue Board." This work is of an identical nature, and it was pointed out that where their proposal had been carried out, a considerable saving of public money had been effected. There can be no doubt that in the other ports the work could be more satisfactorily performed by one set of officers than by two, as at present.

Sir A. West 20748.

Sir A. West pointed out that at most of the smaller outports, by means of amalgamation, an officer of either department might fill up his time by discharging duties that are now divided between two persons. In these places there is need for reform, and I feel assured that the work is insufficient for the full capacity of the double staff. At Aberystwith, for example, the gross amount of Customs revenue collected in 1882 was 1*l.* on tobacco, and that was on a higher scale of charge than now exists.

20868 *et seq.* 20845.

The total reduction in expenditure that might be effected by amalgamation is estimated by the Customs at 11,000*l.* a year, but it must be remembered that this applies to head-quarters only. Sir A. West was of opinion that it would "enormously exceed that amount" without including the proceeds of the sale of duplicate offices throughout the country, and that it would gradually increase, because, as vacancies occurred, it would be possible to diminish the size of the service. Great weight has been properly attached to the evidence of Sir R. Welby on behalf of the Treasury, but much turns upon the line of argument he felt himself obliged to pursue. Summarising his answers he said, "I should like to end by saying that I feel rather bound to "appear as a kind of devil's advocate, that is to say, to put before them, *i.e.*, the Com- "mission, a critical view of amalgamation." He considered certain objections ought

20896. 21032. Sir R. Welby, 22265.

to be fully met, as I venture to think has been the case, before any such recommendation should be made.

It has been urged that one consequence of amalgamation would be general levelling up of salaries, on account of inequalities in the remuneration of corresponding classes of officers in the two departments. Against this argument the evidence of the memorialists among the outdoor officers shows that the same comparison is now drawn, and it is probable that the existing state of things perpetuates the competition for advancement and increase of salary between the officers of Customs and Inland Revenue. In any event it is not a good thing that two sets of men, performing work of the same or an analogous character, should be paid at different rates, and the effect cannot be beneficial to the public service. As fears have been expressed that union would lead to the creation of a large army of civil servants under one system, able to combine for joint purposes and thus to impose their will on Parliament, it is well to point out that the possible staff of a combined department could not be compared in point of numbers with that in the employ of the Post Office. Besides, this is an argument based on the possible weakness of the heads of departments, which it may be hoped is very exceptional.

In another way some are of opinion that the rivalry between the two departments is of benefit to the State, as likely to produce greater zeal and vigilance in the collection of the Revenue, but against this must be set the tendency to accommodate merchants for the sake of business on easier terms than are consistent with public interests. The latter is a danger of the system of dual control which requires attention.

Lastly, I come to that class of objections which may be called political in character. In the first place it is feared that the chairmanship of the Revenue Board will be too important a place to be filled by any other than the Parliamentary nominee of the party in power. "The danger is," said Sir R. Welby, "that you may get a man of sufficient
22261. "parliamentary standing, but who is only going to take it as a form of pension." In answer to this it may be asked whether the recurring opportunities of the present system have not exposed the public service to this very abuse of patronage in the Revenue Departments. The greater prominence that amalgamation would give to the one office
22203–5. would probably be a guarantee against this evil. Secondly, it is suggested that the Chancellor of the Exchequer would lose the benefit of the dual advice and support that he obtains from two responsible officers at the head of the two Revenue Departments in matters of taxation. Against this there is to be set the decided opinion of the two ex-
Mr. Gladstone, 21443. Chancellors who appeared as witnesses, Mr. Gladstone and Mr. Childers. With all the weight of his unrivalled experience, Mr. Gladstone said, "in my opinion there is no such "advantage whatever . . . if it is a question between having one more highly organised "Board and two Boards somewhat less highly, I have no hesitation in saying, I would "much rather get the whole of my advice from one Board." As a matter of fact, it came out in evidence, that, on the special points arising in the Budget, expert advice is always taken from the subordinate officials conversant with the question at issue. Speaking generally, it seems to me of the greatest importance that these two statesmen, who have themselves had so much to do with the finances of the country, should have advocated the amalgamation of Customs and Inland Revenue in so emphatic a manner.

The above reasons have led me to the conclusion, that it is expedient and opportune that an entire consolidation should be effected, but, short of a thorough reform of this kind, I concur fully with the recommendations of the majority of the Commission.

H. L. W. LAWSON.

SUMMARY OF EVIDENCE.

For Index, *see* page xvii.

Sir ALGERNON WEST.

The Inland Revenue Department collected in 1887-8, 57,461,377*l.* - - 20,602-3, 20,606
With a staff of 5,600 officers, and at a cost of 3*l.* 8*s.* 0*d.* per cent. - - 20,602-5, 20,607
Collects Revenue under Excise, Stamps, and Taxes - - - - - 20,608-9
Explanation of Excise proper, which includes all licenses - - - - 20,610-20
Some licenses are collected by the Post Office 20,616
Inland Revenue Departments collects all the Railway Passenger duty - - 20,616, 20,621-3
All Inland Revenue, other than Excise, comes under Stamps and Taxes - - 20,624
All the receipts come through the collectors, or through the Post Office - - 20,625-8, 20,882
The Post Office will furnish free Post Office Orders for payment of Income Tax 20,629-31, 20,638
The Post Office only receives money tendered to it, but is not responsible for amount being correct - - - - 20,632-6
In some towns, Postmasters act as Distributors of Stamps - - - - 20,639-40
No other department (except Customs) does any work for Inland Revenue - - 20,641
But the police help in discovering license evasions - - - - - 20,642-3
Since the fusion of Stamps and Taxes with the Excise in 1849, the fusion, as regards collecting officers, is complete - - 20,644
And absolutely complete below the rank of Assistant Secretary - - 20,645, 20,685, 20,936
The fusion as regards the Board is also complete - - - - 20,646, 21,081-4
Board now consists of a chairman, deputy, and three commissioners - - - 20,647-8
Duties of the Board - - - 20,649-62
In the event of an amalgamation with Customs, thinks that at first, men of experience from the Customs would deal almost entirely with Customs matters - 20,663-5
The Customs in 1886-7 collected about 20,000,000*l.* - - - - - 20,665
With an establishment of about 4,500 officers, and at a cost of 4*l.* 6*s.* 8*d.* per cent. - 20,665
A considerable part of Customs work is connected with matters which do not yield revenue - - - - - 20,666, 20,690-1
About 20 per cent. of Inland Revenue collections, and about 97 per cent. of Customs is collected through warehouses - 20,666-7, 20,672
If the warehouses were transferred to the Inland Revenue, it would seem unnecessary to have a Board with all its highly-paid officers to collect the small remaining amount of Customs Revenue - - 20,967-8
Considers that one amalgamated Board, with a chairman, and four commissioners, would be able to administer Inland Revenue and Customs - - - - - - 20,668-72
In warehouses, work in Inland Revenue and Customs is exactly the same - - 20,672-3
If amalgamation of the warehouses took place, does not say that numbers of officers would be diminished - - - - - 20,672-4
The amalgamated Board could sit together in one place - - - - - 20,676-9
The Customs business at Liverpool is conducted without a Board sitting there - 20,677
If necessary, the Board might meet one day at Somerset House, and another day in Thames Street - - - - - 20,679
Both Board and Secretaries can devolve a certain amount of work - - - 20,682
Duties of Secretaries and Assistant Secretaries - - - - - 20,680-1, 20,683-7
One Secretary could deal with all the warehouses, Inland Revenue, and Customs - 20,687-9
The Inland Revenue Solicitor considers that one Solicitor is amply sufficient to deal with Inland Revenue and Customs questions - - - - - 20,694-9
Has personally found inconvenience in having to consult two Solicitors - - - 20,700
The office of Receiver-General might be abolished - - - - - 20,702-8
One Accountant-General would be sufficient for the amalgamated departments of Inland Revenue and Customs - - 20,708-9
Duties of Chief Inspector and other officers of Excise - - - - - 20,709-13
The Chief Inspector of Stamps and Taxes would not be affected by amalgamation - 20,714-5
Principal of Inland Revenue Laboratory thinks great advantage would accrue from amalgamation - - - 20,715-6, 20,723-4
His duties - - - - - 20,715
There is a chemist at the Customs - - 20,716
And 34 Customs officers employed in chemical work - - - - - 21,059
Instance of difference of opinion between the two chemical officers which gave great trouble - - - 20,717-22, 21,060
Though it may be argued that the criticism of the one upon the other may be of advantage - - - - - 20,721-2
If there was only one Laboratory Department, there would be a saving - - - 21,060-4
Duties of Special Commissioners of Income Tax - - - - - - - 20,724-39
In the event of amalgamation, their duties could probably be performed by members of the Board - - 20,724, 20,729, 20,738
Duties and salaries of Surveyors of Taxes - 20,646, 20,740-2.
They would not be affected by amalgamation with the Customs - - - 20,743-6, 21,058
Surveyor of Taxes is fully occupied - 21,057-8
Account of the warehouse system - - 20,747-8
Since 1883, there has been a unified code of warehouse regulations - - 20,748-50, 20,825
But the two Boards do not interpret the Code in an identical manner - 20,750, 20,754, 20,825, 20,951.
The result is that there have been 76 changes in the 633 paragraphs of the Code - 20,750, 20,944, 20,955-6.
And the Treasury have sanctioned different interpretations - - 20,750, 20,826, 20,952-4
Instances the case of the system of registering transfers - - - 20,750-1, 20,951
Traders have constantly complained of their different treatment in the respective warehouses - - - - - - 20,752-3
The only means of maintaining identity of warehouse practice is by having only one Board - - - 20,754, 20,950, 21,013-4
The code is not annually re-edited - - 20,945-9
There are ten ports where both Inland Revenue and Customs have warehouses - 20,755-7, 20,788-9
Inland Revenue warehouses contain "wet" and "dry" goods, *i.e.*, all dutiable articles 20,758-61
"Dry" goods and "wet" goods practically mean Customs and Inland Revenue respectively - - - - - 20,797-803

Summary of Evidence.

SIR ALGERNON WEST—*cont.*

Trader selects either warehouse, according to his convenience - - 20,762–4, 20,777, 20,804

Everything coming from abroad has to pass through the Customs - - - 20,765–6

Articles after being taken account of at the ship's side, can go to an Inland Revenue warehouse - - - - - 20,767–71

Inland Revenue collects the duty on Customs articles deposited in Inland Revenue warehouses - - - - - 20,772–6

After a Bond is given, the trader cannot remove any article from a warehouse till the duty has been paid - - - - 20,778–87

There are no Customs warehouses, except at the ports - - - - - - 20,790–1

There are Customs warehouses at about 60 ports - - - - - - 20,792

The trade wish to increase the number of warehouses, but the Government wish to reduce them - - - - - - 20,794

There are Inland Revenue warehouses in 170 places - - - - - - 20,796

A distiller makes spirits on his own premises, under the survey of the Inland Revenue - 20,805–6

The two departments endeavour, by pleasing traders, to keep goods in their own warehouses respectively, which is not advantageous to the Revenue - - 20,807–9, 20,956–8

Customs collect annually for Inland Revenue about 3,500,000*l.*, and Inland Revenue for Customs about 2,000,000*l.* - 20,810–17, 20,821–4

There is no friction in the adjustment of the Accounts - - - - - - 20,818–20

Inland Revenue officers do none of the Customs' work connected with discharging goods from a ship, &c. - - - - 20,827–30

Nor do Customs officers do any Excise duties, excepting those connected with warehouses - - - - - - 20,830–4

Outside the warehouses there is no interchange of duties - - - - 20,834

One-half or two-thirds of Customs work is outside the warehouses - - - 20,835, 20,959–62, 20,969–71, 20,979

Out of 4,485 Customs officers, 1,215 are employed in the warehouses - - 20,962–6

Many ports where there are Customs officers, but no warehouses - - - - 20,836

All round the coast there are many places with both Inland Revenue and Customs officers - - - - - 20,837–8

At many of these, there can not be sufficient work for the Customs officer, though he must be there - - 20,842–58, 20,870–3, 20,982–4

But if amalgamation took place, he could help the Inland Revenue officer - 20,850, 20,873, 20,921, 20,982–4, 21,021–2

In some places there are Inland Revenue officers who are not fully employed - 20,919–20

In every port and excise town, apart from the outdoor service, there is a large clerical establishment - - - - 21,033–4

Customs officers do work on behalf of harbour companies, &c. - - - 20,859–62, 20,868–70

A great deal of the work done by the Customs is really Board of Trade work - 20,863–7, 20,876

Inland Revenue collect agricultural statistics for Board of Trade, but this causes practically no work for the Board - 20,864, 20,874–5

Inspectors of Excise and Customs are all in Somerset House - - - 20,877, 20,885

Collectors are highest officers in the country 20,878, 20,891

They collect for Stamps and Taxes, as well as Excise - - - - - 20,879

They pay the revenue collected direct to agents of the Bank of England - - 20,880–2

Salaries of surveyors and collectors - - 20,886–7

If amalgamation took place, those officers would undertake Customs duties 20,888–90, 20,892

If an appeal came from or against a collector, the inspector would report upon it - 20,893–5

Mr. Adam Young, Mr. Forsey, and other high authorities are strongly in favour of amalgamation - - - - - 20,896

Believes that economy effected by amalgamation, would enormously exceed the 11,000*l.* estimated by the Customs - - 20,896

Without including the sums that might be obtained by the sale of the Custom House, &c. - - - - - 20,896

The Customs staff might be accommodated in rooms now vacant at Tower Hill - 20,897–903

Which are not so valuable as the Custom House - - - - - 20,904

If departments were amalgamated, there would be no necessity for increasing the pay of any of the commissioners - - 20,905–6

Thinks there are very great advantages in having a Board for the collection of the Revenue - - - - - 20,907–11

The impersonal character of a Board is of great importance - - - - 20,908

The Board sits from 1½ hours to 2¼ hours a day - - 20,660–1, 20,912, 20,916–7

Three forms a quorum - - - 20,660, 20,909

The rest of the day they sit singly in so-called committees - - 20,661, 20,913–5

Difficulty in putting forward a detailed scheme of amalgamation - - - 20,918

The previous amalgamations have resulted in economy - - - - - 20,922–8

Since 1862 many reforms have been effected without amalgamation - - - 20,929

Distributors of Stamps paid by poundage are being gradually done away with - - 20,929–35

It would have been better originally to have amalgamated Stamps and Taxes on the one hand, and Customs and Excise on the other - - - - - 20,937, 20,939

But to take such a step now, would be to destroy the work of 40 years - - 20,938, 20,940

The further amalgamation now proposed is most desirable as regards economy, efficiency, and public convenience - 20,941, 21,067–8

Even if the economy was found to be small or none, would still advocate it on the other grounds - - - - - 21,069–71

Amalgamation could be so thorough as not to require a separate establishment for the Customs - - - 21,072–6, 21,080, 21,085

In the first instance amalgamation would be in controlling departments only - 21,077, 21,094

And in course of time would descend down into lower ranks - - - 21,078–9, 21,095

In comparing cost of the two departments, account must be taken of the work they do in respect of non-dutiable articles - 21,086–8, 21,093

The collection of agricultural statistics by Inland Revenue may be compared to work done by Customs for other departments - 21,089–91

The Customs does more work for other departments than the Inland Revenue does - - - - - - - 21,093

Thinks it is Utopian to hope that the warehouses could be satisfactorily managed by a committee of the two Boards - 20,942–3

The Preventive Service proper, *i.e.*, the Coastguard, is under the Admiralty - 20,839–41, 20,973–6.

Believes that within the limits of the Ports, the Preventive Service is done by Customs officers - - - - - 20,977–8

Progress of transferring warehouses was stopped for following reason - - 20,985

At nine Ports selected, the cost of the Customs was 12,964*l.*; the Inland Revenue estimated they could do the work for 9,260*l.*, upon which the Customs said they would do it for 9,433*l.* and have since reduced the cost to 5,771*l.* - 20,985–21,007, 21,065–6

The inference witness draws is that at that time (1883) the Customs mode of managing the warehouses was more expensive than the Inland Revenue - - - - - 21,008

But now this is no longer the case - - 21,009–11

Therefore economy would not be effected in the warehousing proper, by amalgamation - - - - - 21,017–20

But so far as regards the warehouses would be confined to the upper officers - - 21,018

Does not believe that the average cost for officers in the Inland Revenue is greater than in the Customs, if comparison is made between officers doing a similar class of work - - - - 21,023–7

Sir ALGERNON WEST—*cont.*

Believes that with this comparison the Customs average is 206*l.*, and the Inland Revenue, 176*l.* - - - - - - 21,026–7
Sees no reason why, if amalgamation takes place, salaries should be levelled up - 21,028–32, 21,048–9.
Levelling down might be quite possible - 21,050–2
The economy would be gradually effected - 21,032
Traders will probably express different views on subject - - - - - - 21,035–6
Thinks it will be found that traders who formerly were under Customs, and now are under Inland Revenue, would not wish to go back to Customs - - - 21,036
This is not because Inland Revenue is more lax, but because they are easier to work with - - - - - - 21,037–8
Thinks two-thirds would prefer doing business with one Board instead of two - - 21,039–41
Has often heard traders express opinion hostile to the existence of the two departments - - - - - - 21,041
Extra pay is given by merchants to Customs officers, which would not be allowed by Inland Revenue - - - - - 21,042–4
First and second class Inland Revenue officers may probably be compared with Customs examining officers - - - - 21,045–7
The lower officers of Stamps, Taxes, and Excise have been, and are being amalgamated as much as possible - - - 21,053–6
Does not think that a partial amalgamation of certain branches under a president and deputy-president of each department, forming one common board for such amalgamated branches, would answer - 21,096–7
Thinks Inland Revenue and Customs authorities together, could produce a scheme of amalgamation - - - - - 21,097
The Statistical Department of the Customs could be handed over to the Board of Trade - - - - - - 21,907

Mr. MURRAY and Mr. PROWSE.

Deputy Chairman and Secretary respectively of the Board of Customs - - - 21,098
In 1887–88 the total amount collected by Customs officers was 21,518,440*l.* - - 21,099
Of this amount 3,662,696*l.* was collected for the Inland Revenue - - - - 21,099
The Inland Revenue collected for the Customs 1,935,591*l.* - - - - - - 21,099
The gross amount of Customs Revenue was 19,791,335*l.* - - - - - - 21,099
The charge for collection was 932,283*l.* - 21,100
Since 1862 the main Customs duty abolished has been that on sugar - - - - 21,101
The memorandum already handed in deals with the changes made for the convenience of merchants - - - - - 21,102–5
Since 1862 the actual work in connexion with the Revenue has slightly decreased, but the whole work of the department has increased owing to new functions imposed upon it - - - - - 21,106, 21,122
These new functions are connected with the importation of cattle, British marks, cotton statistics, registration of fishing boats, &c. &c. - - - - - 21,107
Account of work in connexion with importation of cattle - - - - 21,108–12
The Merchandize Marks Act of last year has added much work - 21,113, 21,116, 21,118, 21,120–1, 21,177–81
Sea Fishing Boats Act (Scotland) gives a good deal of trouble - - - 21,114–5
The Wines Act has also given much trouble 21,182
No definite increase of staff has been made in consequence of these different Acts - 2,117–9
Ships with free goods have to be dealt with as well as ships with dutiable goods - 21,123–4
There are 4452 established officers under the Customs - - - - - - 21,125
Manner in which these officers are divided - 21,126–9
The Board consists of the Chairman, Deputy Chairman, and one Commissioner - - 21,130–1
It was composed of five in 1867 - - 21,132
Mode of transacting business - - 21,133–47
The Board meets every day - - 21,133, 21,770
The work is divided into branches - - 21,139–42
Is not in favour of Boards for transacting business if they meet every day - - 21,148
A Board is useful if kept for consultation - 21,149–50
At the Customs now the endeavour is to do the work more in Committees and less in the Board - - - - - - 21,151
Matters are very much in the hands of the Chairman - - - - - - 21,152–3
The Commissioners are all equal - - 21,154
If anything goes wrong, the responsibility rests with all the Commissioners - - 21,155–6
No quorum necessary for meetings of the Board - - - - - 21,157, 21,162
Sometimes only one is present - - 21,158–61
Thinks it would be better to have one responsible Comptroller and a Deputy - 21,163–7, 21,170–1, 21,591, 21,706
But the directing power should not be less than three, to allow for ordinary leave and absence on inspection - - 21,591, 21,706
No formal record is kept of Board Minutes - 21,168–9
The Secretary's office is now disorganized because it has too much to do - 21,172–3, 21,175–6
Would not welcome a proposal to take over the Inland Revenue work also - - 21,174
The Annual Customs and Inland Revenue Bill is settled by the Solicitor of the two departments - - - - - 21,184
This causes no inconvenience or difficulty - 21,185
The draft clauses prepared by the Customs Solicitor are inserted as a matter of course 21,186–8
The total charge for the Customs Solicitor's office is 4,815*l.* - - - - - 21,189
The Receiver General was abolished in 1872 - - - - - - 21,191–2
The money at the ports is paid by the collectors into the local branches of the Bank of England - - - 21,193–5, 21,201–7
If there is no branch Bank of England it is paid through some other bank - 21,196–7, 21,208, 21,323–4
No actual cash comes to the Customs from the collectors - - - - - 21,198
Except Revenue paid in at the Port of London 21,477
The Bills used to go direct to the Accountant General - - - 21,199–200, 21,208–11 21,213–8
They are now sent straight to the Bank - 21,468–77
The check upon the remittances is sufficient 21,212
There are two Surveyors General and one Acting - - - - - - 21,219–24
Duties of the Surveyors General - - 21,225–31
The Statistical Department is a large one - 21,232–3
Work done by the Statistical Department - 21,234–7
Some statistical work done at Liverpool - 21,238–45
The Export and Import Statistics published in the Board of Trade Returns are entirely prepared at the Customs House - - 21,246–8
The Board of Trade do not examine them in any way - - - - - - 21,249–60
Sometimes the figures are inquired into as to their accuracy - 21,252, 21,261–3, 21,288–91
A proposal was made a few years ago to hand over the Statistical Department to the Board of Trade - - - - 21,264–8
The collection of statistics at the ports is done by Customs officers, who in any case must be employed there - - 21,269–72
Better that their men should not do work under the orders of another department - 21,273–5, 21,280–1
They do the shipping statistics directly under orders from Board of Trade - 21,282–6
The Customs do not make much use of the statistics for their own purposes - - 21,276–9
The statistics are kept currently - - 21,292–3
The Bill of Entry is a branch of the Statistical Department - - - 21,294–9
Duties of collectors at ports of London and Liverpool - - - 21,300–10, 21,312–9

Summary of Evidence.

Mr. MURRAY and Mr. PROWSE—*cont.*

Duties collected in Liverpool about 3,500,000*l.* 21,311, 31,321
And in London about 10,700,000*l.* - 21,311, 21,320
Cash is received in the Long Room in London - - - - 21,326-8, 21,477
And Bank of England clerks call for it daily - - - 21,329-30, 21,478-85
The collector at Liverpool deals with many points that the collector at London does not deal with - - - - - 21,571-2
When anything goes wrong in Liverpool or London it is reported to the Board - 21,573-7
The Board deals with some questions of a lower class in London than it does in cases coming from Liverpool - - - 21,578
The collector at Liverpool receives a higher salary than the collector in London because of his greater responsibility - 21,579-80, 21,588
The collector in Liverpool has quite different duties to the collector in London - - 21,581-8
Duties of inspectors - - - - 21,331-3
Duties of surveyors - - - - 21,334-5
Duties of examiners and out-door officers - 21,336-8
Rummaging is done by examining officers and boat men - 21,339, 21,362, 21,422, 21,426
The examining officer and crew meets a vessel coming into the port of London below Gravesend, and an officer is placed on board in charge - - 21,340-54, 21,361-2
Boatmen are on the establishment - - 21,355
There are also a large number of extra or "glut" men - 21,355-60, 21,412-3, 21,541, 21,545
Who are only paid wages when actually employed - - - - - 21,546-51
When a vessel reaches the docks the landing staff take charge of her - - 21,361-5, 21,371-2
Import jerquers see whether the cargo agrees with the report - - - 31,366
Examining officers do both water guard and landing work - - - - - 21,367-9
Manner in which a ship reports and discharges her goods - - - 21,373-93
The jerquing work is now done by a clerk - 21,394-99
Examining officers are promoted from out-door officers - - - - 21,400-1
Boatmen are nominated by Treasury, and pass a slight educational and physical test - 21,403-5, 21,408, 21,411, 21,424, 21,428-9
Many of the men appointed cannot row - 21,406
They have to serve six months' probation - 21,416-8
Many of the extra or "glut" men are more reliable from the point of view of safety - 21,409, 21,414-5, 21,542
But would not employ more than at present 21,543-4
It would be better if sailors could be appointed - - - 21,409-10, 21,419-20
Boatmen do not often get promotion - 21,421-2, 21,427
The out-door officers are appointed by open competition - - - - - 21,430-1
The majority of them are respectable young Irishmen - - - - - 21,432-3
They do their work well - - - 21,434
But are hardly a satisfactory class, as they are apt to be above their work - 21,434, 21,437
The old "landing waiters" were a superior set of men - - - - 21,438
The technical work is learnt after entry into the service - - - - - 21,435-6
Collectors at small ports act as surveyors - 21,488
They always have a small clerical staff under them - - - - 21,489
In some places there are only superintendents or principal coast officers - - 21,490-7
They require technical and special knowledge - - - - - 21,498-9
Thinks that in some places Customs officers might receive money for Inland Revenue, but they could not assess - 21,500-1, 21,506-9, 21,610-2, 21,733-5
Thinks the only duties that are analogous at Inland Revenue and Customs are those in the warehouses - - 21,505, 21,511, 21,519
Believes that the Customs officers who are employed in warehouses are paid at a lower rate than the assistants of Excise - 21,510-6, 21,520
The Customs employ officers of a lower grade than any in the Inland Revenue, and at a lower salary - - - - - 21,517-8
Classes of Customs and Inland Revenue officers are not the same, therefore difficult to compare salaries - - - - 51,520-6
Does not know what is the work done by various Inland Revenue officers 21,502-3, 21,524-5
Hands in return showing the number of ports under each grade of officer, the amount of Customs and Excise duties, and of foreign trade - - - - 21,527-9
Coastguard do some work for the Customs - 21,530-40
The coastguard do not do preventive duty in ports - - - - - 21,536-7
Although 97 per cent. of the Customs Revenue is collected in warehouses that does not represent the whole cost, labour, or responsibility of collection - - - 21,565
Thinks two-thirds of the Customs work is done before the goods get into the warehouse - - - 21,552-3, 21,563-4
And that this is the most difficult and responsible part - - - - 21,564
Inside the warehouse the work done by Inland Revenue and Customs is practically the same - - - - - 21,554-6
So far the officers are interchangeable - 21,557
The regulations are identical, and contained in one Code - - - - - 21,558-9
There have been many alterations in the Code - - - - - - 21,560
These alterations have not been caused by having two Departments to deal with - 21,561
But by corrections and improvements of system - - - - - - 21,562
Water-guard service and import gauging requires special training - - - - 21,566-9
Objects to amalgamation of Customs and Inland Revenue for following reasons - 21,589
1. It will make too large a business for one Board well to manage - - 21,589
2. It would impose fresh duties on the officers, which would impair their efficiency - - 21,589, 21,592-3, 21,596-7
3. While the area of saving is limited, the area for increased expense is large - - - 21,589-90, 21,781
As the probability is that salaries would be levelled up - - - - - 21,590, 21,781
Does not think that more than 10,000*l.* a year would be saved by amalgamation - 21,781
The saving would be in the supervision - 21,782-4
The Customs work must remain a separate branch whether amalgamation takes place or not - - - - - 21,594-5
Savings might be made without amalgamation at places where there are two collections, *e.g.*, Long Room in London and Dublin - - - - 21,598, 21,606-8
An Inland Revenue collector and staff are located in the Custom House in Thames Street - - - - 21,599-606, 21,609
The Customs head office must be near where it now is, but it does not signify whether it is at Tower Hill or in Thames Street - 21,613-4, 21,619
If the Board were at Somerset House, it would be necessary to have a collector with large responsibility at the Customs House - - - - - 21,615, 21,776-8
And it would be necessary to have a local committee to deal with the Merchandize Marks Act - - - - - - 21,779-80
The collector and other officers in London come personally a good deal in contact with the Board - - - - - 21,616-8
Some questions that arise are dealt with at once - - - - - - 21,620-1
Some that are not could be dealt with at Somerset House equally as well as at the Customs House - - - - 21,622-3, 21,774-6
Last year the Customs wrote 179 letters to the Inland Revenue, some being merely formal returns - - - - - 21,624-36
The warehousing system is of course the principal point of contact with the Excise 21,637-9 21,702
The further transfer of warehouses to the Inland Revenue was stopped in 1884 - - 21,640, 21,742-5

Mr. MURRAY and Mr. PROWSE—*cont.*

At that date the Inland Revenue intimated they could manage the warehouses at nine ports for 6,650*l.*, and the Customs subsequently reduced the cost to 5,771*l.* - 21,641
This reduction was effected by economies being effected which, had the ports been properly looked after, might have been effected sooner - - - - - 21,642–7
Thinks the ground for retrenchment in other ports is small now, but there may be still some ground - - - 21,646–9, 21,723–4
Thinks it might be better if all the warehouses at the ports were under the Customs, and those inland under the Inland Revenue 21,650–1, 21,654–6, 21,664, 21,668–9
But sees no necessity for making the change 21,665–7
There are only a few ports at which there are duplicate warehouses - - - - 21,652–3
There are some ports where there are only Inland Revenue warehouses - - 21,657–63
Has never received complaints from traders because they have to deal with two departments - - - - - 21,670
Mode in which export of beer is managed - 21,671–94
If there was amalgamation, the exporter would have to take the same number of steps as at present - - 21,680–1, 21,690–4
Total number of men employed upon waterguard is 1,400, and their duties - 21,695, 21,697
Upon landing and export duties 1,250, and their duties - - - - - 21,696, 21,698
The work of these 2,650 men would be in no way affected by amalgamation - - 21,699–700
1,200 men employed in warehouses - - 21,701–2
Questions which come before the Board in connexion with warehouses - - 21,703–4
The plan of a Joint Committee from Customs and Inland Revenue to decide on such questions would be workable - 21,705, 21,707–9, 21,719–20
Mode in which the privilege of a new bonded warehouse is granted - - - 21,710–1
Each department have their own locks on their own warehouses - - - - 21,712–5
Differences of opinion between Customs and Inland Revenue in interpreting the warehouse Code have very rarely arisen - 21,716–8
Mode of dealing with deficiencies - - 21,721–2
The amounts collected in Customs warehouses in year ending 31st March 1887 was 21,370,948*l.* - - - - 21,723
The estimated cost of collection was 168,995*l.* or 15*s.* 9*d.* per cent. - - 21,723, 21,765–6
In the following year the amount collected was 21,020,270*l.* - - - 21,723
And the cost of collection was 16*s.* 1*d.* - 21,723
Believes that Customs management is economical - - - - - 21,725
A common system of warehouse accounts was adopted in 1882 - - - 21,726
Some of the ledgers then introduced are unnecessary - - - - - 21,726–8
Does not believe that the rivalry between the two departments leads to the trade being accommodated at the expense of the Revenue - - - - - 21,730–2
Does not think that Customs officers employed at Victoria and other stations could be employed on Inland Revenue work - 21,733, 21,785–93
Amalgamation is possible but not desirable - 21,736
Each department should help the other where the officers do common work - - 21,737–8
How far they can do so must be settled by local inquiry - - - - 21,739
They now collect in the warehouses revenue for each other without difficulty - - 21,740–1
Believes that in 1880, 700,000*l.* or 800,000*l.* was offered for the Custom House - 21,746
If the Custom House was sold, Customs staff might be located on Tower Hill, but doubts whether the site is large enough - 21,747–54
And considerable expense would be incurred in alterations and additions - - 21,751–4
Considerable reductions have been made on the cost of the Customs establishment - 21,755–6
Hands in return showing the expenditure on the effective service in each year from 1880–1 to 1887–8 - - 21,757, 21,760, 21,794–6
In this period there has been a reduction of 111,180*l.* a year - - - - - 21,757–8
The charge for superannuation is not included, as it was abnormal - - - 21,761–4
Thinks that this reduction will continue - 21,759–60
A large amount of duty done by the Customs which is not expressed by revenue - - 21,767–9
Work, other than statistical, done by the Customs for the Board of Trade and Home Office - - - - - - 21,797–803

Mr. GLADSTONE.

For some years his view of the question of amalgamation of the Inland Revenue and Customs has been rather a remote one - 21,440
The question has now come to a state of ripeness - - - - - - 21,440
Thinks that in 1862, when he expressed an opinion against amalgamation, the question was not ripe - - - - - 21,441
At that time the amalgamation of Stamps, Taxes, and Excise, was not really complete - - - - - - 21,441
But believes that now the amalgamation is a real one - - - - - - 21,441
Forty-seven or forty-eight years ago the Customs was marked out for separate action - - - - - 21,441
It was then working mainly on the water - 21,441
Now the functions of the Customs are reduced to great simplicity, and are chiefly inland functions - - - - - 21,441
At that time the Customs had establishments all over the world - - - 21,441
Believes all this has been entirely changed - 21,441, 21,455–7
Consequently, the presumptive argument in favour of the separation of the two Departments has not the same force - - 21,441
The collection of the Revenue should be as much unified as possible - - - 21,442
Thinks the Chancellor of the Exchequer derives no advantage from having the Chairmen of two great Boards to consult - 21,443
There has been a difference in the tradition of the two Boards - - - - 21,443
The tradition of the Board of Customs has not quite come up to that of Somerset House - - - 21,443, 21,458, 21,463
They have not shown the same forward spirit in grappling with the exigencies of the time - - - - - 21,443, 21,463
Although the spirit of administration, as regards discipline and economy, has been exactly the same - - - 21,458–9, 21,462
Quotes two cases illustrating his meaning - 21,443
First, the change from the Malt duty to the Beer duty in 1880 - - - - 21,443
This was a most anxious and dangerous fiscal question to encounter - - - 21,443
But it was desired, promoted, and advised by the Board of Inland Revenue - - 21,443
Second, the change of the Wine duties in 1860 - - - - - - 21,443
This had been long an unsolved problem - 21,443
The suggestion of the alcoholic test adopted in 1860 came from a private firm - - 21,443
The Customs were full of doubts and misgiving as to the change - - - 21,443
If it had failed, the position of the Chancellor of the Exchequer would have been a very weak one - - - - 21,443
When he compares questions like these, he does not attach much value to the dual channel of advice - - - - - 21,445
From the Board of Inland Revenue he always received the best advice - - 21,443
Thinks the Chancellor of the Exchequer is now well provided with financial advisers 21,443
Thinks it would be a great calamity if the appointment of Chairman of the amalgamated Boards became a post that was given as a reward for political services - 21,444
This Commission might do much towards reducing the risk of this by pointing out the danger - - - - - 21,444

Summary of Evidence.

Mr. GLADSTONE—*cont.*

Does not think that now the work of the two Departments would be too much for one man to perform - - - - - 21,445–6
Thinks that the highest efficiency would probably be obtained by a combination of the two Departments - - 21,446, 21,454
And also that considerable economy would result - - - - - 21,446, 21,454
Believes that the change would be popular - 21,447
At Somerset House the immediate heads are still confined to the separate work of Stamps, Taxes, and Excise - - 21,448
As a general rule, would not be in favour of a Board, but of individual responsibility - 21,449
Nor is he aware of anything in the nature of the duties of the Revenue departments which would lead him to suppose that a Board is good - - - 21,449, 21,451
There is a certain official convenience in the impersonal character of a Board - - 21,450
But the public are a little jealous of being put off by an impersonal agency - - 21,451
Does not attach much value to the "impersonal" argument - - - 21,452
Sees nothing in the subdivisions of duty, *e.g.*, the work connected with ships, that seems an adequate reason for dividing the highest responsibility - - - - 21,460–1
Does not think that the tradition of the Customs to which he has alluded would continue after amalgamation - - 21,464
If amalgamation took place, would hope to see the Inland Revenue the dominant element - - - - - 21,465
Even had he not observed the difference in the practice and tradition of the two departments, he would not see any serious force in the arguments against amalgamation - - - - - 21,466

Mr. WILLIAMS.

A surveyor of Customs in the Port of London 21,805–6, 21,825
Was originally a clerk - - 21,807–8, 21,824
At that time the clerical and out-door services were distinct - - - - 21,809–14
Now the clerical work is done by officers of the out-door department - - - 21,815–9
But the lines of promotion are still distinct - 21,820
The grade of service begins at the second class out-door officer - - - - 21,821–2
And he can rise by promotion to be an inspector - - - - - 21,823
Nature of the work of the surveyors - - 21,826–7
There are 54 surveyors in the Port of London 21,828
A ship coming to the Thames is boarded at Gravesend by out-door officers who take charge of her - - - - - 21,829–31
When she comes to the quay side the examining officer examines, in the first instance, the free goods for the detection of dutiable articles, &c. - - - 21,831–4
There is a laboratory at every considerable port - - - - - 21,835–6
The examining officer also examines for prohibited articles - - - - 21,837–40
All this requires considerable experience - 21,841
He also has to examine for explosives - 21,841
The surveyor is responsible for the attendance and discipline of the officers, and for the proper distribution of work - 21,842–3, 21845, 28,854–8.
In small ports the collector is the surveyor - 21,844
If anything goes wrong it is reported direct to the Board through the inspector - - 21,846–53
All taring is done by the surveyor alone, who, in case of difficulty, refers to the inspector - - - - 21,858, 21,865–6
Description of taring - - - - - 21,859–64
The tare is taken in the warehouse - - 21,867–8
The warrant issued by the dock authorities is based on the Customs Account - - 21,869–71
Witness's time is chiefly occupied in connexion with free goods - - - - 21,872–4
But all surveyors might at any time be employed in warehouses - - 21,872, 21,875–6
Their training is based on experience - - 21,877–8
Duties of the jerquers who audit the report of a ship - - - - - 21,880–96
Responsible duties thrown upon the Customs by the Merchandise Marks Act - - 21,897–910
Duties in connexion with export goods - 21,911–31
Spirits and beer are gauged to ascertain the quantity for payment of drawback - 21,914–5, 21,918–28
The gauging done by the Customs is extremely difficult, as the quantity has to be arrived at by dealing with the outside of the casks only - - - 21,929–30, 21,989–90
Mode in which the Customs gauge - 21,992–22,004
Is not aware that Inland Revenue does any gauging - - - - - - 21,982
Except gauging for ullage, which is easily arrived at, as the capacity of the cask can be arrived at when empty - - 21,984–8, 21,991
Mode in which Customs duties are performed at the out-ports - - - - - 21,932–7
There are Excise officers alongside the work of the Customs in the Port of London - 21,938
Their work is entirely warehouse work - 21,939–40, 21,950
In London the Customs officers are pretty well employed all day - - - 21,941–9
Although in one sense the duty is intermittent, if they are waiting for work - - 21,945–9
Any Customs officer could undertake the Excise duties of a warehouse - 21,951, 21,954–5, 21,961–72
But an Excise officer could not gauge for the Customs without experience - - 21,952, 22,003–4
Nor could he rummage - - - - - 21,953
An Excise officer might at times during the day be unemployed in a warehouse - 21,956–7
In some places there would be economy if Customs officers took over the Excise warehouses - - - - 21,958, 21,973–81
As there are gaps of time in the work of each, that could be utilised - - - - 21,959–60
The Customs officer has to do work in the laboratories - - - - - 22,004–5
And requires to be a very experienced man - 22,006
The out-door officer can now rise to the higher positions - - - - 22,007–9
The surveyor has a right to re-rummage - 22,010
He generally re-rummages two or three times a week - - - - - 22,011–3

Mr. FLEMING.

A surveyor of Customs in the Port of London 22,014–5
Entered as a clerk - - - - 22,016
Became a surveyor in 1882 - - - 22,017–8
Has not had experience as an actual examining officer - - - 22,019, 22,023
But has checked and superintended their work - - - - 22,019–20, 22,023
In the old times a clerk did what is now called examining officers' work - - 22,021–2
His work is principally in connexion with warehouses - - - - 22,024
The regulations for the Customs and Inland Revenue warehouses are identical - - 22,025–8
But practically a trader accustomed to one kind of warehouse does not transfer his goods to another merely because the regulations permit him to do so - 22,028–30, 22,053
The Customs have a large class of goods that do not go to the Inland Revenue, and *vice versâ* - - - - - - 22,031
Customs men and Excise men could equally well deal with various goods in the warehouses coming to both departments - 22,032
In London the Customs business in the warehouses is far in excess of the Excise business, but in inland places the case is reversed - - - - - 22,034

Mr. FLEMING—*cont.*

Does not think that in London a sensible economy would be effected by handing over all the warehouses to the Customs - 22,035, 22,048

Because every warehouse is now worked at the lowest possible rate - - - 22,036–9

In the country there are places where there is not much work for either department - 22,037

Believes that the average salaries within the warehouses are much the same for both departments - - - 22,040–44, 22,047

Candidates prefer going into the Inland Revenue because they begin with better pay - - - - - - 22,045–6

Has received no complaints from traders that the Customs system, is more inconvenient than the Inland Revenue - - - - 22,051

Believes that the convenience of traders is consulted equally at both - - - 22,052

Thinks that there is no rivalry between the two departments which acts prejudicially to the Revenue - - - - - 22,054–9

Customs officers would prefer to remain as they are and not to amalgamate - - 22,060–1

Does not see that any advantage would result from amalgamation - - - - 22,062

And as regards the public, the business would be done on precisely the same lines as now - - - - - - 22,062–6

Believes that beer or spirits exported usually go through a Customs warehouse, but that there is no reason why they should not go through an Inland Revenue warehouse if the traders wished - - - 22,067–71

The Inland Revenue gauging is simple because they can weigh the empty cask - - - 22,072–3, 22,073–7, 22,079

Whereas the Customs have to ascertain the contents of a full cask by complicated rules - - - - - 22,073–5, 22,078

The decision of the Customs as to the tare of tea, &c. is accepted by the merchants, dealers, &c. - - - - - 22,080–3

The trade are perfectly satisfied with the way in which this work is done - - 22,084–5

In very rare cases there have been complaints - - - - - - 22,086

Mode in which tea is passed from a bonded warehouse in London to one in Birmingham, or elsewhere - - - - - 22,087

If sent to an Excise warehouse in London it would be dealt with in the same way as in a Customs warehouse - - - 22,089

An ordinary intelligent man with experience can do all the warehouse work - - 22,090–1

The Inland Revenue officers would have no difficulty in dealing with tea as soon as they had learned the work - - 22,092

The regulations for the management of warehouses are identical - - - 22,093

Mr. HINKS.

One of the Inspectors of the Customs at the Port of London - - 22,094–5, 22,099

Superintends the waterguard duties of the Port - - - - - - 22,096

Was an inspector of the waterguard on the Tyne - - - - - - 22,097–8

The waterguard work commences at the limits of the Port - - - - 22,100

The boarding station for the Thames is at Gravesend - - - - - 22,101

The waterguard are composed of watermen and out-door officers - - - 22,102–3

About 170 out-door officers at Gravesend, who guard the vessels between that place and the Docks - - - - - - 22,104–7

The duty of the waterguard consists in the protection of the Revenue in the case of some 10,500 vessels from foreign ports arriving in the Thames annually - 22,108–14

They also have duties connected with explosives, quarantine, cattle, and dangerous oils - - - - - - 22,108

All the free goods are also discharged under witness's supervision - - - 22,113

The other inspectors have nothing to do with the waterguard - - - - 22,115–6

The watermen are appointed on nomination by the Treasury - - - - 22,117

Is quite satisfied with the sort of men appointed - - - - - 22,118–23

It might be preferable if they had some idea of water and boats before being appointed 22,122

They have to pass a physical test - - 22,124

They are promoted to be examining officers 22,126–9

But they do not become out-door officers - 22,125, 22,128

Is acquainted with the work at many ports - 22,130–1

In many places the officers are not fully employed and might do some Inland Revenue work - - - - - 22,132–3

The rummaging of large vessels is very difficult - - - - - 22,135

The majority of out-door officers are young Irishmen, fresh from school - - 22,136–7

They do not rummage - - - - 22,139

All rummaging is done by Boat men - 22,140

There is a staff set aside for re-rummaging - 22,142–3

Witness lives at Gravesend - - 22,144, 22,152

Statement of his daily duties - - 22,145–51

All ordinary prosecutions are initiated by the examing officers - - - 22,148–50

And is reported to witness through the surveyor - - - - - 22,151

Does not come in contact with Inland Revenue officers in his work - - 22,153

Concludes that amalgamation would not affect him in any way - - - 22,154

Has nothing to do with warehousing - 22,155

Sir REGINALD WELBY.

The question of the amalgamation of the Customs and Inland Revenue has never been discussed by the departmental Treasury - - - - - - 22,156

But, of course, the subject has for many years been in men's minds - - - 22,156

The Warehousing Committee was appointed to assimilate Customs and Inland Revenue practice - - - - - - 22,157

There is now absolute unity as regards the warehousing regulations - - 22,158, 22,215

Believes that the interpretation of the regulations by the two Departments has not led to any very serious divergence - - 22,159–60

Is not aware that the Treasury has authorised the regulations being interpreted in different ways by the two departments - 22,161

The Treasury wish every effort to be made to secure uniformity - - - - - 22,162

Duplicate warehouses have been reduced, and other economies effected - 22,163, 22,167–8

There is a proposal by the Customs to take over certain warehouses in London, Dublin, and Cork, now before the Treasury - 22,164–6

During the last few years there has been in both departments almost an emulation in economy - - - - - - 22,169–70

Over a long period of years, the Inland Revenue has, perhaps, been the most successful in securing economy and efficiency 22,169, 22,201.

An incidental advantage of having two departments is that the Chancellor of the Exchequer and the Treasury can check the views of one department by the opinion of the other - - - - - 22,171–6, 22,260

But would not put this forward as an argument against a well considered scheme of amalgamation by which economy and efficiency would be promoted - - 22,173–4

To substantiate the desirability of amalgamation it would be necessary to show that considerable economy would result - 22,177, 22,182, 22,202, 22,210–1.

Summary of Evidence.

Sir REGINALD WELBY—*cont.*

A great deal turns upon what is meant by amalgamation - - - - 22,178
Within the last 10 or 15 years the amalgamation of Excise, Stamps, and Taxes was more nominal than real - - - 22,178, 22,180
And there are still Heads responsible for the various branches - - - - 22,179
The Board dealing in common with all cases 22,180
Believes that now the amalgamation has gone much further - - - - 22,180
Would be opposed to amalgamating the two Boards and leaving them to effect economies which are only shadowed forth - 22,181
Because in such an important matter, very little ought to be taken on trust - 22,182
Quite understands the difficulty of putting forward a detailed scheme of amalgamation beforehand - - - 22,196
But feels quite clear that this ought to be done - - - - - - 22,196–7
The amalgamation of the two departments would increase the force that can exercise parliamentary pressure - - - 22,198
There have in the past been serious agitations in the Post Office and in the Excise 22,199–200
It is easier to deal with such agitations with distinct departments than with one amalgamated department - - - - 22,255
Inclined to think that if amalgamation took place it would tend to improvement in the collection of the Revenue - - 22,201
Does not like to see the few experts able to advise the Chancellor of the Exchequer reduced in numbers - 22,202–4, 22,208–9, 22,212, 22,236–8.
At present he has only for consultation in matters of taxation the two chairmen of Inland Revenue and Customs - 22,202–8, 22,213
Though, of course, the technical officers are constantly called in - - - 22,203, 22,209
The Chancellor of the Exchequer has often not made finance a special study - 22,203
And it is most important that he should have at hand thoroughly competent experts 22,203, 22,208–9, 22,256–9.
Would not put the Heads of Branches, however able, on the same footing for utility as advisers, as the chairmen of the Boards 22,205–7
Observes that the Customs estimate the possible saving by amalgamation at 11,000*l.* 22,184
The Treasury would require before approving of such a great administrative change, which only started with a saving of 11,000*l.*, a detailed scheme to be laid before them - 22,184, 22,188, 22,192–3, 22,196.
As such a saving might in practice be reduced to nothing at all - - 22,184, 22,188
For instance, in 1834 the amalgamation of Stamps and Taxes produced an immediate saving of 18,000*l.* a year - - 22,182
The two branches cost before amalgamation 123,000*l.*, and afterwards 105,000*l.*, but 13 or 14 years later the cost had risen to 147,000*l.* - - - - 22,183–4
Believes that the Customs contemplate the reduction of one commissioner - - 22,185–6
In an amalgamation of this kind the result is very often to level up salaries - 22,187–8, 22,195
From the statistics it appears that the salary of the Excise out-door officers averages 149*l.* per year, and of the Customs out-door officers 123*l.* - - - - 22,188
Supposing these were levelled up this would cost 36,000*l.* - - - 22,188–90
This is *primâ facie* criticism, and very possibly the Excise out-door men do more important work - - - 22,188, 22,190–4
If the Government were in a position to consider the matter afresh, would advocate the division of Customs and Excise for one department, and Stamps and Taxes for another - - - - - - 22,214
The Solicitors' departments might, perhaps, be consolidated - - - - 22,216–7
Also the Accounts departments - - 22,218
Also the Statistical departments - - 22,219–22
Always assuming that such consolidations would show a sufficient saving - 22,218, 22,222
The Inland Revenue does very little statistical work - - - 22,219–21, 22,245–6, 22,252
Amalgamation is not the necessary remedy for divergence of opinion; that ought to be gained by conference between the two Boards - - - - - - 22,223
The Boards do not, as a rule, meet now, though the Treasury might request them to do so - - - - - 22,226–9
If amalgamation were carried out, the chairman would be almost too big for a civil servant - - - - - 22,224
Anticipates a desire in that case to place an independent minister at the head - - 22,224
This would be out of the question, as it would displace the Chancellor of the Exchequer from being Finance Minister - 22,224
If amalgamation were effected, would like the Head to be associated with the Financial Secretary to the Treasury - - - 22,224
If the two departments are retained, but certain of the sub-departments are consolidated, the Financial Secretary might preside at joint meetings of the Boards - 22,224–5
There are two advantages in management by a Board - - - - - 22,230
First, members of the Board can do good service in inspecting country establishments - - - - - - 22,230, 22,240
Second, a decision by a Board is more readily accepted by the public than a decision by a single person - - - - - 22,230–1
Although the chairman has the real power - 22,232
It would probably be sufficient if the two chairmen called themselves the Board - 22,234
Fears that if the two departments were amalgamated, the chairman would have his time taken up by purely administrative work - - - - - - 22,239, 22,241–3
Believes that there is ample work for the members of the two Boards - - 22,240
If the Boards are retained, doubts the advantage of reducing the numbers - - 22,240
Thinks that, as a rule, the competition between the two departments as regards warehousing, &c. is rather wholesome than otherwise - - - - - - 22,244
But would not put this forward as an argument against a good scheme of amalgamation - - - - - - 22,244
Is not in favour of the statistics collected by the Customs being sent up to the Board of Trade to be digested and dealt with there - 22,247–51
No complaints from the Trade have come before him which could only be met by amalgamation of Inland Revenue and Customs - - - - - - 22,253–4
One argument against amalgamation might be that the post of chairman would be so large that it might be made one for the exercise of political patronage - - 22,261–3
The fittest man should be selected for it, whether a civil servant or not - - 22,261–4
Has felt bound to put before the Commission a critical view of amalgamations - - 22,265
But is far from saying that an economical and efficient scheme may not be devised which would overcome the objections - 22,265

Sir WILLIAM MELVILL.

Solicitor of the Inland Revenue - - 22,266
Advantages which have resulted from past amalgamations - - - - - 22,270–1
The reduction of the dog duty in 1867 was facilitated by the transference of such taxes to the Excise - - - - - - 22,272
The carrying out of the Budget Schemes rests with the legal departments - - 22,273
And if you have intercommunication between two legal departments it is difficult to get the resolutions drawn in time - - 22,273–4
Has one assistant solicitor - - 22,275
And four chief clerks - - - 22,276
He has a large staff and a large amount of work - - - - - - 22,279–80

Sir WILLIAM MELVILL—*cont.*

If he undertook the Customs legal work does not think that he would require any increase of staff - - - - - 22,277–8, 22,281–3, 22,300–7, 22,330–6, 22,344, 22,376–8

But it would probably be necessary, in the first instance, that one of the Customs solicitor's staff should be attached to the Inland Revenue - - - - - - 22,283

Does not think there is much Customs law work in relation to Customs - - - 22,300

The work under the Merchandise Marks Act has nothing to do with duties, and is very likely ephemeral - - - - - - 22,301–3

To give advice on Customs law requires minute acquaintance with the Customs Consolidation Act - - - - - - 22,304

In some instances gives a joint opinion with the Customs solicitor - - - - 22,284–5

If there was only one legal department, the Head would probably take a larger view in the first instance - - - - 22,286–7

The Chancellor of the Exchequer looks upon the Inland Revenue solicitor as responsible for the annual Customs and Inland Revenue Bill - - - - 22,288–9

He prepares the resolutions with the exception of the tea resolution - - - 22,289–90

The Customs resolutions pass through the hands of the Inland Revenue solicitor - 22,291

Thinks that the amalgamation of the two solicitors' departments would be much to the advantage of the Chancellor of the Exchequer and of the Revenue - 22,293, 22,322

Excise gives more work to his department than stamps - - - - - 22,294

There has been a great increase in Excise prosecutions since 1875 - - - 22,295–6

Stamps give a considerable amount of work of a different character - - 22,297–9

Thinks that the fact of having two legal departments leads to evasion of duties properly payable - - - - - 22,308–9

Gives instances in which this has been the case - - - - - - 22,310–1

The Board of Inland Revenue can deal in some cases with Customs as well as Excise penalties, but there is no similar power for the Customs to deal with Excise penalties - - - - - - 22,311

This could be remedied without amalgamation - - - - - - 22,312–3

Both Boards should have the same powers - 22,315

Would consider it his duty to report to the Treasury any alteration desirable in the law affecting the Inland Revenue, but would not do so as regards the Customs - 22,314–20

Thinks that if there was one solicitor's office for the two departments all the disadvantages he has pointed out would be rectified - - - - - 22,321

The total of the salaries of his London office is about three times greater than that of the Customs - - - 22,323–5, 22,349

And the work is tenfold - - - 22,326–9

The work is not of a routine character - 22,328

Has already asked for an increase of staff to the extent of four men - - - 22,337–9

There will be ample work for them to do, even if the Customs work is not added - 22,340

The great difficulty is the number of clerks absent prosecuting, but except in London there would not be much Customs prosecutions - - - - - 22,341

In London the same clerks would conduct Revenue and Customs prosecutions, which latter witness believes are few in number 22,343–8

Thinks that the solicitors at Dublin and Edinburgh should be under the solicitor at Somerset House - - - - - 22,350–3

Thinks the solicitors' offices of the Inland Revenue and Customs could be amalgamated even if the rest of the departments remained separate, but that it would not be convenient - - - - 22,352–60

It would be inconvenient if the solicitor was in a different building to the secretaries and others who consult him - - 22,355–60

Witness is a barrister - - - 22,363, 22,365

His assistant was a solicitor originally - 2266–8

The Dublin solicitor is a barrister - 22,364, 22,371

The Edinburgh solicitor is a solicitor - 22,369–70

The solicitor and assistant solicitor to the Customs are barristers - - - 22,372–3

The Customs solicitors have agents at Edinburgh and Glasgow, paid by bills - 22,374–5

If the two solicitors' offices were amalgamated, thinks that the present organisation of his department would be suitable for the united work - - - - 22,379

Does not think that the fact of his being some distance from Thames Street would affect the case materially, but cannot say for certain - - - - - - 22,380–1

There might be cases where it would be more desirable to have the solicitor on the spot - - - - - - 22,385–6

Receives questions on legal points by telegram, which he is obliged to answer to the best of his ability - - - 22,382–4

All his establishment is located at Somerset House - - - - - - 22,387

Would deprecate detaching one or more of his clerks to Thames Street - - 22,388–9

Reason for the difference of duty on imported and home-made playing-cards - - 22,390–2

Does not think that the duties of the solicitor of the amalgamated departments would be too numerous and difficult for one man to be able to advise upon them - - - 22,393

Mr. CHILDERS.

Was Secretary to the Treasury in 1865–6, and Chancellor of the Exchequer in 1883–5 - - - - - - - 22,394

During the latter period gave his best attention to the question of the amalgamation of the Customs and Inland Revenue - 22,394

By that time the Excise, Stamps, and Taxes had been really amalgamated - - 22,395

The work of the Customs had been immensely simplified - - - 22,395

The amalgamation of the warehouses had also much advanced - - - 22,395

He therefore came to the conclusion that amalgamation could be effectively carried out - - - - - - 22,395

There were, however, two difficulties in the way at that particular time - - 22,395–7

First, the internal condition of the Inland Revenue Department - - - 22,395–7

Second, the consolidation of the warehouses had hardly advanced sufficiently - - 22,395–7

Believes that these difficulties have now been removed - - - - - 22,398

There should be one controlling authority - 22,400, 22,426–7

The adoption of one classification and scale of salaries would have to be done gradually - - - - 22,401, 22,485–7

There may be some difficulty in meeting claims for levelling up salaries, but this would not be insurmountable - - 22,402

A scheme should first be laid before the Treasury showing that a real economy would result - - - 22,403–4, 22,500–4

For this purpose it would probably be best to appoint a committee representing the two departments and the Treasury - 22,502–5

In 1885–6 had a scheme before him carried sufficiently far to give a *primâ facie* strong view that it could be carried out - - 22,447

And saw his way to doing so after a year or two - - - - - - 22,447

Was quite satisfied that there would be a considerable saving - - - 22,448

Dislikes administration by Boards - - 22,405

But at first it would probably be best to continue the system - - - 22,405

Does not think that making one head in the sole Revenue Department would be creating too large a place for a Civil Servant - 22,406–8

Summary of Evidence.

MR. CHILDERS—*cont.*

Thinks the Chancellor of the Exchequer would be better advised by one head of the amalgamated departments, than by two, as at present - - - 22,409, 22,434–8
But, of course, he would always bring into consultation other practical officers of the department - - - 22,435–6, 22,491–4
There might possibly be advantage in having advice for Stamps and Taxes and advice for Excise, but sees no advantage in two separate advisers for Excise and Customs 22,437–8
There must be heads of the various branches of work, under the supreme authority - 22,410–1, 22,426
Was Commissioner of Customs at Victoria - 22,412
The Revenue and Customs departments there are now under one head - - 22,413
Believes that the clerical staff of the Civil Service in France and Italy is much larger than in this country - - - 22,414–6
Thinks that the amalgamation of the Inland Revenue and Customs would result in considerable economy - - 22,417–9, 22,481
But the amalgamation in itself would be good, apart from the economy - - - 22,419–20
Feels confident that the traders were in favour of the amalgamation of the warehousing system - - - 22,421–2, 22,431
Thinks that the Customs should be brought into the Inland Revenue - - 22,399, 22,444
This could be easily done - - - 22,423–7
Of course the business in connexion with ships would have to be done by men trained for the work - - - 22,424
There would be no difficulty in bringing the warehousing duties together - 22,425, 22,449–55
Amalgamation between the Excise and Customs would be more easy and natural than that between the Excise and Stamps, which has already taken place - - 22,427–8
If we were beginning *de novo*, thinks no one would dream of having separate departments for Excise and Customs - - 22,429
Believes that merchants would much prefer one supervision for the warehouses - 22,430–1
But does not know that the present system involves any grievance - - - 22,430
Sees no advantage in placing the warehouses in the ports under the Customs, and those inland under the Inland Revenue - 22,498–9
Is under the impression that the Exchequer would gain by amalgamation - - 22,432
Thinks that the Treasury can deal better with one department than with two in the event of an agitation for levelling up salaries - - - - 22,433, 22,482–4
Amalgamation would affect Stamps and Taxes very slightly - - - 22,439
The main saving would be in the amalgamation of the Customs and Excise - 22,440, 22,472
Does not know what is the cost of the Excise Department of the Inland Revenue - 22,441–3
Believes that the Excise Department of the Inland Revenue is worked more economically than the Customs - - - 22,445
Thinks that without complete amalgamation of the two departments the warehouses might be brought under one control - 22,449–55
But beyond this it would be very difficult to amalgamate, short of the amalgamation of the two departments - - - 22,453
Dreads any great change of this kind unless the results are forecast as far as they can be - - - - - 22,456
The distinction of the duties of Excise and Customs officers are not greater than would exist in the branches of any great department - - - - 22,457–8
Customs officers in small ports might readily do some Inland Revenue work - 22,458, 22,471–3
A considerable number of warehouses might be reduced - - - 22,459–62, 22,467–8
The interests of the owners would have to be carefully dealt with - - - 22,463–4
Does not believe that the merchants would raise much opposition - - - 22,465–6
Thinks that with an amalgamated service the number of local officers might be reduced - - - - 22,469–71
Would be in favour of only one Secretariat, one Solicitor's Department, one Laboratory, and one Accounts Branch - - 22,474–8
It would be difficult to have only one Solicitor's office if the whole departments were not amalgamated - - - 22,479–80
There is at the Customs a lower class of officers with lower salaries than at the Inland Revenue - - - 22,488–90
Does not think the competition between the two departments is any advantage to the Revenue - - - - - 22,495–7
Believes that the previous amalgamations at Somerset House effected a genuine economy - - - - - 22,506

SIR ALFRED SLADE.

Receiver-General of Inland Revenue - 22,508
Nature of the work of his office, much of which is of a confidential character - 22,509–27, 22,629–41
His office both receives and pays money 22,510
The Receiver-General of Customs did not make the confidential and miscellaneous payments the Inland Revenue does - 22,511
Part of the work that used to be done by the Receiver-General of Customs is now done by a collector, and part by a cashier - 22,699–700
Receives special payments of income tax, &c., which is of a confidential nature - 22,512–20, 22,629–41
Receives also dividends on foreign loans which is not of a confidential nature 22,520, 22,642–4
His pay clerk pays about 250,000*l.* a year in salaries and pensions - - - 22,520–1
The Accountant-General pays nothing - 22,532–5
Receiver-General's office makes payments to the amount of about 1,500,000*l.* a year - 22,525
Is under security to the Crown for 24,000*l.* - 22,526, 22,530
Pays nothing without an order signed by two Commissioners - - - 22,527–9, 22,657–9
Thinks that all his cashiers ought to find security, in the same way as they have to in private banks - - 22,531–4, 22,540, 22,542–4
Considers it is an open question whether he is liable for the cashiers, or whether the State is - - - 22,534, 22,544
If a cashier's accounts are short any day he has to pay the amount to the Receiver-General - - - - 22,535–9
Has four Upper Division and nine Lower Division clerks in his office - - 22,545–7
Proposals have been made to turn his office into a Chief Collector's office - 22,541, 22,548–9
Has never seen any proposal to amalgamate his department with the Accountants - 22,698
The Board of Inland Revenue appoint collectors and clerks, the Treasury appoints the Receiver-General - - 22,550, 22,751–2
Is practically a higher kind of Collector - 22,551–2
Suggested in 1877 that the Collector in Somerset House should be abolished, without effect - - - 22,552, 22,555
But he has now been abolished, and witness has taken over part of his work - 22,553, 22,556
No reason why he should not take over the work of the five other metropolitan collectors - - 22,553–4, 22,557, 22.569, 22,592–3
Made this proposal in 1877 and 1887 - - 22,615
Thinks that this would save some thousands annually - - - - - 22,600–1
The necessary increase to his staff would be made by transfers from the Collectors abolished - - - 22,602–6, 22,656
Places where these five Collectors are placed 22,575, 22,580
They were originally placed there for public convenience - - - 22,576
Now people can pay their taxes by free money orders - 22,576–9, 22,584–5, 22,593–6
Does not think that this is generally known by the public - - - - 22,579, 22,584–5
It is less trouble to pay in this way - - 22,593

SIR ALFRED SLADE—*cont.*

All Excise licenses which do not require "entry" can be paid at a post office - 22,586
The local collector would receive income tax if asked to do so - - - - - 22,587–8
The Collector is both a receiver of Excise and a receiver of Stamps and Taxes - 22,589–91
The Collector does not do out-door work - 22,615
In 1877 a Deputy Receiver-General was appointed - - - - - 22,558–65
Although witness strongly objected to it - 22,561–5, 22,567
The Deputy had been chief clerk in the department, and received an increase of 100*l.* a year - - - - 22,566
The Deputy is appointed by the Treasury - 22,753–5
Although 40 years ago the Excise was amalgamated by Statute with Stamps and Taxes, they are practically two separate establishments with separate offices - 22,569
In every district there is a Supervisor of Excise, who does the out-door work - 22,569, 22,615
There is also the Surveyor of Taxes - - 22,569
The Supervisors and Surveyors are quite separate, although in theory they are members of the same department - - 22,617
Receiver-General takes an enormous number of cheques, for which he sends an interim receipt - - - - - - 22,570–4
As Receiver-General could superintend a much larger establishment than he now has - - - - - 22,597–8, 22,655
The office of Receiver of Fines should be transferred to witness - - - 22,606–14
The discipline of the Collector's office is carried on by the Supervisor of Excise - 22,615
The Collectors have no control over the Surveyor of Taxes - - - - - 22,616
Who receives his instructions direct from Somerset House - - - - - 22,616
The personal communications are between the Supervisor and the public, not between the Collector and the public - 22,618
Since witness has been Receiver-General, his office has decreased from a staff of 20 to 14, and the cost from 6,750*l.* to 3,921*l.* a year - 22,618
Though the total amount passed through his accounts has increased from 43,000,000*l.* to 56,250,000*l.* - - - - - 22,618
And the amount paid over the counter has increased from 7,000,000*l.* to 9,000,000*l.* - 22,618
The number of remittances have increased from 20,239 to 39,000 - - - 22,619
The number of cheques signed have increased from 1,908 to 4,709 - - 22,619
The number of special payments from 3,966 to 9,800 - - - - - - 22,619
The number of country legacy accounts from none to 30,000 - - - - 22,619
But a few small items of work have been taken away from the department - - 22,619
And some clerks have been pensioned, some on abolition terms - - - - 22,620–1
His cashiers are Lower Division clerks - 22,622
Work of his senior clerks - - - 22,623–8
Work of the Deputy Receiver-General - 22,701–20
Witness does not exercise supervision over the receipt of revenue anywhere outside his office - - - - - - 22,645–7
The local collectors send in their weekly or monthly sheets, which are checked by the Accountant - - - - - - 22,649
Manner in which probate duty is paid - 22,650–4
The whole receipt of the Inland Revenue goes through his office or through his account at the Bank of England - - 22,660–7
Out of 56 millions from 45 to 48 millions is paid in to his account at the Bank of England - - - 22,665–7, 22,685–7
If the 9 millions received in his office were like the other 45 or 48 millions paid into the Bank of England, the Bank would charge so highly that it would not be an economical change - - - 28,677–8, 22,729
Mode in which the country collectors remittances are dealt with 22,679–84, 22,687–91, 22,729–50
Nature of the work that would be thrown upon the Bank of England if these remittances were paid direct to the Bank - 22,740–50
Mode in which special assessments of income tax, &c. are paid into this office - - 22,692–7
The majority of the clerks in Somerset House come to his office personally for their pay - 22,668–70
Issues annually about 1,500,000*l.* in repayments of duties and salaries - - 22,671–6
The hours of attendance in his department are seven - - - - - 22,721–8
The senior clerks received 30*l.* additional salary each when the hours were changed from six to seven - - - - 22 726–7
If the Customs and Inland Revenue were amalgamated his department would receive the Customs revenue, which would entail a very small additional staff - 22,756–67
It would probably be necessary to have some local staff at the Port of London also - 22,762–7

DR. BELL.

Principal of the Inland Revenue Laboratory 22,768–9
Staff of the Laboratory - - - - 22,770–6
39,224 samples were analysed in the Central Laboratory last year for the Inland Revenue and other offices - - 22,776–7
And 13,000 at the nine outports - - 22,778
The numbers this year will probably amount to 45,000 and 16,000 respectively - - 22,778
This increase is caused by the limitation of the water in tobacco - - - 22,779
Immediate savings of 1,800*l.* and 2,000*l.* a year respectively resulted from their undertaking the chemical work for the Board of Trade and India Office - - 22,779
The samples analysed for other departments last year amounted to 3,924 - - 22,779
This entails no work on the Board or secretariat - - - - - - 22,779
Infers that if the principle of devolution were applied to the extraneous work now performed by the Customs for other departments, it would entail little or no labour on a consolidated revenue board - - 22,779–82
Much of the work of the Inland Revenue and Customs with respect to tobacco is intertwined - - - - - - 22,782
This seems to show how unsuitable it is to have two managements for dealing with the same dutiable commodities - - 22,782
15,000 samples analysed by the Inland Revenue last year were drawn by Customs officers - - - - - 22,782–4
The Inland Revenue have no authority to interfere or advise in any way as regards sampling of tobacco or snuff for drawback 22,782–4, 22,788
But witness has power to have a sample drawn for analysis in the case of lemon juice for the Board of Trade - - 22,785
Has never represented to the Customs Board that he should have the same facility as to tobacco and snuff - - - - - 22,786–8
If the two departments were amalgamated, improved arrangements in this respect would soon be made - - - 22,788
The Inland Revenue perform fully five-sixths of the labour involved in charging and securing the tobacco duty - - 22,788
One per cent. of adulteration would represent a loss of 80,000*l.* a year to the Revenue - 22,788
The Customs have no real laboratory in London - - - 22,807–8, 22,859, 22,925
The Inland Revenue has the only real Government laboratory which does work for various Government departments - 22,808–10, 22,925–6
The Customs have one or two men who have had some training as analysts - - 22,811–2
At the nine outports there are both Inland Revenue and Customs laboratories - - 22,813–27
If a Customs laboratory officer at Liverpool wanted advice upon a sample, he would send it to his Board in London - - 22,816

Summary of Evidence.

DR. BELL—*cont.*

And would not make any use of the Local Inland Revenue Laboratory - - 22,818
The Inland Revenue keep a standard and the Customs compares theirs with it yearly - 22,828–9
The Inland Revenue and Customs do not know what methods of analysis each make use of - - - - - - 22,830
There are, in consequence, sometimes collisions when appeals are made - - 22,830
Tobacco is the principle article upon which difficulties arise - 22,831–2, 22,834, 22,837–9
Is not aware of any difference occurring in the case of tea - - - - 22,833, 22,835–6
The Customs control the manufactured tobacco imported, amounting to about 300,000 lbs. a year - - - - - 22,788
This, though small in quantity, occasionally produces unpleasant collisions between the two departments, and also causes hardship to the trade - - - - - - 22,788
Instances a case of seizure of coca-tobacco and coca-cigarettes - - - 22,788, 22,903
They were seized upon information received from the trade - - - - - 22,906–12
The trader had been selling them for four months before they were seized - - 22,789
Had there been only one revenue board, the chances are that they would not have been allowed to come in - - - 22,789–97, 22,904
The Customs officers have not the same experience as the Inland Revenue officers - 22,791–6, 22,831, 22,905
Instances in which differences of opinion between the two boards have proved embarrassing to the Government - - - 22,797–801
A consolidated revenue board would lead to an effective administration and large economies would follow - - - 22,801–2, 22,858
The work now done by Customs examining officers would be done by Inland Revenue temporary assistants on much lower salaries - - - 22,803–5, 22,858, 22,865
The salaries of the Customs men might be reduced without amalgamation - - 22,866–7
Mode in which Inland Revenue chemical assistants are appointed - - - 22,840–9
The men so obtained are highly satisfactory - 22,852
The assistants at the Customs are not of the same calibre and have not passed at South Kensington - - - - - - 22,850
If amalgamation took place, the Inland Revenue could not, with their present staff, provide for the Customs work - - 22,860–5
Advocates amalgamation for the advantage of the service generally apart from the question of economy - - - 22,867–9
Distinction between assistants of Excise and analysts in the Inland Revenue laboratory 22,870–6
Witness corresponds direct with other officers without passing through the Board or secretariat - - - - - - 22,877–80
The Inland Revenue work is more technical and chemical than the Customs work - 22,881–4
In case of samples of tobacco and snuff deposited on drawback, the Customs communicate direct with the Inland Revenue laboratory - - - - - - 22,887–99
There is no other communication between the Inland Revenue and Customs laboratories - 22,913
It would be a great advantage if the whole of the chemical work of all kinds were controlled by one head - - - 22,914, 22,930–1
But with two separate departments under two Boards one cannot get rid of rivalries and jealousies - - - - - 22,915
Witness acts for Board of Trade, Home Office, Admiralty, Post Office, India Office, and others - - - - - - 22,916–7
Would have much pleasure in acting for the Customs - - - - - - 22,918
But the Customs prefer to have a place of their own - - - - - - 22,920–3
Believes that there is an unwillingness on the part of the Customs to avail themselves of advice from the Inland Revenue laboratory, but that this would disappear on the union of the two Boards - - - - 29,932

MR. FOLLETT.

Solicitor to the Customs - - - 22,933
Has always thought that the existence of two Revenue Boards was an unbusinesslike arrangement - - - - - 22,935
And this applies also to the two legal departments - - - - - 22,935
There should be one solicitor with responsible men under him dealing with various branches of work 22,937, 22,949, 23,015–6, 23,021–2
This would lead to economy and reduction of staff - - - - - 22,950, 23,013–4
The number of cases coming up for decision would be diminished - - - - 22,951
Is aware that the cost and number of the staff in the Inland Revenue Solicitor's Department greatly exceeds that of the Customs - - - - - 22,952, 23,010
Does not think that the Customs work could be done at first with a diminished staff - 22,950, 22,953
The business of the Inland Revenue Solicitor is divided into Excise and Taxes - - 22,954
On the side of Excise there is great similarity to the Customs work - - 22,955–7, 23,018–9
Has no official experience as to Stamps and Taxes - - - - - - 22,958
If there were a single solicitor he should be located at Somerset House - - - - 22,959–61
Wherever the Board of Customs was located, there would have to be some responsible officer for legal purposes with a staff - 22,962–3, 22,978–80, 29,995
The Merchandize Marks Act has given witness an immense deal of responsible work 22,939
Most of the legal work at the Customs is responsible work, which is dealt with by the solicitor personally - - - - 22,939
Believes that the legal work at the Inland Revenue is more clerical - - - - 22,939
Sometimes attends meetings of the Customs Board - - - - - 22,940–1, 22,976
Nature of the questions that are referred to the Customs Solicitor - - - 22,942–5
Has no offices outside the Head Department 22,946, 22,948
Has agents in different places who charge by bills - - - - - 22,947–8, 22,971–3
These agents would not be dispensed with if amalgamation took place, unless there were local Inland Revenue Solicitors - 22,996–301
Believes that the Inland Revenue Solicitor sends men from his own office to conduct local prosecutions more than the Customs does - - - - - - - 23,001–3
Thinks the Customs system of employing local solicitors answers very well - - 23,002
The Inland Revenue Legal Department extends to England only; the Customs Legal Department to all the three kingdoms - 22,947
Nobody lower than a collector or acting collector can order a Customs prosecution 22,964–6
This can be done without reference to the Solicitor or to the Board - - - - 22,967–8
The collector would conduct the case himself 22,969
If a complicated case the Solicitor would either depute one of the clerks to conduct it or would employ a local solicitor - 22,970–5
Is in constant communication with the secretary and the committee clerks - 22,977
Where differences of opinion between the two legal departments have arisen, they have been with regard to the warehousing, &c. - - - - - - - - 22,981–6
Such differences have been settled by a compromise, and once or twice by a reference to the Attorney-General - 22,987
A record is kept of such cases - - - 22,988–90
Thinks there would be a difficulty in having one solicitor only if the two Boards were not amalgamated - - - - - 22,991–5
Is himself on the Rolls as a solicitor - - 23,004–5
Two of his clerks were trained as solicitors - 23,006–7

MR. FOLLETT—*cont.*

And the assistant solicitor and one clerk are barristers - - - - - - 23,007
Thinks that it is important that such officers should have had some legal training - 23,008–9
And that training as a solicitor in practice is the best - - - - - - 23,009
Believes that the number of questions for original decision coming before him are as numerous as those dealt with at the Inland Revenue - - - - - 23,012
But has no actual knowledge of the work done there - - - - 23,003, 23,011
A great deal of the Customs law is highly technical - - - - - - 23,017–20
Thinks that one Solicitor would be able, with justice to the Board and himself, to advise the United Departments - - 23,021–2

MR. GILBEY.

Is a partner in the firm of W. and A. Gilbey 23,024
Contributed last year to the Revenue 394,000*l.*, of which 16,000*l.* was paid through the Customs - - 23,025–7, 23,029–33, 23,035–8, 323,044
Reckons that they pay about 400,000*l.* a year for wines and spirits, and 300,000*l.* for tobacco - - - - - 23,028, 23,048–9
The Inland Revenue duties would be on British spirits only, which amount to about 82,000*l.* - 23,026, 23,034, 23,039, 23,041
The balance would be Customs duties on imported wines and spirits - - 23,034
The actual payments for wines and spirits are as follows - - - - - 23,040
Customs and Excise duties, paid through Excise, 308,000*l.* - - - - 23,040
Ditto, paid through Customs, 16,000*l.* - 23,040
British spirits, paid through Excise, 70,000*l.* 23,040
About 12,000*l.* is paid for champagne, claret, &c., which are not bonded - - - 23,042–6
His firm does not make British spirit, but merely rectifies it - - - - - 23,047
Has had experience for the last 50 years in the working of the Customs and Inland Revenue Departments - - - - 23,050–3
It is palpable that most of his firm's work is done in duplicate - - - - - 23,054
The Customs land, gauge, and test their goods - - - - - - 23,054–6
Then they are taken into their own bonded warehouse - - - - - 23,057
And the goods are checked by the Excise - 23,058–9
Who get the information from the Customs - 23,060–1
If amalgamation took place the same work would have to be done - - - - 23,062
Some time ago they petitioned to be allowed to land their goods into sealed barges, to go direct to their warehouse without previous examination - - 23,063–71, 23,074
But their petition was not granted - 23,076, 23,079
It would be a great convenience to the trade if the double examination, first at the water-side, and then at the warehouse, was done away with - 23,071–2, 23,083, 23,167–9, 23,172
It occurred to him at the time that the Customs did not wish to lose their authority over the goods, and that if there had been only one department there would have been more inducement to give this facility - - 23,070, 23,080, 23,090, 23,105–9
Within the last five years the desire of both the Customs and Excise has been very great to meet the wishes of traders - 23,077–8
Formerly there was a great deal of red tape, which has now been abolished - - 23,064
Thinks the Government might safely abolish the water-side examination in most cases - 23,081–4, 23,169
An officer would be in charge of the goods from the ship's side to the warehouse - 23,085
If the change was made it might apply to goods above, a certain bulk - - 23,086–89
Believes that if the two departments were amalgamated much time would be saved to the traders - - - - - 23,091–8
If their goods have to go through the Customs it is sometimes a week or more before they get them - - - - 23,091
The communication between the two departments is slow, and consequently injurious to traders - - - - - - 23,096–8
If amalgamation took place the goods would have to be examined all the same - - 23,099
But witness believes that there would be more chance of the water-side examination being abolished if there was only one department concerned - - 22,100–9, 23,163–5
If this were abolished his object would be attained whether there was one department or two - - - 23,105, 23,163–5
There is a good deal of harmonious working between the two departments, but several Acts of Parliament do not give equal powers to Customs and Excise - - 23,111
For instance, the Inland Revenue has no power to deal with the valuation of champagne - - - - - - 23,111–4
This is the fault of the Act of Parliament - 23,113
So that any point in dispute has to be settled by the Customs - - - - - 23,114
Which involves a duplicate process - 23,115
Believes that amalgamation will be of advantage to the Government as well as to the trader - - - - - - 23,116
The tendency everywhere in business is towards centralization - - - 23,116
Traders have to keep a separate Banking Account for Inland Revenue and Customs 23,117–21
The number of bonds they have to enter into is very great - 23,121–7, 23,134–5, 23,170–2
Thinks they will be lessened by amalgamation - - - - - - 23,121
But they could probably be also lessened without amalgamation - - - 23,128
Gives instances of what appears to him to be unnecessary bonds - - - 23,136–48
Their warehouse in Camden Town is their only bonded warehouse except their distillery in Scotland and whiskey bonds in Ireland - - - - - 23,149–50
They are now allowed to export cases wired and sealed with the Customs seal without further examination before they are placed on board - - - - - - 23,151–4
Thinks that having to deal with the Customs for export does not cause any real inconvenience - - - - - - 23,155–6
Considers it is an anomaly to have to deal as regards tobacco with the Customs up to the time the duties are paid, and afterwards with the Inland Revenue - - 23,157–8
But though anomalous the inconvenience is not great - - - - - - 23,157–8
The Customs test tobacco for the initial moisture, but the Excise for the moisture after manufacture - - - - 23,159–62
There have been many improvements in the bonding system in the last five years - 23,166
When the goods get into their bonded warehouse the Customs has nothing to do with them excepting in case of export - 23,149, 23,173–6
Their warehouses are entirely under the Excise - - - - - - 23,175–6
Has been long in favour of amalgamation from the traders' point of view - 23,178, 23,183
Some years ago an important investigation was made at their warehouse by Excise and Customs officers - - - - - 23,178–82
Believes the great bulk of the trade is in favour of amalgamation - - - 23,184–8
But would rather not mention any names - 23,187
They believe that it must be a great waste to have the same duties performed twice over - - - - - - - 23,189
Cannot mention any case in which the same duty is twice performed, other than those he has already alluded to - - 23,192
If spirits are delayed at the Customs there is a great loss by evaporation - - 23,190–1

Summary of Evidence.

MR. GILBEY—*cont.*

All their petitions, with regard to even small matters have to be considered by both Customs and Inland Revenue - - 23,193–7
Finds that greater facilities are given by the Excise than by the Customs - 23,198–201
The system of gauging is different in the two departments - - - 23,202–13
The amalgamation of the departments would not enable any of the gauging to be dispensed with - - - - - 23,209
But thinks that it would facilitate matters to a certain extent - - - 23,209
Believes there is a ready communication between the Customs and Inland Revenue 23,214–6
At one time there was a jealousy, but that does not now exist - - - 23,216
Thinks it would be preferable to deal with the laboratory of one department only - 23,217–20
Has known the officials of the two laboratories take different views of the same case 23,221–3

MR. SEDGWICK.

Secretary to the Association of Wholesale Tea Dealers - - - - 23,225
In 1882 the regulations which referred to the Excise were tried to be applied to the Customs - - - - - 23,227, 23,233
Some officers who had an intimate knowledge of tea were pensioned, and other officers who had experience in wet goods only, were substituted for them - 23,228, 23,233–6, 23,244–6, 23,268–78, 23,386
The experiment has been a very costly one - 23,228, 23,239
The staff was distributed amongst 24 docks, warehouses, &c. where tea is deposited - 23,228–9, 23,232, 23,237–8
And traders had to pay visits to 24 warehouses for the purpose of claiming tea, instead of going to the one central office at the Customs House - - 23,229–31, 23,238–9
But now the Customs are reverting to the old practice, and the work can be done under one roof at the Customs House - 23,228–31, 23,247–50
Up to 1882 all duties connected with tea were in the control of officers accustomed to dry goods - - - - 23,241–3
The duty on tea last year was 4,600,000*l.* - 23,240
The bulk of tea imported comes to London - 23,251–5
Tea imported into London may be sent into a bonded warehouse in the country - - 23,257
Before it is sent off the gross weight and tare is taken - - - - - 23,258–61
When it reaches the country it would probably go into home consumption - - 23,262
The quantity of tea sent under bond now is very small - - - - 23,262–3
Probably five-sixths of the whole duty is collected at the Customs House - - 23,264
Does not come at all into contact with Inland Revenue officers in dealing with tea - - - - 23,266–7, 23,279–85
It would be highly inconvenient to traders if the Customs House was removed far from where it now is - - 23,287, 23,307–10
Traders have to deal with the Accounts and Clerical Departments of the Customs House - - - - - - 23,288
And with the Board - - - - - 23,289
As a rule, they address the Board in petitions - - - - - 23,290
These petitions principally relate to the transfer of tea from one place to another - 23,291, 23,329–38
It is important that these petitions should be dealt with at once, but it is immaterial whether they are dealt with by a Board or by some high officer - - 23,291–301, 23,328–40
The Customs have on occasions allowed their officers to stay over time to suit the convenience of the traders, who have paid for such overtime - - - - - 23,301–5
Has no complaint to make of the Customs officers, who do their work in a highly efficient manner - - - 23,306–7, 23,338
The trade are so satisfied with the way the work is done that they fear they may go farther and fare worse - - 23,319–23, 23,341–2
Would be decidedly opposed to any change in the place for paying the duty - - 23,324
And deprecates any change in the present staff, who have been educated up to the requirements of the tea trade - - 23,325–7
The outport working of tea is so small that it is hardly worth considering - - 23,311–2
Does not think 250,000*l.* out of 4,613,312*l.* duty on tea is collected out of London - 23,313–4
And this 250,000*l.* is spread over England, Ireland, and Scotland - - - 23,315–6

MR. NORTON.

Collector of Inland Revenue at Liverpool - 23,343
Number of staff under him - - - 23,344–7, 23,381–4
The surveyors of taxes are entirely independent of him - - 23,348–50, 23,373
Although the departments of Taxes and Excise are amalgamated - - - 23,351–2
But their offices are side by side with those of the witness - - - 23,374–5
Extent of the Liverpool district - - 23,353
Is not identical with the corresponding district under the Collector of Customs - 23,354–5
The Inland Revenue does not do any special work for the Customs - - - 23,356
But in several instances the two departments are mixed up together - - - 23,356
For instance, British spirits and Beer would be manufactured under the control of the Excise, warehoused with Customs or Excise, and exported through the Customs - - - - - 23,357–8
This must entail a loss of time on the trade - - - - - 23,359–60
Is of opinion that this work would be more conveniently done by one department - 23,361–2
Does not know that any economy would be effected in this particular instance - 33,363
Does not know of any other instance of duplication of work - - - 23,396
Has heard no complaints from traders owing to their having to do business with the two departments - - - - - 23,480–1
Is strongly of opinion that the amalgamation of the departments would be an immense advantage to the public service, would conduce to considerable economy, and would be a great convenience to the public - - - - - 23,364, 23,432
One collector at Liverpool could be reduced, and the clerical staffs consolidated - 23,365–6, 23,482–4
Does not mean that the Customs are not conducting their work economically - 23,367–71
Is not only Collector of Excise, but also controlling officer, and responsible for discipline in the Excise Department - - 23,376–7
So far as Taxes are concerned is merely receiving officer - - - 23,372, 23,378
The Excise have two warehouses at Liverpool; the Customs have more than a hundred - - - - - 23,379–80
The Collector of Customs could not perform the Inland Revenue work with the existing Customs' staff - - - 23,385–6
In the Excise great practical knowledge is required - - - - - 23,386
It really takes a lifetime to learn the various Inland Revenue duties - - 23,386
In event of amalgamation would work in men of both departments; but is not prepared at present moment to say that any great reduction would be made at Liverpool - - - 23,388–94, 23,466
Believes that at Liverpool both Excise and Customs officers are fully employed - 23,395, 23,463–5

Mr. NORTON—*cont.*

Outside the large ports great advantages to be derived from amalgamation - - 23,397
When witness was collector at Swansea he could have done the Customs work as well as his own - - - - - 23,398–407
The "charging" and warehouse work of the Customs seems to be on all fours with Excise work - - 23,378, 23,408–9, 23,411
The work not analogous to Excise work, is inferior in character, and is done by the outside staff in a great measure - 23,409, 23,411
There must always be a water-guard service 23,410
Customs and Excise are much more nearly related to each other than Stamps, Taxes, and Excise - - - - 23,412
Not only could amalgamation take place at the smaller ports, but Inland Revenue collectors in neighbouring towns could be abolished, and duties be placed under the Customs collector at the port - - 23,413–26
For instance, the Canterbury collector could be moved to Folkestone, the Stirling collector to Alloa, and the Bangor collector to Carnarvon - - - 23,413–26, 23,429
The saving at the smaller places would amount to some 12,000*l.* or 14,000*l.* a year - - - - 23,427–8, 23,466
There would certainly be a saving in the controlling positions, and probably it would go down lower - - - - 23,430–2
The clerical work might be amalgamated - 23,433
Is in constant correspondence with the Board - - - - - 23,435–7
But never troubles the Board if he can arrange the matter himself - - 23,438
With proper organisation does not think that amalgamation would lead to a great deal more correspondence with the Board - 23,440–1
As a general rule writes the letters to the Board himself - - - - 23,443–4
Thinks the Excise supervisors and other officers could with training undertake the Customs work as well as their own - 23,445–7
Apart from the water-guard duties upon which they could not be employed - 23,448
Thinks amalgamation would be of advantage to the Revenue in checking smuggling - 23,449
There is much petty smuggling of tobacco which is taken to Inland towns, and if the departments were amalgamated there would be a greater opportunity of watching suspected persons - - - - 23,450–6
In practice the departments do not now communicate with each other in cases of suspicion - - - - - 23,457–60
And doubts whether any Inland Revenue officer would have power to seize smuggled tobacco - - - - 23,461
But an order from headquarters would possibly put that right - - - 23,462
Believes that Excise officers in a place like Swansea are fully employed - - 23,468
There are no warehouses at Swansea - 23,470–2
In places where there are double warehouses a considerable economy would be effected by amalgamation - - - 23,473–4
At Liverpool the public has been really quiescent on the subject of amalgamation 23,475–9
In some places there would be a saving in office rent if amalgamation took place - 23,485–9

Mr. CLARKE.

Collector of Customs at Liverpool - - 23,490
Number of staff under him, altogether 851 men - - - - - 23,491–6, 23,604
Extent of the district - - - 23,497
It is not conterminous with that of the Inland Revenue - - - - 23,498
Witness controls the service at Liverpool - 23,499
And deals with all matters that he can - 23,500
Sending on the difficult cases to the Board - 23,501–3
Has had 44 years' service at many different places - - - - 23,504–5, 23,600
Has been at Liverpool two years and a half - 23,506
Thinks that the two departments should be kept separate - - - - - 23,508
The Customs is as large a service as can be worked efficiently and economically - 23,509–10. 23,602, 23,649–51
Does not think that at small ports the Customs officers could do Inland Revenue work - - - - - 23,511, 23,514
Reductions have been carried so far that Customs staff is barely sufficient to carry out the work - - - - - 23,512–4
A collector at Liverpool, Inland Revenue or Customs, should thoroughly understand all the duties of his subordinates - - 23,515–6
Does not think that one collector at Liverpool could do both Inland Revenue and Customs work - - - - - - 23,517–20
The traders he has spoken to wish things left as they are - - - - 23,521–3
113 out of the 115 warehouses at Liverpool are under the Customs - 23,524–5, 23,571–3, 23,592–5
Collects annually about 500,000*l.* at Liverpool for the Inland Revenue - - - 23,526
Does not come much in contact with Inland Revenue officers - - - - 23,527
A large number of officers in the Customs have smaller salaries than those in the Excise - - - - - - 23,528–31
The receipt of revenue is a simple matter, the difficulty comes in in the management of the business of the Port - - 23,532–3, 23,583
Does not think any loss is caused to the Revenue by having two Boards - 23,534, 23,537
Some small seizures of smuggled tobacco have been made by an Inland Revenue officer at Liverpool - - - - 23,535
For detection of smuggling, depends upon the water-guard - - - 23,538–40, 23,626
There is no want of communication between the two departments in stopping smuggling 23,541
Believes there is a thorough accord between them as regards their work - - 23,542
Has never received any complaints from traders on this point - - - 23,543
Mode in which spirits, &c. are exported - 23,544–51
Does not see any way of simplifying the process, as there must be shipping officers 23,552–3
There is no duplication of work - - 23,554–7
Is unfavourable to the suggested amalgamation - - - - 23,558, 23,649–51
No reduction of staff would be practicable in Liverpool or Bristol - - 23,559–61, 23,645
The Inland Revenue warehousing is more expensively carried on than the Customs 23,561
The Inland Revenue officers are paid more, and more officers are required by them - 23,562
When witness was collector at Bristol, the Customs took over two Excise warehouses and worked them without adding to their existing staff - - - - - - 23,563–8
Does not think that this is an argument in favour of amalgamation - - 23,569–70
Although in this particular instance the Customs were able by grouping the warehouses to avoid adding to their staff - 23,574–5
Does not believe that in small ports there are now both Customs and Inland Revenue warehouses - - - - 23,576–8
The time of his staff at Liverpool is fully occupied - - - 23,579–82, 23,591
The examination of duty-free goods is a very difficult part of their work - - 23,584–5
Has duties to discharge in connexion with quarantine - - - 23,586–90, 23,627
And many other duties for the Government 23,628–9
Has never heard any complaints from traders as to the way the Customs' business is done - - - - 23,596–9, 23,646
But has heard a trader say he preferred the Customs to the Excise - - - 23,646
Thinks if the two departments were amalgamated it would be more costly - 23,601, 23,651
The service would be too large to be worked economically - - - - 23,602
Could not properly supervise the 90 Inland Revenue officers at Liverpool - - 23,605–6

Summary of Evidence.

MR. CLARKE—*cont.*

There is no similarity between the Customs' and Excise work except as regards warehousing - - - - - 23,607–8
The Customs has no staff competent at present to perform Excise duties in a brewery - - - - - 23,609–11
Nor is the Excise staff competent to undertake Customs' duties - - - 23,612–6
Though each might in time learn the other's duties - - - - - 23,613
Each department requires special training - 23,617
The Coastguard now are not really Revenue officers, but are rather trainers for the Navy - - - - - 23,618
They do not protect the coast much from smuggling - - - - - 23,619
Smuggling is prevented by the difficulty of getting rid of the goods - - - - 23,620–4
Smuggling has much decreased in recent years - - - - - 23,622, 23,634–6
But it would increase again if the water-guard staff was not kept up - - - 23,635–6
Does not think amalgamation would lead to any saving in the clerical staff at Liverpool - - - - - - - 23,630–3
The test of spirits is the same in the Customs and the Excise - - - - 23,637–41
But the gauging is different because the Customs have to deal with full casks - 23,639
Collected 3,000,000*l.* in duties at Liverpool in 1888 - - - - - 23,647–8
Liverpool is the principal collectorship out of London - - - - 23,536, 23,650

MR. MATHESON.

Collector of Inland Revenue at Glasgow - 23,652
Number of staff under him - - 23,653
Glasgow is the largest Inland Revenue collection - - - - - 23,654–7
Extent of the district - - - - - 23,658
Has no actual control over the surveyors of taxes - - - - - 23,659–63
But receives all the taxes on notices issued by the clerk to the local Commissioners 23,660, 23,664
In the Excise the supervisors issue the notices for payment - - - - 23,664–6
The surveyors communicate direct with the Board - - - - - 23,667
All his officers are trained men - - 23,668–9
His experience extends over 40 years in the Excise - - - - - 23,670–1
Finds great difficulty in administering the Warehouse Code between the two Boards - 23,672
The difficulties do not diminish as time goes on - - - - - - - 23,880–9
There are 25 general warehouses under the Excise in Glasgow - - - - 23,673–7
And 25 under the Customs - - - - 23,678
All the dry goods are confined to the Customs - - - - - - 23,679
This is one of the grievances of the trade in Glasgow - - - - - 23,679
As if warehouses were under one department, they would be able to store their wet and dry goods in the same warehouse 23,679–80, 23,682
Very strong complaints have been made on this point - - - - - - 23,681
The trade have lost confidence in the Boards because they interpret the Code in different ways - - - - - 23,683, 23,688
They therefore appeal to the Treasury 23,683–6, 23,688
Is of opinion that the traders would be better served if the warehouses were under one board - - - - - - 23,687
But the Glasgow Warehousing Association, at a meeting last October, upon a motion to petition the Treasury in favour of amalgation, carried an amendment against it - - - - - 23,688–93, 23,893–8
This was a very representative meeting - 23,897
Believes this amendment was carried because it was thought that the trade would get better terms by keeping the two Boards at loggerheads - 23,688, 23,692–3, 23,893, 23,898–9
The Scottish malt distillers, on the other hand, resolved to petition in favour of amalgamation - - - - 23,694–5
Instances of the difficulties of working with two departments - - - - - 23,695–759
The Customs allowed certain whiskey to be exported as "Old Highland Whiskey," which the Excise refused to allow - 23,696–7, 23,710
Again, the Excise refused to allow labels with a fictitious name to be placed on spirits bottled for exportation - - 23,698–9
And they were then removed to a Customs warehouse, to be bottled there - - 23,699–706
Does not know whether this was brought to the notice of the Customs Board - 23,702, 23,707–9
These instances show the friction between the two departments - - - 23,710
Rivalry also occurs in claiming warehouses - 23,721–7, 23,825–7, 23,848–51
Inconvenience is caused by the Excise having to accept from Customs officers samples drawn from beer to be exported - - 23,727–31
The Customs officers might substitute some other sample - - - - 23,728
But does not know of such a case, and believes that Customs officers are fully as reliable as those under the Excise - 23,729, 23,731
In the case of beer exported to the Isle of Man, the Customs decline to take samples, because they treat the Isle of Man as part of the Customs system - - - 23,732–9
The Inland Revenue in consequence have to send officers specially to the quays to take the samples - - - - 23,732, 23,737–8
In the case of goods sent from Customs to Excise warehouses, a despatch has to be sent, causing delay and additional expense - - - - - 23,739–42
This could not be altered as long as there are two Boards - - - 23,743–7
There is a rivalry between the two Boards to get as much trade as possible - - 23,747–59
In the case of tobacco, which is a Customs duty, the Excise is responsible during process of manufacture - 23,759–63, 23,769–73, 23,781, 23,785–7
But the Excise has no direct interest in the prosperity of the Customs revenue - 23,759–62
Has no reason to suppose that the revenue suffers owing to this - - - 23,781–6
Thinks the cost must be increased if there are two departments doing what one could do - - - - - 23,787–90
Mode in which tobacco is dealt with when landed - - - - - 23,764–8, 23,774–80
Believes that amalgamation would lead to economy, greater efficiency, and greater trade convenience - - - - 23,790
A fourth of witness's time is taken up by the difficulties in working the Warehouse Code - - - - - 23,791–4
Is of opinion that one collector could superintend all the Revenue work at Glasgow 23,795–802, 23,816–7
Estimates that the addition of the Customs' work under the Code would add about one-fourth to his present work - - 23,803
And would fully employ his time - - 23,804
The fourth of his time now occupied in settling disputes under the Code would go to meet the additional Customs work which would be thrown upon him - 23,805
The Customs have the exclusive administration and supervision of all goods imported 23,805
This work will always have to be done by some special officers - - - 23,806–7
Duties outside the Code of the two departments - - - - - - 23,807–9
One set of officers could in six weeks learn the duties of the other - 23,807, 23,810–2, 22,821–2
The Inland Revenue preventive men might take some of the water-guard duties - 23,813–5
Is not familiar with the work of the Customs outside the Warehousing Code - - 23,818–20
The Inland Revenue furnish the Customs with some of the data for the Board of Trade Statistical Returns - - 23,820, 23,823
By uniting the Boards, the Customs Statistical Department could be entirely dispensed with - - - - - 23,823–4
Is not aware that by amalgamation the staff at the warehouses would be diminished - - - - - 23,825

MR. MATHESON—*cont.*

But some of the warehouses could then be dispensed with - - 23,825-8, 23,845-6
The time of the officers in such warehouses is not fully employed - - - 23,846-7
Thinks that all the steps taken of late years in connexion with the warehouses have been practically to abolish the two departments - - - - - 23,828-30
Under the General Code it is impracticable to maintain two departments - - 23,830
The economy would be effected at Glasgow by abolishing one collector, and also in the cost of inspection - - - 23,831
The inspection now involves duplicate work 23,831-9
The work would be more concentrated if there was one department - - 23,840
Thinks that with a consolidated department salaries might be assimilated to those of the Inland Revenue Department - - 23,841-3
And in many places where there are two Inland Revenue collectors one might be done away with - - - 23,843
In the case of coast officers of the Customs, if there are also Inland Revenue officers, one or the other could be dispensed with - 23,843-4, 23,851
This would result in an enormous saving - 23,843
A considerable saving would be effected in clerical work by amalgamation - - 23,852-6
Saving that could be effected at Newcastle by abolishing one collector, &c. - - 23,857-62
Possibly the traders would not like it - 23,863
There would probably be a great deal of local opposition in various places - 23,864-7
The more intelligent merchants in Glasgow would favour amalgamation - - 23,868-9
Theoretically the merchants would gain by amalgamation - - - 23,870-5
But the warehouse-keepers wouldobject to it 23,872-3
If amalgamation took place the terms "Customs" and "Inland Revenue" should be entirely discontinued - - 23,875-9
Witness communicates direct to his Board in London, not through the Comptroller at Edinburgh - - - 23,890-2

MR. SCOTT.

Collector of Customs at Glasgow - - 23,900
Extent of his district - - - 23,901-2
Number of staff under him - - - 23,903-6
Has served at 11 ports and has been 40 years in the service - - - 23,908-9
Has been nearly five years at Glasgow - 23,910
Thinks that it would not be advisable in the public interest to amalgamate the Customs and Inland Revenue - - - 23,912
It would be inconvenient to the public if the Customs was not kept entirely independent - - - - - 23,913-5
It is important to have a Board who thoroughly understand all the points - 23,915-5, 23,931, 23,951
The Customs officers are always on the quays - - - - - 23,923-30
Work done by the Customs in connexion with the Copyright Acts - - 23,919-21
And in connexion with quarantine, Foreign Enlistment Act, Explosives, &c. - 23,922-3, 23,932-5
All this work requires special experience - 23,936
And therefore should be kept separate - 23,937
Does not believe that the merchants, as a rule, take any interest in the question of amalgamation - - - - - 23,938-40
The Inland Revenue deal with the traders, but not the exporters and importers who go only to the Customs - - 23,941-5, 24,024
Work of the Customs with foreign consuls - 23,946-50
The two departments are quite distinct, except as regards warehouses - - 23,952-4
The whole of the Customs House officers in Glasgow are fully employed - - 23,955
If they had time they could do the duty at distilleries and breweries just as well as the Excise officers can - - - - 23,956
Has never heard any complaint of duplication of work in connexion with export of beer - 23,959
The Customs take the samples of exported beer 23,960
British beer exported is analysed by the Inland Revenue; imported beer by the Customs - - - - - 23,961
The Customs test everything that is imported 23,962
Never heard of an instance of either department making things easy for a trader with the view to bringing trade into its warehouses - - - 23,963-6, 23,973, 24,009
The Inland Revenue at Glasgow and elsewhere have been a little aggressive in the matter of warehouses - - 23,967-72, 24,009
Some difficulties have arisen in the interpretation of the Warehouse Code - - 23,974
It is very much an Inland Revenue Code and the Customs think it could be much simplified - - - - - - 23,975
There is very seldom an appeal by merchants to the Board - - - - - 23,976
And knows of only one case of appeal to the Treasury - - - - - 23,976-7
It is a great advantage to have seaport warehouses under the Customs - - - 23,977-80
If goods are sent to Excise warehouses from ships or *vice versâ* elaborate accounts called despatches are drawn up - - 23,978-9
As the Customs have to keep the original documents - - - - - 23,982-5
If goods are sent to Customs warehouses the original account is sent with them - 23,986-7
So far as warehouses only are concerned, would be in favour of consolidation - 23,981, 23,998-24,000
It would be a public advantage if all the warehouses at Glasgow were under the Customs 23,988-9
Thinks that all the warehouses at Great Grimsby could be taken over by the Customs - - - - - - 23,990-5
And that in such a case advantage would be gained by concentration - - 23,996
The same thing would probably apply to Hull - - - - - 23,997
Does not think that one collector at Glasgow could undertake all the Revenue work - 24,000
He could not take over any more work except the collection of money - - 24,001, 24,020-1
Has a great deal of correspondence with the Board in London - - - - 24,003
Has many questions of difficulty to settle on the spot - - - - - 24,002
The merchants would not be pleased if he devolved some of his work upon someone below him - - - - - 24,004-5
Has very little correspondence with the Inland Revenue collector at Glasgow - 24,006
Does not think that there is any friction between the two services in Glasgow - 24,007-8
The Customs establishments at various ports have been greatly reduced of late years, but there might be room still for a little further reduction - - - - - 24,010-8
The men in one department might be educated to do the work of the other - - 24,019
But it would take a long time for the Excise officers to learn the Customs work - 24,022
Believes that the merchants would not like amalgamation - - - - 24,023-4
Collects over 1,000,000*l.* of revenue in the year - - - - - - 24,025
Of which 200,000*l.* is for Inland Revenue - 24,025

MR. USHER.

Represents the Scottish Malt Distillers Central Association - - - - 24,026-7
Instances of inconvenience and delay caused by the Customs and Inland Revenue being separate departments - - - 24,029-60
If whiskey is sent from, say Edinburgh to Glasgow, for export, a "despatch" has to be sent about it - - - 24,030, 24,034-5
If the despatch is delayed, the goods may miss their ship - - - 24,030, 24,051-2

Summary of Evidence.

Mr. USHER—*cont.*

But their goods have never actually been stopped - - - - - - 24,050
Each department says it is not in fault, and blames the Post Office, and the responsibility cannot be fixed anywhere - 24,032, 24,036–40
The "permit" goes with the goods, and the collector has power to allow shipment upon it, but he may refuse to do so - 24,031–3
If there was only one department the responsibility for delay could be more easily fixed - - - - - - 24,040
Does not think that the delay so caused has been represented to the Board in London - 24,041–2, 24,049–50
Cannot say how many cases of this sort have recently occurred - - - - - 24,043–8
Other instances in which, having two departments to deal with, causes inconveniences - - - - - - 24,055–60
Any regulations which compelled the proper distribution of warehouses would obviate some of the inconveniences - - 24,061
And for this it would not be absolutely necessary to have only one Board - - 24,062
Many difficulties have been met by the amalgamation of the warehouses - - 24,063
The Customs warehouses at Leith are too large, the Inland Revenue warehouses at Edinburgh are too small - - - 24,059–70
The Excise give notice whenever spirit has been lost in transit, the Customs do not - 24,071–6
The regulations might be made identical in this respect - - - - - - 24,077
Thinks the Excise arrangements are more simple than the Customs - 24,077–9, 24,098–9, 24,204
Under the Excise, duty can be paid in the warehouse, but not under the Customs - 24,079–95
This might be remedied without amalgamation - - - - - - - 24,093
Has not made representations to the Board on the subject - - - - - 24,095–6
Difficulty is experienced from the different mode of interpreting the Code - - 24,100–24
Some whiskey sent to Liverpool for bottling in bond, the Surveyor of Customs would not allow to be bottled as "old" - 24,100–5
But this was due to a mistake of the Inland Revenue officials in sending imperfect and incorrect information with the whiskey - 24,106–7, 24,123
Considers, that though the Customs officer was right in refusing to allow the label "old whiskey" to be put on the bottles, he was wrong in saying that it must be declared to be three years' old - 24,108–13, 24,116–24
It was only necessary for him to satisfy himself that it was matured whiskey - 24,108
All this caused a delay of a month, which witness thinks would not have occurred had there been a single Board - - 24,126–9
Does not think that there is any want of harmony between the two Boards - 24,130
Difficulty caused by goods being sent by a mistake of their agent to Queenborough instead of London - - 24,053–6, 24,131–4
The cases witness has mentioned are all the cases the Scottish Malt Distillers Association propose to bring forward - - 24,135–42
Thinks that the revenue is as promptly and completely collected by the Excise as by the Customs - - - 24,144–6, 24,198
Thinks that amalgamation would be followed by saving of expense - - 24,145
As the number of officers could be reduced - 24,147–8
But cannot say that there would be a saving at Leith - - - - - - 24,149
If witness was managing both sets of warehouses, he would probably close one at Leith, but open another at Edinburgh - 24,150–2
There is a difficulty in closing warehouses, as they are private property - - 24,153–5
Does not think that there is much duplication of work, apart from the warehouses, in consequence of there being two Revenue departments - - - - - 24,156–61
The time of the Inland Revenue officers is fully employed - - - - - 24,162–3
At Edinburgh and Leith thinks the only saving would be by the abolition of one Collector - - - - - 24,164–5
Merchants see the Collector personally - 24,166
But not very often - - - - - 24,174–7
Does not know whether the time of the Customs Collector at Glasgow is fully occupied - - - - 24,167, 24,169
But thinks that one Revenue Collector there would be sufficient - - 24,168, 24,170–4, 24,177
The traders to whom he has spoken would rather be under the Excise than the Customs - 24,178–80, 24,185–6, 24,194, 24,202–4
They have more dealings with the Excise than with the Customs - - - 24,187–93
They think that economy would be effected by amalgamation - - - - - 24,181
And that they would find it more convenient - - - - - 24,182
Neither of the Boards are very prompt in answering letters - - - - - 24,183–4
Has no experience of the small ports of Scotland - - - - - 24,195–6
Does not think that there is a rivalry between the two departments - 24,197, 24,199–201
Nor any laxness on the part of the Excise in collecting revenue - - - - 24,198

Mr. BROWN.

Is a wholesale spirit merchant in Glasgow - 24,206
Is very much in favour of amalgamation of the Customs with Inland Revenue - 24,211, 24,275–6, 24,390–5
Deals with both departments - - 24,212
There is a great delay in the despatches going from the Custom to the Excise, and *vice versa* - - - - - - 24,213–5
Explains the process of sending goods for export from (say) Newry to Glasgow - 24,214–31
Cannot ship without the despatch, but if under the Excise the despatch would come with the goods - - - - - 24,216
Now it has to go through the Customs, to the Customs in Glasgow - - - 24,217
Spirits have to lie on the quay in Glasgow while the Customs take samples away for observation - - 24,231, 24,242, 24,395–418
And the merchant has to pay quay rents all the time - - - - - - 24,419–29
If under the Excise, they would take them into a warehouse at once, and take the sample for observation at the same time - - 24,232
Thinks this would save work - 24,442–50, 24,452–3
This could be remedied without amalgamation of the Boards - - - - 24,430–5
To claim goods through the Customs now takes from ten days to three weeks, under the Excise it could be done in a fortnight - - - - - - 24,234
Thinks that the Excise do their work better than the Customs - - 24,235–6, 24,380, 24,473
The Customs are imperfect, slow, and behind the times - 24,237–41, 24,246, 24,250–1, 24,362, 24,376
Complains of both rules and men - - 24,247
Cannot suggest how the Customs rules should be amended - - - 24,240
Even if the rules were altered does not think the Customs would do the work - - 24,248
The Excise are a select class of men - 24,249
Delay is caused by the officers having to consult two Boards - - - 24,252–4
As an instance of this cites a case of an Excise officer refusing to allow a label to be put on a bottle, as he said the Customs would not pass it - - - 24,255–6, 24,263
This was a mistake on the part of the Excise officer, which caused three weeks' delay 24,257–60, 24,264–6
If there had been only one Board there would have been a quicker anwer - 24,260–1

MR. BROWN—*cont.*

But is not sure that in this instance the Customs Board was consulted - 24,262, 24,267–8
A new rule ought to be laid down, so that an officer could not read his instructions wrongly - - - - - 24,271–6
The Code should be made clearer - - 24,277–9, 24,281–94
The Code should be revised every ten years 24,279
The present Code has not been in operation ten years - - - - - 24,280
New officers ignorant of rules &c., cause delay 24,295–7
Custom House Bonds are more expensive than Excise - - - - - - 24,302–3
The number of officers might be reduced by amalgamation - - - - - 24,304–5
Inland Revenue officers are not sufficiently worked - 24,306–8, 24,310–1, 24,323–4, 24,381–2
Neither Boards work their men fully - 24,309, 24,441
They should work longer hours - - 24,312–22
Does not know that amalgamation would bring this about - - - - - 24,441
The Supervisors of Excise have too much to do, the officers under them too little - 24,325–41, 24,388–9, 24,439, 24,451
Does not think the warehouses in Glasgow are too numerous, but some of them are too large - - - - - 24,342–4
Left off doing work through the Customs, because he could not get his work through - - - - - 24,236, 24,345–8
But never represented his difficulties to the Board - - - - - 24,349–56
Thinks that both departments look equally well after the revenue - - - - 24,358–9
More work could be got out of the Excise than out of the Customs, and at less cost - - - - - 24,360–7
The Excise officers are more vigilant - 24,368
If he wanted to get something out of Government he would go to the Customs, but as he only wants to get work done he goes to Excise - - - - - 24,369–76
The Excise gauges a cask more strictly than the Customs - - - - - 24,373–5
Thinks that the Excise rules are better drawn than the Customs - - - 24,377–9
The Customs have improved of late years, but not so much as the Excise - - 24,384–7
Thinks that amalgamation would result in a saving of expense to both Government and the trade - - 24,392–5, 24,436–7, 24,440
Instance of duplication of work - 24,454–63, 24,465–6
Thinks that the majority of traders prefer the Excise - - - - - 24,467–8
And are in favour of amalgamation - 24,469

MR. BARRETT.

Inland Revenue collector at King's Lynn - 24,474
Staff under him and size of his collection - 24,475–9, 24,512–3, 24,516–8
The four warehouses at King's Lynn are under the Customs - - - 24,482–4, 24498
Customs staff at King's Lynn - 24,481, 24,484, 24,516–8
No duty-paying imports at King's Lynn - 24,485, 24,540–1
But all imports have to be searched - 24,486, 24,542–7, 24,550–1
And returns sent to the Board of Trade - 24,548–9
Thinks there would be an advantage in amalgamation, where officers of the two departments are doing very similar duties close to each other - - - - - 24,488–9
And that a reduction of staff would result - 24,490, 24,501
Witness collects 200,000*l.* a year - - 24,490
The Customs collector collects only 12,000*l.* 24,490
Witness could easily undertake the Customs warehouse work - - - - - 24,491
The other Customs duties are performed by officers similar to those under the Inland Revenue - - - - - 24,492–3
Except the boatmen, &c., who are of a lower class - - - - - 24,493–5
Thinks all the revenue work at King's Lynn could be controlled by one Collector - 24,496
Has heard no complaints from traders - 24,497, 24,538
Comes very little into contact with the Customs - - - 24,499, 24,533–6
But the two departments work quite harmoniously together - - - - 24,500
Has a great deal of correspondence with the Board in London - - - - - 24,537
The officers under him are fully occupied - 24,502–5
But could throw a small amount of further work upon them - - - - - 24,504–6
And could therefore undertake some of the Customs revenue work, and slightly reduce the present Customs staff - 24,507–11, 24,514–5, 24,519–20
One collector could be reduced - - 24,521–4
But he might require occasional help from an officiator - - - - 24,525
Officiators are men who receive full pay when employed, and at other times draw only a small salary - - - 24,525–32
There are now three officiators in King's Lynn collection - - - 24,552
Has been 30 years in the service - - 24,539

MR. RIDDELL.

Customs Collector at King's Lynn - 24,553–4
Holds other appointments under the Board of Trade - - 24,555–61, 24,668–70, 24,687–91
Which takes up a considerable portion of his time - - - - - 24,562, 24,693
There is no officer of Government at Kings Lynn to whom this work could be given except the collector of Customs or the collector of Excise - - - 24,694–700
Number of staff under him - - 24,563–5
The collection of revenue and the warehouse work are the only Customs duties similar to Excise duties - - - 24,567
The preventive service is not similar - 24,567
The Coast Guard protect the coasts - 24,568
The Customs have practically no official relations with the Coast Guard - - 24,569–71
Does not think that an entire amalgamation of the Customs and the Excise would be advantageous or possible - - 24,572, 24,632
The only thing common is the warehousing - - - - - 24,573
All the warehouses at Kings Lynn are under the Customs - - - 24,574–6, 24,599
Does not think that one collector at Kings Lynn could do all the revenue work with the present staff - 24,577–8, 24,583, 24,671–82
The collector of Customs ought to be within call continually - - - - 24,579–81
The duties he performs are of great value in the protection of the revenue - - 24,580
He and his staff are fully employed - 24,582, 24,649–65
At times there is a rush of ships and the Customs staff then has to work overtime - 24,650–4
The Hamburg trade has rather declined, and if it does not increase again it is proposed to slightly reduce the Customs staff - 24,655–63
The collector of Customs is also surveyor - 24,584–5
The Inland Revenue collector receives a higher salary than the Customs collector - 24,586
The salaries of the subordinates of the two departments are about the same - 24,587, 24,589
But the boatmen are of course of a lower class - - - - - 24,588
Does not think that an officer could be a Customs officer one day and an Excise officer the next - - - - 24,591
The men doing duty on board ships must be a special class - - - - 24,591–2
The clerks might be able to be interchangable - - - - - 24,593
The duties as regards warehouses are similar - - - 24,594, 24,600–1, 24,634

Summary of Evidence.

Mr. RIDDELL—*cont.*

Has received no statement from traders on the subject of amalgamation - - 24,595–6
Has heard that at Boston, where the warehouses are under the Inland Revenue, traders have been inconvenienced by having to wait for an officer to be found - 24,597–9
It would probably be an advantage if the warehouses at Boston were transferred to the Customs - - - - - 24,666–7
Any question of the interpretation of the Warehouse Code at Boston would be referred to an Inland Revenue collector or to the Board - - - - - 24,602–3
The Customs could do the warehouse work at Boston with their present staff - - 24,604–5
Is in favour of the warehouses being administered by one department in each place - - - - - 24,606–8
The warehouses are virtually consolidated now - - - - - - - 24,635
The duties being performed under exactly the same Code - - - - 24,636
Though not under the same department - 24,637–8
Sees no advantage in providing that only one set of officers should do the warehousing work - - - - - 24,639–43
Does not believe there has been any rivalry between the departments in order to keep traders - - - - - - 24,609–10
The officers of the two departments do not mix much together - - - 24,610–3
But they would immediately confer together if any difficulty arose - - - 24,614
If any difficulty arose in the interpretation of the Code, witness would communicate with his own Board - - - 24,615
But the Code is so simple that he does not see how a difficulty could arise - - 24,616–7
Has had no complaints from traders with reference to the Code - - - 24,618–9
A collector of Customs must have had some technical training in regard to shipping - 24,620–6
Some of the duties he performs for the Board of Trade, also involves some shipping knowledge - - - - - 24,627–31
An officer of Customs would do Inland Revenue work easier than an officer of Inland Revenue would do Customs work 24,632
Witness sometimess goes on board ship to superintend the work - - - 24,644–5
His work is principally supervision and could not be done by a subordinate - 24,646–8

Mr. MOLINEUX.

Chief Inspector of Excise - - - 24,702–4
His work is purely confined to Excise - 24,705–8
Is familiar with Sir A. West's views on the amalgamation of the Customs and Inland Revenue Departments - - 24,709–10
Believes amalgamation to be perfectly practicable - - - 24,711, 24,716–7, 24,795
The officers of either department could do the work of the other, except the boatmen 24,712
Is not fully acquainted with the work done by the Customs for the Board of Trade, but does not believe that it is very difficult or intricate - - - - - 24,713–5
Thinks that amalgamation would be economical - - - 24,718, 24,725–30, 24,795
There are 52 collectors of Customs at ports, in 23 of which there are alsoInland Revenue collectors - - - - - 24,718
For the purposes of collecting revenue in most of these 23 places, two collectors are unnecessary - - 24,718–21, 24725–30
Sees no reason why at these places the Inland Revenue collector should not also undertake the duties performed by the Customs for the Board of Trade - - 24,722–3
Thinks it may be necessary in the event of amalgamation to re-arrange the Excise collections so as to retain the collector in the port as much as possible - - 24,724
Thinks that amalgamation would result in an immediate economy of from 12,000*l.* to 15,000*l.* - - - - 24,731–4, 24,747
Cannot give an opinion whether a controller and deputy could take the place of the present Boards - - - - 24,735–9
But thinks that a Board would have greater authority with traders, and taxpayers - 24,740–4
Desires to see a complete fusion of the two Boards upon terms of equality - - 24,745–6
This would not cause the slightest inconvenience to traders - - - 24,748–9
There would be an economy in amalgamating surveyors of Customs with supervisors of Excise - - - - 24,749–50, 24,758
Surveyors of Customs have much higher salaries than supervisors of Inland Revenue - - - - - 24,752
Average salaries of Customs officers (excluding boatman) is about 206*l.* a year, and of Inland Revenue about 176*l.* - 24,753–7
Amalgamation would be for the convenience of traders - - - - 24,759, 24,795
Present system leads to delay and inconvenience - - - - - 24,759–60
If one department kept its warehouses open longer than the other this might lead to complaint - - - - - - 24,761–4
This is a matter of administrative detail - 24,763
There is a spirit of rivalry between the two departments which acts unfavourably to the interests of the Revenue - - 24,765–8
But believes that each department does its work faithfully and truly - - 24,766–7
The Inland Revenue out-door service are constantly comparing their salaries and terms of service with those of the Customs, and this causes discontent - 24,769–78, 24781, 24,805–7
Which would be done away with in the event of amalgamation - - 24,772, 24,782, 24,808
Does not think that amalgamation would result in levelling up - - - 24,779–80
With an amalgamated Board there would be less delay in dealing with applications from traders - - - - - - 24,783–5
As in every deviation from the Code it is necessary to consult both Boards - - 24,783–6
This entails a good deal of clerical labour - 24,787, 24,793–4
Amalgamation might therefore enable the clerical staff to be reduced to some extent- 24,788–9
But the letters are not very numerous, perhaps 150 a year - - - 24,790–3
Has frequently heard merchants express an opinion in favour of amalgamation - 24,796–7
Is strongly in favour of amalgamation - 24,798
There are some difficulties in the way, especially in the time of transition - 24,798
It would be necessary to carry out the changes gradually and with judgment - 24,798
No difficulty as regards the warehousing work which is now identical - - 24,801
But some difficulty as regards the waterguard and the work done by the Customs for the Board of Trade - - - - - 24,802–3
The Inland Revenue have to do work for other departments - - - 24,804
Previous amalgamations have resulted in considerable savings - - 24,809, 24,814, 24,816
Was not aware that within 14 years after the amalgamation of Stamps and Taxes in 1835, the amalgamated services cost 15,000*l.* more than they did before - - 24,813–4
The surveyors of taxes are perfectly distinct from other Inland Revenue officers - 24,810
Owing to the amalgamation of Stamps and Taxes with Excise there has been a saving in the highest grades - - 24,811–2

Mr. WILLS.

Tobacco merchant in Bristol and London - 24,818–20
One bonded factory in Bristol controlled by the Customs - - - - - 24,820–1
And one free factory controlled by the Excise - - - - 24,820–1
Manner in which tobacco imported into this country is dealt with - - - 24,822–3
Unmanufactured tobacco is taken charge of by the Customs and deposited either in a Customs or Inland Revenue warehouse - 24,822

Mr. WILLS—*cont.*

Imported manufactured tobacco is controlled by Customs - - - - 24,822
If it contains nothing but tobacco and 35 per cent. of water it pays a duty of 4*s.* per pound 24,823
If it contains sweetening matter it pays a duty of 4*s.* 6*d.* a pound - - 24,823
Leaf tobacco pays a duty of 3*s.* 2*d.* a pound - 24,845
All manufactories where sweetened tobacco is dealt with are controlled by the Customs 24,840–4
The bonded factories were placed under the Customs because the Customs had to do with foreign manufactured tobacco - 24,919–20
In manufacturing tobacco under bond anything that is not prejudicial to health may be added - - - - 24,845
And the higher duty is paid on the net weight of the manufactured article - 24,846
The Customs, so far as a bonded factory is concerned, are not required to know anything about chemistry or analysis - 24,847, 24,886–7
Their duty is simply to see that no tobacco leaves the factory that has not paid duty - 24,848, 24,852, 24,882–4
They are responsible for the weight only - 24,850
The Excise are responsible in their warehouses for the purity of the tobacco - 24,850
An Excise officer would be able to do all the duty in a Customs' manufactory of tobacco - - - - 24,851
But in an Inland Revenue tobacco warehouse the Excise Officer requires to have a knowledge of chemistry - - - 24,851
In a bonded factory the Customs practically do not check adulteration owing to the higher duty payable - - 24,853–4, 24,856–68
The Inland Revenue in their warehouses are obliged to check adulteration, because nothing may be added except water - 24,855, 24,868, 24,877–8
In the manufacture of sweetened tobacco in bond, the duty is not paid till the article comes out of bond - - - 24,869
In the other manufacture it is paid before it goes into the warehouse - - 24,870
There would be no inducement to adulterate tobacco in a Customs bonded factory with cabbage-leaf or such things - 24,871–6, 24,888-92, 24,928
If the Customs bonded factories were placed under the Excise, their duties and practice would be identical with those now performed by the Customs - - - 24,879–80
Nothing but tobacco would be allowed to go into a Customs bonded factory - - 24,881–3
The manufacture of snuff has to be scientifically watched to guard against adulteration - - - - - - - 24,929–35
The Customs have to protect the Revenue against smuggling - - - - 24,823
There is a great deal of smuggling of tobacco in small quantities - - - 24,283–8
The supervision over smuggling would be better if there was only one department - 24,828, 24,897, 24,940
Thinks there is a disadvantage in having a division of Revenue labour - 24,828, 24,893
If the officers were under one head the work would be done more efficiently and more economically - 24,828–9, 24,894–6, 24,915, 24,936, 24,946–7
As the heads of departments could be reduced - - - - 24,829
The Code of Revenue law outside the warehouses is not identical - - 24,830–2
One collector could control all the Revenue work at Bristol - - - - 24,833–4
He would want a good chief clerk - 24,835, 24,916–8
There would be a great simplification of work if it was all under one department - 24,836, 24,897, 24,925, 24,946
There might be a little difficulty at first until the officers get to know the work of both departments - - - - 24,837
It would be a great convenience to his firm if there was only one head to deal with - 24,838–9, 24,924, 24,936
But they have not suffered from the fact that there are two departments - 24,937, 24,943
There is always a friction between two departments whose duties clash - - 24,898–900
Does not think the rivalry between the Customs and Inland Revenue is beneficial to the Revenue - - - 24,899, 24,942
Would only carry the amalgamation out so far as the heads—collectors and their staffs—are concerned - - - - - 24,901
The duties of a gauger, landing waiter, &c., must always remain - - - 24,902
But there are many matters which might be interchangeable amongst the under officers - - - - - 24,903–5
And in time there would be a saving all through the ranks - - - 24,906
In small ports the saving would be greater than in large - - - 24,907–9
Has had a large experience of the working of both departments - - - 24,910–11
Has received great courtesy and assistance from both - - - 24,912–3, 24,945–6
And has no complaint, whatever, to make of either - - - - 24,913–4, 24,943–6
And cannot point to any disadvantage except that which practically comes from two people doing one person's work - - 24,944
Does not think that the trade have experienced any prejudicial delay owing to having to deal with two departments - 24,926–7, 24,943
Thinks that merchants at Bristol would be in favour of amalgamation - - - 24,938
But does not believe that any representation upon the subject has been made to Government, through the Chamber of Commerce or otherwise - - - - - 24,939
Believes that the more departments with kindred duties are consolidated, the better and cheaper the work will be done - - 24,948
Instances the case of railway amalgamation - 24,936, 24,952–5

Mr. BIGGS.

Represents the firm of Lister and Biggs - 24,956
Who have experienced inconvenience from different ways in which Customs and Inland Revenue deal with spirits of wine 24,957
The inconvenience arises from the Customs mode of gauging a cask - - - 24,958
Sometimes they gauge a cask to contain five gallons less than it really does - - 24,958
Then a rectifier, having paid duty on the quantity gauged, takes it and methylates it and gets a drawback on the full contents as computed by the Inland Revenue 24,958
And in consequence receives back five 16*s.* more duty than he has paid - - 24,958
The witness taking the spirit under bond gets no drawback - - - - 24,958
And, therefore, is to the above extent worse off than the rectifier and cannot compete with him - - - 24,958, 24,980
Witness does not care about the departments being amalgamated - - 24,961 24,986
But wants the rules for arriving at the contents of casks to be the same - 24,959–61, 24,986
When it is a case of low duty it does not much matter, but when the duty is 16*s.* 6*d.* a gallon it is of importance - - 24,960
The Customs plan is to gauge - - 24,962–3
The Inland Revenue is to empty the cask and weigh - - - - 24,962
Sees no difficulty in the Customs adopting the rule of the Inland Revenue - 24,959, 24,964–6
This should be the rule, especially in the case of strong spirits paying a heavy duty 24,966–8
This would get rid of the difficulty and inconvenience - - - 24,969
Has corresponded with the Customs and Inland Revenue on the subject, but practically with no result - - 24,970–2, 24,987
The difficulty would be met by a rule that no one should get drawback on more gallons than he has paid duty on - - 24,974
But this would scarcely be practicable as the rectifier mixes the spirit with his duty paid stock and could not identify it - 24,974–6
The Customs would agree that they cannot gauge accurately - - - 24,978
Casks can be "prepared" for gauging by having thick staves inserted in - - 24,977–83
The whole of this methylated spirits business should be done in bond - - 24,973, 24,984–5

Summary of Evidence.

Mr. HUTCHISON.

Is a shipowner in Glasgow - - - 24,988
Has more dealings with Customs than with the Excise - - - - - 24,989
Considers that the Customs are much more amenable to the common sense view of the trade than the Excise are - 24,989, 25,025
His firm are the largest carriers of wine into Scotland from foreign parts - 24,990
The constructive warehousing allowed by the Customs saves a great deal of trouble 24,991-2
Would be very sorry to see the present state of things changed - - - 24,993
The Customs give them every facility - 24,994
Their trade is largely through trade with other parts of the country - - - 24,995
The obscuration on wines, &c. has to be taken in all cases whether under Customs or under Excise - - - 24,996
It would be very inconvenient if Excise officers not accustomed to the duty came down to work wine cargoes - 24,999, 25,046-7
Instance of inconvenience caused by the Excise raising a difficulty in the case of brandy sent to Edinburgh "to order" and calling upon the Edinburgh carters to take out a licence to sell spirits - 25,000-23
This was over zeal on the part of the Excise, as the Edinburgh carters were merely conveying them to a a warehouse "to order" until the consignee claimed them - - - - - 25,003-23
It is a common practice to send goods in this way "to order," and the Customs would have recognised it - - 25,000-23
Thinks that the stamps and taxes might be dealt with by the Post Office - - 25,027-8
And that the Customs might undertake all other Revenue, the Excise ceasing - 25,029-31
Thinks that there should be one officer of Revenue in Glasgow - 25,032-4, 25,038-9
All the Glasgow traders he has spoken to are of opinion that it would be better to retain the Customs than the Inland Revenue - - - - - 25,035-7
In Glasgow he deals practically with the Customs only - - - 25,040-1
And in towns outside Glasgow with the Excise - - - - - 25,040-1
Does not think the Customs officers in Glasgow could perform more work than they do at present - - - 25,042
But the collectors could - - - 25,043-5
The Customs officers are very active - 25,048
Constantly has to appeal to the collector of Customs who thoroughly understands the business - - - - 25,049-51
Would deprecate having to go before a man who did not understand the business - 25,052

Messrs. HUNTER, CUNNINGHAM, CROWE, and WEBSTER.

Represent supervisors, first-class officers, second-class officers, and assistants of Excise - - - - - 25,053-7
Responsibility, nature, and extent of their work - - - - - 25,058-9
Working hours are very irregular - 25,058-9
Main grievances are that both the supervisors and officers are unnecessarily subdivided into three classes - - - 25,059
Wish a service scale to be granted to both grades, rising by seniority to the maximum - - - 25,061, 25,067, 25,109-14
The officers should have a maximum salary equal to that of lower division clerks 25,061, 25,149
The supervisors should have a maximum salary equal to that of a higher division clerk, or a surveyor of Customs or of Taxes 25,061, 25,149
To a large extent supervisors do the same kind of work as the surveyors of Taxes - 25,062-3
Promotion has been very much stopped owing to the change from a malt to a beer duty rendering higher officers unnecessary - - 25,064-6, 25,071-3, 25,077-8
The grade of supervisors should continue to be distinct from that of officers - - 25,068-70
Difference of remuneration for similar kind of work performed by indoor and outdoor officers - 25,074-6, 25,140. 25,149, 25,290-2
In the reorganization of 1887 many upper appointments were abolished, and the size of some of the districts in charge of supervisors were increased - - 25,077-85
A district is either a first-class or a second-class district according to the personal position of the supervisor in charge - 25,085-90
The Board have power to change first-class districts into second, and *vice versâ* - 25,085, 25,092-100, 25,107-9
There is no necessity for these distinctions - 25,100
There is practically no difference between the duties of a first-class and a second-class officer - - - - - 25,060, 25,111
Promotion from a second-class to a first-class supervisorship is by seniority tempered by fitness - - - - - 25,101-6
Propose a scale of salaries for officers commencing at 80*l.* and rising by 5*l.* to 100*l.* - - - - - 25,115-8
The salaries now commence at 50*l.*, rising in six years to 65*l.*, with an allowance of 2*s.* a day whilst actively employed, which adds on about 30*l.* a year - - 25,115, 25,119-36
The officers suggest that they should go on by regular increments to 190*l.*, and then, if fit, to 250*l.* - - - 25,136-9
The diminution of higher appointments and the consequent slowness of promotion is one of the principal points in their case - 25,142-7
There is discontent and dissatisfaction permeating the service from end to end - 25,148-52
Have not sufficient data to enable them to calculate what the cost of carrying out their suggestions would come to - 25,153-4
The Board have stated that a general increase of salaries would amount to about 150,000*l.* on the mean and 300,000*l.* on the maximum cost of the outdoor Excise service - - - - - 25,155-7
But witnesses do not think that it would be so large - - - - - 25,158-9
They estimate that it could not at any time exceed 120,000*l.* a year - - - 25,159
And that in the first year it would probably not exceed 20,000*l.* - - - 25,159
Do not think that it would be good policy to lower the status of the service by putting the incoming men on a lower salary - 25,160-1
Absence of rewards for good service - 25,162-3
The divisions in the lower or charging grade are purely artificial - - - 25,165-6
An assistant whilst officiating for an officer does exactly the same work as an officer would - - - - - 25,167-72
If there were collusion between the officers and the brewers, &c. the Revenue could be greatly defrauded - - 25,173-5, 25,183-7
Until or unless checked by a superior official 25,173, 25,176-82, 25,187
It is the business of the supervisor to be responsible for the proper charging, &c. of the officers in his district - - 25,188-93
But he cannot check the basis of the change unless he visits the brewery, &c. immediately after it is made - - 25,194
Think that travelling expenses to and from residences should be paid - - 25,195-8
And that some allowance should be made for loss of prospects since they entered the service - - - - - 25,200-7
Discontent must tend to a perfunctory discharge of duty - - - - 25,207-10
The horse allowance, 40*l.* for the officers and 55*l.* for the supervisors, is not sufficient - 25,211-20
Some of the younger men amongst the assistants are allowed to enter the indoor service as clerks - - - 25,222-4
The assistants should be allowed an annual increment - - - - - 25,225-32
They entered the service understanding that they would be promoted in about four years - - - - 25,228-30

MESSRS. HUNTER, CUNNINGHAM, CROWE, and WEBSTER—*cont.*

Many of them now will serve from 10 to 12 years before promotion - - - 25,232

The triennial increment of 7*l.* 10*s.* is only half the increment given to lower division clerks and not quite half the annual increment given to boy clerks - - 25,232

The assistants are sometimes unemployed from 100 to 175 days in the year - - 25,233–5

Their average hours when employed are not less than eight - - - 25,236–8

If an assistant is employed for a second class officer he only receives 1*s.* a day for horse allowance - - - - 25,239–54

Though he does exactly the same work as the second class officer who receives 40*l.* a year horse allowance - - - 25,239–54

And an assistant drawing a fixed salary of 95*l.* a year is allowed nothing for horse allowance whilst officiating as second class officer - - 25,239, 25,241, 25,243–51

All the assistants on 95*l.* a year are not employed all the year round - - 25,256

On an average some of them would be unemployed for 60 days in the year - 25,257

List of licenses the outdoor officers have to to look after - - - - - 25,258–65

They have to do very delicate work in connexion with ascertaining whether the sureties for bonded warehouses, &c., are really possessed of the necessary amount - 25,266–71

But they would not be called upon to pay any loss from the default of a surety - 25,271

They think that officers of less than 10 years' service should have 21 days leave, and officers of more than 10 years' service 28 days - - - - 21,271–3

In consequence of the irregularity of their hours they are unable to supplement their incomes by outside work - - 21,273–7

The sum of 5*l.*, allowed them for having to provide a room for official business, is not sufficient - - - - - 21,278–85

MESSRS. ANDERSON AND FISHER.

Represent the second class Inland Revenue Inspectors - - - - - - 25,293–5

Their salaries commence at 380*l.*, rising by 10*l.*, a year, to 400*l.* - - - 25,296

They pass through the various ranks of the service - - - - - - 25,297

And enter their present class by examination from supervisors - - - - 25,298–9

There are 19 inspectors - - - 25,300

Their duties are not confined to Excise - 25,301–6

They come immediately below the first-class inspectors of Excise - - - 25,306

The minimum of their class is 380*l.*, and the minimum of the first-class is 550*l.* - 25,307–10

The maximum is 400*l.* and 650*l.*, respectively 25,311

The promotion is usually to a collectorship and from that to a first-class inspectorship 25,312–6

Duties of second-class inspectors - - 25,317–22

Duties of committee clerks and principal clerks - - - - - - 25,322–7

Who act too much as go-betweens between the Board and the inspectors - - 25,366

These officials receive salaries of from 600*l.* to 800*l.* a year - - - - 25,327, 25,329

And deal with routine papers, the inspectors dealing with the important papers - 25,326–30, 25,349

They also are now taking all the secretaries posts - - - - - - 25,330

The committee clerks were introduced in 1887 - - - - - - 25,330–2

The inspectors do skilled work and get less pay than the committee clerks who do routine work - - - - - 25,388

The inspectors seldom come into contact with the Commissioners - - - 25,330

Of the 16 officials between the inspectors and the Commissioners, only one, the Excise Secretary, is a practical man, familiar with all the duties of his position - - 25,333–6

The inspectors were formerly more freely promoted to the secretariat - - - 25,337–8

Would reorganise the departments of the secretary and chief-inspectors, so that the superintending inspectors should take their papers to the Board - - - 25,339, 25,341

Considers that there is no necessity for both the indoor and the outdoor staff - - 25,340

The outdoor could well perform the duties without the chiefs of the indoor department, but the indoor could not get on without the outdoor - - - 25,341

Think that the salaries of their class should commence at 450*l.* rising to 500*l.* a year by 20*l.* - - - - 25,341–2

Joined the first-class inspectors a year ago in petitioning the Board for an improvement in their position - - - 25,343

The first-class inspectors were then given an increase of 100*l.* a year to their initial salaries - - - 25,310, 25,343

But the second-class inspectors have received no reply to their petition - 25,343–4, 25,346, 25,355–6

Think that by the reorganisation they propose a saving of some 4,000*l.* a year would result - - - - - - 25,345

With which the salaries of their class could be sufficiently raised - - - 25,345

Promotion now is much slower than formerly - - 25,346–7, 25,372, 25,382–4, 25,388

Under the old system they would have been better off than they are now - - 25,374–81

Believe that in other classes of the Civil Service compensation has been given for loss of prospects - - - - 25,348

In the late reorganisation there was not a single higher division clerk in the indoor branch who did not get an increase of salary - - - - - 25,349

In the outdoor branch on the other hand 12 collectorates and two inspectorates were abolished - - - 25,349

The saving 30,000*l.* a year was obtained from the outdoor department - - 25,349

The inspectors want a closer relation between them and the Board - - - 25,350–4

If they did some of the committee clerks' work, the amount of registration, &c. could be materially reduced - 25,354, 25,366–8

Position of committee clerks in the Inland Revenue and Customs respectively - 25,357–64

Witnesses were anxious to bring sample papers to show the nature of the work done by themselves and by the committee clerks, but the Board would not allow them to do so - - - - 25,365

Witnesses represent 18 out of 19 second-class inspectors, but not the first-class inspectors - - - - - 25,369–70

Think that their increment should be more than 10*l.* a year - - - - 25,384–7

MESSRS. BLAKE AND GOUGH.

Represent the Surveyors of Taxes - - 25,389–90

Their grievance as to salary has been partially remedied since their statement was sent in - - - 25,391, 25,410–11, 25,479

But they still think that the difficulty and delicacy of their work has not been fully recognised - - - - 25,391, 25,431

Present scale of their salaries - - 25,412–21

All the posts from the chief inspector downwards are open to them - - - 25,422–8

Collectorships are not open to them, as those appointments are in the Excise Department, from which the Surveyors of Taxes are quite separate - - - - - 25,429–30

They consider that in important districts their salaries are still not high enough - 25,432–7

Contend that their duties are quite as important as those performed by committee clerks and principal clerks - 25,438–9, 25,448

Important nature of their duties 25,439–46, 25,504–6

Summary of Evidence.

MESSRS. BLAKE AND GOUGH—*cont.*

They consider that the important and confidential duties done by surveyors' clerks ought not to be entrusted to men engaged on small weekly wages - - - - 25,391
But know of no instance of their having betrayed confidence - - - - 25,500–4
They suggest that a clerk attached to important districts should receive increasing wages up to 40*s.* a week, and then, after passing a qualifying examination, should be allowed to rise to 150*l.* a year, and be permanently established - 25,391, 25,395, 25,398. 25,401–3
Thirty shillings a week is the maximum the principal private clerk gets - - 25,394
These clerks are not established officers, but are continuously employed subject to a week's notice on either side - - 25,336–7
All the principal districts, about 80 or 90, have two of these clerks - - - 25,399–400
Have not calculated what the cost of their proposal would come to - - - 25,404
Their object is to obviate the difficulty of a clerk leaving at a week's notice, and their being unable to obtain anyone to take his place - - - - - - 25,404–5
Not more than 100 clerks would be affected by the change - - - - 25,406
Work done by these clerks - - - 25,407
They know all the assessments to income tax of the various tradesmen in their towns - 25,408–9
Think that the amount of leave—28 days—allowed Surveyors of Taxes should be increased - - - - - 25,449–69
And that some arrangements should be made for carrying on their duties during their absence - - - - - - 25,450–3
Now the work accumulates while they are away - - - - 25,451–3, 25,467
As a rule they are unable to take the 28 days continuously - - - - - 25,454–5
Some parts of the year are slacker than others - - - - - - 25,456–7
Average day's work at easiest time is seven hours - - - - - - 25,458
Do not know whether, if length of leave was increased, number of surveyors would have to be added to - - - - - 25,465
Surveyors work seven, eight, and ten or more hours a day - - - - - - 25,470–6
Think that surveyors should have their salaries increased in the same way as clerks in Somerset House had theirs increased when placed upon seven hours' scale - - - - - - 25,477
Suggest an improvement in the mode of keeping parochial ledgers which would effect an economy - - - - - 25,480–5
Have not officially made this suggestion to the Board - - - 25,481, 25,485
Think that chief inspectors' department should have entire control of questions relating to Income Tax - - - - 25,486–92
And that no part of this duty should be performed in the secretary's office - 25,486–92
Suggest an alteration in the mode of dealing with "Form 48" - - - - 25,493–5
And with reports on schedules - - 25,496–7
And with the Valuation Act and assessments on public companies - - - - 25,498
Have found boy clerks in some cases most useful - - - - - - 25,392, 25,499

MESSRS. CUBBIN, SYMONS, AND DEVEREUX.

Represent the Customs Examining officers in the Port of London - - - 25,508
Think that their salaries should rise from 110*l.* by 10*l.* to 350*l.*, no officer attaining a higher salary than 220*l.*, unless thoroughly fit - - - - - 25,509, 25,544–56
In 1882 there were 75 surveyors immediately above them, but that number has since been reduced to about 50 - - 25,510–5, 25,528
Consider that this constitutes a breach of contract - - - - - - 25,540–4
This is owing to the amalgamation of the outdoor and indoor departments - - 25,511
Numbers of first class, second class, and assistant examining officers - - 25,516–8
In 1882, when the amalgamation took place several officers joined the outdoor service on the understanding that a certain establishment would be maintained, but this has been since reduced and their prospects injured - - - - 25,519–21, 25,540–4
These officers were allowed two months to learn the outdoor duty - - - 25,522–3
It takes at least six months to learn gauging 25,524–7
The establishment now is composed of two classes, the old outdoor men, and the clerical officers - - - - - 25,529
Recently there have been one or two cases of an officer being promoted to a collectorship 25,599–601
The old outdoor men complain that if their original establishment had been left, many of them would now be surveyors - 25,529, 25,534
The indoor men complain that the 75 surveyorships promised them have been cut down to 50 - - - - - 25,529
Every section of the department has a grievance, owing to the stagnation of promotion 25,529
The amalgamation has not secured the good will of the officers - - - - 25,531
Are in favour of there being special officers for gauging and landing duty, and clerks proper - - - - - - 25,531
Think that if officers have to perform many varied duties, they will be less efficient than if they have only one class of work - 25,533, 25,558–62
One result of the change has been to make certain of the better appointments open to them - - - - - - 25,535–40
But this affects the out port clerks adversely who find the collectorships thrown open to another class than themselves - - 25,536–40
Believe than the change was made because it was thought that it would be economical to have officers capable of performing any of the duties - - - - - - 25,563–4
At the small ports it may be right that an officer should do all the general work of the port - - - - - - 25,564
But at large ports it would be more economical to keep men to one class of work, and the work would be more efficiently performed - - - - - - 25,564–70
Complain that some of the water-guard officers have to work for very long hours - 25,571–5
The state of the offices, &c. in which they work have been considerably improved lately, but some are still very unhealthy - 25,576–9
Believe that it has been proposed that hours of officers employed upon landing and shipping duties should be increased - 25,580–2
Their hours at present when employed upon free goods are from 6 a.m. to 6 p.m. - 25,580
And when employed upon dutiable goods from 8 a.m. to 4 p.m. in the summer, and from 9 a.m. to 4 p.m. in the winter - 25,580
The officers think that it is scarcely fair that when employed upon free goods they should be liable to attend for 12 hours, and when employed upon dutiable goods seven or eight hours - - - 25,580, 25,606–7
And are of opinion that eight hours should be the maximum in any case - - 25,580
If they are compelled to work from, say 6 a.m. to 2 p.m., this is very inconvenient, necessitating their getting up at four or half-past in the morning - - - 25,583
Hitherto the convenience of the traders has been met by a system of overtime payments - - - - - - 25,584–5
Think that a continuance of these overtime payments for hours before 8 a.m. or after 4 p.m. would be cheaper and fairer to the officers than employing relays of officers 25,586–98, 25,608–10
No time allowed them for meals during their eight hours' service - - - 25,602–5

MESSRS. CUBBIN, SYMONS, AND DEVEREUX—*cont.*

Think that officers in London should have some compensation for the extra time and expense spent in travelling, and for the enhanced house rent - - - 25,611–2

If transferred to Excise, think that some consideration should be given to those officers who, had it not been for the amalgamation of 1882, would be in higher positions than they now occupy - - 25,612–4

And that if there is an amalgamation it should be a real one, and that the officers should be thoroughly interchangeable and all have equal chances - - - 25,614–6

MESSRS. MOLONEY AND WEBB.

Represent out door officers of the Customs, with the exception of those at Liverpool - 25,617–9

One of their greatest grievances is the system of acting examining officers - 25,620, 25,642–52

Outdoor officers, whilst so employed, do the duties of examing officers, but for so doing receive only 1*s.* a day - - 25,621–5, 25,629

By employing outdoor officers on this work, positions which ought to be filled up are not filled up, promotion being thus stopped - - - - - 25,626–30

The creating of assistant examining officers has not met this grievance - - 25,631–40

As there are not sufficient of them - - 25,634–40

In London there are about 70 acting officers 25,641, 25,643

Think that the annual increment should be increased from 30*s.* to 3*l.* - - 25,653–5, 21,662

And that classification should be abolished - 25,655

In their service no distinction is made between the work of one class and another - 25,656

A waterman does not pass into the outdoor officers second class as a matter of course - 25,657

A second class officer passes into the first class provided his character is good - 25,658

But there is no promotion till there is a vacancy in the first class - - - 25,658–9

Recently a copyist was appointed directly to a first class officership - - 25,659, 25,666

This is considered a grievance, and the outdoor officers fear that it may be used as a precedent - - - - - 25,660

Copyists have also been appointed to outport clerkships - - - - 25,667–8, 25,671

Which the witnesses consider should be open to them to compete for - - - 25,668–70

The out door officers come in by competition 25,661

Till quite recently promotion to the first-class was by seniority - - - 25,663

Within the last 18 months two or three officers have been promoted for special service - - - - - 25,663

One was placed over the head of 66 others - 25,663–7

Think that some other mode should be found for rewarding special work - - 25,663

An outdoor officer on London duty has not the same opportunity of distinguishing himself as one on Gravesend duty - 25,664

Wish retirement to be compulsory at the age of 60 to provide for promotion - 25,672–5, 25,678–80

At one dock the average of 22 examining officers' service is 33 years each - - 25,676–8

Have not calculated what the cost of this proposal would involve - - - 25,681

The deputy chairman informed a deputation of outdoor officers that their hours are from 6 a.m. to 6 p.m. - - - - 25,683–7

The witnesses contend that no such condition exists - - - - 25,683–5

Although they quite understand that they may have to perform duty at any time, Sundays or week days, without extra pay - - - - - 25,687

For some duties outdoor officers in London are often now employed from 6 to 6 - 25,688–90

When they entered the service they were informed that when employed on the river the hours were irregular, but that in the warehouses they were from 8 to 4 in summer and 9 to 4 in winter - - 25,683, 25,691–3

It is unreasonable to ask men to work from 6 to 6 on warehouse and landing duties - 25,694–5

On board ship it is different, as the men sleep on board and are always there - - 25,696

They contend that when on land duty the hours should be from 8 to 4 in summer and from 9 to 4 in winter - - - 25,700

Wish a broader system of awarding characters to be instituted - - - 25,701

And that officers should be told when any complaint against them is recorded - 25,701–2

At present they have no knowledge about it till they are passed over, or wish to attend another examination - - 25,701–2

By this time it may not be possible to question or investigate the complaint - 25,701–2

Wish the results of the examinations for second class examining officers to be communicated to unsuccessful candidates - 25,703–6

At some ports the officers complain of having to perform menial duties - - 25,707

MESSRS. SMITH and GEORGE.

Represent Customs outdoor officers at Liverpool - - - - - 25,708–9

Young men entering after competitive examination are put upon water-guard duty and kept on it for some time - 25,710, 25,781–2

This duty does not require a great deal of intelligence, nor a severe educational test - - - - - 25,710

And by this system the efficiency of the department has deteriorated - - 25,710

Suggest that the water-guard duty should be done by a staff of naval pensioners - 25,711–7

They would do the work quite as efficiently and more economically - - - 25,711

This suggestion has been made to the Board 25,712–5

And the severity of the duty felt by the young men appointed by examination was pointed out - - - - - 25,715

The Board censured the officers for combining to make this suggestion - - 25,715

The boarding duty is a most outrageous one - - - - - 25,779

It is a very exposed duty, and officers are sometimes employed on it for 43 hours without a break - - 25,780–1, 25,785–95

Some system should be devised by which the officers would be only required to work a reasonable number of hours, say eight a day - - - - 25,781

Express gratification at the Treasury having extended to them the concession of an eight hours' day in summer, and a seven hours' day in winter - - - 25,718–21

But would like some order on the subject in black and white which there would be no possibility of gainsaying in the future - 25,721

Also suggest that their increment should be increased from 1*l.* 10*s.* to 3*l.* - 25,722, 25,741, 25,772

Complain of the general loss of prospects suffered by the officers - - 25,723–7

A large portion of the clerical work is now done by outdoor officers - - - 25,725–7

Think that their class should not be employed so long as acting examining officers with such a small remuneration - 25,728–9, 25,735–6, 25,741, 25,775–9

Twenty per cent. of the Liverpool outdoor officers are continually employed in doing the examining officers' duty - 25,730–4, 25,775–7

Suggest that all vacancies for clerks should be open to competition amongst the outdoor officers - - - - 25,737

And that they should be eligible for promotion to collectorships and superintendentships - - - - 25,738

Vacant assistantships should be filled up - 25,739

And further that the entrance salary should be increased - - - 25,740–1

Summary of Evidence.

MESSRS. SMITH and GEORGE—*cont.*

At Liverpool, more than elsewhere, outdoor officers are given superior duty without remuneration - - - - 25,741–6
They do not object to the work but want to be paid for it - - - 25,747–56
Urge that they cannot live upon their salary 25,758–60
Those who are now in the service should have an immediate addition of 10*l.* to their salaries - - - - 25,760–61
Knew what the pay was when they entered the service, but in consequence of a reduction in the number of higher posts they have lost prospects of promotion - - 25,762–72
Wish classification to be abolished - - 25,774–5
If there is a report against a man's character he should be informed of it at the time so as to have an opportunity of defending himself - - - - 25,797
Now men are debarred from promotion on account of a mistake or accident which may have occurred 18 years ago - - 25,796–9
And they have no opportunity of defending themselves, not having been formally charged - - - - 25,801–2
Think that after two years the debarment should cease if the officer has for that period a good character - - - 25,803–4
In London, officers working in warehouses from 8 to 5 are paid for the extra hour, but officers in Liverpool are not - 25,805–7
Complain that copyists have recently been appointed to outport clerkships - - 25,807–8
Which appointments should be open for outdoor officers to compete for - - 25,807–8

MESSRS. STRICKLAND and McCLEERY.

Represent the Customs examining officers at Liverpool - - - - 25,809–10
In 1883 a new classification was given to Liverpool - - - - - 25,811
This consisted of 193 examining officers, 19 surveyors, and 2 inspectors - - 25,811
Since then the superior appointments have been reduced - - - - 25,811
And examining officers have to act as surveyors without drawing the salaries of surveyors - - - - 25,811–2
To act in a superior capacity used to be looked upon as a stepping stone to promotion - - - - 25,814
But the abuse of the system has now caused it to be looked upon as a way of reducing salaries - - - - - 25,814
In Liverpool 20 per cent. of the officers in the outdoor department are acting in superior appointments - - 25,812–3, 25,815–6
Propose that there should be another grade of staff officers at a less salary than the present surveyors - - - - 25,816–7
This grade should commence at 250*l.* and rise to 350*l.* - - - 25,817, 25,822
And that an examining officer should rise to a maximum of 250*l.* a year - - 25,816–7
And that an assistant should have an increment of 5*l.* instead of 3*l.* as at present - 25,816
Below the examining officers there are outdoor officers - - - - 25,819–20
In 1883 there were 214 examining officers, surveyors, and inspectors at maximum salaries of 55,820*l.* - - - - 25,823–38
Now there are 214 examining officers, surveyors, and inspectors at maximum salaries of 49,830*l.* - - - 25,823–38
Under the scheme proposed by the witnesses there would be the same number of officers at maximum salaries of 51,590*l.* - - 25,823–38
The basis of the scheme is that it increases the number of the principal officers, but reduces the cost to some extent - - 25,839–40
The hours of working should be limited to seven in winter and eight in summer, and when officers are required to work at abnormal hours, *i.e.*, before 8 a.m. or after 5 p.m. they should receive some compensation - - - - - 25,841–5
No time is allowed for meals - - 25,846–7
The work is now done by the overlapping system - - - - - - 25,848–54
That is, one officer attends from 7 a.m. till 3 p.m., and the other from 9 a.m. till 5 p.m. - - - - - 25,848, 25,853
But the difficulty of this is, that from 7 to 9 a.m. and 3 to 5 p.m. one officer has to do two officers' work - - 25,850, 25,853
The Sunday duty is a necessary evil in the Customs service - - - - 25,855
But unreasonable concessions have been made to shipping interests, which have added unnecessarily to the Sunday duties 25,855
Examining officers used to be paid 12*s.* a day by the merchants for the Sunday duty 25,855, 25,862
But two years ago this was abolished, and they now receive no extra payment - 25,855
25,863–9, 25,875–6
Unless they are specially ordered down for baggage duty - - - - 25,870–4
Some of this duty need not necessarily be done on Sunday, and if merchants had to pay for it, it would probably not be required - - - - 25,855–8
The outdoor officers are allowed 1*s.* every Sunday they are on duty - - - 25,860
If any complaint is made against an officer, he should be told of it at the time - 25,877–8, 25,883
Now he does not know till his increment is stopped, or something of that kind, which may be months afterwards - - 25,879–82
Thinks some allowance should be made them for travelling when they have to go to their work at very early hours before the ordinary conveyances are running - 25,884–90
Wish the uniform to be abolished, except where an officer is examining baggage on a passenger steamer - - - 25,891–99
It costs 4*l.* or 5*l.* a year - - - 25,892
And no allowance is made towards it - 25,893
Wish retirement to be compulsory at the age of 60, or after 40 years' service - 25,901–3

MESSRS. MAYSTON AND O'LOUGHLIN.

Represent the Customs examining officers at the outports, except Liverpool - - 25,904–5
Believe that their work is at any rate equal to that done by a Lower Division clerk - 25,907
Propose that the maximum of the second class shall be raised to 250*l.* - - 25,907–9
And that of the first class to 350*l.* - - 25,910
The want of promotion is a great drawback - 25,912
The change in their prospects has been caused by the abolition of many posts they naturally looked to - - - - 25,913–4
The collectorships and superintendentships should be thrown open to the whole service - - - 25,915, 25,976–7
This has been carried out to a very limited extent - - - - - - 25,915–7
In some ports the greater part of the duty the collector has to perform is really surveyor's work - - - - 25,977–8
The examining officers' duties are very various - - - - - 25,917
There is a great facility for fraud in the case of examining officers assessing duty for the collection of the revenue - - 25,918
As the check upon him is necessarily very limited - - - - - - 25,918–23
Do not think that men upon low salaries, acting or otherwise, should be employed on such duties - - - - 25,918, 25,924
The suggestion made by the Liverpool examining officers as to classification is very much the same as that made by the present witnesses - - - - - 25,925–36

MESSRS. MAYSTON AND O'LOUGHLIN—*cont.*

Recommend that there should be two classes of surveyors right through the United Kingdom, the second going up to 420*l.*, the first to 559*l.* - - - - - 25,937–41

The present maximum of a second class examining officer's salary is the same as the minimum of the first class - - 25,941-2

Thinks that there should be a difference between the two - - - - 25,943

The maximum of the assistant examining officer is higher than the minimum of the second class - - - - 25,944

The assistant examining officers' grade is a sort of consolation for outdoor officers who are unable to pass the competitive examination for examining officers - - 25,944–50

See no advantage in wearing uniform, except in the case of officers boarding ships - 25,951–4

Wish promotion to continue, as now, general throughout the service, and not confined to the different ports - - - 25,954–6

Any allowance given to London or other officers for travelling expenses should be granted solely as a travelling allowance, and should not count as salary - 25,956, 25,959–64

Witnesses have very little travelling - 25,957-8

Work performed between 6 and 8 a.m. should be paid at a higher rate - - 25,965–8

Retirement should be compulsory at 65, and at 60 if inefficient - - - - 25,970–2

Sunday duty is unavoidable - - 25,974–6

MINUTES OF EVIDENCE

TAKEN BEFORE

THE ROYAL COMMISSION

ON

CIVIL ESTABLISHMENTS.

FIFTY-NINTH DAY.

7, Whitehall Place, Westminster, S.W., Tuesday, November 13th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

EARL BROWNLOW.	Mr. A. S. HARVEY.
LORD LINGEN, K.C.B.	Mr. R. W. HANBURY, M.P.
Rt. Hon. H. H. FOWLER, M.P.	Mr. H. L. W. LAWSON, M.P.
Mr. J. CLEGHORN.	Mr. MACLURE, M.P.

Mr. H. WALPOLE, C.B., *Secretary.*

Sir ALGERNON WEST, K.C.B., called and examined.

Sir A. West, K.C.B.
13 Nov. 1888.

20,602. (*Chairman.*) Perhaps it would be the best plan to ask you to state to the Commission first the amount of revenue collected by the Inland Revenue Department, and then the staff with which it is done?—In the last year 1887-88, we collected 57,461,377*l.* That amount was collected by an established staff of about 5,600 officers at a cost of 3*l.* 8*s.* 0*d.* per cent.

20,603. That is the net produce of all the Excise and Taxes?—Yes.

20,604. And then the charges for collection, as given in the last return to Parliament, are 1,886,800*l.*?—Yes.

20,605. A note to that return explains what those charges include?—Yes, that note is quite correct.

20,606. Does that total of net produce include the sums collected by you on behalf of the Customs, or is that your own proper revenue, so to speak, collected for your own purposes?—That is more than we collected; it is our own proper revenue, adding to it what the Customs collected for us.

20,607. In the same way the charge for collection includes the charge for collecting on behalf of the Customs whatever you collect on their behalf?—Yes.

20,608. You cannot give a more correct definition of the revenue which you collect than the three headings of Excise, Stamps, and Taxes?—That is it, broadly.

20,609. Can you give us a summary of the way in which you collect the revenue; that is of the nature of both the head establishment and the outdoor establishment?—As you have said, the way we technically divide the three sources of revenue, in common talk, is always Stamps, Taxes, and Excise; and I understand you wish to know how that is divided amongst our officers. I thought the simplest way of answering that question would be to tell you what are the duties of the Excise service first of all, and to show you how the Excise, the Stamps, and the Taxes have been interwoven together subsequently to the amalgamation of 1849.

20,610. (*Mr. Hanbury.*) Will you please explain first what you mean by Excise proper, what you mean by Stamps proper, and what you mean by Taxes proper?—Excise duty proper consists in the charging of duty on beer, spirits, railways, chicory and coffee labels (a very small thing); clubs (we have to deal with what are commonly called bogus clubs); illicit distillation; hotels (that means for the purposes of the valuation of licenses); then there come in the list before me a mass of licenses which I will read over quickly.

20,611. May we take it generally all licenses?—All licenses, with one or two exceptions, such as bankers' licenses.

20,612. Do you call that Excise?—I call that all Excise.

20,613. You mean not only a licensed victualler, but licensed brewers and a licensed broker; is that Excise?—I think I am correct in saying every license, with the above exceptions.

20,614. (*Chairman.*) Not establishment licenses?—Yes.

20,615. Do not they come under taxes?—No, they come under what we call excise; they are collected by our Excise officers.

20,616. (*Mr. Maclure.*) Are not there a number of licenses that are collected by the Post Office?—Yes. Passing from that list of licenses, the Excise officers have to inspect magistrates' certificates without which publicans' licenses cannot be granted; they have to collect the railway passenger duty; they have of course everything regarding all the operations connected with spirits and with beer; they have to see as to sugar where it is used in brewing; they have to see to the Exciseable liquors sold in theatres; and they also have to settle the valuation of public-houses for purposes of licenses. Those are the principal headings that I have given you. I have not told you in that purposely how it is interwoven with Stamp duties and with Taxes. I will now proceed to tell you how the duties of an Excise officer are interwoven. Besides those things that I have mentioned the Excise officer collects the income tax under Schedules D. and E., in most of the first-class towns in the kingdom. I think the Commission is well aware of how that matter stands. There have been several attempts made in Parliament to cause the profits under Schedule D. and the duties arising therefrom to be collected by the Inland Revenue officers. That question has been repeatedly before the House of Commons, but it has always been either with-

Sir A. West, K.C.B.

13 Nov. 1888.

drawn or defeated. By the law the General Commissioners of Income Tax are empowered to ask us to collect the Schedule D. for them, and in consequence of that all the first-class towns, except those very notable exceptions, Birmingham and London, have asked us to collect this income tax, and therefore the duty of the Excise officers in those large towns is to collect the income tax.

20,617. (*Lord Lingen.*) Are the Commissioners at Somerset House, of whom you speak, those who are called "Special Commissioners?—No. Besides that the Excise officers have to collect the agricultural statistics throughout the country, and by Act of Parliament they have to collect all the corn returns in all the market towns of England. They have also to deal, for the purposes of the Legacy and Succession Duty, with all estates under 300*l.* Under the Act of 1881, when a person dies the executor of that person may go to an Excise officer and, say "This estate is under 300*l.*, let me pay 30*s.*, and let "me have done with it there and then, and you must fill "up the form and do all the rest of the duty." Besides that part of the work which is done under Act of Parliament, all inquiries connected with death duties are performed by our Excise officers. For instance, we have in our legacy department a statement that so and so has died and left no effects or anything of any value. In that case a reference is made to the Excise officer who has to go and see the people, and make inquiries whether the statement is true and enter it properly and so forth. They also have to sell stamps at all the collectors' offices. Then they have to receive documents for stamping, which I will explain in this way. We stamp of course in London largely and mainly, but lately we have been pressed, and have yielded to it, to establish stamping presses at some of the great towns such as Liverpool, Glasgow, and Manchester. Now when anybody brings a document to our collector anywhere and says, "I want this stamped," we take it from them, send it up to London, and the next day it goes back to them stamped. They also have to deal with what I call spoilt stamps; a man has a stamped document over which he spills a bottle of ink; that is brought to the collector, and it has to be destroyed by a process which I need not explain. An allowance is made to the man or he is allowed to get another stamp. Then besides what I have mentioned they have to survey all tobacco manufactories. Of course they have always had to do that with a view of detecting adulteration; but now, as you are aware, by the Act of last year the moisture which may be put into tobacco is limited and therefore they have constantly to investigate the tobacco which is being manufactured throughout the country, because the guarding of the tobacco revenue is entirely in the hands of the Inland Revenue. They have to take samples of almost every package of tobacco to know that the moisture is not exceeded.

20,618. (*Mr. Cleghorn.*) Do you mean they visit the manufacturing establishments?—Yes. To proceed with their duties, they have to detect all illicit spirits throughout the country, and they have to detect all adulteration or dilution of beer by all the publicans. They have to conduct all prosecutions that are not sufficiently important for us to send down a special solicitor for.

20,619. (*Lord Lingen.*) Can they employ a local solicitor without reference to head quarters?—No. They have to value public-houses; they have to supply our surveyors of taxes with all particulars of the manufacture of exciseable goods. In that way the surveyor is enabled under the direction of the local Commissioners to say such and such a brewer brews so many barrels of beer, and this forms a guide in assessing his Income tax. They have to receive all duties under every head of our revenue—anything that is brought in payment of taxes in any way or in any kind or for any licenses has to be received by the Excise service. I think those are, as far as I can explain shortly, the duties of the Excise service.

20,620. When you say receive the duties, is the class of collectors the only persons who receive them, or may a supervisor or divisional officer receive them as well?—The collector is, as a matter of fact, the receiver, but a supervisor may receive duties and remit the amount to his collector.

20,621. (*Mr. Maclure.*) You mentioned that you had the whole of the railway passenger duty to collect. I think that is all done by a simple return from the railway company, is not it, without any trouble to the department—I mean to say one clerk could do the whole work in about a dozen hours a year?—I am very glad to hear you say we do not cause the Companies any trouble, but it is a most troublesome work for us to perform.

20,622. It is a monthly thing?—Yes. I do not want to exaggerate it, but I was asked to give the duties. I did not say which were important and which were not.

20,623. It is a very large item of income that is received from this duty, is not it?—No; it is about 340,000*l.*, what we should call a small item. It forms the chief duty of a couple of clerks.

20,624. (*Mr. Fowler.*) What you mean I take to be this, that with reference to the "Stamps" branch, their own title tells us what they mean; that is, the stamps upon documents; and "Taxes" means the land tax, the income tax, and the inhabited house duty; and all the rest of the Inland Revenue is, for the purpose of your nomenclature, called "Excise"?—That is it.

20,625. (*Chairman.*) All the receipts which come into your hands at the Inland Revenue come practically through your collectors?—Yes, and to some extent through the Post Office.

20,626. Indiscriminately as to what kind of revenue it is?—Quite indiscriminately, as far as its coming up in money; of course the accounts are kept discriminately.

20,627. I mean that the individual officer in the country reponsible to you, who collects, receives indiscriminately money for the spirit licenses and all kinds of things?—Yes.

20,628. With what exceptions? The Post Office, for instance, receives certain establishment licenses?—Quite so. The Post Office does a great deal for us. They receive, as you say, a portion of the establishment licenses. I think you all know what establishment licenses mean.

20,629. (*Mr. Fowler.*) The old assessed taxes?—Yes. They receive them, and we have extended, with the help of the Post Office, these operations, so that if you have a demand from the parochial or Inland Revenue collector showing that your income tax amounts to 7*l.* 8*s.* 4*d.*, upon your producing that to the Post Office, the Post Office will furnish you with a free post office order.

20,630. (*Mr. Cleghorn.*) For transmission to London?—Yes. That is done at all post offices—I should rather say all money order offices. I do not think it is quite all post offices.

20,631. (*Chairman.*) A man would get a money order, in fact, in lieu of a stamp for a certain amount of income tax which is due?—Yes, and it is adjusted between the Post Office and our books at Somerset House.

20,632. The Post Office, as I understand it, does not undertake any responsibility as to the correctness of the establishment licenses or the amount of the income tax; is the responsibility for the accuracy of that with some officer of yours?—Yes.

20,633. (*Mr. Maclure.*) I think what the Chairman meant is this, that the Post Office does only the clerical work. That is, when I take out my own license I go to them and fill up a form, and I say, "Two dogs;" it does not matter to my postmaster whether I have got half-a-dozen. It is your officer who looks after that?—Quite so; the postmaster takes what is offered him.

20,634. He takes what is offered him perfunctorily, and you have to see to its correctness?—Exactly.

20,635. (*Chairman.*) A post office official at any particular town is merely a means of receiving the money in a convenient form for the public?—That is so.

20,636. I do not understand that the post office official exercises any judgment or discretion, or assumes any responsibility as to the amount being correct which is certified upon the paper?—None whatever.

20,637. (*Mr. Cleghorn.*) In many towns there is also an officer of the Inland Revenue who collects taxes in addition to the Post Office, is not there?—Yes.

20,638. (*Chairman:*) Is there anything else that the post office official does for you?—He gives free post office orders, and he gives out licenses, but I am not aware at the moment of anything else.

20,639. (*Mr. Maclure.*) They sell stamps for you at some post offices, do not they?—The Inland Revenue

and post office stamps are now identical, so of course they sell them both.

20,640. Some post offices sell exchange stamps, do not they?—Yes, in many towns postmasters act as Distributors of Stamps.

20,641. (*Chairman.*) Putting aside for the moment what is done for you by the Customs, is there any other work of yours connected with the collection of the revenue which is done for you by any other department of the Government except the Post Office?—No.

20,642. (*Mr. Maclure.*) I think you have very material assistance from the police, have you not, in taxing some districts?—In some districts the police help us in the discovery of gun and dog license evasions.

20,643. And they also help you on the question of selling beer without a license, do not they?—That has nothing to do with revenue; they help in detection, but not in the collection of revenue in any way.

20,644. (*Chairman.*) The gist of your remarks as regards this staff for collection, I think, comes to this, that since the date of the fusion of the Stamps and Taxes with the Excise in 1849 there is now a complete fusion as regards the officers for collecting?—Yes.

20,645. Is there a complete fusion as regards headquarters?—I think I may say absolutely complete, below the rank of Assistant Secretary in our office. We have not been able ever to fuse; we have not in fact thought it advisable to fuse quite the head men, and there are a head Secretary for Excise, a head Secretary for stamps and taxes, and Assistant Secretaries. We have always thought it wiser when he gets quite to the top that the man should devote his attention to the special branches.

20,646. (*Mr. Fowler.*) Just take that a little higher and apply that question also to the Board; have you a separate Commissioner for each separate branch?—No. I ought to go on, I think, with your question still. I have now explained to you to the best of my power what the duties of Excise are, and how they are interlapped with Taxes and with Stamps, but I should not complete that without telling you what are the duties of the surveyors of taxes who are not interwoven in any way. Their duties are, in our opinion, so important and so difficult that we have never thought of mixing them up in any way with any other duties beyond those of surveyors of taxes.

20,647. Let us first have the hierarchy of officials in their order, and let us begin with the Board. What does your Board consist of?—It consists of a Chairman, a deputy Chairman, and three Commissioners.

20,648. I believe that it once consisted of seven commissioners, but you have abolished four?—Yes.

20,649. So that there are only three Commissioners now who receive from the Consolidated Fund 1,200*l.* a year, a deputy Chairman who receives 1,500*l.* a year, and the Chairman who receives 2,000*l.* a year?—That is it. Broadly the duty of the Board is to superintend the whole of the collection of this great revenue. That is rather a platitude perhaps, and therefore I had perhaps better try to describe what we do each day. We divide the duties into what we call (I do not know why) various "committees." That means one of the Commissioners has been called for all time a "committee." The duty at the beginning of the day will be for each Commissioner, in his private room, to receive all the superior officers of Somerset House under the chief Secretaries. The work varies from week to week, whether the Commissioner takes Excise, or whether he takes Stamps, or whether he takes Taxes, or whether he takes miscellaneous work. In this way, between 11 and 12, the Commissioners will deal with the Assistant Secretaries and the chief clerks, in such matters as are not considered of sufficient importance to be dealt with at the Board. I will take the simplest case I can that they have to deal with—cases of prosecutions for dogs. In such matters by law no Information can be directed against any person without the direct order of a Commissioner. I have given you that as the lowest class of work, because after all it is not very important, except that they have to consider what the circumstances are, whether there should be an Information, or whether a compromise fine should be taken.

20,650. (*Mr. Lawson.*) Is the assent of the Commissioners obtained in every case?—They do not go actually into every case. The Committee clerk who has brought it to the Commissioner will have read the papers through. The process is this. He will have read through very likely a hundred papers, and he will have said, in 80 of these "there is nothing out of the common; it is the "commonest case in the world, and it is merely a case "for Information;" but we will say 20 of them are of a different nature. A person has given some excuse, or some reasons, and the Committee clerk will say, "You "must look into that and see whether there is to be an "Information." That is only dealing with the Informations. Each of these Commissioners will go through the work connected with a particular thing in Excise—and I have given you all the different headings—in fact anything that may turn up in the day till 12 o'clock.

20,651. (*Lord Lingen.*) One question about those Informations. Does the Solicitor appear in any part of that story, or are they only Excise officers in your own department who would come to the Commissioners?—The Solicitor would not have appeared at present. When the order for the Information goes out, in the majority of cases it goes to the Solicitor's department to prepare the Information.

20,652. Then it would be decided to proceed with an Information, or not to proceed with one before the case was referred to the solicitor?—Certainly; of course the Commissioner would be at liberty if he was in doubt to send up to the Solicitor and say, "Is this evidence "sufficient, do you think."

20,653. (*Mr. Maclure.*) I believe that in the ordinary prosecutions for keeping a dog without a license no Solicitor appears?—No Solicitor appears.

20,654. Your officer, the supervisor, appears before the court and sometimes brings on 60 cases at a time?—Yes.

20,655. And sometimes most frivolous complaints have been made about keeping a dog without a license. It is then always said, "If you have any doubt you can "bring it before the Board;" do you say that it has been before the Board previous to coming before the magistrates, and that then it goes before the Board again when it has been proved before the magistrates to have been a case that ought not to have been brought up? A magistrate is bound to fine a man if he keeps a dog without having a license although that dog may have only followed him a month before, because the law says you shall fine him?—I cannot admit on the part of my own department that that is frivolous; the man has got a dog, and he has not got a license, and it is our duty to prosecute him.

20,656. (*Mr. Fowler.*) May I suggest that we avoid illustrations, or we shall get into endless detail?—Very well. I will tell you broadly that each Commissioner deals with the papers connected with all the subjects I have read out to you (Stamps, Taxes, and Excise) in committee in the morning.

20,657. That is up to 12 o'clock?—Yes. Then perhaps you will ask me what my duties are. Many of you are aware what my duties are out of Somerset House with the Treasury and with the Chancellor of the Exchequer; in Somerset House my day would commence by anybody in the office such as the chief Secretaries and the chief Inspectors coming to me in the morning before the Board meets, upon any detail that may arise connected, for instance, with the establishment. You can imagine what that would be with a very large establishment.

20,658. You do not form a committee?—I do not form a committee.

20,659. Does the deputy Chairman form a committee?—No.

20,660. Then the three Commissioners form three committees, and the deputy Chairman and the Chairman are quite outside of those committees?—They are quite outside. The principal duty of the deputy Chairman, as far as we divide it, is this: No case involving a sentence on the discipline of an officer is passed unless it has been read by myself or my deputy; no man would ever be dismissed without the whole papers having been read through by myself or by my deputy. Those are my duties up till 12 o'clock. At 12 o'clock we meet at the Board on every day in the year, except on the statutory holidays. There are bound to be three present at the Board. Some acts cannot be performed legally without the presence of three; for instance, we cannot dismiss an officer without the signatures of three, and when we report to the Treasury the report must always be signed by three, although I do not think that is required by law. The duties of the Board are very multifarious. All the important part of those various duties that I have attempted to describe come to be discussed before the Board by the Secretaries, who take it in turn. We have

Sir A. West, K.C.B.
13 Nov. 1888.

two Secretaries every day, one from each side, that is the chief Secretary of Excise and the assistant Secretary of Stamps and Taxes one day, and the next day the chief Secretaries of Stamps and Taxes and the assistant Secretary of Excise.

20,661. (*Chairman.*) In your nomenclature you still recognise different sides in the office?—Certainly above the rank of committee clerks. Those duties take on an average about an hour and a half in the day, but of course they are sometimes shorter and sometimes longer. That takes us till about half-past one or two generally. Then I need not say that everybody is supposed to go to his room, and we do not sit in the Board room any more till three o'clock. There are various things, a great many signings, a great many warrants, a great many various papers that crop up in different parts of the office which are dealt with by the Commissioners, or by myself, and at three o'clock the Board, without the Chairman or the deputy-Chairman, that is the three Commissioners only, would meet and go through any cases of minor importance that had arisen in the course of the day. Therefore they dispose of anything on the same day that it has come in. I am afraid that does not describe really what the work is; it is very difficult to describe the work in a great department.

20,662. (*Mr. Lawson.*) Is there any regular principle of division of work among the three Commissioners with regard to the signing?—Yes, week by week there is a paper put up in the Board room, and one Commissioner would take a certain duty one week and change it the next week, and therefore perpetually round and round he deals with everything.

20,663. (*Mr. Fowler.*) Let us go on in order, and before we leave the Commissioners, having regard to our inquiry, which really is the amalgamation of the Customs and the Inland Revenue, should not you now tell us how you think that your Chairman and deputy Chairman and three Commissioners could discharge in addition the duties which at present are discharged by the Chairman and deputy Chairman and the Commissioner of the Customs?—I have never said that.

20,664. I do not imply that you have. I want you to deal in your own way with the point of the amalgamation, so far as it affects the head of the establishment now, not for us to have to come back again to it. We are now on the Commissioners' work. Of course you may suggest to us, which I think you very probably would suggest, that there should be an increase in the number of Commissioners?—I must be very careful because I am dealing with other departments to a certain extent; and therefore I am very anxious that nothing I shall say should in any way exaggerate my own work and diminish the work of others.

20,665. I can quite see your difficulty. But might we ask you, in the first instance, whether you think it would be competent for the present Board of Inland Revenue to have added to it the duties of the present Board of Customs?—Supposing such a thing to be done I think it would be very rash indeed to say that the Board of Inland Revenue to-morrow could deal with the work of the Customs. My idea of an amalgamation would be a fusion, taking the men of experience from the Customs who would at first almost entirely deal with Customs matters, until we are able to learn what the Customs duties are. If you will allow me I should like here to state a matter which I think springs entirely from your question. Just now, having told you of the 56,000,000*l.*, speaking in round figures, I said this: "That amount is collected by an established "staff (this is Inland Revenue proper) of about 5,600 "officers, at a cost of 3*l.* 8*s.* per cent." The Board of Customs in one year 1886–7 (I am obliged to go back to that date—their report is not out for last year yet, but that is very immaterial for this purpose) collected a net revenue of about 20,000,000*l.* They have an establishment of about 4,500 officers and the cost of their collection was about 4*l.* 6*s.* 8*d.* per cent.

20,666. (*Lord Lingen.*) I should like to ask you now upon that point, this question: Is it not true that a considerable part of the Board of Customs duty is concerned with matters which do not yield revenue?—Certainly; of course I am coming to that. I ought perhaps to have preceded my remarks by saying that for the moment I am dealing entirely with the question of revenue. This is, to my mind, the important thing. Of the 56,000,000*l.* collected by the Inland Revenue, it is estimated that about 11,000,000*l.* or about 20 per cent. is collected through warehouses, leaving 44,000,000*l.* to be collected from other sources. Of the 20,000,000*l.* collected by the Customs, very nearly 19½ millions or 97 per cent. was collected in respect wareshoued of goods, leaving 460,000*l.* only to be collected from other sources.

20,667. (*Mr. Maclure.*) That 460,000*l.* means such things as collections made at ports like Dover and Folkestone, does not it?—I presume so. The total sums collected by both Boards from goods in warehouses would therefore amount to about 30,000,000*l.* a year. I do not know whether I ought here to go on and say what I can say if I am to argue the question of amalgamation, viz., that this vast sum of revenue is collected from warehouses which both Boards and both sets of officers are equally competent to deal with.

20,668. (*Mr. Fowler.*) I do not think we have got to that; we have commenced at the head of the staff; you say this large revenue (no matter where it is derived from) of 56,000,000*l.*, is supervised by five great officers of State, so to speak. Now in considering a proposition that the large revenue of the Customs should be put under the control of one body, do you suggest (of course subject to all the modifications which you have alluded to, such as time for learning the business) that a Board, consisting of a Chairman and deputy Chairman and three Commissioners would be sufficient to control and supervise the collection of the Inland Revenue also eventually?—I have some hesitation in giving an answer to that, because it looks as if it was an attack upon another office: that is my great difficulty. I may, however, say it is distinctly my opinion that one Board, I particularly avoid saying our Board, but that one amalgamated Board with a head, and to give a certain amount of latitude I will say another Commissioner, I would say four Commissioners would be perfectly able to deal with the administration of this department.

20,669. (*Chairman.*) The collection of the whole revenue of the country should be in the hands of such a Board as you have mentioned?—Yes.

20,670. (*Mr. Hanbury.*) Of six persons as against nine?—Yes. I should like to put it very carefully that there is no question of personality in the matter. For instance, I might be abolished to-morrow, and it might go to a Board of the Customs.

20,671. We might assume that the Customs would be the Inland Revenue, instead of the Inland Revenue the Customs?—Quite so.

20,672. (*Mr. Fowler.*) You are of opinion that one Board could do the whole, but you reserve to yourself the right hereafter to consider of what number of men that Board should consist?—Yes. I will go this far, that one Chairman, I believe, and perhaps at the beginning of a great and extensive change like this, two deputy Chairmen, one coming from the Inland Revenue or from the Customs, whichever it might be, would be necessary. But if you ask me what the future constitution might be (I will say in five years time, because all these economies would be prospective) I should say one Board with a Chairman and a deputy Chairman, and (leaving it perhaps rather vague) three or four Commissioners, I will put it, would be perfectly capable of dealing with this revenue. My reason is this: That out of the 20,000,000*l.* of Customs collected, 97 per cent. of that duty, as I have already remarked, is absolutely homogeneous. Of course I am only dealing with the revenue, not other duties as yet. If you were to say to-morrow that the Board of Inland Revenue was to take over the administration of all the warehouses in the country I think it would lead to no difficulty whatever. I do not say that it would diminish the number of officers, but I say that the Board could to-morrow take over the administration without the slightest additional trouble beyond an increased amount of correspondence, as the principle of the thing is exactly the same.

20,673. You mean to say that with regard to all the warehouses for Government revenue purposes it would be exactly the same?—Exactly; and it would add nothing to my work.

20,674. (*Mr. Lawson.*) You do not say it would not diminish the number of officers?—I do not say it would not. I particularly want to guard myself on that point.

20,675. (*Chairman.*) Having dealt with the Board, perhaps we had better proceed with the other officers?—Very well. Then I suppose the next thing would be to attempt to explain to the Commission what has been the history and the present state of the warehousing system.

20,676. (*Mr. Lawson.*) Is there any means of knowing whether it would be possible for the Board to sit together in one place or whether there would have to be two places for the Commissioners to meet?—One board could sit in one place.

20,677. That is contradicted, of course, by the Customs. The Customs say it is not possible, you could not have a Board sitting at Somerset House directing the Customs House?—May I answer that by asking one question, which is this: If it is so necessary to have a Board sitting at the Customs House to deal with Customs matters, how is it possible that the Customs business at Liverpool (it is not as great as in London, but it is an enormous business) can be conducted without a Board sitting there? That is a question I should like to have answered, though it is not for me to put it.

20,678. (*Chairman.*) But your answer to Mr. Lawson's question is distinctly that in your opinion the united Board (whatever character it might be), if responsible for the whole revenue of the country in the same way as the Inland Revenue Board is now for the Inland Revenue, could do the work?—Certainly.

20,679. (*Mr. Lawson.*) And I suppose there will be no difficulty in one Commissioner, we will say, going down to the Customs House after sitting at the Board or at a committee?—There could be no difficulty. At first it might be quite possible to hold the Board on one day at one place and on another day at the other place.

20,680. (*Lord Lingen.*) I think we had better take them by classes. Perhaps you will consider now the Secretaries and assistant Secretaries. I notice that the Customs have the same officers, a Secretary, an assistant Secretary, and also three committee clerks. I apprehend that the Secretary, assistant Secretary, and three committee clerks, at the Customs, making up five officers, are doing about similar duties to the six officers which with you are called Secretaries and assistant Secretaries; is that so?—I imagine so.

20,681. (*Chairman.*) Will you please tell us what your Secretaries do?—I think the best answer I can give you as to why I think the duties can be amalgamated is that all amalgamations in the past have led to economy.

20,682. Forgive me, that is a very general question. If you think there is nothing to be said about Secretaries let us get on with your description?—I think our Secretaries can devolve a certain amount of work. So do I say of the Board. I do not doubt that a certain amount of work from the highest may gradually be devolved lower down. If more important work comes to the Board at a certain time than at another, then less important work may gradually filter down into the lower stratification of our office.

20,683. You have two Secretaries; do they take separate sides of the office?—They do.

20,684. We understand pretty well what a Secretary of such a Board must be; one of them practically looks after the business of the Stamps and Taxes and the other of the Excise?—Yes.

20,685. As you have told us, the head offices are not so thoroughly amalgamated as the offices below?—That is so.

20,686. The assistant Secretaries help the Secretaries?—Yes.

20,687. Then as you say, the work filters upwards in proportion to its importance; it is dealt with immediately by the Secretary or principal clerks and so goes upwards?—Yes. Now, with a view to the Secretaries, I think you wish me to keep to that. I should say it is quite possible, and I always want it to be understood that either Secretary, whether it is Customs or Inland Revenue, could perfectly, with his Excise duties and without any really great increase of work, deal with the whole question of warehousing, and that, as I say, disposes of 97 per cent. of the revenue collected by the Customs. I do not want to say that our Secretary could take it, but that one Secretary could do it.

20,688. (*Mr. Fowler.*) You have two Secretaries and four assistant Secretaries; would it be possible for a secretariat, consisting of a staff of six, to discharge the duties of both the Inland Revenue and Customs duties?—I do not think it is necessary that I should say for the sake of my argument that a secretariat of six would be able to do the duty. If you would put the two secretariats together and see what they amount to, and then ask me whether a diminution of numbers could not do the work, I think that would be fair.

20,689. (*Chairman.*) I think Mr. Fowler is not looking at it from the point of economy, but that he is looking at it from the point of efficiency. Observing, now, that you have two Secretaries in your secretariat department, is it your opinion that as heads they would be competent to transact all the business that you expect would come to a united Board if the warehouses of the Customs were added to your work?—Yes.

20,690. (*Lord Lingen.*) I should like to put, on this point, this consideration before you: up to a certain extent it is perfectly fair to say that 97 per cent. of the Customs revenue is collected from warehouses, and that that 97 per cent. does not contain any material difference between itself and the the work that is now done by the Inland Revenue, but a very large portion of the Customs administration, the great majority of it in fact, happens before the goods get into warehouses. All the despatch of ships, all the receipt of ships, all the statistics of commerce, all the protection of the revenue on dutiable articles, all that is done at the waterside before the goods get into the warehouse at all, and therefore in talking of the amalgamation we must remember that the nineteen millions of Customs revenue which gets into the warehouse is the outcome of and exists side by side with a vast mass of other work?—Of course I am aware of that, and I was prepared to come to that later. I was dealing for the moment, rightly or wrongly, with the revenue aspect of the question.

20,691. Then, too, the Secretary of the Customs has to deal not only with the Customs revenue but with the whole of the Customs administration?—Clearly.

20,692. (*Chairman.*) If we have said sufficient about the Secretaries office, what is the Surveyor-General? I leave out for the moment the clerks, which is a question of detail into which we need not now enter. I see in a note that the Surveyor-General is also a special Commissioner of income tax, but without salary?—That is an office that has been abolished for some time.

20,693. (*Lord Lingen.*) In the Estimates of 1888–89 he is gone?—Yes.

20,694. (*Mr. Fowler.*) Who is the next in rank below the Secretaries?—The Solicitor's office would come next. The Solicitor, Sir William Melvill, has, at my request, drawn up a paper, which I should like to hand in to the Commission, showing, in his opinion, the vast advantages that would accrue in legislation by an amalgamation; it is a very technical paper (*handing in same*).

20,695. (*Chairman.*) Would you state in one sentence what the gist of it is?—He is practically of opinion that one Solicitor is amply sufficient to deal with the questions of Customs and of Inland Revenue.

20,696. Is this Solicitor a gentleman who gives his whole time to the Government?—Yes. His paper is full of quantities of anomalies that exist owing to having the law drawn up by two Boards and two Solicitors. The practice at the Treasury, as Lord Lingen will perhaps recollect, is that when a Budget Bill, which is commonly called a Customs and Inland Revenue Bill, is introduced I am responsible for producing it, the Solicitor being the draughtsman. We collect from the Customs Solicitor that part which bears on Customs duties, and incorporate it into the Bill. Our Solicitor is very strongly of opinion that all these diverse enactments relating to the duty on foreign spirits and British spirits and foreign plate and British plate, and all these things would be enormously simplified by being under the direction of one Board.

20,697. (*Mr. Fowler.*) In the memorandum you have sent in to the Commission you do not state what is the gross cost of the Solicitor's department, although you state that the Secretary's office is 30,000*l.*, and the Controller's office 43,000*l.*; why is that?—I think it is 22,000*l.*, which includes the establishments at Dublin and Edinburgh.

20,698. If that is what it costs that would no doubt cover all the legal expenses of the Customs too?—At any rate one Solicitor would be ample for the two.

20,699. (*Chairman.*) Do you endorse the opinion of the solicitor given in his memorandum?—Entirely.

20,700. Have you personally, in preparing Bills for the Chancellor of the Exchequer, experienced any inconvenience in having to collect your materials from two Solicitors?—Yes, very great inconvenience.

Sir A. West, K.C.B.

13 Nov 1888.

20,701. To go on with the list of officials given in your return; I do not think we need ask you anything about the Legacy and Succession Duty Office?—No, I think not; it is apart from this question.

20,702. Is there any other principal department which is concerned with the Customs?—Yes, there is the Receiver-General.

20,703. (*Lord Lingen.*) Is the Receiver-General a necessary person in the Inland Revenue now?—Not the least.

20,704. Could not he and his department both be swept away?—Certainly; but I do not mean by that to say that the duties performed by the clerks in his office would not have to be done by somebody else. My idea is that they would be done by a collector.

20,705. (*Chrirman.*) What does the Receiver-Genera do?—He receives duties paid at the chief office, pays salaries, &c.

20,706. (*Mr. Harvey.*) In your view the receipt of cash at Somerset House does not involve a special organisation for the receipt of money?—That is so, and in the event of a vacancy in the office I should not feel it my duty to recommend its being filled up.

20,707. (*Mr. Lawson.*) The corresponding officer in the Customs is a collector, I believe?—I believe so.

20,708. (*Mr. Cleghorn.*) That would apply to the deputy receiver as well, I presume?—Yes; the next great officer is the Accountant and Comptroller-General. There, again, I should not hesitate for a moment to say that one Accountant and Comptroller-General would be amply sufficient to control the very much simplified accounts that would come were the administration united.

20,709. (*Chairman.*) How would they be very much simplified?—Because there are a great many accounts that pass between the Customs and our Board, and between our Board and the Customs, and there would be a great simplification in them. We receive duties for the Customs, and the Customs receive duties for us, and all those are matters of account. The next office we come to would be that of the Chief Inspector of Excise. No doubt a great interweaving there would create great economy. I do not know what the duties of the Chief Inspector of Customs would be, and therefore I think I ought not to speak of what can be done there.

20,710. Perhaps it would be better now if you were to explain shortly what is the duty of the Chief Inspector of Excise and the other officers of Excise?—The Chief Inspector of Excise is mainly responsible to us as a Board for the whole discipline of the service. He would generally be consulted in all matters of promotion, of removal, of putting different officers to different duties, of reviewing all the reports of our travelling Inspectors, all the reports from the collectors, and the general supervision of the whole Excise service.

20,711. (*Mr. Maclure.*) Does he now visit the provincial centres. I will take the district I know. Does he visit Hull and Grimsby, Manchester and Liverpool, all of which are separate departments?—That would not be specially his duty.

20,712. Would he not go personally to see them?—He would not generally. I get the reports brought to me from the inspectors, and in any difficulty I should say: "This is a very difficult case, and I cannot get at "the truth of this; one collector says one thing and "another another; I wish you would go down and look "into it yourself." Then he goes, but it is not in his routine of work.

20,713. It is not his duty?—It is not his duty. His duty is to sit in the head office and to collect all the books and all the work of all the other inspectors.

20,714. (*Chairman.*) The Chief Inspector of Stamps and Taxes, I suppose, is a corresponding officer with regard to Stamps and Taxes?—Yes, and would not be affected in any way by amalgamation that I can see.

20,715. Neither one nor the other?—Neither one nor the other. I now come to the laboratory, which is a most important part. I should like to hand in here a report from the principal of our laboratory, Dr. Bell, showing the very great advantages that would accrue from amalgamation. [*Handing in same.*] I may tell you that the chief of the laboratory is also the reference analyser for all Government purposes under the Food and Drugs Act; he analyses all articles for the Board of Trade, such as lime-juice and other commodities that the Board of Trade use, he analyses all the samples of beer for export, all the spirits, and all the tobacco. There is, I believe, another laboratory in the Customs, and there are in nine places in the country two chemical or analytical departments, one man sitting in one office and another in another office representing the Customs and Inland Revenue.

20,716. (*Mr. Lawson.*) In the Customs list there does not seem to be any head of a laboratory?—You will find in the Estimates that there is a charge for the chemical office. There is a chemist, because we have had a very bitter experience of the diversities of opinion between the two chemical officers, but the Customs Laboratory officers all rank in the outdoor department. Dr. Bell goes very fully into the advantages that would arise from having one chemical head instead of having two.

20,717. (*Chairman.*) Could you give us from your own experience an instance to illustrate the inconvenience that you, as head of the Inland Revenue, have felt from the fact of having two chemical officers?—I can give you an instance which gave us very great trouble. I have forgotten the year, but when Mr. Childers was Chancellor of the Exchequer there arose a great demand in the country for a special kind of cigarettes. A large consignment of these cigarettes was detained by the Customs because their chemical officer said that it was full of sugar. A sample was sent to our laboratory, and Dr. Bell found they contained—I think I am right in saying—14 per cent. of sugar, but that that sugar was a perfectly natural product in the tobacco. The supply had met the demand, and a Virginia sun-dried tobacco was prepared, containing 14 per cent. of natural sugar. The Customs were very annoyed at this, and it ended in a conference between Colonel Romilly, myself, and the Chancellor of the Exchequer. Colonel Romilly stated that it was absolutely absurd to suppose that the natural product of sugar in tobacco could amount to that, and so strongly and so ably did he put his case that the Chancellor of the Exchequer declined to come to any decision at all between the two departments, and a Treasury reference was made to an experienced chemist of repute. He reported that Dr. Bell was perfectly right, and that it was a purely natural sugar, and the result was that there was a fee of 100*l.* to pay, and I think 400*l.* damages had to be paid to the manufacturer for the delay in the delivery of his cigarettes.

20,718. That is a case, is it not, in which it turned out that the Customs chemist made a mistake; but is it not conceivable that even if there was one chemist for Government a mistake might occasionally be made. I do not see exactly how the case you give illustrates more than this: that one chemist on that occasion was right as against the other who was wrong?—Yes; but does it not argue that the conflict of opinion led to a great deal of trouble and expense?

20,719. (*Mr. Harvey.*) Was it not the error and not the conflict of judgment that led to the expense?—Perhaps so.

20,720. (*Mr. Fowler.*) Suppose your officer had made the mistake, and had been the only man?—Then we should have had, no doubt, to pay damages to the manufacturer; but he did not make the mistake, as his general experience and investigations had already made him acquainted with that description of tobacco.

20,721. You might have had an expensive trial, but in this case the conflict of opinion detected the error?—That is true, but the error would not have occurred if the Customs officer had had general experience in the detection and suppression of adulterated tobacco, and a thorough acquaintance of the natural constituents of the various kinds.

20,722. (*Chairman.*) Does not it in fact rather point to this, that the criticism of one chemist upon another might occasionally be of great advantage to the Government, and might enable the fault to be detected before it had gone too far?—I quite see the force of what you say; it might be so, but it would be an expensive mode of correcting occasional errors.

20,723. (*Mr. Fowler.*) Let us take it generally. Can the chemical work which arises in the two departments, both the Customs and the Excise, be done under the head of one laboratory?—In my opinion, certainly.

20,724. In your opinion there is nothing to prevent one competent chemist discharging all the chemical duties of the Government for both purposes?—Certainly. Then the office of Controller of stamps and

stores would not be brought into this question, nor would the mechanical staff and the stamping department. Then running through the different heads we come to the special Commissioners of income tax. There I think, oddly enough, the question might be affected to a certain extent. I must explain that the special Commissioners have a salary of only 600*l.* a year. Their duties are to make assessments upon all those persons under Schedule D. who elect to be assessed by the special Commissioners. That is to say, any merchant in London or anywhere else, who chooses to say, "I wish to be assessed by the special Commissioners," may do so, and a large number of assessments are made in that way on the large merchants in London. The duty of the special Commissioners is to make these assessments, and beyond that to hear appeals in all cases. Everybody may appeal to the special Commissioners, and their duties are to hear those appeals, to move about the country if necessary, where they cannot be heard in London. In the event of a Board, such as the Inland Revenue Board, being increased, as all my Board are ex-officio special Commissioners of income tax, I do not hesitate to say that, in order to meet an emergency, if the Board was larger, the duties of the special Commissioners in all probability could be performed by members of the Board.

20,725. (*Mr. Fowler.*) How many special Commissioners have you?—Three.

20,726. Is there an appeal from the special Commissioners to the Board?—No real appeal—no legal appeal.

20,727. (*Mr. Maclure.*) Do you say these special Commissioners are peripatetic, and that they go up and down the country?—Yes. They have a circuit of two months long in Ireland. Two Commissioners must be present, and they have to travel to all the small places in Ireland. In England they arrange their circuits so as to condense the work.

20,728. You mean that they go to Liverpool and Manchester, and to towns of that sort?—Yes, and they hear appeals in London.

20,729. (*Chairman.*) Are we to understand that if a Board of Inland Revenue was constituted rather more numerous than the present Board, the members of that Board would be able to undertake the duties of those three gentlemen who are special Commissioners of income tax, and those gentlemen might then be done away with?—I think probably they would be able to do the work of two of them.

20,730. Supposing that was the case, how far would it give satisfaction to the merchants or to those who now employ these special Commissioners of income tax?—I take it there would be no objection on behalf of the merchants. For the sake of gaining information, I have very often heard appeals myself, and so have many of my colleagues, because I have asked them all to go and hear appeals for the sake of learning how it is done. There would be no more objection to appealing to us than to the special Commissioners.

20,731. (*Mr. Harvey.*) Does the ordinary return of a merchant addressed to the special Commissioners go to the General Board?—No.

20,732. Then the merchant, so to speak, is brought into collision with the special Commissioners only?—That is all.

20,733. (*Chairman.*) You said, I think, there was no real appeal?—There is no legal appeal from the special Commissioners to us.

20,734. Is there a nominal appeal which is not taken advantage of?—If a merchant came to us and said he was aggrieved by the action of these gentlemen, and asked us to look into it, no doubt we should ask the special Commissioners to come up, and we should go into it with them and see if we could adjust it, that is all.

20,735. (*Mr. Lawson.*) There is no reason at present why you should not see returns made, is there?—Not the least.

20,736. (*Mr. Harvey.*) I believe that what was supposed to be the special justification for the appointment of the special Commissioners was that the returns should be a secret between them and the merchant making it, or was it that the Commissioners themselves could not undertake it?—The original object of the appointment of special Commissioners was to get the return out of the hands of local Commissioners.

20,737. What I wanted to know was whether the justification for the appointment of these gentlemen was that the merchant was supposed to have his return a secret between them and him, and that it should not be known to the general Commissioners at Somerset House?—I do not think that was the object at all, because the Act provides that we are special Commissioners. I have not time for this work now that I am chairman, but when I was a Commissioner I constantly went and did the work of a special commissioner for my own learning and information. I have been all round Ireland as a special Commissioner, and I have heard appeals in London constantly as a special Commissioner, and I may do so to-morrow if I like.

20,738. (*Mr. Fowler.*) Then the only vantage ground that you see in this is that possibly if the staff of the Board was increased you might be able to diminish the staff of special Commissioners?—Yes.

20,739. And assuming that the public learns, as they will learn some day, that this board of special Commissioners does exist, and that they can evade what many of them are anxious to evade, namely, the exposure of their private affairs to their own fellow townsmen, do not you think it is just possible that the work of these special Commissioners may be so largely increased that you would have to add to them?—I should think it is thoroughly known now. I should like to mention in connexion with this that our surveyors of taxes now deal with two thirds of the cases that would be appeals. I want specially to mention that, because I never knew the enormous extent it went to till this year, when I employed my autumn in going round and visiting all my big offices. I found that the confidence is so great in the surveyors of taxes that very nearly all of the merchants of the big towns will go to the surveyor, produce all their books, and go through all their accounts, and say: "Now you must settle this"—of course he cannot settle it legally—then he goes to the Commissioners and says: "So-and-so has been before me," and the whole thing is settled in that way by the surveyor of taxes. Now I think the time has come when I should tell you what the duties of the surveyor of taxes are.

20,740. First tell us how many you have got?—228 surveyors for the United Kingdom, and 45 assistants.

20,741. What is their minimum salary—I ask that in order to see what class of men they are?—Until the other day it was 100*l.*, going by 37*l.* 10*s.* triennially, to 400*l.*, with duty pay at various rates not exceeding 200*l.* The whole of that has been changed since your Commission has reported, as we have now done away with duty pay, and also with triennial increments.

20,742. (*Chairman.*) Then you were going on to tell us about the work that is done, and the position of the surveyors of taxes?—It is rather difficult to describe well, but this is the best I can do. The surveyors of taxes are the local officers of the Board in their respective districts. They supervise the assessment of the income tax and inhabited house duty, as well as the collection of these taxes and of the land tax. They attend all meetings of district Commissioners, and assist them and advise them in administering the various Acts of Parliament. They examine all the printed accounts of all public bodies and companies so as to ascertain their liability under Schedule D. of the income tax, and a vast number of the public resort to them in cases where the assessments on profits of trade are objected to. In the large majority of cases an agreement is come to which is subsequently submitted and approved of by the district Commissioners. The collection of the duties is closely watched by the surveyors, and the accounts of parochial collectors are examined by them, and brought to a balance to show that all duties payable to the Revenue have been paid to it. I am afraid that gives a very inadequate idea of the duties of surveyors, because you will all see at once how important it is in dealing with the whole mercantile community that the different returns should be looked closely into and examined, and cases of back duty (which is a very constant occurrence) looked up.

20,743. I do not quite see how the surveyors of taxes will be affected by any amalgamation of the Customs?—I do not think they will at all.

20,744. Will they be affected in any way?—Not the least.

20,745. They might be affected with regard to the amalgamation of the excise, and stamps and taxes?—

Sir A. West, K.C.B.

13 Nov. 1888.

Very distantly, if at all, not worth, I think, your attention.

20,746. (*Mr. Harvey.*) There are many interesting questions about them, but I do not quite see that they have much to do with the point that is now before us as a Commission, unless you think they will be affected by the amalgamation?—I do not.

20,747. (*Chairman.*) Are we ready now to come to the question of the warehousing; probably questions affecting the warehouses will take us over the rest of the ground?—Yes, they will. Shall I repeat the figures I gave you earlier in the day, because they are rather the basis of my statements upon the warehouses.

20,748. I do not think you need repeat the figures about the Revenue collection, because they are upon the notes. You had better, I think, tell us what is the warehouse system?—I will give you a history of it. Up to this time I have separated the revenue derived from goods in warehouses from other revenue collected in other ways, because in my opinion it is most important in dealing with this question of amalgamation. I think it might be convenient to the Commission now if I stated that the question of transferring the administration of some portion of the warehouses from one department to the other has already occupied a very large amount of time and attention at the Treasury, and of course of the two Boards. As long ago as 1876 was my first personal experience that this question was being considered practically. Then I was asked, but it fell through, to visit some of the ports to see what might be done, but nothing came of it farther than that. The real suggestion of the amalgamation of warehouses originated in Lord Frederick Cavendish's time, when he appointed a committee which was composed of the two chairmen of the Boards, Mr. Barrington, of the Treasury, and Mr. Holmes, who was then a Lord of the Treasury, was the chairman of it. I think I can only read again what I have put already in my papers of the 12th of October beginning at the last paragraph of the first sheet, which will give you the history of this committee. It was appointed in 1880 "to inquire into the "bonding system of the two departments; and also "as to the reduction of Customs establishments at "minor ports." What was put before us—I may say "us," because although Sir Charles Herries was originally on the committee, his health broke down, and I succeeded him (I was deputy chairman of the Board at that time) on the committee. What was put before us was: "That the regulations for bonding "goods in the warehouses of the Customs and Inland "Revenue should be absolutely assimilated. That in "districts where there are duplicate establishments, all "of them should, as far as practicable, be transferred to "the Revenue Board." (That meant one Revenue Board.) "That in each town or port the number of "bonded warehouses should, as far as possible, be "reduced to the actual requirements of the trade. "That Customs establishments at minor ports should, "as far as may be practicable, be abolished or reduced "to a lower class (*i.e.*, to the class of creeks, or parts of "larger ports). Sub-committees, consisting of mem-"bers of the two departments, were subsequently "appointed to carry out these recommendations with "the result—That an unified code of warehousing "regulations for the two departments was issued in "1885. That the assimilation of the system of ware-"housing accounts was practically affected. That the "number of duplicate warehousing establishments was "reduced from 35 to 7 (exclusive of a few ware-"houses occupied by distillers), and the bonded "warehouses at 41 minor ports were transferred to the "Inland Revenue Board. On this last subject, the "committee reported to the Treasury in November "1883 as follows:—'We have the pleasure of reporting "'that a saving of 15,000*l.* per annum has been affected "'(through the transfers in question) and this without "'any diminution whatever of the facilities given to "'the public, but rather, if we may judge from the "'reports that reach us, to the satisfaction of all con-"'cerned. This feeling will, we believe, be deepened, "'as the public become more familiar with the altera-"'tions. The saving mentioned above of 15,000*l.* per "'annum, is in respect of changes carried out in "'accordance with the recommendations of our pre-"'vious reports, at the places mentioned therein. "'There remain a large number (61) of places at which "'warehousing business is still performed by the Board "'of Customs. Of these places we append a list, from "'which it will be seen that at only 19 places is "'the business extensive, while we are strongly of "'opinion that at the other ports (42) in the list "'investigation by the practical officers of the two "'Revenue Boards would show that the work could "'be more economically performed by the Board of "'Inland Revenue. We would therefore suggest "'whether your Lordships should not issue instruc-"'tions to both Boards to bring about, with as little "'delay as possible, a transfer of business on the lines "'above indicated, observing that we do not consider "'it necesary that our committee should be continued "'to supervise such transfer.' These recommenda-"tions were adopted by the Lords of the Treasury in "December 1883, but the transfer was stayed in the "following year by the Chancellor of the Exchequer, I "believe on the assurance of the Customs Department "that they could themselves effect great economies."

20,749. (*Chairman.*) Then you go on after that in your paper to give a few statements as to what followed since that date, with regard especially to the unified code of warehouse regulations?—Yes.

20,750. How does that unified code work?—The code has come into operation. It was introduced with the object of the practice being identical. It is of course impossible that two Boards, with the very best intentions, could administer an identical code. Their officers have different views, and the Boards have different views. This code was issued in 1885, but we have already issued 27 general orders to the services making alterations therein. We have had inter-departmental committees to arrange about these changes, and they have already affected about 76 out of the 633 paragraphs of which the code consists. Now these 76 alterations have been affected more or less with the consent of both departments. Of course I may say, that in such a meeting to settle these things there is a good deal of give and take. We have had to give up things that we think useful and essential; I have no doubt the Customs will tell you the same. But certain cases have arisen in which the Treasury have deliberately sanctioned since this code a departure from the identity of it. I can give you as an example this case. In the practice of the Inland Revenue Department we always took in warehouses, the transfer of goods from A. B. to C. D. In the code we arranged to follow the Customs plan, which was not to give tranfers. In Dublin about two years ago considerable frauds arose, not, however, frauds on the Revenue. A trader sold his packet of goods that he had in a warehouse five or six times over, to five or six different persons, who all believed that these spirits which were deposited in the warehouse had not been sold previously. Following the old practice when A. B. sold to C. D. it would have been transferred in the books, and the merchants would have known that that packet of goods was not his any longer to dispose of.

20,751. (*Mr Harvey.*) What document of title had the merchant who put it into the warehouse?—He had the warrant showing that he had got this case in the warehouse, and he produced it to several people and sold it half-a-dozen times over. A deputation waited upon the Board of Inland Revenue (upon me rather), of the warehouse keepers in Dublin, and asked us to revert to the system of registering transfers. I heard (which, of course, I only can do in a deputation) what they had to say, and then I put the case to the Treasury, and in putting it I said, "Some advantage will be gained from "a revenue point of view, because we have found out "that all these merchants are quite willing to pay a "shilling a piece in each transfer which will go into our "pockets, and as they will become dealers by transferr-"ing it, we shall get licenses from them." The result was that we were told we might revert in our warehouses to the principle of transfer. But the Customs objected to it. I do not know whether they may have changed it again since that time; they objected to it at that time, and the Treasury deliberately sanctioned our following one practice and the Customs another. I am not saying this in blame. I am only giving it as an example of the difference of the practice that has crept in, and differences of practice must go on creeping in.

20,752. (*Chairman.*) Have complaints been made to you by traders of any inconvenience which they have experienced in consequence of this difference of treatment in the respective warehouses?—Very constantly.

20,753. We shall probably hear from the trade, then, of that inconvenience?—No doubt; there has been very constant complaint.

20,754. You are strongly of opinion that not only should the code be unified as stated here, but that it should be managed by one Board as the only means of maintaining its identity?—That is the only means of maintaining its identity. Understand I am assuming that both Boards are equally anxious to do what is best, but the two separate Boards and the two separate quantities of officers cannot go identically in practice on the same lines.

20,755. How many places are there where there are duplicate warehousing establishments. Is that number still seven. According to the report the number was reduced from 35 to 7?—There are, however, ten ports where both establishments have warehouses, they are Aberdeen, Belfast, Cork, Dublin, Glasgow, Leith, Limerick, Liverpool, Newcastle-on-Tyne, and London.

20,756. Those are the ten ports where there are both Customs and Revenue Board warehouses?—Yes.

20,757. (*Mr. Fowler.*) There are only two in England outside London?—Yes.

20,758. What are your bonded warehouses, say in London?—In London our warehouses contain what we technically call dry and wet goods, which mean all dutiable articles, Customs or Inland Revenue.

20,759. Are they goods that have been manufactured in England?—Both foreign and English.

20,760. Do you have foreign goods in your warehouses?—Yes, we warehouse tobacco, we warehouse foreign spirits, and we warehouse dried fruits.

20,761. Take dried fruits, that is a pure customs duty, is it not?—Yes.

20,762. Why does that come to you?—Because the trader wishes, for his convenience, to distribute it from our warehouse.

20,763. Then it is the trader's action?—Yes.

20,764. Therefore it comes to your warehouse with the sanction of the Customs authorities?—No, at the wish, and for the convenience of the merchant.

20,765. (*Mr. Lawson*) What is the trader's object?—I will take as an instance, Mr. Gilbey. I quote him always, because he is far the largest man in that line of business; his line of business is the foreign business, which is mainly wine. His wine is landed at the docks in London. Account is taken of it there by the Customs officers, and it goes through a Customs warehouse to an Inland Revenue warehouse direct. He has to deal with both departments. His great warehouse is at Chalk Farm, that great round house that you see going out by the North-western. That is an Inland Revenue warehouse. Everything coming from abroad has to pass through the Customs to get to us, therefore he is affected by a double operation always.

20,766. (*Chairman.*) It is not necessarily put into a Customs warehouse, is it?—I would rather you ask that of the Customs, because I do not know whether it is what they call, constructively, a warehouse. For instance, when you come from abroad you pass through a kind of shed to show your luggage; I think that would be called a Customs warehouse, but I do not know.

20,767. If a cargo of wine comes which a trader desires to deal with in some Inland Revenue warehouse inside the country, could not the Customs account for it on board ship, and then after their clearing it, could not it be put on the rail and taken straight to an Inland Revenue house?—Occasionally goods after being taken an account of at the ship's side go direct to Excise warehouses.

20,768. (*Mr. Fowler.*) Could they take an imported article to your warehouse at Manchester say?—Yes.

20,769. Do they?—Yes, largely.

20,770. I say Manchester, because I want to take a place to which there is no water communication?—You can take Birmingham and Manchester. It is done at both places.

20,771. What I understand you to say is this, that goods imported into this country from abroad which have not yet paid their duty can be bonded, warehoused in Birmingham, say under the Inland Revenue?—Yes.

20,772. When those goods are taken out, to whom is the duty paid; to you, or to the Customs?—It depends upon what it is.

20,773. Suppose it is wine?—Then it is to the Customs.

20,774. (*Chairman.*) Do you collect for them?—Yes.

20,775. (*Mr. Fowler.*) You collect for them and account to them for it?—Yes.

20,776. But the authority for releasing the wine out of bond will be given by the Inland Revenue?—Certainly.

20,777. (*Chairman.*) Then it is generally the fact in the case of imported goods that at the choice of the trader they can go into the warehouse belonging to either Board?—Yes.

20,778. (*Lord Lingen.*) Can you state how the duty would be guarded in the case of tea that was landed at Liverpool and was going to be bonded in Birmingham; where would the bond be given until it had got itself into the warehouse, or would any bond be given at present?—At present the Custom House officer would weigh the tea, and it would be, as I believe, put into a Customs warehouse; of course I am speaking now of the Customs, and therefore I speak with great diffidence. From that Customs warehouse it then comes under us, and is deposited in an Inland Revenue warehouse. Nearly all the tea comes to London, and it goes to all inland towns by rail and is deposited in our warehouses, provided, of course, there is an Inland Revenue warehouse at the town where the article is required.

20,779. The obligor under the bond does not pay the duty till he withdraws it from the warehouse?—No.

20,780. In all this long transit overland from here to Birmingham, how is the duty protected during that time; who undertakes that?—The Customs House officer writes by post to our officer at Birmingham to say 50 packages of tea have left from such and such a ship, and they are marked to our warehouse; when they come to our warehouse the advice letter is reconciled with the quantity that comes.

20,781. At the railway stations and in the train what is the protection to the Revenue?—There is none except this, that the merchant is under bond, and if 50 packages of tea have left the Docks in London to come to us at Birmingham, and on arriving at our warehouse it is found there are only 25, the merchant would have to pay the duty.

20,782. (*Mr. Harvey.*) Supposing they did not arrive at all, what then?—He would have to pay the duty; he is responsible that what is landed is deposited.

20,783. (*Mr. Fowler.*) The duty is assessed at the time of landing, and it is at his risk, whatever becomes of it afterwards?—Exactly.

20,784. All that you say is this: You can deposit what you call equivalent to it, so many boxes, and you need not pay that duty until you take those out?—Certainly.

20,785. The duty we shall have sooner or later, and the duty is what is assessed in London?—Yes.

20,786. And if the quantity has been stolen that is your business, not ours?—Yes.

20,787. (*Lord Lingen.*) As a matter of fact, is the form of bond the same whether given to the Customs or given to your Board?—I imagine so.

20,788. (*Chairman.*) There are 10 places, I understand, where there are duplicate warehouses?—Yes.

20,789. (*Mr. Fowler.*) Those are all ports?—Yes.

20,790. Then in all the rest of the country wherever goods subject to customs are bonded they are in Inland Revenue warehouses?—That is so, except, of course, at the ports.

20,791. (*Chairman.*) There are no Customs warehouses except at ports?—No.

20,792. Will you tell us at how many ports there are Customs warehouses now?—About 60.

20,793. Then there has not been any large reduction in the number of warehouses?—Not that I am aware of.

20,794. I suppose there has been a considerable pressure on the part of the trade to increase the number of bonded warehouses?—And a considerable pressure on our part to diminish them, because in our opinion they are now absolutely unjustifiable. They were granted in old days by the Customs. In Birmingham, I think, we have not more than three warehouses, but in Barnstaple we have 24, and there are 11 in Chester, all granted by Customs, but now transferred to our Board.

20,795. (*Mr. Lawson.*) You say "there are"?—There are, because there were.

Sir A. West, K.C.B.

13 Nov. 1888.

20,796. (*Mr. Fowler.*) In how many places are there bonded warehouses belonging to the Inland Revenue?—In 170.

20,797. I understand the greater part of the goods bonded in those warehouses are goods, the duty of which is a Customs duty and not an Inland Revenue duty?—No; it is only at the big towns, such as Manchester and Birmingham, where we take in dry goods and wet goods. The dry goods is a technical term for Customs goods.

20,798. Wet goods or your own?—Yes; wet goods may be British or foreign.

20,799. Can you give us any figure as to the number of places where you take in Customs goods?—I will give you that afterwards.

20,800. (*Mr. Lawson.*) Are those mutually exclusive terms—"dry goods" and "wet goods"—do they mean exactly "Customs" and "Inland Revenue"?—I think so. Ours would only be spirits and beer.

20,801. They might be Customs too?—They might be Customs, but the reception of "dry" means, if you once take in Customs you take in everything of Customs.

20,802. (*Mr. Fowler.*) Wet goods would include British spirits?—Yes.

20,803. And foreign spirits?—Yes.

20,804. (*Chairman.*) Is it equally true of the manufacturer of dutiable articles in England, that he can, if he wants to deal with them, by way of export, warehouse them of his own choice either in an inland Revenue or in a Customs bonded warehouse?—Yes.

20,805. Does the distiller make his spirits on his own premises?—He makes it on his own premises, which are under our survey.

20,806. Then your officer would see what he does on his own premises, the same as he does with brewers?—Yes; but the rectifier deals entirely with duty-paid spirits; the distiller has in all cases what we call a distillery warehouse, that is a place next to his distillery where he warehouses his spirits; then, to follow out your question, he sends those under bond to any place that he likes, either for export or for home consumption.

20,807. He has got the same free choice, with that exception which you mentioned, that the importer of foreign dutiable articles has with respect to them?—Yes. One of the disadvantages of that is the kind of rivalry that exists between the two departments. It is very natural that the officers of one department do not like to see their business going to the other department, and that leads of course to a considerable rivalry, which I am afraid is not advantageous to the revenue.

20,808. That is to say, that the officers of the respective departments try to make things pleasant for the dealer in order to keep the trade?—Yes.

20,809. Without putting it higher than that, there is a temptation on their part not to be too particular where the hydrometer stands when testing the specific gravity?—This kind of thing occurs. The traders will say, "Look here, you are tremendously strict here; I see "you take the line below the degree, and the Customs "over there take it above." I am not setting one department against the other, but merely one place against the other in that way. "We shall go across to "the Customs, or we shall go across to the Inland "Revenue if you do not deal better with us." I admit there is that temptation to the officers, because they naturally like to have their warehouses full.

20,810. Could you state what amount of revenue each department collects for the other in the year; could you give us an idea how far the interchange goes on?—The Customs collect for the Inland Revenue about three and a half millions; the Inland Revenue collects for the Customs about two millions.

20,811. Under what circumstances does that collection take place?—Foreign spirits, for instance, bonded in our warehouses, would be revenue appertaining to the Customs, and when I say "foreign spirits," it equally applies to dried fruit.

20,811*a*. Foreign spirits bonded in your warehouses are Customs goods?—Yes.

20,812. (*Mr. Harvey.*) You collect that for the Customs?—We collect that for the Customs and *vice versâ*.

20,813. Where do the Customs collect for you?—In home manufactured spirits deposited in Customs warehouses.

20,814. (*Chairman.*) Then the proportion between the two receipts by either board on account of the other depends upon the proportion of home spirits to foreign spirits, dealt with in England, I suppose?—Yes, to a great extent.

20,815. That is, compared with others manufactured at home?—No doubt.

20,816. (*Lord Lingen.*) It depends really, does not it, on the choice of the public, if they put Customs goods in your warehouse you collect the money and account for it to the Customs, and *vice versâ*?—Yes.

20,817. And while three and a half millions of your duties are put into Customs warehouses, two millions are put into the Inland Revenue warehouses for the Customs?—That is it; then that account is adjusted between the departments every month.

20,818. (*Chairman.*) In the ordinary adjustment of those accounts, is there any friction?—I have never heard of any.

20,819. So far as that goes, then, there is no particular case for amalgamation?—No; I really do not think there is anything amounting to friction between the two departments, certainly not between the two Boards.

20,820. (*Mr. Lawson.*) Of course there is the time taken up?—Of course.

20,821. (*Mr. Harvey.*) Do you think the fact that the Customs collect more for you than you for them, indicates a preference on the part of the public for Customs arrangements?—I should not be very much surprised if that were so, because I know that when we took over the Customs warehouses in 1882 they did object, but I will venture to say you will not find one person who was so taken over in 1882 who will give you evidence that he is dissatisfied now.

20,822. (*Mr. Lawson.*) They collect the larger amount out of a smaller total, do not they?—Yes.

20,823. Proportionately, the amount is very large indeed?—Yes.

20,824. How do you account for that if there is no preference, and if there is no reason for it, as you say there was in 1882?—I would like to reserve my answer to that if you will allow me.

20,825. (*Chairman.*) I understand the regulations for charging the revenue upon dutiable articles in either warehouses are identical, and that the only difficulty which has arisen, which you say is a real difficulty, has been owing to the fact that there are two sets of officers and two Boards to determine upon these regulations?—That is all.

20,826. And that the Treasury has occasionally gone so far as to sanction a departure from them in the case of one department?—Yes, so far as it was sanctioned; there is now come a Treasury Order that we are not to sanction a warehouse, we will say at Birmingham, without consultation with the Customs, who of course have no means whatever af judging about the requirements of Birmingham. On the other hand, the Customs may not sanction a warehouse at Hull without the sanction of the Board of Inland Revenue. All this means delay; that is all the argument.

20,827. Then we come to the question of the action of the officers; take a case of one of those 10 ports, where there are existing, what I may call duplicate warehouses—I mean warehouses under both Boards—do your own officers exercise any of the duties which might be supposed to be more properly Customs duties?—No.

20,828. Then the Customs do all the work connected with the discharging of the ship, or whatever the technical term may be, and seeing that the articles imported are dutiable, or the reverse and so forth?—Yes.

20,829. You have no cases that you know of where your officers are employed upon that sort of duty?—None at all.

20,830. Are there any cases where the Customs men do any of your work?—Always excepting the great thing of the warehouses, which is identical, but nothing else; I mean the Customs officers would not interfere with the licenses or any of the Excise duties, nor would the Excise officers interfere in any way with the

Customs duties proper, such as searching the vessel, rummaging, taking charge of what is in the vessel, and so on; the duties are kept quite distinct.

20,831. (*Mr. Lawson.*) Warehousing comprises that part, roughly speaking, of the Customs functions which is included in Revenue?—Yes.

20,832. Has the Customs anything else of Revenue except that?—They collect about 400,000*l.* in addition.

20,833. Of course the Customs officers have other duties, but warehousing is the only part of their duties which pertains to Revenue?—I am not quite sure now that my answer is correct; I mean that they do not clash with us anywhere, it is as distinct as posible.

20,834. (*Chairman.*) Outside the warehouses there is no interchange of duties?—None at all.

20,835. Of course there are a great many Customs duties that are outside warehouses altogether, and which show no Revenue in return?—Exactly.

20,836. I presume there are many ports where there are Customs officers and no warehouses?—Yes.

20,837. And many ports where there have to be Customs officers naturally to see that no dutiable articles are landed, but where there is practically no dutiable articles to be landed and therefore no Revenue?—Exactly; following up my argument, that is the second strong point for amalgamation. All over the coast there are officers employed by the Customs and by the Inland Revenue. I have had this little map prepared for the Commission (*handing in same*). I have not put all the places where we have got Inland Revenue officers, because it does not bear upon the question, but taking the coast all round I have had that map prepared with a green line surrounding the places for Inland Revenue officers, and a red line surrounding them for Customs officers.

20,838. These lines do not mean warehouses?—No, only where the officers are; you will see at a glance that all round the coast there are double establishments.

20,839. (*Lord Lingen.*) Your men do not watch the actual waterside, the sea anywhere?—No, but neither do the Customs (I speak subject to correction). The Customs are not a preventive service. They only have to board and examine vessels when they come. They do not walk along the coast and see when there is a vessel coming.

20,840. That duty is given to a totally different service, to the preventive men?—Yes, under the Admiralty.

20,841. (*Chairman.*) The Customs have nothing at present to do with the Coast Guard, have they?—I believe not, but I would rather that you took that from the Customs.

20,842. We could get from the Customs what they considered to be the obligation of the Customs with regard to placing officers at different points on the coast?—I should not dispute for one moment that it is necessary to have an officer at each of those places. It is impossible to do without Customs House officers wherever there is a possibility of a vessel coming up; but my contention is this, that it is absolutely impossible that there can be sufficient work for any Customs House officer in a place where no vessels can come up.

20,843. (*Lord Lingen.*) But no vessels can legally come to the coast except within the limits of a port?—Exactly.

20,844. Therefore that resolves itself into the presence of a Customs House officer within the limits of a legal port?—Yes.

20,845. Then the preventive service of the guarding of the coast includes a much greater length than the limits that were included within legal ports?—Yes. I have had no information from the Customs since sitting on that Committee in 1882. Then they gave us a return of the different ports and the duties that were collected at them. The first place we come to (they may have changed this since) was Aberystwith. The gross amount of Customs duties and charges collected at that port was 1*l.*—1*l.* duty on tobacco; it would be reduced now, because the duty is less.

20,846. (*Chairman.*) That being a port where a ship could land goods of course it is perfectly clear there must be somebody to represent the Customs at that port?—Yes. When this return was made out in 1880, for the purposes of that Committee, the cost of the Customs establishment at Aberystwith, where they collected 1*l.*, was 854*l.* 12*s.* 1*d.*

20,847. (*Lord Lingen.*) Per annum?—Per annum, and they collected 1*l.* per annum.

20,848. How many men had they got for that money there?—I cannot tell you that.

20,849. How many men in Aberystwith had you at that time?—There would be a supervisior, and probably two or three officers.

20,850. Your collection would be a serious amount of money from a place of that sort?—No doubt. Of course I have taken a very extreme case. Probably it is necessary to have an officer there because this tobacco having come in once might come again, and you want to get the duty on it. But my contention is that, as we have a district office there with an officer, and as the tide serves only at certain times, and the boats only come in at certain times, this work could be interwoven with duties he is doing for us, so that when he has made this collection of 1*l.* he will have other duties to perform in regard to licenses, publicans, breweries, and all the multiplicity of duties we have to perform, or even if you could not reduce an officer then that Customs House officer, if he were a revenue officer, would be engaged in the intervals of his leisure in looking up licenses and doing the necessary duties of an excise officer.

20,851. (*Mr. Lawson.*) Although this is an extreme case, are there many other cases in which the same is true?—I took the first case, and it happened to be an extreme case, so it answered my purpose; but I could read you many which are as absurd. I believe there are several places within the country in which no boat of any kind or sort can come up except at spring tide, or once a fortnight.

20,852. (*Lord Lingen.*) Would not the coastguard do duty within the limits of a port, or is it only outside the limits of a port?—They make a distinction between ports and creeks.

20,853. A creek is legally part of the port?—Yes; but for the purposes of the establishment we make that distinction.

20,854. Would the coastguard come into Aberystwith, for instance, and guard there, or would that be left to the Customs?—I should think that the coastguard would guard it up to the point where the port or the harbour was.

20,855. They would not consider that their field was exclusive of the limits of the ports?—I should think not.

20,856. (*Mr. Lawson.*) I see that at Rye they collected 99*l.* in the year. Are you aware that the cost of the Customs there would be in the year 1879, 435*l.* 12*s.* 1*d.*?—Yes.

20,857. (*Chairman.*) Can you say generally, from having looked through the lists, that there are many ports around the coast of the United Kingdom where the Customs House officer or the Customs House Establishment would appear to have very little to do?—I should say so, certainly.

20,858. (*Lord Lingen.*) I should think, except in Swansea, Cardiff, and Holyhead perhaps, that in all these Welsh places the collections must be exceedingly small?—They are excessively trivial. The trade always comes to certain fixed places. That is the most curious thing in the world. Tea, for instance, comes to London, and goes all over the country because the trade chooses to take that channel.

20,859. (*Chairman.*) Have you any statement which shows to what extent the Customs House officers in these places do work on behalf of the harbour companies and the various commissioners?—I have only got the statement made by the Customs in the paper which was prepared for your Commission; they mention that they divide their work into 20 heads.

20,860. So far as those 20 heads go is not it the case that the receipt of revenue for harbours and so forth is paid for by those respective companies?—They take advantage of the presence of the Customs collectors. You will find, I think, that the collectors at the big places receive fees or emoluments which are not put down in the estimates. There, again, is no doubt the beginning of a certain amount of jealousy. For instance, in Dublin (I say this subject to correction, because it may be answered), I believe the collector has 1,500*l.* a year from one source or another. He does not collect

Sir A. West, K.C.B.

13 Nov. 1888.

half of the revenue that our collector collects with a maximum salary, which I suppose he has not got yet, of 800*l.* a year. All these things give rise, of course, to certain amount of jealousies and frictions and difficulties. I want particularly to say that probably the Customs have been most energetic in their economies of late years, and I have no doubt they have made arrangements that these things shall not continue. I am only telling you of facts.

20,861. If there is a collector of Customs at Newcastle, or some large port of that sort, can you see any reason why that man, when he has to board a ship for certain duties connected with the revenue, should not at the same time be able to certify for the tonnage and harbour dues for the purposes of the commissioners there, and for the convenience of the public, for which he may fairly earn an extra salary?—No doubt.

20,862. You do not see any objection to some officer doing that?—I do not see any objection to "some officer," I do see an objection to an officer as high as a collector with that salary.

20,863. (*Lord Lingen.*) Do you know from that return at Aberystwith what amount of dutiable goods would have come there?—No; I should like to touch very much upon that point. On page 2 of the Customs Report to you, of the 19th October, there is this: "With the view of examining the question whether any "improved administration or economy is likely to "result from the proposed change, it will be as well "first to state the main divisions of the work of the "Customs Department;" and then follow 20 heads. I should be very unwilling to go into the details of the work, because Sir Charles Du Cane will give very much better information about that than I could do; but I think I might make this remark, that nearly all these duties are duties subordinate to the duties already performed by the Board of Trade, that is to say, that at all the big places the Board of Trade have officers, and they do nearly all these duties themselves.

20,864. You mean "light dues," and so on?—All these things, such as "Receipt of light dues," "Other "work for the Board of Trade," "Superintendent of "mercantile marine and receiver of wreck and enrol-"ment of men," and registration of vessels. The mass of this work is duty properly belonging to the Board of Trade, because as small places have the Customs House officers they may as well do the duty. I think I may argue that as to giving work to the Board, I may compare it with my own duty in the collection of agricultural statistics. If I wish to magnify the duties of my Board, I could say here we have the superintendence and collection of agricultural statistics from every farmer in England, every little farmer. But I tell you frankly that does not cost us 5*l.* of work, it is work done by the lower class of officers. But if it is a question of principle, supposing questions of principle arise, and twice in my chairmanship they have arisen, and the President of the Council has asked me to go down and attend a deputation with him from chambers of agriculture, as to whether they should include for the future silos in the return, or whether they should include chickens. I gave him an extra two hours' work to say of course if they want silos included we will take care that silos are included. But there is no administrative work in the higher branches in consequence of that probably. So I say that in all these cases it is impossible that the Board of Customs should deal without reference to the Board of Trade.

20,865. (*Lord Lingen.*) The Treasury policy has always been to induce the Board of Trade, as far as possible, to employ the Customs for their seaside work?—Yes.

20,866. And the struggle on the Board of Trade has always been to have their own men and establishments?—Exactly.

20,867. I think, unless the policy of the Treasury is changed since I was there, they would lean rather to keep the Board of Trade work with the Customs than to discourage that?—I am quite sure they would. I was not saying a word against that; all I was saying was, this is administrative work in the lower ranks of the service. Of course great cases arise no doubt, as when the Alabama went away. That caused great anxiety to the Customs. In ordinary cases these are matters of principle. In the case of the Alabama they would be referred to the Government of the day.

20,868. (*Chairman.*) I think there is a slight confusion there between the administrative duties they have to perform for the head of the Customs in London and the work at the port, because here we have got a small port like Aberystwith or some other port where we have seen that there is a very small revenue and a considerable expenditure. Whatever that expenditure may be, we presume from this return of the Customs that those particular officers may have a lot of other work to do?—A lot of these little things to do.

20,869. Which may fairly fill up his time; and if that be the case is not it a good thing that his time should be so filled up?—Yes.

20,870. It does not interfere with the questions of the amalgamation at all, but it takes away the value of the argument as regards the particular individual, showing he might be doing Excise work?—Will you allow me to differ to this extent: they cannot have any of these duties performed if there is nothing to perform them on; that is my contention.

20,871. Nothing to do at that very port—none of those 20 points?—I do not think there is one of those we can do, except there is a ship to do it on. My contention is there cannot be a ship.

20,872. (*Lord Lingen.*) Suppose a collier came to Aberystwith; there is no duty on coal, but they would have to search that ship strictly, and to see that there was no tobacco and no spirits?—Quite so. I am not in the least saying that. But what I say is this, that there are lots of places on the coast where nothing can come.

20,873. (*Mr. Harvey.*) Would not there be a good deal to do there as receiver of wreck?—If you will take the Wreck Chart for any number of years you will find that probably at Aberystwith there has not been a wreck for ten years. Wrecks do not occur in these creeks and places. The total received in the year by the collection, not including Light Dues, is about 91,000*l.* for the whole of the coast trade. I do not in the least presume to say that that officer has not enough to do; but I cannot help thinking that from a common-sense point of view, at a place like Penrhyn, his time cannot be fully occupied, and that perhaps it might be dovetailed into the establishment that the Inland Revenue is obliged to have at that spot. I will give you an instance. Mr. Morris wrote to the "Times" the other day to say that at the holiday time of the year the slaughter of sea birds was very great by people who did not take out gun licenses. What could be more useful than that Customs House officers should be employed in seeing that these people walking along the coast had gun licenses. I give you that as an instance. Then, again, they might help to look after dogs in spare time. My argument is that the more multifarious the duties the more it enables you to work them in one with the other.

20,874. (*Mr. Harvey.*) Then that statement of the duties is substantially misleading?—I would not say that for the world. I should not call it misleading if I said we had to collect agricultural statistics, which gives great labour——

20,875. (*Mr. Lawson.*) Because it must give your subordinates a good deal of labour?—Of course it does. I will only take one of them. I do not want to criticise their payment of pensions, civil, naval, and military. Of course we have the payment of civil pensions, but that does not cause me, or the board, or anybody else beyond a pay clerk, much trouble, yet we pay a great many more.

20,876. That particular one would not affect an outdoor officer?—No. Then there is the prosecution of offenders against revenue laws and the preparation of the statistics of trade. No doubt you will hear the anti-Treasury view about these statistics. No doubt you will have before you Mr. Giffen. These statistics from which the Board of Trade returns of imports and exports are prepared are sent up *en masse* to the Customs House. They are not tabulated at the ports in any way, they are sent up *en masse* and there is an enormous department in the Customs House that tabulates those and sends that tabulation to the Board of Trade. No doubt you will ask Mr. Giffen all about that.

20,877. (*Lord Lingen.*) Have you got before you the revenue estimates for this year 1888–89, page 31. There is the Chief Inspector's office divided into two branches, one for the Excise and one for the Taxes. The Excise is naturally a good deal the biggest. There are 32 in that if you cast them up, and there are 13 in the other. Then if we turn to page 38, where you have got your outdoor departments for the Excise, these inspectors

and examiners, or some of them, figure again at the head of it. These are parts of the same staff that are mentioned at page 31. I suppose some of them are quartered in Somerset House, and some are posted up and down the country, is that it?—No. Inspectors are all in Somerset House, and you will see at page 38 no salaries are put to them; they go back to page 31 for their salaries.

20,878. Therefore the head persons down in the country, your highest-placed salaried officers, are the collectors?—Yes.

20,879. Do they collect your stamp duty and tax duties as well as your excise duties?—They do.

20,880. And where they do not collect, how does the revenue reach your Receiver-General?—It never reaches the Receiver-General, but is paid direct to the agents of the Bank of England.

20,881. That would only be true of the house tax?—Yes, and of all other taxes.

20,882. The licenses would reach you through the Post Office, would they?—Some through the Post Office and some through our officers; the most would be through our officers, through our collectors' offices.

20,883. (*Mr. Lawson.*) When you say London, I suppose you mean all through the metropolis?—I said London particularly, because the City of London have always clung to their patronage in giving these large sums to their collectors, they will not let us collect for them.

20,884. You mean the metropolis outside the city of London, the administrative county?—We shall have to look at that in a different light. I do not know how that will affect us. The City of London Commissioners have always stuck to their own patronage at a very great cost to the country.

20,885. (*Lord Lingen.*) Is that equally true of your inspectors on page 40, a certain number of whom look after your taxes, that they are not local officers but are quartered at Somerset House?—Yes.

20,886. Then I see local officers for the taxes, and gentlemen who are put on the new scale, of which 400*l.* was the previous maximum?—Yes, 400*l.* and duty pay.

20,887. There seems considerable difference in the pay of the collectors, and of the highest pay of these surveyors of taxes?—The surveyors of taxes highest is, I think, 600*l.* and the collectors' highest is 800*l.*

20,888. If you undertook the Customs collection, these collectors, I suppose, are the officers into whose hands the Customs duties would come?—Yes.

20,889. If you now turn to page 13 of the same estimates under the Customs, the collector there you see means the head of a port. It means a different person to your collector. He collects at present all the Customs duties within his port. When it was proposed to consolidate him with your collectors it was said "that is impossible because the collector of the Inland "Revenue is an ambulatory officer who is inland, and "all about his district. Our Customs collector must "be at all times within the limits of his port." Do you admit the force of that argument?—No, I do not. The policy of the Board of Inland Revenue has been to throw as much responsibility upon the collectors as possible, and to look to them for the proper discipline of their collection. In accordance with that we have abolished what was called "rounds." We used formerly to have 'rounds" for collections. The collector would be here at a certain spot, and by that means, saw his officers. There was a very great expense in that. He took his clerks, and the office was shut; that is abolished. We now get the Revenue sent to that collector without any trouble at all. But with a view to inspection we insist upon a collector visiting each district (say that he has five or six districts) once in the year, and we hold him responsible for knowing about the officers, and the conduct of them, whether they are good men or bad men, or indifferent men, and so on. But to say that would interfere with the duties of the collectors seems to me not to be the fact, because in the collector's absence, visiting these places once a year, the chief clerk in his office is perfectly competent to deal with all such matters that might arise during a temporary absence.

Sir A. West, K.C.B. 13 Nov. 1888.

20,890. Then the same would happen in a port?—The same would happen in a port.

20,891. (*Mr. Lawson.*) The collector, of course, supervises really the work that is done in his district?—Yes, he is the king of his collection.

20,892. Therefore, probably even the addition of Customs work would not make such a difference to him as to a subordinate officer?—Exactly.

20,893. (*Lord Lingen.*) If an appeal came from or against one of your collectors, would it go into your Inspector's office, Inspector of Excise, or Inspector of Taxes?—If there was a quarrel or anything of that kind with one of the public, the Inspector, if it was of sufficient gravity, would inspect, and see and hear the matter.

20,894. But the Inspector would be for any of those purposes the permanent adviser of your board. You would send it to him, or he would come to you?—Yes.

20,895. He is the channel through which anything respecting the collection either of excise or of taxes would reach your board?—Certainly.

Adjourned to Thursday, the 22nd instant, at 12 o'clock.

SIXTIETH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, November 22nd, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
LORD BASING.
Rt. Hon. H. H. FOWLER, M.P.
Mr. J. CLEGHORN.
Mr. A. S. HARVEY.
Mr. H. L. W. LAWSON, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Sir ALGERNON WEST, K.C.B., recalled and further examined.

20,896. (*Chairman.*) Have you anything that you would like to say with reference to the evidence that you gave on the last day the Commission met. Have you anything to add to any of the answers you then gave?—In reading over that evidence I was struck with the impression that apparently I had given too great prominence to my own individual opinion, which I should be very sorry to do; and I should like, if I might, to say how that opinion has been borne out by other men—not in political circles; I am not talking of Chancellors of the Exchequer, or Secretaries of the Treasury, but by other men with whom I have been in constant conversation and communication on this point. I have never come across one who did not think that increased economy, and improved administration, would not follow amalgamation. I would mention first my

Sir A. West, K.C.B. 22 Nov. 188

Sir A. West, K.C.B.

22 Nov. 1888.

colleagues and late Deputy Chairman and Secretary of the Board of Inland Revenue, Mr. Adam Young and Mr. Forsey. I think they are by far the highest living authorities on Excise laws and are most intimately acquainted with Customs laws and practice. They were constantly, in a long career, brought into contact with all the Customs laws; they both retired, as you are aware, and they are both, I am sorry to say, unable from ill-health to attend as witnesses. They have both written to me to say how strongly they feel, and have felt all their latter time, how necessary amalgamation is. Our present Chief Inspector (who has an immense experience), our Excise Secretary (who has occupied the position of collector at Hull, Belfast, and Dublin, three of the most important Customs ports), together with all our most able collectors, are of the same opinion. The Warehouse Committee, as you are aware, in a letter addressed to the Treasury in November 1883, suggested, in the paragraph on amalgamation, that in addition to the 41 warehouses that had already been transferred from the Customs to the Inland Revenue, a further number of 42 should be similarly treated. That letter was signed by Sir Charles Du Cane, who was then and is now the Chairman of the Board of Customs. That was approved of by the Treasury at the time. Both the Boards at the present time, I am happy to see, are agreed that amalgamation would result in economy, the only difference between us being the amount of that economy; because I observe that the Customs admit there would be an economy of 11,000*l.* a year. I venture to think that it would enormously exceed that amount, even without including the sums that might be obtained possibly from the sale of the Custom House (which, I believe, is estimated to amount to millions) and the sale of duplicate offices, either Customs or Inland Revenue, throughout the country.

20,897. (*Mr. Fowler.*) You say "the sale of the Custom House"; do you think it would be possible, assuming the Boards were consolidated, to do away with having an establishment for the consolidated Board down by the docks?—I think it would be quite impossible to do without an office for the staff which would be retained there, but there are large Government rooms that I believe are now vacant at Tower Hill, which would be amply sufficient for the duty of the port; I do not say the Board, because I contend that it must be immaterial to the whole trade whether the Board sits there.

20,898. I understand there is an immense mass of accommodation required at the Custom House for the purposes of shippers and merchants, and so on, for clearing their ships?—No doubt.

20,899. I think we may dismiss the idea that any of them would come to Somerset House; of course they would object to that?—Certainly.

20,900. Therefore you must do the work there?—My answer to that would be that the offices at Tower Hill would probably be found sufficient for the duties of the port.

20,901. (*Mr. Cleghorn.*) And so the existing Custom House, you think, might be sold?—I do.

20,902. You would still have to provide a long room and all the other appendages?—The offices at Tower Hill that were formerly ours are very large.

20,903. (*Mr. Lawson.*) You have got actual knowledge of that fact now?—I cannot go into detail, but I think at Tower Hill there are very large offices, which would be, in my opinion, sufficient.

20,904. (*Mr. Cleghorn.*) Cannot these offices you refer to at Tower Hill be sold, and so avoid any transfer or change?—I do not think they are a quarter the value, or anything like a quarter the value, of the Custom House.

20,905. (*Chairman.*) Then so far as the figures are concerned, and leaving out of the question for the moment the suggested sale of the Custom House and other duplicate offices, and confining ourselves to the staff, I understand that you and others whose opinions you have just now quoted, are of opinion that the Board could be amalgamated, and that a saving of something like 10,000*l.* or 11,000*l.* a year could be effected by that. Do you, or do you not, think that there would have to be any increase in the salaries of the Commissioners or of any of them?—Certainly not.

20,906. Do you think that the work could be done by the gentlemen of position who ought to be at the head of such boards and colleagues on such boards, and that there would be no occasion to raise the salaries?—Not the slightest. I may say in passing as it occurs to me that a Bill is in Parliament now which is going to be passed I hope on Monday which will add to the sum collected by us 680,000*l.* a year. That is a kind of sum that is thrown upon us without the smallest question of increasing our position or pay, or anything else.

20,907. In the working of the Inland Revenue with which you are so familiar, do you see any special value in that fact of having a Board at all, or how would you set the advantages of having a Board as against having a Comptroller and a Deputy-Comptroller of the Inland Revenue?—I have thought a great deal on that question. I think the advantages of the Board are very great. Supposing you are on the question of economy first of all. If you abolish the Commissioners you would be obliged, from the nature of the work, to have officers of equal position, though you might not call them Commissioners as staff; it would merely be calling in others to consult with the Comptroller.

20,908. I merely suggested that, because the point is sure to be raised when we come to talk of the Inland Revenue (not thinking for the moment of the Customs at all) wherein do you see the advantage of having a Chairman, a Deputy Chairman, and three Commissioners, as against having a Comptroller and a Deputy Comptroller?—This is one point. I do not think you would gain anything in economy for the reasons I have stated. Then considering the unpopular and difficult duties we have to perform throughout the country, I think the force of a Board is something enormous. All of you perhaps have got instances in your mind. Supposing an unpopular tax was imposed on the country, and it was to be said that Sir Charles Du Cane, or anybody else, was the man who was collecting it, there would be raised a strong feeling and an agitation against the individual. Now, although we collect 56,000,000*l.* of revenue, there are not many people in the country who know of our existence individually, or who we are, but directly things are associated with a name (which they would be in the event of one or two men being substituted for a Board) I think you would imperil very much the collection of the revenue. I feel that very strongly. In the first place, if you put the case of two men, I frankly say this, as far as I am concerned, that if one man is away on his leave or is ill or anything of that kind, it would be almost impossible to bear the responsibility of dealing with the various things that will constantly arise.

20,909. You told us last time that your Board generally meet in full numbers, subject to certain questions of leave?—Yes; three always; three is a quorum, and I find the greatest possible advantage from it.

20,910. Then, quite apart from the question of economy, do you think as a matter of administration, from your familiarity with the work, that it is a distinct advantage to the public that there should be a Board, and not that it should be in the hands of one man and a deputy?—I do.

20,911. (*Lord Lingen.*) And that not so much with regard to the execution of the work as its effect upon the public?—Its effect upon the public is one point. The other point perhaps you will say is negative. Supposing you abolish we will say two or three Commissioners, their work would have to be done by two or three other people who would be equally highly paid. Therefore you would gain nothing, and you would lose that freedom of expression of opinion which colleagues can have, but which never is quite the same from the subordinate to the chief. You get a more free expression of opinion from men who are your colleagues than from men even in high positions who are your subordinates.

20,912. What proportion of the working hours of the day is passed by the Commissioners together sitting at the Board, and by the Commissioners separately sitting by themselves?—As nearly as I can tell you I might say the Board sit from an hour and a half to two hours and a quarter a day.

20,913. That is about a third of their time?—Yes. Then, besides that, as I explained the other day, there is what I may call a sub-Board of Commissioners in the afternoon, and I also explained that they sat in what is oddly enough called "committees" the rest of the day, a committee being one man.

20,914. (*Mr. Lawson.*) The Chairman and Deputy Chairman not being present?—Quite so.

20,915. (*Lord Lingen.*) Would your experience be that any considerable number of questions are brought before the Board that might just as well be decided by a single Commissioner, the decision being practically the adoption of the report or draft of your experienced permanent officers?—I should say that never a day passes that there are not five or six points that require considerable thought and discussion.

20,916. So far as routine work comes before the Board, one-third of the whole official time is occupying at least two very highly-paid officers who might be doing something else?—Quite so, if it were not necessary for them to be there.

20,917. Supposing that to be so?—Yes.

20,918. (*Chairman.*) You told us, I think, last time what your views were as to the capacity of the Secretariat and of the Solicitor's Department to do the amalgamated work, but, below that point, I think that your view is, as I gather from your paper, that you cannot now put in writing the exact method in which you think there would be an economy as far as regards the staff below the upper departments?—For two reasons. I think it would be almost indecent of me to put forward a scheme for another department to be amalgamated with mine without consultation with that department. That appears to me at once. The other difficulty would be this, that if I was to say that such and such an office might be abolished, I have no doubt that would raise such an amount of opposition that it would be very rash in view of my having anything to do with the future arrangement of either Board that I should state that publicly.

20,919. (*Chairman.*) I do not understand you to say that you think any of your Revenue officers could undertake Customs work as they now stand; do you think that your men are not so fully employed but what they might do some Customs work?—I will not for the moment say that collectors at small places are fully employed. I am making no reflections on them, but I mean from the nature of things that a collector at a small place can take a little more work.

20,920. You have in some places men who must be there, but whose time is not quite fully employed?—Yes.

20,921. And in the same way you imagine, and you have given us one or two instances, which you thought possibly would apply, where the Customs similarly had a man engaged who might devote some of his time to your work?—Exactly.

20,922. You say that all previous amalgamations have resulted in economy, and you give, as a main instance, the two cases of the amalgamation of the Stamps with Taxes in 1834, and the amalgamation in 1848 of the Stamps and Taxes with the Excise?—Yes.

20,923. Can you tell us what the saving principally was in the former case—was it in separate establishments and salaries?—Yes, mainly.

20,924. You give the figures in your paper of the 1848 amalgamation?—Yes, on page one.

20,925. Those are almost entirely, are they not, in the upper establishment?—I have only given the higher ranks in detail, but I believe there were altogether about 570 officers abolished.

20,926. (*Mr. Fowler.*) Was that an actual saving, or a prospective one?—What I am alluding to now was an actual saving.

20,927. Were there no pensions on reorganisation to be deducted from it?—It is most difficult to say at this time whether that was so. The next paragraph points to the fact that Mr. Horsfall's Committee (and they had very full evidence before them) said there was a saving of over 100,000*l.* a year. You see now in any question of figures we carefully add the cost and the dead weight of the pension too, always.

20,928. (*Chairman.*) The savings which were effected in those days were effected under very different conditions to those which prevail at the present day?—No doubt.

20,929. Is not it the case that since Mr. Horsfall's Committee, and since attention was called to a great many inconveniences and worse than inconveniences, there have been a great many reforms effected without any amalgamation?—Yes, a great many. I will mention one very notable reform, which took place not very long ago, as an example of others. We formerly had distributors of stamps all over the country, who were paid poundage, amounting in some cases to 1,000*l.* and 2,000*l.* a year or more in some cases. They were people with no connexion whatever with the Inland Revenue, but they were appointed by the Ministry of the day to receive this poundage. Their clerks did the work and they received the money; that has all been abolished.

20,930. (*Mr. Fowler.*) That was a piece of pure political patronage?—Yes.

20,931. The stamp distributors in times gone by were men who had no special knowledge whatever, were not they?—Yes.

20,932. In how many cases is poundage still paid to distributors of stamps?—In 57 cases.

20,933. (*Mr. Cleghorn.*) Are we to understand that even those 57 will die out?—Yes.

20,934. They will not be replaced?—No.

20,935. (*Mr. Lawson.*) How long has it been the rule not to replace these officials?—Ever since my connection with the Inland Revenue. I do not mean to say that I initiated it; I mean that I found it.

20,936. (*Chairman.*) You told us last time I think with reference to this amalgamation of the Stamps, Taxes, and Excise, that throughout the lower ranks of the in-door service the fusion had been complete?—Yes.

20,937. Supposing you had a free hand now, and this amalgamation had not taken place, does not it appear to you that a more natural amalgamation would be the Customs and Excise on the one hand, and the Stamps and Taxes on the other?—Clearly.

20,938. That amalgamation having take place in 1848, what would you say to any proposals, supposing such proposals were made, to amalgamate now the Stamps and Taxes on the one hand, and the Customs and Excise on the other?—I should say it was destroying the work of 40 years; it would be absolutely retrograde in that way. The effort of everybody since 1848 has been to amalgamate, and I think we have succeeded pretty well. This would be exactly going back upon that. Nothing is impossible in this world; but it would be a tremendous unravelling of all that for 40 years it has been attempted to interweave and mix.

20,939. But you are of opinion that in the first instance it would have been the more natural amalgamation?—Far more natural.

20,940. (*Mr. Lawson.*) I suppose the arrangements are now so complete that you would break up the department if you attempted to take that course?—Exactly.

20,941. (*Chairman.*) You see very conclusive reasons for maintaining now the fusion or amalgamation which exists of the Stamps, Taxes, and Excise; and also, as you have told us, you are of opinion that amalgamation still further of the Customs with the Inland Revenue (which is already an amalgamated office) would be desirable?—Yes.

20,942. Just a question upon the warehousing; you have told us, and your paper tells us, that there are difficulties with reference to the interpretation of the Code. I want to understand clearly why it is necessary to amalgamate the Boards, or to amalgamate the two departments together in order to get a simplification of that Code. Would it not be possible to manage the warehouses by a joint committee of the two Boards?—I think it is Utopian to hope for such a thing as that.

20,943. I cannot quite see why it is Utopian, nor where the impossibility is. Do you mean that it is hopeless to expect that the Inland Revenue and the Customs can work harmoniously together?—There is perfect friendliness existing between the Boards at present, and yet we have got to this state; and, therefore, is not that rather an argument showing the difficulty of meeting and trying to arrange these questions?

20,944. Perhaps you would define what this state of things is. We do not know at present what the view of the Customs is, or what the view of the trade is; but I imagine that the view of a good many of the Customs people very possibly is that amalgamation is not necessary, and that they would not admit a state of things which called for any very great alteration?—May I give you that state of things as regards that code only? I quite understand your question why the Board should not meet and settle these things. That is rather difficult to answer. We do settle them, but then the difficulties arise equally from the primary interpretation. I hope you understand there is no friction whatever

Sir A. West, K.C.B.

22 Nov. 1888.

between the Boards. All our communications have been most friendly in every way; but since the 1st January 1885, when the present code came into operation, I have written down the number of cases where that code has had to be altered. Twenty-seven general orders have been issued to the Service making changes therein at the instance of one or other of the departments, which have necessarily had to be considered and agreed upon by both. These changes have affected about 76 of the 633 paragraphs of which the code consists.

20,945. (*Lord Lingen.*) Do not you collect these separate orders and then re-edit the code every year?—We have not done so yet.

20,946. That would be an obvious improvement, would it not?—Except that it would be a great expense to do it every year.

20,947. I suppose half-a-dozen pages of print include the whole code?—No, there are 633 paragraphs. However, I quite admit, without arguing that, of course it would be the simplest thing to re-edit it as you suggest. It is the mere matter of expense that has prevented us doing so.

20,948. It is what the Education Department has done every year for the last 20 years?—Of course all these general orders are filed and kept in the different offices.

20,949. Still it must greatly increase the labour and the uncertainty of the officer on the spot who has to decide in a minute if he has got the code before him, and then has got to hunt up all these loose papers?—I will see what it would cost to adopt your suggestion.

20,950. (*Chairman.*) I do not quite follow you as to how the necessity of making these changes in the code arises from the fact of there being two Boards. I quite understand that in a complicated code of that sort the necessities of the trade require alteration from time to time, but how is that owing to the fact of there being two Boards. Of course there must be communications and correspondence between the two Boards before you settle the alterations in the code. That I can understand?—And that you will understand would be obviated if there was one Board. That is obvious; then you say why does it arise now?

20,951. Why do you have more changes in the code because of the two Boards?—Because we have different and distinct opinions. That is a point, of course, that might be met by our meeting together. I will give you an instance—I am afraid I am repeating it—that instance which occurred about transfers in warehouses. That was a point on which the Boards differed. The Treasury instructed us to make the alteration that we thought right, and left the Customs to do that which they thought right. There was then a distinct difference of opinion between the two Boards. Of course that might be met by communications.

20,952. When there is a difference of opinion between the two Boards I presume the Treasury decides?—Yes.

20,953. I think you state in one of your papers that already the Treasury has sanctioned a difference of practice in the case of goods coming under your Department and under the other?—Yes.

20,954. That you say is objectionable?—In my opinion, very.

20,955. (*Mr. Lawson.*) Do these differences of opinion occur frequently?—Still touching upon the warehousing code only they have occurred since 1885, in many instances, and as I have already said, 76 out of the 633 paragraphs have had to be altered in consequence of those differences.

20,956. Differences of what kind?—Differences of practice and interpretation. I know it is an argument against my view, that these conflicts may be of some advantage, the rivalry of the two Boards and of two men may be of some advantage. I see the force of that argument, but I say that that rivalry always results in a loss to the revenue, because, as I explained on the previous occasion, the keen and zealous officer is naturally anxious to attract goods to his warehouse that are in the other Departments' warehouses, and therefore any concessions that he may make are not disastrous, but are inconvenient, I will put it, to the revenue.

20,957. (*Mr. Fowler.*) You mean a loss to the revenue but a gain to the taxpayer?—Exactly.

20,958. And the taxpayer in this case I suppose would mean the public?—Yes.

20,959. (*Chairman.*) You tell us that you think that the putting of the warehouses under one establishment would be a very good reason for the amalgamation, and that 97 per cent. of the Customs' revenue is collected in the warehouses; have you considered how much of the work of the Customs is done before the goods get into the warehouses. Perhaps it is hardly a question which you can answer, but I believe the bulk of the work of the Customs is done before the goods get into the warehouses, is it not?—Do I understand you to ask this: Supposing the warehouses as contemplated by our Committee of 1882 were eventually transferred to the Inland Revenue Department, whether in my opinion the Customs on the Quays and on the Docks would be able to diminish their staff?

20,960. I was not going into the question of diminishing their staff?—It would not diminish their duties a bit; it would not diminish the seaboard duties.

20,961. I want to get from you the proportion of the work that is done by the Customs. The argument, I understand, to be this, first it would be easy to fuse the warehouses and to have them all managed by one Board, and then the argument goes on that as 97 per cent. of the Customs revenue is taken in the warehouses, therefore the three per cent. of the Customs work outside is not worth thinking of as requiring an extra Board; would it not be more correct to say that fully one-half or two-thirds of the Customs work is not directly the collection of the revenue but the dealing with goods before they get into the warehouses?—It is so.

20,962. So that practically two-thirds of whatever the proportion may be would remain the same and the responsibility the same whatever happens to the goods when they get into the warehouse, although the revenue is there collected?—Certainly. I will give you the exact figures. I am quoting from the Customs own return, and therefore I give them without hesitation. They have a total number of established officers of 4,485.

20,963. (*Lord Lingen.*) Does that include everybody?—It includes all their established officers. The officers employed in warehousing, by which I mean employed inside the warehouses, are estimated at 1,215.

20,964. (*Mr. Cleghorn.*) Out of that 4,500?—Yes.

20,965. (*Chairman.*) Therefore, there are a good many employed, are there not, both in the warehouses and outside?—I suppose there would be, there must be some; but the Customs have given this return of the number that they employ in warehousing, and whether they include some of the outside men or not I do not know. I was including only those employed "in warehouses," as they call it, and I should think that meant "in the warehouse."

20,966. (*Lord Lingen.*) Then those men inside, you think, do no out-door duties at all?—I would rather you took that of the Customs, but I imagine from their return that they do not. That would leave the balance employed on the quay and in the docks performing those various duties for the Board of Trade and other Departments which they mention in their memorandum.

20,967. (*Chairman.*) I only meant to press you to an opinion as to how far it was quite fair in a matter of comparison to say that the Customs revenue being collected to an extent of 97 per cent. of it in warehouses, therefore there did not appear any necessity for the Board of Customs if the warehouses were taken away?—I did not go so far as that, but I think I said this, and I can say it now, that if the warehousing was transferred—I dislike putting it in the way I am about to do, because it looks as if I really meant transferred to the Inland Revenue.

20,968. Put it "To one Revenue Board"?—I must say the Inland Revenue to carry out my argument for the moment. Supposing you said all these warehouses can be transferred to the Inland Revenue Board, and the 1,215 officers now employed by the Customs would come with them natually; you then would leave (and this is my argument) a board with all its highly paid officers, such as secretaries, law officers, accountants, and so on, to collect a revenue of less than half a million, and to do, of course, the sundry works for the Board of Trade and other departments.

20,969. I do not know, perhaps, that one need press you any further on the subject, but is it fair to take the mere receipt of revenue as a test of the work that is done by the Customs; is not the whole responsibility of

the previous dealing with these goods before they come into the warehouse really the main business of the Customs?—Only as regards the revenue they collect from them, at least it appears to me so.

20,970. It is quite true that the money is received after the goods have been in the warehouse, but is not it the business of the Customs to see that the proper bond is given for those articles, and that dutiable articles do not get in scot free, and so forth?—Quite so.

20,971. Although the money is not taken until after they have been warehoused?—Quite so; I do not in the least want to say otherwise. If we are comparing what is commonly called the two Great Revenue Boards (that is the point of my argument), then I naturally wish to ask what is the revenue collected by the two Great Revenue Boards.

20,972. (*Mr. Lawson.*) In the same way though not to the same exent, it is the duty of the Excise officers to prevent frauds upon the revenue, is not it?—Certainly.

20,973. (*Mr. Fowler.*) But is not there a great preventive service in the Custom House?—No, the preventive service proper (I hope I am speaking correctly) is the Coastguard. The duties of the Customs Board many years ago, before the simplification of the tariff before the repeal of the Navigation laws with preferential duties to all the colonies, were enormous because they had to know in the case of a ship coming from a colony where the sugar was, whether it was to be charged one rate or another. All those duties were enormous, and then they were very properly called the two Great Revenue Boards, but I think now to call them two Great Revenue Boards is a misnomer.

20,974. (*Lord Lingen.*) You would not find a Coastguard officer on the Quay either in the port of London or in the port of Liverpool, would you?—They watch the coast, as I understand, entirely.

20,975. Generally speaking, the coast outside the limits of the port?—No doubt.

20,976. (*Mr. Fowler.*) Are they under the Admiralty?—They are under the Admiralty. If you go to Beachy Head, for instance, you will see them.

20,977. (*Lord Lingen.*) Within the very large limits of the ports all the preventive service there is done by Custom House officers, is it not?—I suppose so.

20,978. If a lot of sailors were landed from a steamer in a bumboat in Liverpool there would be no Coastguardsmen to receive them on the quay, but it would be Custom House officers. They might or might not have a lot of spirits or tobacco on them, but the Custom House officers would have to look to that?—I imagine so.

20,979. (*Chairman.*) I put it to you in this way. You talk of a revenue of 20,000,000*l.*, and you say that a large proportion of that is received through warehouses. Is not it the fact that whatever becomes of it after it gets into the warehouses, whether it is dealt with by one Revenue Board or two, with reference to the 19½ millions, or whatever it may be (it is something like that), would not the work of the Customs remain the same, and would not that work be to see that these goods did not get in without paying their proper duty?—Certainly.

20,980. You might make the same comparison of the collection of the revenue on your own side pure and simple, because a good deal of your revenue is collected more cheaply than other kinds of revenue—a good deal of it, for instance, is merely receiving a cheque?—Certainly.

20,981. Does not that imply so much preventive work, measuring work, and weighing, and so forth?—Of course.

20,982. (*Mr. Lawson.*) Supposing that one were coming through from the Continent, take it to Victoria Station, is it a Customs House officer that we see when the luggage is examined?—Yes, and that is my point. The question I should like asked of somebody, not of me because I could not answer it, is what these Custom House officers do when the train is not coming in. I do not imply that they have got nothing to do, but I do imply that the dovetailing of the two services would be complete, and that those men could be employed on Inland Revenue business till the next train comes in.

20,983. (*Chairman.*) The Customs House man must be there, and still it is equally certain that during a great portion of his time he would have nothing to do, and you say he might just as well be doing Inland Revenue work?—That is my point. I do not go quite so far as to say he has nothing to do, because he may go back to the Customs, but at any rate he might do our work on the spot where he is; that is my idea. Take Victoria Station, we should have an officer at Victoria Station, and during the intervals between the trains coming in, he would be employed in the many duties that devolve on our officers.

Sir A. West, K.C.B.

22 Nov. 1888.

20,984. (*Mr. Lawson.*) As a matter of fact the Continental trains to Victoria are only a few in the day?—Exactly, and they are at fixed periods.

20,985. (*Chairman.*) There is only one other point at present with which I wish to trouble you, and that is with reference to the action of the Treasury Warehousing Committee and the results which followed it. You have given the history of it in your paper, but I want to get perfectly clear as to why the progress of transferring the warehouses was stopped. I rather think you give a reason different from that given by the Customs. Perhaps you will tell us in your own way how it was. The recommendations of the committee were, were they not, that wherever possible the duplicate establishments should be done away with and the warehouses put under one board. The Customs say in their memorandum that the opinion of the committee was erroneous?—There is something I am afraid rather antagonistic to the Customs, but I have been asked the question so I must answer it. I can tell you exactly how it occurred, because I was at all the interviews with the Chancellor of the Exchequer and the Chairman of the Board of Customs. It occurred in this way: whether the recommendation was erroneous or not, it was not supposed to be erroneous at that time, because we have given enormous labour to it. You must bear in mind that the Chairman of the Customs was on that committee. We unanimously made the recommendation that this should be continued at 42 out of the remaining ports. What happened was this: I was extremely anxious, and I have no doubt Sir Charles Du Cane was equally anxious at that time that there should be no conflict of opinion between us, and I therefore settled with Sir Charles Du Cane to proceed with our inquiries at those ports that he agreed we might make savings at. Eleven ports were selected, and I hoped that when we got over those 11 ports we should go on amicably, but anyhow that we should go on. The 11 ports that were chosen to be proceeded with were these, Aberdeen, Dundee, Exeter, Limerick, Londonderry, Newry, Plymouth, Portsmouth, Sunderland, Waterford, and Whitehaven. So far we were in perfect unanimity. We were then furnished by the Chairman of the Board of Customs with the figures that it cost them to collect the revenue from the warehouses at those ports, and we were told to make an estimate of what we could do them for. I need not say that we made an estimate, knowing that we should be criticized—very warmly I will put it—a very safe estimate, an estimate which we hoped was excessive, but still we thought it a right and fair estimate to put forward. Sir Charles Du Cane and one of his practical officers called upon me at Somerset House, and they said: "Our actual cost of conducting the "warehouse in Aberdeen in 1883 was 1,393*l.*" The Inland Revenue estimate was 1,200*l.* Mr. Fleming (I forget what office he held; he held a high office in the Customs) said to me: "Now, I have been to Aberdeen "myself; I have spent a week there, and I assure you "that you cannot do it for 1,200*l.*, that there is not "one penny to be saved out of that 1,393*l.*; it is im-"possible." I was still very anxious to avoid points of controversy, and I said, "Very well, let us leave for the "present Aberdeen alone." We came to Dundee, where the cost of the Customs was 1,880*l.* We had estimated 1,400*l.* He told me exactly the same, and I said, "Very "well, let us leave Dundee aside out of the question." We then came to Exeter, where the cost of the Customs —I will not put the shillings in—was 1,108*l.* We estimated it at 860*l.* At Limerick the cost of the Customs was 904*l.*; we estimated it at 710*l.*

20,986. (*Lord Lingen.*) Just interrupting the list for one moment; did the Customs in that include not only the indoor warehouse service; but the preventive part of the story as well?—No; I take it they were actual officers inside the warehouse; even cash-taking officers were excluded.

20,987. Inside?—Certainly.

20,988. (*Mr. Cleghorn.*) You estimated, as I understand, to do for these smaller sums the same work as they did for the larger sums?—Exactly; and therefore

Sir A. West, K.C.B.

22 Nov. 1888.

it applied solely to warehouses proper. To go on with the list, the cost of Londonderry was 597*l.*, we estimated it at 440*l.* I said before that I am leaving out the shillings, but I want to tell you that there are shillings in all these cases to show the extreme accuracy with which they give the actual cost of the Customs. At Newry they said it cost 710*l.* We said we could do it for 465*l.* At Plymouth the cost was 2,540*l.* We said we could do it for 1,600*l.* At Portsmouth they did it for 933*l.*, and we said we could do it for 540*l.* At Sunderland they did it for 1,387*l.* We said that we could do it for 1,055*l.* At Waterford they did it for 650*l.*; the Inland Revenue said they could do it for 490*l.* At Whitehaven they did it for 858*l.*; the Inland Revenue said they could do it for 500*l.* The totals of the cost of the Customs for those eleven ports was 12,964*l.* 5*s.* 4*d.*, to be very accurate; the estimated cost by the Inland Revenue was 9,260*l.*

20,989. (*Mr. Harvey.*) At the time you made your estimate did you know the actual cost to the Customs?—I think so.

20,990. (*Chairman.*) Upon that point will you kindly take in your hand the correspondence which has recently passed between yourself, the Treasury, and the Customs with reference to those ports. It would elucidate those figures; look at page 7 of that correspondence?—I have not seen this reply of the Customs.

20,991. Can you explain the discrepancy, taking those nine ports which you last referred to, namely, from Exeter to Whitehaven, the Customs state there that in their report to the Treasury in 1885 they show that whereas the cost in their own accounts of the working of the warehouses by the Inland Revenue was estimated by that Department at 6,160*l.*, the actual cost of their administration by the Customs was 5,771*l.* per annum. I want to know how that can be explained?—I will explain that. Now comes the reason: I have been a long time getting at it, I am afraid, but I thought you would like to hear the whole history. Now comes the story of why this was stopped. Sir Charles Du Cane went to the Chancellor of the Exchequer with me, and he no doubt put the figures somewhat in the way that I have been giving them to you. He said, "Take the "case, we will say, of Plymouth"—I take a good case for myself—"the figures that I gave were 2,540*l.* The "Inland Revenue say they can do it for 1,600*l.*, we "can do it for 1,270*l.*" Of course I do not blame the Chancellor of the Exchequer for saying: "Very well, "if you can, well and good." Let me now read you the final estimate of the Customs which was after they were, shall I say, challenged.

20,992. In the paragraph I have referred to they state that the figures they give there were given by them to the Treasury in 1885. Do you mean that when they stated that the actual cost of the administration by the Board was 5,771*l.*, and then said that they could in future do the work for 1,270*l.*, that last figure was only an estimate?—It must have been.

20,993. They say here "the actual cost" of their administration was 5,771*l.* for the warehouses at these ports?—In what year?

20,994. I suppose in the last year before 1885?—That was no doubt afterwards.

20,995. Was that in consequence of this friendly auction that took place between you and the Customs that the Customs so reduced their cost that in 1885 they were able to tell the Treasury that the actual cost was 5,771*l.*, the estimate that you had given for those nine ports being 6,160*l.*; is that the explanation?—No doubt. Now I will go on. They gave us the actual cost. We gave an estimate. I must say the estimate was made after careful examination.

20,996. (*Mr. Cleghorn.*) Had you the materials for making the estimate?—Yes.

20,997. (*Chairman.*) It was a purely warehousing estimate?—It was a purely warehousing estimate, but it was an estimate, as I have said, after very careful and serious consideration.

20,998. (*Mr. Lawson.*) With reference to the question put to you by Lord Lingen upon this point, I suppose it was clear all through that only warehousing was in question, not preventive service?—Quite clear. Now, having given our estimate formed on the figures given me by the Chairman of the Board of Customs, the Board of Customs came and said, "It is true we pay at "Exeter, 1108*l.*; the Inland Revenue say they can do "it for 860*l.*; we can do it for 640*l.* We are now "paying 904*l.* at Limerick; the Inland Revenue say "they can do it for 710*l.*; we can do it for 737*l.*," which is a little increase. "At Londonderry we are doing it "for 597*l.* The Inland Revenue say they can do it "for 440*l.* We can do it for 505*l.* At Newry the "Customs are doing it for 710*l.*; the Inland Revenue "say they can do it for 465*l.*; we can do it for 577*l.*" Now comes the most curious one of all. "At Plymouth "where the Customs are doing it for 2,540*l.*, the Inland "Revenue say they can do it for 1,600*l.* We can do it "for 1,270*l.*"

20,999. (*Chairman.*) Then, as a matter of fact, it was done for these figures?—It appears to have been done for even less.

21,000. The total of the figures that you have now given in the estimate of what the Customs could do it at?—Yes, but my inference at the time was this. When we took 11 ports out of the 42 (and recollect I only took these 11 ports, because the Chairman of the Board of Customs and myself agreed upon taking these 11 ports. I had no intention of stopping at these 11 ports, but my argument and inference was this—if where we challenge your cost at these 11 ports, when we say that you do it at 12,964*l.*, and we can do it for 9,260*l.*, and then you come and say you can do it for 9,433*l.* odd, which is very much less than you are doing them for at the present time. I then say that surely the same argument will apply to all the 42 ports in question, and I should like to know very much whether these economies were made in those ports as they have been made in the ports that were challenged.

21,001. (*Mr. Lawson.*) Was that reduction made in one year by the Customs in consequence of your decreased estimate?—I imagine it was made between 1883 and 1885.

21,002. Still, for the years preceding it, those figures had been true, or roughly so?—I imagine so. They were given me by the Chairman of the Board of Customs. I hope you see my argument. We say we can do it for less, and they say "we can do it for still less." Then I say, "you can do it for all the ports," but I do not know whether they did it for all. I am afraid on this point I have been a little controversial, but I wish very much to avoid that if I can.

21,003. Can you tell us with regard to those ports which you have given, what the total reduction made by the Customs was in those two years?—The figures I have read out to you were given me by the Chairman.

21,004. You cannot tell us whether, with reference to the other ports, there has been any other reduction on the part of the Customs with reference to their warehouses corresponding to the reduction in these cases?—I cannot tell you, but I have no doubt there has been, as I believe the economies lately made by the Customs have been very large indeed.

21,005. (*Lord Lingen.*) Am I right, then, in assuming that, as far as you know, this is the state of matters when the Customs were called to account, or had to account; they showed a charge of 9,260*l.* a year, whereas now they show that that same service is done for 5,771*l.* Is that the state of matters?—Certainly, so far as 9 out of the 11 ports are concerned.

21,006. (*Mr. Lawson.*) That was done in two years in consequence of the challenge?—In consequence of that committee.

21,007. You do not know, and therefore I suppose we shall have to find out from the Customs whether the same searching economies have been introduced in the other ports for which you did not estimate?—I do not know.

21,008. (*Chairman.*) Is the inference you draw from that that the mode of managing the warehouses on the part of the Customs is more expensive than the mode of managing them by the Inland Revenue?—I am clearly of opinion that it was much more expensive. I distinctly say "was." I do not believe it is a bit more expensive now.

21,009. Not now?—No. I should not be surprised to hear it was the other way.

21,010. Then as far as regards the warehousing generally, and the cost of getting warehouses erected all over the country, I understand you to say that whatever was the past history of the thing, at present you consider the management of the Customs as economical as your own?—Yes, as far as I have the means of judging.

21,011. As far as you can judge you do not at all wish to say that their management of the warehouses they still have is more expensive than yours?—No.

21,012. (*Mr. Lawson.*) Could not we have some comparison with regard to London? Could you give us any figures with regard to London?—No, that was purposely left out; it is so big.

21,013. (*Lord Lingen.*) Your proposal is for the management of the warehouses, not by any joint committee of the boards, but that the warehouses should be bodily handed over to you, is not it?—No, I said that for the sake of answering the Chairman's question, but I should not like at all to put it in that way. My contention is that the whole of the warehouses ought to be under one board, not at all that they should be handed over to us.

21,014. Therefore the management of the warehousing is only a part, in your view, of the general question of amalgamation?—Yes.

21,015. I do not find in either your estimate or the Custom's estimate, any class of men described as warehousemen. Are they "Outdoor Officers" who constitute that class?—Yes.

21,016. What would your people be described as?—Outdoor officers, supervisors, first and second class officers, and assistants.

21,017. (*Mr. Cleghorn.*) Do I understand you that in your contemplated fusion of the two systems the Inland Revenue could not conduct the warehouses at a smaller cost than the Customs do now?—I have no ground for saying so. I believe that since 1883 the economies have been so great in the Customs that I should not contemplate any further economy. Of course there would be in the fusion, the economy which we have talked of before in the head office, but you mean economy in the warehousing proper as I understand, and I do not know of any economy possible there. I will not say I do not contemplate it.

21,018. Then the economies you contemplate would be confined I take it to the upper spheres?—So far as regards the warehouses.

21,019. And the general?—Not the general economy.

21,020. (*Mr. Lawson.*) In other answers you said there could be economies effected in these outposts?—Yes, but not in the warehouses, I was trying to separate them. I meant to say, if we take over a warehouse at a particular place that was looked after by Custom House Officers, as regards those officers I do not anticipate any economy if they are looked after by Inland Revenue Officers.

21,021. (*Mr. Cleghorn.*) Have you gone into any other branch of the service so as to enable you to give anything like an idea of the possible economies that might be made in other branches of the Customs work?—I have gone into it to this extent only, I am sorry to say, as any other man looking at the question might do, without any special knowledge. I have given to the Chairman a map showing the various places where there are Inland Revenue officers, and where there are Customs officers, but I have tried to argue that it is impossible at some of those places that there can be sufficient work to employ the double set of officers all through the day, and there I should look for great economy.

21,022. You have not put it into pounds?—I cannot put it into pounds.

21,023. (*Mr. Harvey.*) I observe the Customs say that the gross average sums set down in the Estimates per officer for the Inland Revenue is greater than in the Customs; do you know whether that refers to a period before this change to which you have referred in these nine warehouses?—No, it is now.

21,024. Now?—With a qualification. The difference between our opinion of that statement would be this: they include a lower rank of officer than we have at all at a lower salary; and therefore, if they take their average salary per man it naturally is smaller than the average salary per man of an Inland Revenue officer.

21,025. Then your explanation is, that you think they do not include all the men in the Excise Branch?—Yes, but there are a certain class of officers in the Customs which we do not possess, such as outdoor officers, at very low salaries. That of course diminishes the average. They put the average salary per outdoor officer, not including watermen and boatmen, at 152*l.*, but the only average we think that would be useful if anything was contemplated in the way of the amalgamation of the services, would be to take, for the purpose of comparison, those classes of officers who are engaged on similar duties. I am supposing for a moment that there was a fusion of the services, the lower branch of the Customs would remain a lower branch of the Customs; they would not be affected, and then the real question of fusion would come in that class of officer engaged on similar duties. Therefore, for the purposes of comparison, I should take all our officers who are engaged in what we call charging revenue—that is responsible work—and all their officers who are engaged in charging revenue, and omit altogether from the calculation such officers as outdoor officers, boatmen, glutmen, and men who merely perform either mechanical or manual labour.

21,026. (*Chairman.*) Supposing you do that, could you say whether the pay which you give the man for your work is upon the same scale as analagous work is paid upon in the Customs?—Yes, if I am correct in saying that their first and second class outdoor officers are not engaged in work similar to charging, I then should say that the average salary for their officers would be 206*l.* a year. In the Inland Revenue, following the same rule, I should say our average salary was 176*l.* per man as against 206*l.*

21,027. That is a very important point, is it not?—Very.

21,028. So far as you are familiar with schemes of amalgamation, has not it been the unfortunate fact that levelling up has generally been the rule more than levelling down?—I have heard of such things, but I cannot say I admit it.

21,029. As you very properly say, if you are right in making certain assumptions with reference to the charging of the work by the Customs officers, you make a comparison between 206*l.* and 176*l.* respectively for analogous work?—Yes.

21,030. If those men were amalgamated would not the 176*l.* man expect to go up to 206*l.*?—I do not know what he might expect.

21,031. Would it not be a probable result?—I hope not, I think not.

21,032. (*Mr. Harvey.*) At all events you see no reason for conceding such a claim?—No, none at all. I have talked a good deal over the economies that would result from this amalgamation, of course I wish it to be borne in mind so far as my opinion is worth anything that there must be future prospects, that you will not, if you amalgamate these boards to-day, find an extraordinary decrease in the estimates of next year, because I think that you would not for a moment contemplate going down to a place where we have two collectors and saying to one, "Now you must be off, and go at once." My idea would be, that anybody who presided over or guided the amalgamated board would watch his opportunity as vacancies occurred. You must recollect that our opportunities are so enormous, because in these two large services the constant entrances are so great, that it is much easier to make economies without hurting anybody than it is in smaller departments. The constant number coming in stopped for a few years would make a very sensible effect upon the estimates. But I should be very sorry to suppose that you would go to any of those officers holding high salaries, and say you must go to-morrow because there is an amalgamation and you are not wanted. I think one would be forced out of that before long. Therefore it would be a gradual economy which might be spread over four or five or six years, and I hope, whoever had to manage this, would be allowed to follow the recommendation of this Commission as to the retirement at a certain period of service. That would enable you to make very large reductions much sooner than you could otherwise.

21,033. (*Lord Lingen.*) In every port and Excise town apart from the outdoor service, is there not a large clerical establishment. The Customs collectors have got a number of clerks, and your collectors have got a number of clerks?—Yes.

21,034. All that service would be more or less identical in its character?—Yes.

21,035. (*Mr. Harvey.*) Now, so far as the public are concerned, can you say that there has been any expressed wish on their part that there should be a further fusion?—I do not know that this would be very respectful to the trade, but I am perfectly convinced that if you open your doors to hear evidence, you will find that there will be three classes of men who will come before you There will be the trader who, with

Sir A. West, K.C.B.

22 Nov. 1888.

an eye to his own profits, will like the two departments. I know that view has been expressed very often, not for convenience of business, but because they can work one department against another, for that reason you will find a great many cases of traders who will tell you that.

21,036. (*Lord Lingen.*) The effect of that being against the Revenue?—Yes. You will find on the other hand a large number of traders who will tell you they prefer the Customs. You will find I hope a large number of traders who will tell you that they prefer the Inland Revenue. But all I venture to say is this, that you will not find two traders of any importance who will tell you that they have been under the Customs, and now are under the Inland Revenue, but would wish to go back to the Customs,—at any rate, I think so; of course I may be wrong.

21,037. (*Mr. Harvey.*) Might we interpret that to mean from the standpoint of the Revenue, that that was not because the Inland Revenue Department was more lax with them, but because it was perhaps easier to work with them?—Yes.

21,038. The Revenue does not suffer?—Not necessarily.

21,039. (*Mr. Lawson.*) So far as you know in that classification you have given, you would find two thirds in favour of doing business with one board instead of the two boards?—I expect so.

21,040. According to your estimate?—Certainly; I do not want to repeat myself. I have seen a great many of those traders. There may be a certain amount of bias in talking to me, possibly, I do not say there might not, but I have never come across one who would prefer two boards.

21,041. (*Mr. Harvey.*) Still you are not in possession of actual written complaints because there two boards?—I have heard very often traders express an opinion to me very hostile to the existence of the two sets of officers they have to deal with, and the extreme inconvenience they suffer from it.

21,042. (*Mr. Lawson.*) Following up the question of salaries, I want to ask you whether taking two classes of outdoor officers in the two departments, you would find that almost invariably the Customs officers are better paid than those in the Inland Revenue?—There is one great thing which must be considered in the very difficult question of comparisons. There is a great deal of extra pay I expect which the Custom House officers get or got—it may be stopped. We never allow extra pay, and formerly (I particularly want to say formerly) the practice always was in the Customs, and still I believe exists to give extra pay whenever it is required by the merchants to the Custom House officers.

21,043. (*Mr. Cleghorn.*) Do you mean for being employed on extra time?—Yes, and of course the tendency between warehousemen and Custom House officers was to have that extra pay.

21,044. Then do you imagine that if you had those men under you, you would not allow them such extra pay for such extra length of duty?—Certainly not.

21,045. (*Mr. Lawson.*) Taking the two grades of your officers, they are called officers of the first and second class, is it fair to compare them with the examining officers of the Customs?—Certainly.

21,046. I find the Customs have a considerably higher maximum. Taking your officers of the first and second class I see they go up to the maximum of 220*l.* in the first class, and 140*l.* in the second, there are only 2,500 in all of them. The examining Officers of Customs go up to 300*l.* in the first and 220*l.* in the second. I see there are not anything like the same number. Do these men represent much the same class?—I imagine so, but of course that ought to be found out by a conference between the Customs and the Inland Revenue.

21,047. Then do you prefer not to give any opinion as to the general range of salaries?—Yes, because it always leads to these controversies that such and such a one's duties are much more important than anybody else's.

21,048. But you do not see any reason why, assuming for the moment that there is a rather higher range of salaries, there should be any levelling up on amalgamation?—No, not at all, there ought to be a judicious fusion. I do not say but that this may happen, that some men will be allowed to keep those salaries till the end of their time.

21,049. When there is an amalgamation there is sure to be some assimilation of salaries, that is almost inevitable, do not you think so?—I think it is.

21,050. Do you think it will be possible to level down in this case?—Certainly.

21,051. It would not be possible to have permanently under one great department men doing the same duties under different rates of pay?—No, but I am distinctly of opinion that there is no question of levelling up to make it pleasant. I do admit this to say the worst against my own argument, that for some years, I think there will be a demand and a reasonable demand for a certain amount of personal allowances.

21,052. That is rather apart from that?—Yes, I only wanted to put it at the worst.

21,053. I will take you back for one moment to the amalgamation in 1848 between Stamps, Taxes, and Excise. I think in a previous answer you said that only affected the upper staff. Was there no attempt made so far as you know (of course it had nothing to do with you personally) to amalgamate the lower branches of the service, and, why has no attempt been made hitherto, is it because it is impossible?—As far as possible that has been done and a very large saving has been effected.

21,054. These are all officers of the upper grade?—All are who are put in the earlier report because they are the principal people who were thought much more of in those days.

21,055. Can that be carried any further?—In those higher ranks?

21,056. No, in the lower ranks; it has been suggested to me that there is not sufficient amalgamation between the lower officers at the present time under the Inland Revenue, and that it might be carried further and a great saving effected?—I am not aware of that, but I can only say that wherever I find I can do it, I am always tending in that direction.

21,057. Take the surveyor of taxes, do you consider his time is fully occupied at present with his present duties?—Absolutely.

21,058 And that it is absolutely impossible for him to take over any others?—Quite impossible; every hour of the surveyor's time is occupied.

21,059. When you were here last time the question was raised as to whether there was such a department as a laboratory at the Customs; could you give us any particulars, or do you know anything of the existence of it; we could not find it on the list?—I was in the same difficulty as yourself, but as far as I have been able to ascertain there are at least 34 officers employed in chemical work and distilling wines in the Customs' laboratories, with rank and salaries below ours. There are 30 examining officers who get from 110*l.* to 300*l.*, and four outdoor officers who get from 55*l.* to 100*l.* a year. They are in the Estimates.

21,060. Do you consider these men would not be required, supposing that on an amalgamation there was one large laboratory department?—I think there might be a very great saving there. I want on this point to answer a question put to me by Mr. Fowler the other day, whether it might not occur (it was not so in the case I gave him of the sweetened cigarettes) that our Inland Revenue officer should be a very bad one and the Customs a very good one, and therefore the story might be told in another way. What I did not sufficiently explain was this: my contention should have been, and I ought to have put it plainer, that our laboratory being a much higher class office for the reason that we do the test operations for every department of the State, I may say for the Government entirely, therefore of necessity we must have a chemist of very high professional rank, who is not so likely to make a mistake as chemical officers employed with low salaries, and with only a certain amount of chemical knowledge. That is how, I contended, the mistake arose with the Customs in that case of the sweet cigarettes. You must have one higher chemical officer for the duties of the whole Government.

21,061. Are there any chemical officers except in London?—Yes, there are.

21,062. Have you chemical officers elsewhere?—Yes, at 9 or 10 places.

21,063. Have the Customs also in the same places and in the same way?—Yes, at the same places; there are two chemical establishments.

21,064. You think there might be a saving with regard to these?—Certainly.

21,065. In the selection that you made of ports, to which the memorandum which you have been quoting and dealing with to-day refers, why were those particular places chosen, was it because the Customs expenses were supposed to be so very extravagant there?—No, not at all, but this was my reason. You will understand there are over 60 ports to be dealt with. The Chairman of the Board of Customs, Sir Charles Du Cane, said, "You cannot do it here, you cannot "save anything there," and as I have been trying to explain I was very anxious to go hand-in-hand with the Chairman of the Customs at the time. I said, "Where "do you think we could make economies?" and at his wish we began with those 11 ports.

21,066. You do not say that they are places exceptionally expensive to the Revenue on account of the existence of the double establishments?—No.

21,067. (*Mr. Fowler.*) Do you base your view of the desirability of this consolidation with regard simply to economy, or with reference to efficiency and public convenience?—All three.

21,068. I want to know which you put the stress upon?—Economy, I should say first; public convenience next; improved administration (pray remember not from the Inland Revenue over the Customs, but from one general Board) third.

21,069. Supposing that the economical view should, upon investigation, turn out to amount to a small sum, should you then advocate it as a necessary change on the other grounds?—Yes.

21,070. Assuming that we save nothing, would you think it desirable?—Yes.

21,071. It would promote the public convenience to have one department, and it would promote a unity of administration in the revenue totally irrespective of what it cost?—Quite.

21,072. Do you consider that the amalgamation between the two departments could be made so thorough as not to require a separate administration for the Customs?—Quite.

21,073. And would you extend that answer to what I have previously called the preventive service?—As far as the Customs do it now.

21,074. In the warehousing department you see no necessity for any separation whatever?—None whatever.

21,075. And you think in course of time the Inland Revenue officers could discharge the preventive duties?—I do not like to put it in that way. I do not see why you say Inland Revenue officers, they would no longer be Inland Revenue officers. A Custom House officer and an Inland Revenue officer is composed of the same material originally, he goes through instruction either from the Customs or from the Inland Revenue. If there was an amalgamated service he would go through instructions which would combine the two, and therefore in a few years you would not have an Inland Revenue officer doing Customs work, or a Customs officer doing Inland Revenue work, but a Revenue officer.

21,076. That is what I mean; the amalgamation would be so thorough?—Yes. I should like again to say one thing which I said before. I have only heard quite lately that people say, "Bless me, take the "Customs officer away; what will you do; how on "earth could your Inland Revenue officers do the "work"? What I want particularly to press upon you is, so far as my opinion is worth anything, that no immediate change would take place. I mean that no Custom House officer would be taken away, but that that Custom House officer would be a Revenue officer in addition, and that he would have the same training, the same knowledge, and the same efficiency that he has to-day.

21,077. The amalgamation in the first instance, if carried out, would simply be in the Controlling Department?—Solely, if my wishes prevail.

21,078. Then in course of time it would descend down into the lower ranks, and, as you say, an officer in the Customs and an officer in the Inland Revenue would become an officer of the Revenue?—Exactly.

21,079. And he would be apportioned to his work?—Exactly.

21,080. But are you quite clear that, in your judgment, in the Controlling Department it would not be necessary to have a separate branch for the control of the Customs?—Quite clear.

21,081. Although, as I understand you, in the other departments you have separate branches?—Not in the higher ranks—not in the Board.

21,082. I thought I understood from you there was a division of duty?—There is a division of duty, but they alternate every week, and therefore there is no real division.

21,083. There is no one Commissioner who permanently attends to Excise, and another to Taxes, and another to Stamps?—No.

21,084. All three do the work interchangeably?—Yes.

21,085. And you think the same rule can be applied to the Customs?—Yes.

21,086. (*Lord Basing.*) A comparison is often made, and I think it was given by you the other day between the relative cost of the two establishments measured by the gross revenue that they collect. Does that take into account the relative quantity of work or duty done for the State by the two departments respectively in regard to non-dutiable articles?—Certainly not.

21,087. Then may I go further and say that the Customs office is largely engaged in doing public work—in taking account of the import of non-dutiable articles?—Yes.

21,088. Therefore it conveys a fallacious notion of the cost of the Customs establishment if they are put down as per-centage upon the revenue they collect, if you remember the great quantity of statistical and other work for the State against which no such set off can be placed; that is so, is it not?—Quite so.

21,089. Is there any work done by the Inland Revenue which can be compared in quantity and in amount with the work that I described as done notoriously by the Customs?—I can give you an exact comparison. The largest extraneous duty, if I may call it so, done for another department by the Inland Revenue is the collection of agricultural statistics, and that is an exact comparison, I take it, with the duties performed for other departments by the Board of Customs.

21,090. Would you compare the duty done in this particular example of the agricultural statistics with the duty incessantly, going on at every port in the kingdom in collecting statistics in respect of non-dutiable articles?—Of course one is continuous, and the other is not. The one is done in about three months in the year, and the other is continuous.

21,091. Of course it would be difficult to assess the two services in that respect?—Very.

21,092. But the service done by the Customs is something enormous I take it?—Very great. I may go a little further. My argument in the matter is this. These services which are done by the officers in the lower grades mainly are done for another department, where all questions of control and administration and principle must inevitably be settled. It would not rest with me to decide any question of principle connected with the collection of agricultural statistics. I should immediately refer to the President of the Council—that was my argument—that though officers may be engaged in it, nobody high up, that is to say the Board, is engaged on that kind of work, beyond, of course, exercising a certain amount of control.

21,093. I understand that so far as it goes, if you do not take that important matter into account, to compare the cost of the Customs establishment by the gross revenue they collect, and then go to the Inland Revenue and make the same statement, conveys a fallacious notion?—Unless you confine it, which I hope I have always done, to the collection of revenue alone. I admit they do more duties for other departments than we do.

21,094. (*Mr. Lawson.*) In your answers to Mr. Fowler you seem to suggest that there would be no immediate consolidation of lower grade offices. Did you mean that to apply to the smaller ports upon which you have given us so much evidence?—My idea would be that in the smaller ports, as opportunities arose, you might amalgamate. My argument is that when you amalgamate, the economies at first would be small, and for two years you would probably not have any more entries of the Customs or Inland Revenue.

Sir A. West, K.C.B.

22 Nov. 1888.

21,095. That economy might speedily come to operate?—In about two or three years.

21,096. (*Lord Lingen.*) When you speak of one Board, as being sufficient for the management of both revenues, supposing this was proposed, that there should be a President and a Deputy-President, whatever you call him, of the Customs, and a President and a Deputy-President of the Inland Revenue, and that they should separate those parts of their business which are kept separate. We will assume for a moment that you consolidated the warehouses, and you consolidated the solicitor's offices, and consolidated the accountant's office possibly, and that then this President and Deputy-President, the two of them, should meet from time to time either at fixed periods or as often as was necessary, and made one common board for any joint purposes, do you think that there would be any advantage in that, in having a greater experience of those two superior officers in the Customs on the one hand and in the Inland Revenue on the other hand?—Perhaps it is out of my place to do it, but I should like to look at it from the point of view of the Chancellor of the Exchequer, and say it is absolutely impossible for the reason that he would have to consult two men sitting at the same board and being responsible for a joint establishment. We should quarrel with the best intentions before six weeks were over.

21,097. Might not each establishment so far as it was kept separate be absolutely under its own president and deputy-president. The Customs make a considerable point that the Chancellor of the Exchequer would consult with greater confidence a chairman of the Customs only, and a chairman of the Inland Revenue only, than that he would consult any chairman of both boards. Do you agree with that?—That is a question which I hope you will ask, I understood from the Chancellor of the Exchequer that there are certain points that I had better leave alone, and that he contemplated you would call before you ex-Chancellors of the Exchequer, and I would sooner that you put that to them. There are one or two points of very small importance I should like to mention. In one of the Customs' memoranda they suggest the Board of the Inland Revenue should be very much reduced. That I think we need not argue, but I do think there are very grave objections to a board of three. A Board of three means a board of two for six months in the year, supposing they all keep their health. A Board of two is an anomaly in my view, and still more so a board of one; of course with a board of two, if sickness should unhappily fall, as it very often has lately, upon one member of the Board, it really means a Board of one. I am not sure whether it is not illegal, but certainly it is most objectionable. That is one point. Then it has also been mentioned to me that the Commission would expect from me a scheme to show how this amalgamation could be effected in the lower ranks. I think I have answered that question; but I think I should like to say that I see no overwhelming difficulty in preparing a scheme if the Customs and the Inland Revenue put their heads together. Then one other argument I have heard used is that under one Board you are of course increasing the number of the service even after allowing for any reductions that might take place. I admit that that is an argument, but at the same time I should like to say that the Post Office has an establishment of 57,000, compared to what would be 10,000 or 12,000 under the united Boards. Then there is one other point which arises upon the question of the possibility of selling the Custom House. They have a very large staff there, but it is quite clear that a very large part of that staff is composed of people who collect and tabulate statistics for the Board of Trade. Now, there is no more necessity for their being at the Customs House than there is for their being anywhere else. The officers of the Customs House who collect statistics from ships, do not tabulate them at the ports, but they send them up *en masse* to the Customs House, where a very large staff, over 150 I believe, are employed in making up those statistics for the Board of Trade. The Secretary to the Board of Trade will tell you that those duties and all kindred duties would gladly be taken by them. So I hope you will inquire of the Board of Trade their views upon the question. With reference to any question of the examination of any witnesses from our department it struck me that it might be more useful to the Commission (I am afraid that I have not given you all the necessary information even if I have given you at all the kind of information you want) to have as a witness somebody not connected with Somerset House, so that it should not be thought that we have impregnated ourselves in Somerset House with the idea of amalgamation. I should like to ask you, if you felt inclined, to have one or two of the collectors of our biggest places; there is the collector at Glasgow, for instance, who has a good deal of knowledge of Customs duties as well as Inland Revenue duties.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

SIXTY-FIRST DAY.

7, Whitehall Place, Westminster, S.W., Friday, November 23rd, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.	Mr. R. W. HANBURY, M.P.
Rt. Hon. H. H. FOWLER, M.P.	Mr. H. L. W. LAWSON, M.P.
Mr. J. CLEGHORN.	Mr. MACLURE, M.P.
Mr. A. S. HARVEY.	Mr. H. WALPOLE, C.B., *Secretary.*

Mr. HERBERT HARLEY MURRAY, C.B., and Mr. RICHARD THOMAS PROWSE, called and examined.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

23 Nov. 1888.

21,098. (*Chairman.*) Mr. Murray, you are, as we know, Deputy Chairman of the Board of Customs, and I think the gentleman with you is the Secretary?—Yes.

21,099. What is the revenue that is collected by the Customs in the past year; do I give it correctly at 19,729,653*l.*?—In our report for the year ending 31st March 1887 it is stated that the gross receipt of the Customs revenue, including charges and the revenue of the Isle of Man, amounted to 20,312,885*l.* Of that sum 1,965,064*l.* was collected by officers of the Inland Revenue. The Customs officers, on the other hand, collected duty on British spirits on behalf of the Excise to the amount of 3,488,763*l.*; the total amount of revenue therefore collected by the Customs officers was 21,836,574*l.* In our report for the year ending 31st March 1888 the gross receipt of the Customs revenue is stated to have amounted to 19,791,335*l.*; of this sum the officers of Inland Revenue collected 1,935,591*l.*; but the Customs officers collected for the Excise 3,662,696*l.* The total amount therefore collected by the Customs officers was 21,518,440*l.*

21,100. And the charges of collection, which include everything you collect on behalf of the Inland Revenue or any other department, are 959,384*l.*?—The actual

charge for the collection of the 21,836,584*l.* in 1886–87 was 946,673*l.*, and that for the collection of the 21,518,440*l.* in 1887–88 was 932,283*l.*

21,101. Can you tell me now upon that point what material change there has been in the heads of revenue collected since Mr. Horsfall's Committee upon this question of amalgamation?—I think the only main point of revenue which has been given up is that from sugar; since 1862 that has been the main item.

21,102. Speaking generally, can you tell us what material changes have, since that time, taken place in the work which the Department has to do in the way of collecting the revenue?—I can tell you what has taken place between that year and this.

21,103. Is it sufficiently stated in the memorandum with which we have been supplied?—No; we have not referred in that to any changes made between the years 1860 and 1881.

21,104. You have spoken merely of the changes that have taken place for the convenience of merchants, I think?—Yes, that is all.

21,105. And not of the other changes?—Not of the financial changes that have taken place.

21,106. The Commission would be glad to have a general notion how much the work has increased or the reverse since the year 1862?—I should say the actual work in connexion with the Revenue has slightly decreased, owing to the doing away with some of the *ad valorem* duties, but that the whole of the work done by the Department has, if anything, increased owing to the new functions imposed upon them.

21,107. What are those new functions?—The duty attending the importation of cattle, and the business as regards the British marks, cotton statistics, the registration of fishing boats, including those registered under the Sea Fishing Boats, Scotland, Act, 1886, the inspection and analysis of tea under the Food and Drugs Act, 1876, the supervision of the landing of explosives under an Act of the same year, and the publication of the Bill of Entry.

21,108. What work does the importation of cattle bring upon the Board?—That brings not upon the Board, but upon the Department, a good deal of work. Cattle may be imported either for movement into the country or for slaughter. They can only be imported at certain ports, and at these ports our officers most carefully watch over the importation. For instance, if they are imported to be removed into the country the vessel has to be under bond, and the officer who has to watch the importation must see that the vessel has not been too long on its voyage, and so as to have gone to any port out of its course. It must not have been to an infected country either on its way out or home; and, as a proof that the declaration made by the master on this point is correct, they, at their discretion, can examine the log to see that the time occupied by the ship has not been too long for the proper voyage. Then when the vessel arrives, the cattle shipped have to be accounted for. If any have been killed on board, or lost on board, they must account for the number which is different from what was shipped and what is going to be landed.

21,109. (*Mr. Lawson.*) When was that function imposed?—I think in 1867 or 1868. It was after the cattle disease first got a footing in this country.

21,110. (*Mr. Cleghorn.*) Does the officer take any cognizance of the health of the cattle?—No, the cattle remain in his charge till the local officer comes to inspect them. (*Mr. Prowse.*) That is the Privy Council veterinary officer.

21,111. (*Mr. Lawson.*) Has any part of that duty been increased since 1867?—(*Mr. Murray.*) It has increased with the increase in the quantity of cattle imported.

21,112. (*Chairman.*) The point, as I understand it, is that that is a new work imposed upon the Department since the passing of those Acts respecting the importation of foreign cattle?—Yes.

21,113. I observe that you state also in your last reply to the memorandum of the Inland Revenue that you have had new responsibilities such as those created by the British Marks Act, and the Registry of Fishing Boats and other Acts?—Yes, that in connexion with the British Marks is very heavy now, owing to the Merchandize Marks Act of last session.

21,114. The work connected with all those Acts practically is this, that all work that has to be done at the waterside in respect of ships coming to this country with goods or otherwise is put upon the Customs officer?—Just so. For instance, the Sea Fishing Boats, Scotland, Act, 1886, is giving a good deal of trouble.

21,115. (*Mr. Hanbury.*) Is that work that will be permanent?—Yes, that will be permanent.

21,116. And does the same remark apply to the Merchandize Marks Act?—I am afraid that is increasing every day.

21,117. (*Mr. Lawson.*) Have you made a definite increase of staff in consequence of these different Acts?—No.

21,118. There has been no increase then in your whole staff?—Not at all, but I may say that the work of the secretariat in consequence of the Merchandize Marks Act has been excessively heavy this last year. It has increased what we call our registered papers from about 20,000 to about 37,000 in the first 11 months of the year.

21,119. But, as a matter of fact, the other Acts I suppose do not affect the secretariat, but rather the lower grade officers?—Not when you have once got the business into shape. It always gives trouble in the secretariat at first. When you have got an Act into shape the officer is able to work it at the outports without much interference on the part of the Board.

21,120. Of course that is true of the Merchandize Marks Acts?—No, every paper has to come up.

21,121. Surely there are questions with regard to it which you are settling every day at first, but in regard to which when once a precedent is established, there will be very little trouble afterwards?—So we thought at first, but practically we do not find it the case. (*Mr. Prowse.*) The marks are of infinite variety.

21,122. (*Chairman.*) Since the year 1862, when as we know Mr. Horsfall's Committee dealt with this question of amalgamation with which we are now concerned, has the work of the Customs, either in the amount or in the nature and variety of the duties decreased or increased?—I should say it has increased in the variety of its duties, and also in consequence of the enormous increase in the quantity of free goods which are imported.

21,123. Ships with free goods have to be dealt with as well as ships with dutiable goods to see whether the goods are dutiable or free?—Quite so; they have to be examined and the ships looked after.

21,124. The work, of course, has been very much simplified since 1862?—It is simplified so far as the cessation of the *ad valorem* duties.

21,125. With reference to your staff, can you give us the number of established officers that are taken upon the estimates this year, and how their duties are divided?—There are 4,452 taken in the estimates for 1888–9.

21,126. What are the main heads of service?—They are approximately divided in this way: Superintending staff, collectors and clerical work, 200: Receipts of Revenue 73, waterguard 1,400, landing and shipping goods 1,250, warehouses 1,200, registry of shipping, mercantile marine, and naval reserve, wreck work and light dues 260. That gives a total of 4,339, which is 113 less than the estimated number.

21,127. You are giving now the whole of the established staff wherever it exists?—Yes. Since the estimates were prepared in November 1887 there have been several offices abolished, and I think the difference may be partly accounted for in that way and by offices being vacant.

21,128. Could you give us the local distribution, that is the general distribution?—In London the superintendence includes 158, the Port of London 1,512 officers, Liverpool 598, and the outports 2,189.

21,129. Those being the general numbers of the staff at London, Liverpool, and the outports, may we take it that the distribution in each of those places pretty well answers the proportion that you have given us on the general list?—Yes.

21,130. Now take the superintending staff, beginning from the top downwards. The Board, I think, consists of three?—Yes, the Chairman, Deputy Chairman, and one Commissioner.

21,131. That, I think, is a reduction from what it used to be?—It consisted of four two or three years ago.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

28 Nov. 1888.

21,132. (*Mr. Hanbury.*) It used to be five, did it not?—It was five in 1867, I think.

21,133. (*Chairman.*) Could you state to us shortly what is the mode of transacting business at the Customs, when the Board meets, and so forth?—The Board meets every day. As far as we can we are diminishing the business at the Board, and throwing it as much as we can on the committees, as we think much of the time in which two or three men are employed superintending the same work at the Board is rather wasted time. We are reducing the work of the Board as much as possible. The work which comes to the Board now is chiefly this: any papers which are brought by the Secretary affecting the Department and which, being reserved for consideration, are not dealt with by a member of the Board in committee.

21,134. Perhaps you would now explain what the committees are?—Committees consist of the committee clerk, who is one of the superior clerks in the office, and a single member of the Board.

21,135. (*Mr. Lawson.*) May I ask why, in this memorandum forwarded to us in the first place from the Commissioners, there are only two Commissioners in the Customs staff?—In that memorandum the numbers of officers in each grade is not given, and therefore the number of Commissioners is not stated.

21,136. (*Chairman.*) It is the custom of the Board to meet and do a good deal of the business that comes up to it generally, but now a good deal has been devolved upon committees, which you say consists of one member of the Board—presumably either the Chairman, Deputy Chairman, or one Commissioner—acting with one of the principal clerks in the office, or with the secretary?—Just so.

21,137. Is the Secretary a member of all committees?—No.

21,138. You have three committee clerks, I observe?—Yes.

21,139. Is the work of the Customs divided into any branches?—It is. It is divided approximately in this way: There is the business which the secretary takes, there is the business which the assistant-secretary takes, and there is the business which each of the three committee clerks take.

21,140. Is that division merely an arbitrary division, or does it answer to any real division in the nature of the work?—There is a regular division according to the nature of the work.

21,141. Is it simply divided as a matter of convenience of practice and not from any real difference in the nature of the work?—It can be altered from day to day no doubt if it is thought desirable.

21,142. It is merely a distribution of work, but it is generally of the same character, is it not?—No, not of the same character quite; it varies in character in each of the divisions.

21,143. (*Lord Lingen.*) Would they know in the Registry Room whom to minute it to—to the secretary, assistant-secretary, or committee clerks?—Certainly.

21,144. They would?—Yes.

21,145. (*Mr. Harvey.*) Would they minute the business to the divisions at once?—Quite so.

21,146. And then would it pass to the committee clerk and up to the secretary, and then travel on to the Board if necessary?—No, it does not go to the secretary unless it refers to the work which he specially takes.

21,147. Then it would go from the committee to the Board if necessary, and from the committee clerk at the head of the division to the Board if necessary?—It comes from the committee clerk to the Commissioner in committee, and then if the Commissioner reserves anything in committee it goes to the Board.

21,148. (*Chairman.*) That being the Board, and the way in which the work is at present done, do you or do you not attach importance to there being a board at all. What would be your view, for instance, if the suggestion were made that there should be a Comptroller of Customs and a Deputy-Comptroller as a matter of theory more than anything else?—I am not in favour of boards for the transaction of public business, if they meet every day.

21,149. (*Mr. Cleghorn.*) Not if they meet every day?—No. I think a board is useful providing it is kept in reserve for consultation.

21,150. (*Chairman.*) You mean if the work is done by individual responsible heads who meet occasionally more for consultative purposes than otherwise?—That is my opinion of the use of a board. I should think each Commissioner should as far as possible transact the business by himself, and when he is in doubt he should reserve it for consultation or for the meeting of the Board.

21,151. Is that the direction which, what I may call your reforms in the procedure of the Board are taking, namely, to do the work more in committees and less at the Board?—Yes; the work is drifting as much as can be in the direction you speak of.

21,152. I presume matters are very much in the hands of the Chairman, are they not, in the nature of things; it is so at every board?—Yes, they must be.

21,153. Does the principal work go to the Chairman when he is able to take it?—He is present at each meeting of the Board. He does not take committees unless the Commissioners are away.

21,154. (*Mr. Hanbury.*) The Commissioners are all more or less equal, I suppose?—Yes, all equal.

21,155. Supposing anything very wrong in the Department went on, for instance, in the case of an office where there was one definite permanent head, then you would be able to trace responsibility up to one man, but how would you do in the case of three or four Commissioners?—You must trace it to the Board.

21,156. And it would be divided between all the four?—Quite so.

21,157. (*Mr. Lawson.*) Have you a necessary quorum?—No.

21,158. As a matter of fact do you meet occasionally in less numbers than four?—I am sorry to say that during the last year I have very often been the Board by myself.

21,159. (*Chairman.*) Is that owing a good deal to the illness of Sir Charles Du Cane?—It is owing to the illness of the Chairman.

21,160. (*Mr. Lawson.*) I do not quite follow it; that would make one member less, but you are four in all?—There are only three now; there were four at the time you spoke of just now when that memorandum was prepared.

21,161. One being ill and one on leave, I suppose?—When one is on leave or inspecting the ports, there is only one left at the Board.

21,162. (*Lord Lingen.*) Does your Commission specify a quorum?—No.

21,163. (*Chairman.*) Looking at it from the idea that you had a free hand, do you see from your knowledge of the Customs and the work that is done at the top, any advantage in a Board with joint responsibilities, such as you have described, or would you think it equally good to have one responsible Comptroller and Deputy Comptroller?—I think that it would work well if the direction of the Department was constituted in something like the mode you suggest.

21,164. Do you think there is an advantage in the present system?—I think that the plan you propose would be better than the present system.

21,165. You think it would be better?—Yes, because I think there is at present much time lost at meetings of the Board.

21,166. (*Mr. Lawson.*) Then when you meet as a Board by yourself of course you come up to that ideal?—No.

21,167. Why? What is the difference?—That is hardly a reasonable way of putting it. I am obliged occasionally to sit at the Board by myself, because there is nobody else to help. The whole of the work devolves upon me.

21,168. (*Mr. Harvey.*) Is all the business done in committee reported to the member of the Board sitting at the Board. Does the present system involve elaborate minutes of what took place in committee?—No; that is all done away with. There are no formal records kept now of Board minutes.

21,169. Then, in fact, practically there is no Board in the sense that we generally understand it?—Not now. We consider that the minute on the papers is the record of the division of the Board.

21,170. (*Mr. Lawson.*) I understand that you do not attach any importance to the idea that the joint re-

sponsibility of the Board is a safeguard for the revenue?—I do not myself.

21,171. (*Mr. Hanbury.*) In fact you think it would be better to have one permanent head?—I think so.

21,172. (*Chairman.*) With reference to the secretary's office, I do not know that I need ask you many questions upon that, but is there anything special about the secretariat that you would like to say?—You are speaking now of its organisation?

21,173. No, I do not want to go now into the question of clerks?—The only thing special about it at present is that it is in a very disorganised condition owing to its having too much to do.

21,174. You would not welcome, therefore, a proposal that you should take over the Inland Revenue work also?—Certainly not.

21,175. Do you think that one secretariat would be able to do as far as the secretariat were concerned, and supposing the staff were large enough to do it, the work of an amalgamated board?—I could not say anything about the Inland Revenue work. All I can say is that our present secretariat in the Customs is as busily employed as it can be.

21,176. (*Mr. Lawson.*) That is in consequence of the Merchandise Marks Act and the cases arising from it?—Not only that, but all the other branches of the business.

21,177. But the special increase of work of which you speak is due to this Act of last year?—It is due to that Act of last year.

21,178. What is the peculiarity about the cases arising under it which necessitates this constant reference to the secretariat?—There is constantly a nice question as to whether the papers come under the law or not, whether the goods may be stopped or not.

21,179. And this overwork is to be perpetual, you say?—I do not see any chance of its diminishing now.

21,180. (*Mr. Harvey.*) Do those papers involve a reference to the solicitor as well?—A great number of them do. I think within the first five months of this year the solicitor told me that he had written between four and five hundred reports on questions under this Bill, and many of them very difficult ones too.

21,181. On the Merchandise Marks Act?—On the Merchandise Marks Act references are made to him daily.

21,182. (*Mr. Hanbury.*) Has the Wines Act given you much trouble?—It has given a good deal of trouble.

21,183. (*Chairman.*) That brings me to the question of the Solicitor's Department; of course all questions involving legal decision are sent to the solicitor?—They go to the solicitor.

21,184. How far has there been any inconvenice felt, or do you think there is any inconvenience in having a solicitor's department also at the Inland Revenue. The annual Customs and Inland Revenue Bill has to be settled by both solicitors, has it not?—Yes; it has. The Customs Clauses are drafted by our solicitor, but sent by him to the Inland Revenue for insertion in the Bill, because they usually have a larger number of clauses in the Bill than the Customs have.

21,185. From the Customs' point of view has that given rise to any inconveniences and difficulties?—None whatever.

21,186. (*Mr. Harvey.*) Does the Bill in draft come to you from the Inland Revenue?—No; we send our draft clauses to the Treasury, and they approve of them. Then after they have been approved by the Treasury they are sent by our solicitor to the Inland Revenue, who embody them in the Bill.

21,187. (*Mr. Cleghorn.*) Then he accepts those clauses as a matter of course?—Yes.

21,188. The Inland Revenue solicitor does not exercise any jurisdiction over them?—No.

21,189. (*Chairman.*) I observe the total charge in your solicitor's office in the current estimate was 4,815*l.*, including the assistant solicitor, chief clerks, and so on. I am talking of the head office, and not including the item below?—That is the amount.

21,190. The Accountant and Comptroller-General is your principal financial officer, is not he?—Yes; he is the accounting officer for the vote.

21,191. You have no Receiver-General, I believe?—No.

21,192. (*Mr. Lawson.*) When was that officer abolished?—About the year 1872.

21,193. (*Lord Lingen.*) I should like to ask one question about that. When money is sent up from the ports by your collectors, to whom does it go at the Customs, into whose hands?—It goes into the account at the Bank of England.

21,194. Is it addressed directly to the Bank of England?—No; all the money which is paid to the branches of the Bank of England goes in direct to the Bank of England; but as to that which is remitted from banks other than the Bank of England, the bills are sent, I believe, to the Accountant-General, and they are cashed after so many days' sight.

21,195. Does the collector, for instance, at Liverpool, and the collector at Glasgow send part of his receipts direct to the Bank of England, and part direct to the Custom House?—The whole from Liverpool will be paid into a Branch Bank of England there, and find its way direct into the account at the Bank of England in London. That at Glasgow is paid into one of the Scotch banks, and I think there is seven days' grace allowed there.

21,196. (*Mr. Harvey.*) In other places the collectors remit by bank drafts?—Yes; where there is no Branch Bank of England.

21,197. Then we may take it that where there is a Branch Bank of England, the collector pays directly into the bank, and in other places where there is no branch he has an account at some bank, and he draws drafts which are negotiated in the ordinary way?—Yes.

21,198. (*Mr. Cleghorn.*) Then does no money come to the Customs from your collectors?—No, actual cash.

21,199. Not bills or cash?—The bills will go direct to the Accountant-General.

21,200. (*Chairman.*) All bills?—Yes.

21,201. (*Lord Lingen.*) Then the Liverpool collector does not negotiate his bills from the Branch Bank of England?—No. The Customs receipts are paid into the Branch Bank of England, and the Branch Bank of England there transfers them direct to the Bank of England in London.

21,202. Do they go to your Accountant-General at the head office?—No, the bank itself remits. The collector merely informs our Accountant-General how much has been paid into the bank, and then the bank itself remits the money to the Bank of England.

21,203. (*Mr. Cleghorn.*) Does the collector pay in at Liverpool daily?—Yes.

21,204. Then he pays the money across the counter at the Branch Bank of England at Liverpool?—Yes.

21,205. They pass it on to the bank in London?—Yes.

21,206. The collector at the same time sends an advice to the Custom House in London that he has paid in such an amount?—Yes; then it is in our pass-book the next day.

21,207. (*Lord Lingen.*) I am not clear about this yet. Does that system apply to your whole collection without exception all over the kingdom?—The description I have given applies in all cases where it is paid into the Bank of England.

21,208. Now tell me exactly the difference where there is not a Branch Bank of England?—Those banks keep the money for so many days according to the agreement with the bank, and then they send the bill up to the Accountant-General, and he at the end of so many days realises the money.

21,209. Then those latter county banks send their draft, or whatever the instrument may be, to your accountant?—Quite so.

21,210. It has been given, I think, in evidence as to the Inland Revenue that there is some sort of scruple about the accountant receiving money, or what is as good as money; have you ever found any practical difficulty to arise in your Accountant's Department from the fact that he receives a certain proportion of drafts from these country bankers?—None that I have heard of.

21,211. (*Mr. Hanbury.*) Do you know whether that is contrary to the principle adopted in other departments where the handling of money is kept distinct, and very distinct, from the duties of the Accountant-General?—I do not know that it is.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

23 Nov. 1888.

21,212. (*Mr. Cleghorn.*) Do you think the check upon the remittances is sufficient?—Yes.

21,213. (*Chairman.*) In the case of the Customs, are you quite satisfied with the mode in which the present business is arranged, namely, that the Accountant-General should not only be an accounting officer, but that he should also receive bills in the way we have been told he does receive them?—I have heard of no objection to it.

21,214. (*Mr. Harvey.*) When a collector at a port where there is no Branch Bank of England has got his bill from the local bank, which, of course, is a bill on the London agent of that bank, he sends that bill up to the Accountant-General, and the Accountant-General then endorses it and hands it to the Bank of England for collection?—After a certain number of days.

21,215. What advice does the collector send?—He informs the Accountant-General each day; that officer has the information sent him of the amount of duty he is to receive, and also the amount paid into the bank.

21,216. Then after a time the advice, I imagine, takes the form that so much money being in the bank he remits so many bills on the bank?—Yes, he remits at sight.

21,217. (*Mr. Cleghorn.*) To whom are those drafts or bills made payable?—The Accountant-General.

21,218. Of course he endorses them, and hands them over to the Bank of England?—Yes, for collection.

21,219. (*Chairman.*) Now, we come to the Surveyors-General; you have three, have you not?—At present we have two Surveyors-General and an acting Surveyor-General; then Mr. Prowse, who is the senior Surveyor-General is at present acting as secretary.

21,220. (*Mr. Lawson.*) I should like that explained, because there are three down in the estimates?—That is the establishment number.

21,221. Does the acting Surveyor-General receive the same salary as the other?—No; he is not in the estimates. It is an arrangement which has been made with the Treasury since those estimates were drawn.

21,222. The amount appearing for 1888-89 is only 40*l.* short of that for 1887-88; how is that?—(*Mr. Prowse.*) That would be by the operation of increments. (*Mr. Murray.*) There should be three Surveyors-General, but then the Treasury object to the third being filled up, and they also object to the secretaryship being filled up pending the Report of this Commission.

21,223. I perfectly understand that, but there are three down in the estimates for 1888-89?—We could not tell when we should be able to fill up the third. We ought to have three, but we have only really two and a half at present.

21,224. I thought when the office was vacant the amount was not estimated for at all?—It is not an office which has been abolished, it is merely in abeyance.

(*Mr. Prowse.*) The Treasury made a provisional arrangement. I in my own person am filling the place of Surveyor-General and Secretary.

21,225. (*Chairman.*) What is the work of the Surveyor-General?—In the printed paper which was put in at the beginning of the Commission the way their duties are recited is this:—

"The Surveyors-General of Customs have to report to the Board on the port establishments of the United Kingdom, as arranged for the proper protection and collection of the Customs revenue. This duty comprises such matters as the arrangement and allotment of the business, and the proper discipline of the officers employed in it. The inspection of all docks, quays, and other places at which the loading and discharging of cargo are carried on, and of the Customs bonded warehouses.

"For these purposes it is the duty of the Surveyors-General, as regards London, to visit the various stations as occasion may require, and to keep themselves generally informed of the state of business and of the requirements for meeting it at each station. As regards the outports, they undertake the like duty by means of periodical inspections under the directions of the Board, and by special visits when necessary.

"It is also the duty of the Surveyors-General to submit to the Board, from time to time as occasion arises, whatever new orders or regulations they may deem necessary for meeting the exigencies of the service or for the facilitating public business."

21,226. Then it is a part of their duty also, I think, you said to visit the Customs bonded warehouses?—Undoubtedly. Chiefly the ports which comprise the bonded warehouses, inspection of outports, and particularly on special questions, as, for instance, when there is a question of establishment or of local arrangements for business and matters of that sort requiring a local visitation.

21,227. (*Mr. Harvey.*) Do they inquire into complaints if they have been made from the trade?—Certainly.

21,228. (*Chairman.*) They are the principal mediums then of communication between all those who do business with the Customs at the various ports and the Board?—Yes; upon reference from the Board. Ordinarily papers on those subjects would go through the committee clerks to the Board or to the committees as before explained, and if there are points of difficulty or points of practice to be explained or new points of departure to be arranged, the Surveyors-General intervene.

21,229. If, on the other hand, the Surveyors-General, in the course of their visits saw reason to make a change in practice, to recommend for instance the abolition of a warehouse, or the making of fresh regulations of any sort or kind, either in the warehouse or outside, they would make those recommendations to the Board?—Yes, particularly as to readjustments of staff.

21,230. In the departments?—Of course within the compass of the estimates they would also exercise the powers of changing officers within ports, to arrange duties, or anything of that kind.

21,231. They would exercise a certain amount of shifting officers without going to the Board?—Yes, quite so; that is to say, officers within the respective grades. They could not, for example, order an examining officer to be a surveyor without the Board's intervention.

21,232. I think the Statistical Department is the only other department not yet mentioned of the Superintending Establishment; that is a very large department, is it not?—(*Mr. Murray.*) That is a very large one.

21,233. Is that all situated in the Custom House in London?—Yes.

21,234. All the statistics are sent up, are they not, from the various ports?—Yes.

21,235. And sifted and searched in London?—They are registered there.

21,236. Is there any sifting and arrangement of the statistics which you collect for the Board of Trade at the ports, or are they sent up as collected?—A copy of every entry is sent up, and a copy of every specification, the specification being for outward goods.

21,237. Then the officers at the ports are simply collecting and not at all arranging officers as regards statistics?—No.

21,238. All the materials, so to speak, are sent up to the head office and dealt with there for the Board of Trade?—Yes. At Liverpool there is a little exception still, but that is the only port.

21,239. (*Mr. Lawson.*) What exception?—The specifications are tabulated more at Liverpool than they are at any other port.

21,240. Have they then a staff of clerks there to do the same work as the men in your Statistical Department?—I think there are one or two men employed upon it.

21,241. Why was that exception made?—It was found, I think, to be working well.

21,242. Does not it lead to some confusion that Liverpool should be singled out and treated exceptionally in that matter?—No; it is almost the largest export station we have got.

21,243. When the statistics are sifted there are they forwarded to the Board of Trade or to the Custom House?—They all come to the statistical office in London. (*Mr. Prowse.*) They have all to go into the main accounts.

21,244. Is the work done twice?—No.

21,245. (*Chairman.*) I understand there is some little preliminary sorting done at Liverpool?—At Liverpool only. (*Mr. Prowse.*) And that in relation to exports.

21,246. Is the Statistical Department concerned entirely with statistics that are commonly called Board

of Trade statistics?—(*Mr. Murray.*) With the statistics relating to the import and export trade of the country.

21,247. Are the whole of the statistics of the import and export trade of the country which are published in the Board of Trade Returns done in the Statistical Department?—Entirely, and printed by that Department.

21,248. Are they subsequently revised or corrected or dealt with in any form by the Board of Trade?—In no way whatever. The Board of Trade only put their name outside the Blue Book; that is all.

21,249. The Customs is entirely responsible for the accuracy of these statistics, which are in no way examined into by the Board of Trade?—In no way whatever.

21,250. (*Mr. Lawson.*) I should like to be quite clear about it. Does Mr. Giffen's Department have nothing to do but to take them as they are sent to them by you?—They are printed by us and published by us. The Board of Trade, as I say, put their name outside the Blue Book. That is all they have got to do with it.

21,251. Mr. Giffen does not look over them?—No, he never sees them till they are printed. (*Mr. Prowse.*) There is a note printed on the monthly account of trade which explains the situation as between the Board of Trade and Customs. It is to the effect that the arrangement of the form of the accounts rests with the Board of Trade, but that the compilation and publication rests with the Customs. I forget the exact words, but they are to that effect, and that explains the situation exactly.

21,252. (*Mr. Harvey.*) If Mr. Giffen thought that, for instance, the export and import figures needed amendment would he communicate with the Board on this point or with the Treasury?—(*Mr. Murray.*) He would write to us if there was any complaint made about the accuracy of the statistics.

21,253. He would not attempt to alter any of the figures you sent him?—No.

21,254. (*Mr. Lawson.*) He would have none of the data of course?—Of course he would not.

21,255. Could he have the data if he applied?—We would give him any information he wanted.

21,256. (*Lord Lingen.*) So long as he did not alter the returns that you made of course he might compose any number of tables of his own that he chose?—From our statistics?

21,257. Combining or recombining?—Quite so.

21,258. When you say a separate book do you mean they would go from your Board to him already printed in the shape that they will be laid before Parliament?—Quite so.

21,259. So that you carry them through the press and you send him that book to do what he likes with?—That is all.

21,260. (*Mr. Lawson.*) And he has no power to touch them?—No, the only (I will not call it interference) the only thing the Board of Trade have to do with any alteration they wish to make in the statistics is this, that it was settled some four or five years ago by the Treasury that once a year an officer of the Board of Trade should consult with the head of the Statistical Department as to what alterations should be made each year in the annual import or export list. (*Mr. Prowse.*) And in the forms of the account.

21,261. (*Mr. Harvey.*) Have you ever had a case of this sort; a great increase of imports, or a great increase of exports. The Board of Trade officers and Mr. Giffen for instance might think there is something wrong in the figures, and that the course of business does not seem to justify such an alteration in the figures, and then Mr. Giffen might like to have the figures inquired into again? (*Mr. Murray.*) Oh, yes; I do not say frequently, but we sometimes have applications of that kind from the Board of Trade, not so much originating with the Board of Trade as originating perhaps from some chamber of commerce. We had one the other day from the Bradford Chamber of Commerce as regards woollens, I think, and the Board of Trade asked us to inquire whether our statistics were correct. All we could do was to tell them they were correct according to the returns which the merchants' clerk had given us. Whether the merchants' clerks had given us accurate and correct information, of course we could not tell.

21,262. It is hardly relevant to the subject of our Commission, but I should like to ask you here whether the imports figures are based entirely upon the returns from the merchants?—They are based entirely upon the entries.

21,263. Do they represent freight charges?—No. The entries for imports are pretty correct, because they are checked by our officers, but for the exports we have to rely mainly upon the merchants' clerks.

21,264. (*Chairman.*) Has any proposition been made within your knowledge to take the Statistical Department away from the Customs?—There was a Committee on that a few years ago. There were three gentlemen on it, and two of the Committee thought that the statistics should be handed over to the Board of Trade, but the third disagreed with the other two, and the Treasury decided to leave things as they were.

21,265. (*Mr. Lawson.*) Is the composition of that Committee confidential, or could you tell us who they were?—It was at first composed of Mr. Holmes, M.P., Mr. Giffen, and myself, and later on Mr. Herbert Gladstone joined it.

21,266. Were you the minority?—I was the minority.

21,267. (*Chairman.*) I need hardly ask you, therefore, whether you are of opinion that there is no advantage in making a change?—That is my opinion.

21,268. Could you state to us what advantages, in the eyes of those who took the opposite view, would be attained by giving this work to the Board of Trade?—I would rather leave those who held that view to state their own opinions.

21,269. I understand that the collection of the statistics at the port is done by officers of yours who would be in any case employed there?—That must be so; that is one reason why I never could see any advantage in the change. As it is our officers do the work, as far as the entries for imports go, as part of their necessary daily work; and with regard to the exports they must do it, too, as far as any dutiable goods are concerned, or goods in transhipment or under bond.

21,270. Therefore for the ordinary export goods which do not come into the category of dutiable goods, they would not otherwise have any duty to perform?—We should not care about them *qua* the Customs.

21,271. But with reference to dutiable goods, whether imports, or exports and with reference to all articles of import of whatever character, your Customs men must be there and must be doing duties with regard to those articles whether they have the responsibility for the statistics or not?—That is so.

21,272. You therefore contend that as the men have got the work there to do they had better be employed as they are now in forwarding those statistics to London?—Yes, and working under their own officers.

21,273. (*Mr. Harvey.*) Do you think that working under their own officers involves a greater guarantee for accuracy?—I do; I think officers look out sharper when they are working under an officer who can report them to head-quarters for want of accuracy, or want of discipline, or anything of the kind; I think they work better when they are working under the department on which their promotion ultimately depends.

21,274. (*Chairman.*) Has the proposal been made, or would there be any objection if such a proposal was made, that these returns should be collected by your officers while they are discharging their other official duties and sent direct to the Board of Trade?—It could be done, but I think we should object to that course.

21,275. Do you mean that you would not like to get rid of an important department of your own, because that we can readily understand?—Not upon that ground, but we should not like our officers to be employed very largely upon work done for another department and to be constantly liable to be pulled up by them.

21,276. (*Lord Lingen.*) For the purposes of your own report and your own business, you as well as the Board of Trade make use of these statistics, do you not at the Customs?—We do not make much use for our own purposes.

21,277. But if the Chancellor of the Exchequer sends for the Chairman and yourself to consult you upon questions of export and import duties, would not, the basis of your argument be derived from these statistics?—We require them for that purpose, no doubt.

21,278. You do make use of them, do you?—Yes, for that purpose.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

23 Nov. 1888.

21,279. (*Mr. Lawson.*) Do you make any further use than might be made by any other person who had the Blue Book in his hands?—*Quâ* advising the Chancellor of the Exchequer as to the stock of any dutiable article in the warehouses from which an estimate might be formed as to the quantity of goods that might be imported afterwards we do make a good deal of use of them, but with reference to the great bulk of the contents of that Blue Book we do not.

21,280. (*Chairman.*) Your principal argument in favour of retaining the Statistical Department at head-quarters as well as of keeping the men so employed at the ports is that you at head-quarters think it best that you yourself should deal with your own officers, and that your officers should not be dealt with by the Board of Trade, and that at the ports you think that as you have got to employ these men they might as well continue to return these statistics?—Yes, as a matter of discipline. We think they had better work under us.

21,281. (*Mr. Lawson.*) As a matter of fact, do they do work for any other Department?—Not on the same scale as that would be.

21,282. But they do some work?—Yes.

21,283. Directly under any other department?—They do the shipping statistics directly under the Board of Trade.

21,284. Do they send them direct to the Board of Trade?—To the Board of Trade direct.

21,285. Without passing through your hands?—Without passing through our hands at all.

21,286. Is there any friction or difficulty about it?—No.

21,287. (*Mr. Hanbury.*) Are the salaries all charged to your Department?—Yes, they are.

21,288. (*Mr. Harvey.*) Having regard to the enormous importance of these statistics to the State, how often in the course of a year do you question their accuracy?—Do you mean how often are they questioned from the Statistical Office?

21,289. How often do you have occasion to say, "Well, "that is a very remarkable figure; the merchants are "commenting upon it, the world generally is surprised "with this figure. I wonder whether it is true; send "down to Liverpool and find out whether there is not "a mistake somewhere." How often is there a check such as that exercised by the Board?—There is no check, I should say, exercised by the Board on that because those are all carefully checked in the Statistical Office itself.

21,290. (*Lord Iingen.*) The head of the Statistical Department is one of your principal officers, is he not?—Quite so; and these returns, these entries, and these specifications as regards quantities and values are checked daily before they are registered, and if they do not sufficiently agree the paper is referred back to the port for explanation. I suppose there are 20,000 queries sent in the year upon these points.

21,291. (*Mr. Harvey.*) That is the point I wanted to ask; what is the check upon their accuracy?—I went over them some years ago and I found that up to July there were about 13,000.

21,292. (*Mr. Lawson.*) When are these statistics made up?—(*Mr. Prowse.*) Currently. (*Mr. Murray.*) They are posted daily. (*Mr. Prowse.*) They are entered into a monthly account.

21,293. (*Chairman.*) And I believe they are published every month?—Yes, and as I have said they are kept up currently so that at the end of the month the totals can be made out.

21,294. The Bill of Entry is simply a branch of the Statistical Department, is not it?—(*Mr. Murray.*) That is all; that is: two papers Bill A and Bill B are published daily at the leading ports giving as far as they can the exports and the imports into those ports.

21,295. The Bill of Entry pays itself, I suppose, now?—Yes, it more than pays itself.

21,296. Where is that shown in the Estimates?—That is under the Statistical Office; you will see it entered as a sub-branch.

21,297. Where are the receipts shown?—That is not stated, except at the end of the Estimates, in the "Extra Receipts." You will see at page 26, "Manu-"script or lithographed information supplied to mer-"chants and others in connexion with the Bill of "Entry, 6,550*l*."

21,298. (*Mr. Lawson.*) It is not an increasing amount, is it?—No, it is not.

21,299. (*Chairman.*) It is only recently, I think, that receipts have been taken for that?—It was a private concern till about six years ago.

21,300. I think now we have gone through the whole of the superintending departments, and in order to get at the nature of the work you had better take as shortly as possible the Port of London first. Will you begin by stating what are the collector's duties?—The collector of the Port of London is not a collector in the same sense that he would be at the outports. He is responsible chiefly in London for the actual receipt of the London revenue, which is nearly 11 millions a year, but the administration of the port is carried on in this way, the port is divided for administration purposes into five districts, and the supervision of the officers in those districts is carried out by the inspectors who are over them.

21,301. (*Mr. Lawson.*) Are they the five gentlemen who are put down in the estimates for the out-door department?—(*Mr. Prowse.*) Yes.

21,302. Are there five?—There are five and an assistant, making six altogether.

21,303. (*Chairman.*) In fact the collector is a superior officer in consequence of the size of the Port of London. I presume that is not the case at any other port, and that he is of a higher rank, so to speak, than the other collectors?—(*Mr. Murray.*) Not of higher rank; he has different work; he has the supervision only of what I may call the indoor work of the port. The outdoor work of the port is under the inspectors. (*Mr. Prowse.*) He is collector only for the Port of London and chief registrar of shipping.

21,304. Take the collector at Liverpool. He has no inspectors under him as I understand although he attends to both indoor and outdoor work?—(*Mr. Murray.*) He has two.

21,305. Has he an assistant inspector?—He has one inspector and an assistant inspector under him.

21,306. (*Lord Lingen.*) Are the inspectors all local officers or do they go about?—They are local officers for the port. (*Mr. Prowse.*) They take districts withi the port.

21,307. Then the only travelling officers are the surveyors?—(*Mr. Murray.*) The surveyors.

21,308. (*Mr. Lawson.*) You mean not the surveyors, but the surveyors-general?—The surveyors-general are the only travelling officers.

21,309. (*Mr. Harvey.*) What is the difference between the duties of the surveyors at Liverpool and the duties of the inspector?—The Port of Liverpool again is broken up into stations, and those stations are under the surveyors. (*Mr. Prowse.*) The inspector of Liverpool does what a collector at an ordinary middle-sized port would do, he overlooks the outdoor department, Liverpool is too large for the collector to undertake all that, so he has assistance in the shape of an inspector and an assistant inspector.

21,310. (*Chairman.*) I see that the gentleman whom you call the collector at the Port of London gets 1,000*l*. a year, and that the officer who is called collector at Liverpool gets 1,200*l*.?—(*Mr. Murray.*) The collector at Liverpool is a much more responsible officer, very much more. (*Mr. Prowse.*) He is the local head of a very large port. In London the duties of collector are divided so to say between the collector and the direction, that is, the board. Many port questions in London came directly to the board and not through the collector. Also the collector of the Port of London has no jurisdiction whatever over the inspectors, that is over the outdoor department, nor does he pay any salaries. Those are all paid in London through the Accountant-General. At Liverpool the collector of course has to pay locally his own salaries. In many ways the presence of the board and the direction, the Accountant-General and the secretariat helps the work of the Port of London, therefore the collector of the Port of London is a less responsible officer than the collector of the Port of Liverpool.

21,311. (*Mr. Cleghorn.*) What would be the amount of the duties collected at Liverpool and London?—(*Mr. Murray.*) In Liverpool it is about three and a half millions, in London it is about 10,700,000*l*. I think.

21,312. And yet you say that the collector who receives 10,700,000*l*. is a less responsible officer than the collector at Liverpool who takes only three and a

half millions?—Far less. (*Mr. Prowse.*) Less responsible except as to money, but then he has no discipline questions to deal with. (*Mr. Murray.*) There are many other duties beside.

21,313. (*Chairman.*) Are we to understand that the collector in London does not collect at all, and that he is not a collector in one sense?—His clerks receive the money.

21,314. Do the inspectors collect?—(*Mr. Prowse.*) The inspectors are only disciplinary officers.

21,315. I am afraid I am not perfectly clear who is responsible for the receipt of the money in London?—(*Mr. Murray.*) The collector he has 10 clerks under him directly employed in the receipt of the revenue.

21,316. Then it is with reference to discipline and the payment of salaries to the staff principally, and also with reference to settling all questions, which in London are settled by the board direct, but which in Liverpool must be settled on the spot by the head collector; it is in those respects that that collector is a much more responsible person?—Yes, and the collector at Liverpool is also in direct correspondence with the merchants, and in personal communication with them.

21,317. (*Mr. Lawson.*) May I ask whether the collector in Liverpool decides on questions of organisation and scales of pay, because I see you have not the same scale of salaries in Liverpool as in London?—There is not much variation in the salaries of the establishment of Liverpool as compared with the others.

21,318. I see, for instance, clerks of the first and second class there is a difference in title?—(*Mr. Prowse.*) I think their scale of salary is the same at all the outports.

21,319. The collector at Liverpool has no power, as I understand you, to decide questions of organisation and classification?—(*Mr. Murray.*) No, none at all.

21,320. (*Mr. Cleghorn.*) Does this 10,700,000*l.* include remittances from the outports where there is no branch Bank of England?—No; the whole of that is paid in in the Long Room as revenue. (*Mr. Prowse.*) That is the collection of the Port of London *per se*.

21,321. And the amount that is transmitted from the country to the collector as you have explained is in addition to that?—(*Mr. Murray.*) The money which the collector at Liverpool remits is about three and a half millions. (*Mr. Prowse.*) But that does not come to the London collector.

21,322. What the collector at Liverpool pays into the branch Bank of England does not come to the collector in London at all?—(*Mr. Murray.*) No.

21,323. Take the collector of Glasgow, or of any other place where there is no branch Bank of England, I suppose he sends it by a draft to the bankers direct?—Yes.

21,324. Does that pass through the collector?—Not at all; he has nothing whatever to do with any revenue except what is paid in the Long Room in London.

21,325. (*Chairman.*) For that purpose the Port of London is quite separate from any other port?—Quite.

21,326. (*Mr. Harvey.*) Is there an actual cash office in the Long Room?—There is a particular part of the Long Room told off for the receipt of cash.

21,327. Actual coin of course would be paid sometimes?—Yes, but the proportion is relatively small.

21,328. (*Mr. Cleghorn.*) But a great deal of it would be by cheque?—It is mainly paid by what are called transfer cheques and notes.

21,329. (*Mr. Harvey.*) Does that go straight into the Bank of England?—The Bank of England clerks come to receive it at 3 o'clock.

21,330. (*Mr. Cleghorn.*) Daily?—Yes.

21,331. (*Chairman.*) To go on further with the controlling officers, and still taking the Port of London (I suppose that is as good as any, and the most important), will you just roughly mention if there is any difference between it and another port? Take the outdoor department first. I believe the inspectors are responsible for discipline?—They are responsible for everything which goes on in the division of the port which is assigned to them to take charge of.

21,332. For everything?—Yes.

21,333. Except, of course, the collection of money?—They have nothing to do with that.

21,334. Then the surveyors that are under them; what are they responsible for?—The surveyors that are under them are in charge of the different stations in the district, of which the inspector is chief.

21,335. Then they are a kind of sub-inspectors really, and they might be called sub-inspectors?—Hardly that. Say it is a good sized district, and divided into so many stations, over each of these stations a surveyor is placed, and he has under him again examining officers and outdoor officers. (*Mr. Prowse.*) A district is an aggregation of stations.

21,336. Then it is upon the examining officers (I see they are very numerous) that, in the first instance, the duty falls of seeing what goods a ship is bringing in?—(*Mr. Murray.*) Yes.

21,337. (*Lord Lingen.*) Would the first duty fall upon them, and not upon the outdoor officers?—The examining officers are outdoor officers.

21,338. Yes, they are outdoor officers, but in your very unfortunate nomenclature you call a particular class outdoor officers?—The outdoor officers are subordinate to the examining officers; they are the next grade to them.

21,339. Would the rummaging of the ship be done by the outdoor officers?—That is waterguard duty. The waterguard duty is chiefly done now by examining officers and boatmen.

21,340. (*Chairman.*) Perhaps you had better take the case of a ship coming into the Port of London?—She will first have the quarantine questions put to her.

21,341. (*Mr. Harvey.*) By whom?—By an examining officer and his crew.

21,342. Where does he meet the ship?—He meets the ship just below Gravesend.

21,343. (*Chairman.*) Is this man the waterguard?—Yes.

21,344. Then the examining officer in the outdoor department that Lord Lingen was referring to, is not one of the waterguard?—(*Mr. Prowse.*) Yes, there is the same title for all these officers.

21,345. (*Mr. Lawson.*) First or second class?—(*Mr. Murray.*) The majority of examining officers employed in the waterguard are of the second class.

21,346. (*Chairman.*) Would you point out in the estimates who these people are that you refer to, who is this gentleman who goes in the boat?—They would be second-class examining officers or assistant examining officers, and would be accompanied by three or four boatmen or outdoor officers. Sometimes outdoor officers are employed in the work and sometimes boatmen; but we are employing as far as possible boatmen now because they do the work better.

21,347. Do what?—Manage the vessels and to undertake the waterguard duty under the examining officers.

21,348. (*Mr. Lawson.*) Who are these boatmen?—These boatmen are appointed by the Treasury.

21,349. Are they called watermen of the first section?—Yes, they are divided into two sections.

21,350. (*Mr. Harvey.*) In reference to this boat which is sent to manage the vessel, who else have we got on board, we have got as far as a waterman and an examining officer?—There are an examining officer and three watermen. (*Mr. Prowse.*) Also an outdoor officer as tide-waiter, to be placed on the ship in charge while she goes up to her station.

21,351. (*Mr. Lawson.*) What outdoor officer?—One of those mentioned on page 9 of the estimates.

21,352. A man who is technically called an "outdoor officer"?—That is his title, he is a tide-waiter for that purpose. (*Mr. Murray.*) They and the boatmen are the lowest grade of established officers.

21,353. (*Chairman.*) Is the boatman the same as the waterman?—Yes.

21,354. Does the boatman row the boat as well as go on board the ship?—Yes.

21,355. (*Mr. Hanbury.*) Are they all on the establishment and entitled to pensions?—They are all on the establishment and entitled to pensions. (*Mr. Prowse.*) There is also a large army of extra men for supplementing them.

21,356. (*Mr. Lawson.*) Do the extra men sometimes row the boat?—(*Mr. Murray.*) Sometimes they put an

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

23 Nov. 1888.

extra man on who remains in the boat while the rest go on board, that is an economical arrangement.

21,357. Where do they appear in the estimates?—They will appear under "Glut" pay. You will see it if you turn to page 10.

21,358. Do you mean the item "extra and glut officers including preferable men"?—Yes.

21,359. Who are called "preferable men"?—There are some men who get 3*s.* 6*d.* a day, and the others get 3*s.* a day.

21,360. The 3*s.* 6*d.* man is "preferable"?—Yes.

21,361. (*Chairman.*) To return to the subject we have just left— you had got to the point of the ship being examined by an examining officer, and did you say one of the watermen?—Two of the watermen as a rule. Then the stores are sealed up at Gravesend, and the outdoor officer is boarded to bring her up to wherever she is going to be berthed: when she goes into the dock the officer who has been boarded on her from Gravesend is taken off that duty, and the ship is taken charge of by the landing staff in the docks.

21,362. (*Mr. Harvey.*) May we assume that these examining officers have rummaged the ship to see that the cargo agrees with the bill of lading?—No, they have rummaged the ship just so far as to seal up the stores. They cannot do anything in the way of rummaging the ship till the vessel has got cool—while the engines are working the heat is too great, and the officers can make no effective rummage. (*Mr. Prowse.*) Moreover, she would not wait; she must come up on the tide.

21,363. (*Mr. Lawson.*) I want you to follow that out; you said when she is berthed, then the officers go on board if possible?—If she is taken into the docks the Gravesend outdoor officer quits her, and she is taken charge of by the landing staff in the docks.

21,364. Who are the landing staff?—Examining officers again and surveyors.

21,365. Of the same class?—Yes, of the same class.

21,366. (*Mr. Hanbury.*) Who are import jerquers?—Import jerquers are those who see whether the cargoes of the ships that import goods are in accordance with the reports—it is a check that the work of the outdoor department has been properly executed.

21,367. (*Mr. Lawson.*) Then the examining officers do both duties?—They do both water guard and landing work.

21,368. Indifferently?—Not indifferently.

21,369. I mean they do both in common?—An officer may be told off one day to the waterguard, and another day to landing work, but as a rule officers are employed on the waterguard as much as possible on account of their aptitude for that duty, and we are rather inclined to keep them at the work which they do best; still the duties are interchangeable.

21,370. (*Chairman.*) Do the waterguard—the watermen as you call them in the estimates—become outdoor officers by promotion?—A boatman may be promoted to be an assistant examining officer, but the promotions are not very numerous.

21,371. The ship being in dock, she is, as I understand, taken charge of then by somebody on the landing service as it is called?—Yes.

21,372. Is he an examining officer?—It is taken charge of by the examining officer and the staff under him. The examining officer here again has outdoor officers under him.

21,373. What are his duties then with reference to the Long Room?—The ship immediately has to report, and even before she has reported she may commence to discharge. Immediately she is commencing to discharge, the entries are put in and then the examining officers begin. Then as soon as ever the vessel is in a state in which she can be rummaged, the first rummage takes place by some of the waterguard officers going to her. The examining officer and perhaps two boatmen will give her as much of an overhaul as they can. That operation will be repeated by a re-rummaging officer and his crew, and the same vessel will be re-rummaged several times in the course of her discharge.

21,374. (*Mr. Harvey.*) Can the lighterman begin to discharge a vessel without any authority from the Customs officer?—No, the ship must report first.

21,375. I want to learn what the lighterman requires before he takes the goods off the ship, must he have a Customs authority before he can touch the cargo?—Nothing can be taken off the ship until the entry has been passed.

21,376. (*Chairman.*) Who passes the entries?—The merchants' clerks, or rather I will say the merchants.

21,377. Initialled by the examining officer?—No, the entry is put in by the merchant's clerk, and given to the examining officer.

21,378. (*Mr. Harvey.*) The merchant is the consignee of the goods?—Yes.

21,379. He goes up to the Long Room and reports the nature of the cargo?—The report is made by the captain of the ship, and he is allowed in practice to report at the spot where his ship is berthed. The regulations are smoother in this respect than they were. As soon as ever he has made that report he may begin the discharge.

21,380. (*Mr. Cleghorn.*) Does he produce the bill of lading?—He produces a report. We have nothing to do with the bill of lading properly speaking; the report of the ship is what we go on. That is supposed to show everything which the vessel contains as cargo, according to its marks and the number of packages.

21,381. (*Mr. Harvey.*) Then that goes to the Long Room clerk, and the Long Room clerk gets the report on the ship?—If the ship reports at the dock she can begin unloading there at once, but if the captain chooses to report in the Long Room, that causes a little delay, but that is at his own option.

21,382. (*Chairman.*) If it is in dock I want to be clear who is the responsible officer who authorises the unlading to commence; is it the examining officer?—It is the examining officer in point of fact now. (*Mr. Prowse.*) The station surveyor, if any privilege is involved.

21,383. (*Mr. Hanbury.*) For that purpose a superior officer?—Yes.

21,384. But in ordinary cases the examining officer is the man who does that?—Yes, and there would be presented to him that very entry on which those statistics are framed of which we were speaking just now. That is the basis of statistical accounts.

21,385. (*Mr. Harvey.*) Do you mean that that record which goes to the Long Room is the basis of the entry in the statistics?—I think perhaps we are a little confusing the report with the entry. The report goes to the Long Room, the entry may go to the Long Room, or it may go locally. We do not force the entries into the Long Room, because the port is too large. At an outport they would usually go into the Long Room; but the reports all have at some stage to find their way into the Long Room to be filed.

21,386. (*Mr. Lawson.*) What do you mean by "locally" when you are talking of London?—The port of London is so extensive that we have divided it into districts.

21,387. (*Mr. Harvey.*) First of all, what is the entry?—The report is the basis of the whole.

21,388. Then begin with the report?—The report is the list of everything in the ship—all her cargo and the marks on the packages. It is a legal requirement to produce this on the arrival of a ship in port with a cargo. Then that report is broken up by the entries—is, so to say, broken up because a number of entries discharge the report.

21,389. (*Mr. Hanbury.*) Who is responsible for the report?—The captain.

21,390. (*Mr. Harvey.*) There will be a great many items in that report, of course?—Certainly. I should produce some specimens perhaps.

21,391. (*Mr. Hanbury.*) I do not understand the entry yet, would you clear it up a little; what is it?—The entry is a document upon which import goods are passed out of a ship and examined.

21,392. Who is responsible for it?—The man who owns the goods primarily.

21,393. (*Mr Harvey.*) I understand the report, and I understand the entry. Will you follow that out? What record is made in the Customs books of those two accounts?—Of the report no record is made in the Customs books, because the reports are filed, and it is simply an affair of numbering them; but every ship's report has to be discharged by the entries; it is a

debtor and creditor account. When a captain puts in his report he, so to say, raises an account against his ship, which has to be discharged by the entries; that is to say, the consignees of the goods produce entries for the different parts of that cargo. Those entries are specific information, they have to give the marks and the numbers of packages, and values, and other descriptions (all governed by the law), and those quantities and values are the foundation of the statistical returns. They go on from the station where the goods are examined to the statistical office for recording. These entries are done in duplicate, one we call the bill and the other the warrant. The bill is the copy which goes to the statistical office for record; and it is the basis of all that is there recorded. Then, at the end, all the entries are collected and balanced against the report; and that answers the question which was put just now as to what was import jerquing; it is the auditing of the entries as against the report.

21,394. (*Mr. Lawson.*) Is one of the surveyors the jerquer?—No; now that work is being done by a clerk. We had for a time a surveyor, but since those estimates were framed a clerk in the office is doing the work.

21,395. Does he receive the extra allowance?—Yes; but his own duty pay is in abeyance. I apprehend that in the next estimate this latter extra allowance will not appear.

21,396. It does not appear in the estimates for 1888–9?—No; I think not.

21,397. Does the clerk receive nothing extra?—Yes; he has the allowance to which I referred just now.

21,398. (*Chairman.*) All the duties in the Long Room which you have been speaking of are purely clerical?—Yes; inclusive of this import jerquing it is purely a clerical office.

21,399. Is that import jerquing easily learned. Is there any difficulty about that?—No.

21,400. I want now to come to the character of these other officers; do they require a long training, and where do you get your responsible officers?—They are trained through what we call the out-door department; that is, the examining officers get their appointments by promotion from amongst the out-door officers. The out-door officer is the commencing stage.

21,401. I want to get at the special requirements which the nature of the work entails upon the officers whom you employ and who are responsible for, I do not know whether to call it guaging—but I mean work of that sort?—We call the duties gauging and examination of duty goods, examination of free goods, and so on. I have detailed accounts of the duties.

21,402. Without giving too much detail, perhaps you would inform us of the nature of this work?—Would it do to begin with the duty of an out-door officer, he being the lowest?

21,403. Take it either upwards or downwards, having regard to the special qualifications that are needed, as you explained just now, on the part of the Customs out-door staff. Take the boatman first, if you like. Has the boatman any special qualification when he comes in?—He comes in upon only a slight educational test; he gets his appointment not by competition, but by direct Treasury nomination.

21,404. (*Lord Lingen.*) He gets a certificate from the Civil Service Commissioners, does he not?—He does. He passes a slight educational test before the Civil Service Commissioners.

21,405. (*Chairman.*) He is the lowest out-door officer naturally that you have. Is he called a waterman at first?—He is called a waterman in London, and a boatman at the outports; but there is absolutely no distinction in the duties.

21,406. How soon is he put to the duty of going on board a ship?—Almost immediately. Many of the boatmen who are appointed cannot row, so immediately on appointment they would have to learn rowing. It is an absolute fact that many of the men who are appointed to be boatmen cannot row, and therefore must be taught that art before they can be probationed.

21,407. (*Mr. Hanbury.*) Who recommends them for appointment?—Members of Parliament, I believe.

21,408. (*Mr. Lawson.*) Is the recommendation of a member of Parliament a sufficient guarantee for their honesty?—They have to undergo after nomination all the inquiries by the Civil Service Commissioners as to character and fitness—physical fitness especially; the Commissioners are very rigid about that.

21,409. (*Mr. Hanbury.*) Can you suggest any better system for recommending these men?—Not unless we could have sailors. Many of our extra men are certainly more reliable from the point of view of safety.

21,410. What is your idea of the way in which these men ought to be appointed?—I should certainly say we should do better if the appointments were given to those who have either served an apprenticeship at the sea, or who are willing to come out of the sailor profession to undertake work of this sort, because not only should we like them to be able to row, but it is an advantage that they should know the meaning of the different parts of the ship, and know where to go when undertaking such work as rummaging.

21,411. Then you know nothing whatever about these men till you find them appointed by the Treasury?—Nothing whatever, unless they may have been some of our extra men.

21,412. (*Chairman.*) The extra men—the glut men, and the preferable men that you talk of, are employed at the outports as you want them?—They are casual men.

21,413. Casually employed, provided you get a good character with them?—Yes.

21,414. (*Mr. Lawson.*) I want you to explain a little further an answer you gave just now. You said you found the extra men more satisfactory?—I said so, from the safety to human life point of view.

21,415. What do you mean by "human life" in that connexion?—I mean the safety to human life. An examining officer would naturally rather have two or three trusty extra men to row him about in his boat than people who cannot row.

21,416. (*Mr. Hanbury.*) I suppose there is some expense involved in training those men for their work?—Certainly. There is a six months' probation usually served at the river station just below London Bridge. The officers there have to be responsible that the candidates learn to row, and also practice the other initial stages of their duties.

21,417. (*Mr. Lawson.*) How long does that take?—Six months usually.

21,418. Sometimes longer?—It is a six months probation.

21,419. (*Mr. Fowler.*) I suppose apart from all other considerations if you were really trying in the public interest to get the best men, you would take intelligent young sailors of about 19 or 20?—Undoubtedly, and we should fill up the places without the least difficulty.

21,420. (*Mr. Hanbury.*) They could be put to out-door work at once?—Yes, for the important work; but of course they would have to learn official forms.

21,421. You said these boatmen were never or very seldom promoted. Is it because they are of this class of men that they really do not get promotion?—It is because they are not, so to say, in the line. They come purely for what we call waterguard work—waterguard service; they do not learn the practical duties of an officer; that is to say, they do not learn to be gaugers; they do not learn to be examining officers in the sense of actually examining goods for landing, shipping, and so forth; and they do not learn warehousing work.

21,422. (*Mr. Harvey.*) Do they rummage?—They rummage; and there are promotions occasionally from their ranks into the rank of examining officers or assistant examining officers. But a man who has been so trained seldom develops talents that make him fit for all the duties of an examining officer; he is usually limited to waterguard services.

21,423. (*Mr. Fowler.*) Is there any limit of age?—For admission there is a limit of age—25 is the maximum.

21,424. (*Mr. Lawson.*) What are the conditions of the Civil Service Commissioners with reference to these men?—First of all, physical fitness—so many inches round the chest, and so on—then a slight educational test, age and character.

21,425. (*Chairman.*) The work that these men do is principally physical work, is it not?—Yes.

21,426. You spoke of rummaging, that is, more moving the thing about and assisting the examining

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

23 Nov. 1888.

officer, as I understand it, than really examining the things themselves?—Yes.

21,427. Occasionally they rise to be assistant examining officers?—Yes. (*Mr. Murray.*) They also by experience become very skilful attempts at detecting smuggling; from the knowledge they gain of the ships they know where to look for the hiding places.

21,428. (*Mr. Hanbury.*) Does this mode of appointment which you describe apply to all the ports, and is it universal?—(*Mr. Prowse.*) Yes, to all the watermen in London, and all the boatmen at the outports.

21,429. At Liverpool, for instance?—Yes.

21,430. (*Chairman.*) The next class above him. How do they enter, and what work do they do? Would they be the "Assistant examining officers," or are they the "Outdoor officers"?—The outdoor officers. There are the two lines, the waterman line and the outdoor officer line. The outdoor officers get their appointment not by direct appointment, but by open competition under the Civil Service Commissioners.

21,431. Is there any special qualification required of them?—There is no official special qualification other than that which is required of the other class. There is, however, the qualification of beating other men in the examination; that is to say, the educational test. Then there is the physical test, and the test of character and age; but as regards our service there is no special qualification. They serve a six months probation when they come, and if they come well out of that they get established.

21,432. What class do they mostly come from?—The majority of those that come to us in the port of London now, and in the port of Liverpool, are respectable young Irishmen.

21,433. What had they mostly been before, had they been on the land, not on the sea?—Many had been pupil teachers in schools or had been in offices or shops. They are in many cases farmers' sons, and are a very respectable class of men, so much so, in fact, that the work at first required of them is hardly up to their educational acquirements, which leads to agitations for more pay, and so on.

21,434. (*Mr. Harvey.*) Are they good enough for the work, do they do the work well?—They do the work well because for the first two or three years in London they have very simple work to do, that, namely, taking charge of ships between Gravesend and the Docks, under the arrangement we were speaking of just now; but by degrees they come on to be landing and warehouse officers. We also now employ them a good deal on office work (at outports chiefly). It is to their interest to learn gauging and other practical duties as soon as possible because they thus become available for promotion, either by competition or selection. They do their work well; but at the same time they are hardly a satisfactory grade of officer in all respects.

21,435. (*Chairman.*) Then all the technical work that is required of all your officers is learned in the profession, so to speak, after entry in the service?—Yes; quite so.

21,436. What do you say are the special qualifications which necessitate a good deal of learning which you require in the Customs work before you get into the warehouse or the Long Room; gauging is one, is it not?—Gauging is one.

21,437. (*Mr. Hanbury.*) What do you mean by saying they were hardly a satisfactory class?—Because they sometimes are a little above their work; the result of a comparatively high educational test being to give us a man rather too good for the position, in its earlier stages.

21,438. Is there any improvement you can suggest in that respect?—In old days we had what were called "landing waiters," who were equivalent in many respects to the examining officers of to-day. Those landing waiters began in London at a salary of 160*l.*, and undoubtedly we got through that arrangement, a superior order of men. Now we shall be, under the present system, wholly dependent upon promoted outdoor officers for succession to the higher places. From the nature of things these are not of quite the same class as the old landing waiters, and we are already experiencing, at times, a difficulty in filling up some of the higher places, because, although the class of men is, as beforesaid, very respectable and well educated, they are, as a body, hardly the sort of men for filling some of the higher places of the service. Some of our surveyors to-day, for instance, are promoted outdoor officers, and I should not look upon them all as of the same value, on an average, as those who had their first appointments in the manner already mentioned, and who are thus of a somewhat higher social grade.

21,439. (*Mr. Lawson.*) I should like to know what you mean by "social grade" in respect to outdoor officers?—The outdoor officers of to-day are, officially, the equivalent of the tide waiters and lockers of former days.

The witnesses withdrew.

The Right Hon. WILLIAM EWART GLADSTONE, M.P., &c., &c., &c., called and examined.

Right Hon. W. E. Gladstone, M.P.

21,440 (*Chairman.*) This Commission, as you know, Mr. Gladstone, is just now inquiring into the old question of amalgamating the Customs and the Inland Revenue Departments, and they would be exceedingly indebted to you if you felt yourself able, from your long experience, to give them any opinion upon the policy of such an amalgamation?—I should be most happy to place at the command of the Commission any service that I can render. On the one hand, I feel that for now a good number of years my view of the subject has been rather a remote one; it has not been freshened by incessant intercourse with the heads of both departments for some little time; but, on the other hand, it reaches back over a long period, and I have witnessed, and even shared in, the great changes in our laws as to trade, shipping, and fiscal administration which have helped to bring this question to its present state of ripeness. I will follow whatever course you think fit.

21,441. I observe that you say that the question has got to a state of ripeness. I apprehend, therefore, that you think amalgamation possible, and I hope that you may have a definite opinion upon the subject which you might be able to give us?—I will endeavour to do so. I assume, in the first place, that we are not now called upon to give opinions on the question which arises between administration by Board and administration in the other form of a responsible head of an office with other such persons under him as it may be requisite to appoint. I presume that is not the point immediately suggested to me; but the question is of the amalgamation of the two departments. Perhaps I ought to begin by saying that I was questioned—I do not know whether I ought to say questioned—but I was led to give expression to such opinions as I had then formed on this subject in 1862, and those opinions were unfavourable to the idea of amalgamation. I own I do not think that the question at that time was ripe. I do not think it had taken such a place in public opinion as would have enabled it to be favourably considered, but that which influenced me mainly in the opinion I then gave was the sentiment of the Board of Inland Revenue itself. It was then under, I think, Sir Charles Pressly, for whom I had the greatest esteem, and with whom I worked long and much. The opinion of that Board, I think, at the time, in which I could not but concur, viewing it as a practical question, was that the amalgamation already effected had not taken full effect. I say it was Sir Charles Pressly,—perhaps it was his predecessor, Mr. Wood,—but one of those two admirable public servants certainly stated to me: "This is mis-" called an amalgamation, it is a juxtaposition of three " Departments, but there is no vital unity established " between them. They are three Departments put " under one authority, and so far working together." That, I believe, was strictly the case in 1862, and did continue to be the case for some considerable time.

Now I believe that that is not the case, and that the amalgamation is a real amalgamation, so that it having been made real in the Inland Revenue Department, public authority is in a condition to consider whether it is or is not expedient to go forward with it. I should venture to give it as my opinion that the *primâ facie* case for amalgamation is far stronger between Excise as such and Customs as such in the

present state of our laws of trade and shipping, than it was between Excise on the one side and Stamps and Taxes on the other.

I admit, however, that as the Customs Department was, when I first practically knew it, which was about 47 or 48 years ago, it was evidently marked out for separate action. It was then a department working a system, which, in the main, was not on the land but on the water. No doubt warehousing had come in, but still the Customs Department was a department with very complicated shipping laws to administer, and a very complicated system of duties, drawing every sort of artificial distinction, and raising every sort of question under a peculiar law. So that at that period undoubtedly the chief business of the Board of Trade was to deal with cases of Customs law which cropped up every day. I am under the impression—I am not certain—not that those cases have disappeared altogether, but that they may be said comparatively to have disappeared,—that the laws out of which they grew have been either repealed—in most cases repealed—or so simplified that now the functions of the Board of Customs are reduced to a great simplicity, and, moreover, that they are now chiefly inland functions.

At that time, according to my recollection, the Board of Customs had its establishments all over the world—when I say all over the world, of course I mean in our own principle colonies. In Canada, in Jamaica, and elsewhere the Customs establishments were administered from the Custom House in Thames Street, and were strictly a part of the domestic organisation. It was one system reaching over sea in every direction. I believe that has been entirely changed. I am not able to say whether that is so. Of course information would be at the command of the Commission; but I believe that has been either altogether or almost altogether changed, and the function and office of the Board of Customs has altered its character, and it has come immeasurably, I would almost say, nearer to the functions of a Board.

Consequently, I do not say that the argument—the presumptive argument—in favour of separation of the Departments has the force which it formerly derived from the nature of the duties. I am not now speaking of the extent of the duties. If the duties are too large to be discharged under one authority, and by one organisation, that is another matter; but the nature of the duties seems to me to point to amalgamation rather than the continuation of a separate existence. Of course I do not enter into the question of all the subordinate and miscellaneous duties which have been aggregated around the office of the Customs as they have around the office at Somerset House, because I presume that those are secondary matters, and could not determine the question whether the great Departments ought to be united or not, and that secondary arrangements according to convenience would be made for the discharge of them, whatever course is taken as to amalgamation.

21,442. Would you be able to give an opinion, from the point of view of the collection of the Revenue, whether you think the collection of the Revenue, which is somewhat *in pari materiâ*, by different establishments which are now in a kind of emulation, so to speak, or rivalry, is a good thing or not for the public service, or whether it would be desirable that the whole of the collection of the Revenue should be under one Board?—I should certainly be for having the collection of the Revenue as much unified as it was possible. I think in all those matters of pecuniary account, though I may be a decentraliser in other respects, I like very much the centralisation of account, and of pecuniary management, and I think it works very well for the public service. Where the duties are analogous, I should certainly say that whatever argument arose from that fact, would not at all be neutralised by any such idea—at least in my mind—as that it was desirable to keep the collection of Revenue in different hands, for the purpose of supplying a stimulus to the performance of duty.

21,443. May I ask you another question from the point of view of the Chancellor of the Exchequer? I think it possibly may be asked as a matter of policy whether the Chancellor of the Exchequer, in preparing his Budget scheme for the taxation of the country, is or is not in a better position by having the Chairmen of two great Boards to consult, who naturally look upon the revenue from two rather different points of view. Could you express an opinion upon that point? I quite understand that it may be difficult for you to do so?—No, on the contrary. I look upon that question entirely in the light of experience, and undoubtedly it is the part of the subject upon which I think I should be disposed to speak most positively. In my opinion there is no such advantage whatever. Perhaps, if you will allow me, I ought to go (having stated so much) a little farther into the question; and to say that there has been during the whole of my public life a certain difference in the action and in the tradition of these two Boards which I cannot wholly account for. I mean, of course, nothing in the nature of a reproach to any member of either of them. They are extremely able men at Somerset House, and they are extremely able men connected with the Customs Department; but unquestionably I may say that, after a really very long experience, I see no advantage whatever in that severance with a view to the advising of the Chancellor of the Exchequer. I think the question is, which Department, from all its circumstances taken together, in its nature admits of, and historically has exhibited the best and most efficient organisation. And if it is a question between having one more highly organised Board and two Boards somewhat less highly organised, or one highly organised and the other a little less highly organised, I have no hesitation in saying I would much rather get the whole of my advice from the one Board.

Right Hon. W. E. Gladstone, M.P.

23 Nov. 1888.

I have never found, from what reason I know not, and, as I say, without having ever had the slightest reason in any way to complain of either the one or the other, I have not found that the tradition of the Board of Customs came quite up to the tradition of the office at Somerset House. There has not been the same forward spirit in it—the same anxiety, I think—no—anxiety, I cannot doubt, there has been just the same; but certainly not the same habit, not the same forward attitude in grappling with the exigencies of the time, and meeting and confronting and promoting and encouraging changes that have proved to be beneficial. As the question is put to me distinctly from the point of view of an old Chancellor of the Exchequer, perhaps I may quote two cases which I think will in some degree illustrate what I mean; and the one of them connected with the one of the Departments, and the other with the other. The one connected with the Customs is the change in the wine duties which was made in 1860, and the other is the change in the malt duty—the change from the malt duty to the beer duty—which was made in 1880, both under my responsibility as Minister of Finance. The more difficult of the two undoubtedly was the latter. That was one of the most—at first sight—anxious and dangerous fiscal questions to encounter, and its administrative detail, complex to the last degree, requiring the complete and sudden metamorphosis of a whole code of regulations and interference with trade. That change in the beer duties was desired, promoted, and advised by the Board of Inland Revenue; and from the Board of Inland Revenue, and especially from that incomparable public servant, Mr. Adam Young, I received such assistance and advice and information as gave every imaginable advantage for working through the change.

Well, now, if I go back to the wine duties, that also was a very curious case. The case of the wine duties had long been a puzzle—an unsolved problem. Everybody felt that the system of imposing a duty of nearly six shillings a gallon upon wine of all descriptions was thoroughly unsatisfactory and indefensible, but no one had ever struck out a means of introducing a better system. Of course men's minds went first to the idea of an *ad valorem* duty as an alternative, and Mr. Porter, of the Board of Trade, about 1840, I think, with a view to a treaty with France, attempted to introduce a mixed method of charging wine—a low fixed duty, and then an *ad valorem* duty; but that never was adopted, and it would only have been a very indifferent compromise with all the difficulties of an *ad valorem* duty, which, as applied to wine, may fairly be called insurmountable, would have had to have been encountered. But the Customs never felt they could venture to make any suggestion for the improvement of the wine duties, and undoubtedly their departmental advice was that they should continue as they were. Well, in 1860, the immediate occasion being negotiation with France, the Government undertook to propose the total change of the basis of the duty by the adoption of what is called the alcoholic test.

It may be asked whence came the suggestion of the alcoholic test? Not from any agent of the Government whatever. It was made known to me entirely by the

Right Hon. W. E. Gladstone, M.P.

23 Nov. 1888.

practice of a private firm whose name I have forgotten now. A private firm in London—I do not know whether Lord Lingen recollects the name of the firm or not—was in the habit of making use of the alcoholic test for its own purpose in the market. That was the whole and sole reason of the introduction of that change; and frankly, it must be recorded that the Customs were full of doubts and misgivings as to that change. Now, I need not say this, that if it had failed, if it had worked badly, my position would have been a very weak one. My first duty would have been to confess that the Customs had always objected to it. And consequently when I compare cases like those the Commission will readily understand that I do not attach a great value to the idea of keeping up this dual channel of advice. What I should like to have from the practical administrators of the Revenue is the very best advice; and, if I can have a Department so organised that it is likely to give me the very best advice, I am prepared to must that Department all the way through. From the Board of Inland Revenue I never have had anything but, I think, the best advice, and the most wonderfully forward disposition to promote and to adopt improvement. The Board of Inland Revenue is a Department that has never waited for pressure; so, at least, it has always seemed to me. It has always been desirous to suggest improvement of its own accord. I am bound to say this also, that I consider the Chancellor of the Exchequer to be extremely well provided with financial advisers now. It was not so 50 years ago. Fifty years ago he had no security whatever for having any good financial advisers in the Treasury, which may seem very odd; but, under the present organisation of the Treasury, he is quite certain to have them there. He has always a good financial adviser, as far as public money is concerned, in the National Debt Office. It is his own fault if he has not, for he appoints the Comptroller of the Office, and I think that, if he has an able Chairman, and very commouly not a Chairman only, at Somerset House for Revenue purposes, he has everything that he can desire.

21,444. Would you attach any weight to the argument, which I think possibly also may be raised, that if you create a single Chairman and a single Board responsible to the Chancellor of the Exchequer for the collection of whole revenue of the country, you not only make a post which is exceedingly difficult to fill, but you also create a very powerful department, and a very powerful executive officer. There is a further objection in connexion with that also, that there might be presumably considerable danger that such an appointment would be too good to be passed over by the great political parties, and that there would be more danger than there is at present in making some ex-Minister the Chairman of the Revenue Board?—That certainly would be a very great misfortune if it came about. Of course there is a great advantage in having appointments made conspicuous. Upon the whole, they are less likely to be jobbed; but, undoubtedly, if an appointment comes to be one of such elevation, emolument, or reputation as to offer very great worldly attractions, there is the other danger that pressure may be brought upon the Government to make it a convenient machinery for disposing of claims that, in other shapes, are inconvenient. I admit that that would be a great calamity if it occurred. Let me take the Board of Inland Revenue as it has been during the time that I have known it—I have not known it intimately as long as I have known the Board of Customs—I began to know it intimately in the end of the year 1852. Since that there have been five Chairmen, every one of whom, I think, has been thoroughly up to his work, in unbroken succession. And there has usually been a Vice-Chairman; indeed, I am not sure that there has not uniformly been, there is now, and I think there has always been, a Vice-Chairman who likewise was extremely valuable as an assistant to the Chairman, and even as an assistant to the Chancellor of the Exchequer. I hope that that evil is not likely to occur; and I feel quite confident of this, that if the advice of this Commission to Her Majesty's Government should be to promote an amalgamation, the Commission itself might do a very great deal towards the reducing to zero the risk of such an evil by pointing out the danger, and indicating with what care it ought to be avoided.

21,445. Supposing that danger to be got over, the question naturally arises (indeed I observed that you yourself made reference to it in the debate upon the appointment of Mr. Horsfall's Committee) whether the functions might not be rather too weighty and too anxious to put into the hands of one man, whether in fact in all probability the Chancellor of the Exchequer and the country are likely to get the services of one man himself capable of conducting such a very large and single Revenue Department. Do you think there is any weight in that proposition?—I thought so at that time, because my reason for thinking so, I believe, was that at that time the unity of subject and unity of view had not been established within the Board of Inland Revenue itself, and consequently, as the full responsibilities of the Department had not then been quite fully mastered, I was very much afraid of making an addition to them. I am not conscious now, I may be wrong, but I do not feel at all certain, that any grave addition would be made to the responsibilities of the Department by adding the work of the Customs, on account of the very large ground occupied in common between them in respect to the main business of collection of the Revenue through the medium of the warehousing system. I do not presume to give a very confident opinion upon that subject, but that is my impression.

21,446. Then, if the change were not shown to be economical, if there was no distinct gain shown by the abolition of two or three Commissioners, and so on, I understand it, on the whole, to be your opinion that you would think it would be an administrative improvement; I think at all events you say that *primâ facie* it is desirable, and that is not open to the objections which I have hinted at, and which I think might be raised, as to the political nature of a possible appointment, or as to the difficulty of finding a man capable of discharging the duties of Chairman?—No, I think the dangers might be obviated. I think that the real interest lies in having the highest efficiency. I think that, upon the whole, the highest efficiency would probably be obtained by a combination between the Departments; but I own I am also very decidedly under the belief that a considerable economy would be the natural result; that from the nature of the case it happens that both the one and the other Department must have a great number of officers whose time is not fully occupied, and that where that is the case, with judicious management, there is very, very great scope for retrenchment by consolidation of duties without introducing any other difficulties of over-work, so that I should be undoubtedly very much disappointed if, among the results of the change, there were not to be found really considerable public economy.

21,447. From the point of view of public convenience, I dare say that in the course of your varied experience you have had to see a great many traders who were concerned with both Departments. Does it strike you, from the point of view of the convenience of traders dealing with both Departments, that even if regulations are made uniform as they are very nearly now, the general feeling would be in favour of dealing with one Department rather than with two?—I feel that on such a question I am rather giving second-hand opinion; but my impression certainly is that the change would be a popular change. I think that the growth of this movement, the origin of this movement, as far as I can make out, has been popular. It has been the commercial instinct of the different local committees that have prompted it from a very early stage onwards, as far as I know.

21,448. Perhaps I may hardly ask you whether you have looked into the way in which the amalgamation would operate as to the constitution of the Board and so forth. I believe in the case of Mr. Horsfall's Committee that the idea was at that time to amalgamate only the lower portions of the staff, and that the Committee did not think so much of the amalgamation of the Boards. At the present moment the amalgamation of the Stamps and Taxes is only carried up to a certain point; that is to say, it is all brought under one Board, but at Somerset House the immediate heads are still confined to the separate work of Stamps, Taxes, and Excise, and so forth?—Yes.

21,449. Have you looked into it sufficiently to be able to say whether you think it would be best to have one Board in the form of a Board, or have you an opinion upon that subsidiary question, as to whether it is best to have a Board or a Controller?—I have never considered that question sufficiently to give a confident opinion. My own leanings would be, as a general rule, against a Board, and in favour of a system which brings individual responsibility up to the highest point to which it can be carried. But I do not think that I have looked into it sufficiently to speak very confidently about it. What I think is, that Customs Duty and Customs Law

would evidently require to be made a special, and in some degree a separate subject, under the supreme authority at Somerset House; but that that would be a matter not difficult of adjustment in Somerset House itself, perhaps by a permanent and inflexible, perhaps by a less permanent and more flexible system of division of duties. I should always require, if I may so say, the advocate of a Board—for doing business by a Board—to show cause; and I should cross-examine him as well as I could, believing that, as a general rule, it is not good, nor am I aware of anything in the nature of the duties of the Revenue Departments which would lead me to suppose that it was good. Of course I need not say that it has been a very slow operation to bring the Boards down, and get them within moderate numerical compass; so that, if the other circumstances were prepared for any change, the public might not be burdened with very heavy superannuations.

21,450. The view that Sir Algernon West expressed to us the other day was that there was an advantage in the impersonal character of a Board in dealing with the public as taxpayers; he thought it a very convenient thing that the Board stood between him and some of the persons with whom he may have to deal. I asked him that very question as to whether he attached any particular importance to a Board, and that was rather his view, though not very strongly?—I do not deny that—we have an analogous case in the instance of my Lords, somewhere a little nearer where we are now—I do not deny that there is a certain amount of official convenience in it. There are higher authorities upon it at this table than I am.

21,451. Then as regards the constitution both of the Inland Revenue and the Customs as Boards, whether amalgamated or not, you see no particular advantage in doing the work by Commissioners sitting in a Board rather than coming back to the theory of responsibility in an individual?—No, certainly not. I am aware of no reason why the general rule, which I take to be undoubted, of strict individual responsibility should not apply in their case; and I think, while admitting the official convenience of a small morsel of circumlocution in regard to that, there is that sort of circumlocution which undoubtedly arises a given amount of public jealousy. The public are a little jealous of being put off, I think, by an impersonal agency in the refusal of things they desire to obtain.

21,452. In the collection of revenue that ought not be somewhat desirable from the public point of view and quite leaving out of question the inconvenience of the officials—from the public point of view in the collection of revenue might there not be some force in the argument that it is desirable to deal impersonally with some of those questions?—I own that I do not attach, and I cannot attach, much value to it.

21,453. I do not know that there is any other point, Mr. Gladstone. I have not myself anything farther to ask you; and perhaps you will now allow some other Commissioner to ask you some questions?—I shall be most happy to answer any questions they may address to me.

21,454. (*Mr. Fowler.*) I understand, Mr. Gladstone, that, looking at it from the two points of view of economy in administration and efficiency in administration, upon the whole you incline to the opinion that it would be desirable to amalgamate the two Boards?—Yes, I am prepared to say as much as that. In the state to which we have now reached, in the condition of our laws and the mode of working them, and the mastery which the Board of Inland Revenue has attained for all practical purposes over its work, I think, on the whole, that that is the soundest opinion.

21,455. (*Mr. Maclure.*) Have I understood you rightly; you said that when first you came into practical public life the Customs collected the revenue of the Colonies, and that you were not quite sure whether there were any establishments still existing in connexion with the Colonies?—No, I am not quite sure.

21,456. I believe there are none?—My impression is that undoubtedly; if it exists it must be upon a very contracted scale.

21,457. Because they collect all their own duties?—Yes.

21,458. The other thing I wish to put to you is about the anxiety of the Customs—I did not quite understand that; you said that there had not been quite the effort and desire, as I understood it, on the part of the Customs to formulate or to bring forward before the Government any reformations and economies to the same extent that there had been from Somerset House. I can quite believe it, but I only wanted to know whether I quite understood the answer?—I think the spirit of administration as regards the Departments, the discipline of the Departments, and the economy of the Departments has been exactly the same, so far as I have ever had the means of judging. But as regards advising and guiding changes in the law, unquestionably I cannot say that there has been the same—what shall I say?—courage on the part of the Customs which I have always found in the Board of Inland Revenue.

Right Hon. W. E. Gladstone, M.P.

23 Nov. 1888.

21,459. I think the word you used was "anxiety"?—I should gladly correct that word, because I can draw no distinction of public spirit in the intention of those who have presided over the Departments

21,460. (*Mr. Lawson.*) Of course it is easy to see the facility of amalgamation between the two Boards in respect of the warehousing work. Do you anticipate that there would be much difficulty, in respect of the functions performed by the Customs in the boarding of ships and in the supervision and examination of the non-dutiable articles which do not bring in revenue?—I can conceive that all that would have to be met by a judicious division of sub-Departments in a great Department: so it appears to me. Unquestionably when one looks at the nature of the duties directly connected with shipping and going on board ships and watching and superintending—all that is done in and from the ship—that evidently points to a subdivision of duty. But I do not see in any of those subdivisions anything that appears to me to be an adequate reason for a subdivision of the highest responsibility. I do not see anything in such an order as would point me to think of dividing the highest responsibility.

21,461. (*Mr. Harvey.*) Do you think that that subdivision that would have to take place under a united Board would be analogous to that which exists now in the case of the Inland Revenue Department, where duties so distinct as those of Excise and Stamps and Taxes, are practically under one management?—No doubt it would be a question of degree, and would adjust itself no doubt in detail.

21,462. (*Mr. Hanbury.*) I do not quite gather from what you said whether the different spirit which you said was at work in the two Departments was due to the different organisation and constitution of the two Departments, or to the accident of the staff that might be filling the various offices in those Departments at any given time—whether it was personal or not?—I do not know of any difference in the organisation of the two Departments, nor can I very well explain to to myself the kind of distinction which I have, notwithstanding, found to exist in practice. I can draw no distinction between the honour and character of the men superintending them.

21,463. It might be rather the tradition of the two offices?—I think that is the word that I myself would rather like to use; the tradition of the two offices is not quite the same; and the tradition of the Board of Inland Revenue, from whatever cause, I think has been the more energetic, and in being more energetic, certainly not less wise.

21,464. Would it not be possible that the tradition of the Customs would still be carried on if there were an amalgamation so far as the Customs Department was concerned?—No; I think that the sense, and will, and habit of the superintending authority, provided due pains are taken to keep that in a state of efficiency, would (as I think is generally so universally found in the working of the Government) certainly determine the character of the entire Department.

21,465. Then your idea would be that the Customs would be merged in the Inland Revenue Board and not *vice versâ*?—Clearly. Undoubtedly if the amalgamation takes place, I should hope to see the Inland Revenue Department continuing to be the dominant element in the compound.

21,466. (*Lord Lingen.*) I understood you to say that, even if you had not observed this difference in the practice and tradition of the two Departments, looking at it quite impersonally, you would still be in favour of amalgamation. Was that your conclusion?—I will go as far as this, to say at any rate that I should not see serious force in the arguments against it.

21,467. (*Chairman.*) I think, unless you have anything to add, we will not detain you?—I think such small matters as have occurred to me you have kindly given me an opportunity of explaining.

The witness withdrew.

Adjourned to Monday next at 12 o'clock.

SIXTY-SECOND DAY.

7, Whitehall Place, Westminster, S.W., Monday, November 26th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B. | Mr. J. CLEGHORN.
Mr. H. WALPOLE, C.B., *Secretary.*

Mr. HERBERT HARLEY MURRAY, C.B., and Mr. RICHARD THOMAS PROWSE, recalled and further examined.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

21,468. (*Chairman.*) First of all I should like to ask you whether you have anything to say with reference to the evidence you gave on the last occasion?—(*Mr. Murray.*) With your leave I should like to correct a statement I made on Friday as to the bills being sent direct to the Accountant-General. I find that was the practice in former days, but about 10 or 12 years ago it was changed and now they are sent straight to the Bank and the Accountant-General is only advised.

21,469. (*Mr. Cleghorn.*) Do you mean the bills from the country?—From the banks.

21,470. From the outports?—Yes.

21,471. And the Accountant-General does not receive money now in any form or shape?—He does not touch any money either in the shape of a bill or anything else.

21,472. (*Lord Lingen.*) When a negotiable instrument comes to the Customs from the country, who receives it there?—It goes to the Bank of England. It does not come to the Customs Office at all.

21,473. Does no bank note or negotiable instrument whatever come to the Customs?—Not from the outports.

21,474. From the outports, when it comes to the Customs, who opens the envelope and finds the instrument there?—The instrument does not come to the Custom House at all. It goes to the Bank of England.

21,475. I understood you to say that some did?—None do; the advice comes, but the bill goes straight to the Bank.

21,476. May we hold this, that every piece of paper that represents money, and all coin, if such a thing even did come, goes straight from your collectors in the country to the Bank of England?—Yes.

21,477. Without the Custom House intervening at all?—The Custom House does not intervene at all. The Custom House only receives the revenue paid in at the port of London.

21,478. (*Mr. Cleghorn.*) That is received by a clerk from the Bank, who, I understood you, attends daily?—Yes, at three o'clock.

21,479. He comes down every day to the Custom House?—Yes.

21,480. Does he take the money in a lump, or does he count it?—It is mostly received in what they call transfer notes and Bank of England notes, and a small portion in coin. That is all counted by the clerk of the Bank of England, and he gives the collector a receipt for it, and he takes it away with him.

21,481. I see for the services of their clerk, the bank is paid 300*l.* a year?—Yes.

21,482. (*Lord Lingen.*) Then the person who receives the London dues and hands them over to the bank clerk is the collector?—The collector.

21,483. And the receipt that the bank clerk gives him answers to the advice from a country collector?—Yes; it would do for the Accountant-General.

21,484. That receipt I mean, passes into the accounts room?—It is sent on to the Accountant-General at the close of each day.

21,485. (*Mr. Cleghorn.*) The collector having got the bank receipt for his money, is acquitted?—Yes.

21,486. (*Lord Lingen.*) Practically you would only have all financial questions that arise inside the Customs go to your accountant?—Yes.

21,487. (*Mr. Cleghorn.*) I do not know whether the bank sends a letter of advice to the Board of the amount of credit to the Customs account?—The pass book would show that.

21,488. (*Chairman.*) When we left off on Friday we were engaged in inquiring into the controlling staff of the port of London, and especially upon the out-door department. I think we were following the arrival of a ship, and the manner in which the dutiable articles were dealt with. I presume that, taking it size for size, the ports of Liverpool, or ports of that sort of a larger or smaller size, are identical in these respects, with the exception of the collector at the head, about the difference in whose position you told us last time?—The duties are in some respects the same. The collectors in the small ports are in this position. They have to act as surveyors; they have out-door duties to attend to. At the large ports where there are surveyors also the surveyors superintend the out-door duty, but in the smaller ports, where there is not work enough for the two classes of officers, the collector has to discharge both duties.

21,489. At some of quite the small places is not the collector pretty nearly the only person there?—There is always a small clerical staff under him.

21,490. One or two instances have been given to us of some of the very small ports. I think Aberystwith was named where the revenue collected was exceedingly small. I think it was quoted at 1*l.* for one year?—There is no collector at Aberystwith, only a principal coast officer now, or superintendent, I forget which.

21,491. When you come to a port where there is a very small amount of business and a small amount of revenue, what is the rank of officer that you keep there to guard the revenue, to see that no dutiable articles come in?—In some cases they are superintendents, and in other cases they are principal coast officers, at such a place as Aberystwith, for instance. I think we have lately at Aberystwith made some change, and that we have now a principal coast officer there in place of the superintendent, because the business has fallen away so.

21,492. (*Lord Lingen.*) Would the superintendent when he is the sole person be a principal or first class or second class clerk?—No; the superintendents are a separate grade.

21,493. In the absence of a collector, do not they represent the indoor department?—The superintendents are the heads of small ports or districts.

21,494. Then it is an acting title for an examining officer, is it?—No.

21,495. Is he of a separate class?—He is of a separate rank.

21,496. Does he come between the surveyors and the examining officers in the scale?—In position, as being in charge of a small port or district, he is more nearly allied to that of the lowest paid class of collectors; I should say that his duties are simple; an officer of this grade is stationed at places where there is no money to collect, but where usually there is a good deal of Board of Trade work and preventive work to attend to.

21,497. He superintends both the outdoor service and the indoor service, when he is at the port in the place of a collector?—Quite so, and usually he has a considerable district of coast to attend to. In some cases, especially in Ireland, there are very large districts.

21,498. (*Chairman.*) Do these men, whatever they are called, who are in charge of these districts require any technical or special knowledge of their work?—Yes; they must have a good knowledge of shipping business *quâ* Customs work, because they have the preventive work to do as well as the Board of Trade work.

21,499. Then they are men who have been doing similar work at larger ports and get these posts on promotion?—Quite so. In many cases it is supposed to be a stepping-stone to a collectorship.

21,500. With a view to this amalgamation, of which we are now talking, do you consider it to be practicable or not, that in some districts where there is not a very great amount of work to employ the time of the principal officer that you have in charge, that he might do some Inland Revenue work with advantage to the public?—I think he might, providing it was only the receipt of money. I doubt if he could undertake any duties which required assessment of Inland Revenue, but as far as receipt of any cash is concerned I think he might do it.

21,501. Your officers might act as the machinery for collection, but not take any responsibility as to assessing?—I do not think they could assess.

21,502. Are you familiar with the Inland Revenue organization?—No, I cannot say I am.

21,503. Do you know, for instance, where they would draw the line at what they call charging officers?—No.

21,504. The comparison has been made in the evidence which has been laid before us between what is the cost of a charging officer in the Inland Revenue, and what it is thought might be an analogous position in the Customs?—What do they call their charging officer, may I ask?

21,505. I suppose it is a responsible officer, one who, as you say, is capable of assessment and capable of doing the responsible duties of Inland Revenue, but I do not know that that is an accurate definition; but for this purpose of amalgamation have you considered at what point you think the duties are pretty well parallel and analogous as between the Customs and Inland Revenue?—I think the only duties which are really analogous are those in the warehouses.

21,506. I wanted rather that you should look at the salaries which are paid. You have said that you think that it is possible that for mere purposes of collection some of the time of one of your officers in a district where his time is not fully employed might be taken up in assisting in the collection of the Inland Revenue?—I should give that as a general opinion. I think it would require local examination in each case, but I see no objection to Customs officers being employed in the manner suggested when it does not interfere with their other duties.

21,507. What would be the salary at present of such a man as we are comtemplating in those places?—I think a man in the receipt of the salary of a second-class examining officer would be equal to that, or a superintendent, which is nearly the same thing.

21,508. That is a man from 110*l.* to 220*l.*—Yes; and the first-class superintendent goes to 240*l.* Both those classes of men would be quite equal to receiving money and accounting for it, to a small extent.

21,509. You do not think they could do anything beyond the mere receiving of money, and you think they would not be capable of doing any special Inland Revenue work as well as assessment?—I do not know enough about Inland Revenue work to give an opinion, but I should rather doubt whether they would.

21,510. As regards warehousing, I presume there need not be any difference between the salaries of one department and the other?—There is a difference I think. I should say the main staff employed in the Customs warehouses consists of out-door officers and second-class examining officers with first-class examining officers to act as checkers. The mean salary of our out-door officer of the second class is 67*l.* 10*s.*, and of an out-door officer of the first class, I think, 92*l.*, whereas the assistants of Excise practically speaking commence at 78*l.*, so that there is a considerable difference there between the scales of the officers in the two services.

21,511. Do you mean that the work that is done by these officers is precisely the same or analogous to that done by your own?—The work in the warehouses must be the same, but comparing the second-class out-door officers in our service with the assistants of Excise, our out-door officers are paid at a lower rate.

21,512. Do you mean when they are engaged upon warehouse work or in all their work?—In all their work. The scale of an out-door officer of the second class in the Customs goes from 55*l.* to 80*l.*, and the mean of that will be 67*l.* 10*s.* The salary and emoluments of assistants of Excise amount to 78*l.* a year.

21,513. In the Estimates, under the sub-head of "Out-door Departments—Excise" I find "Assistants of Excise, 50*l.*"?—Last year I understand a new scale was introduced into the Estimates.

21,514. The maximum salary of Assistants of Excise of the second class is put down in the Estimates as 50*l.*?—If you cast your eye lower down you will find that they get in addition 2*s.* a day whenever they are employed. You must add that to the salaries and divide it by the number of those men, and you will find that will give about 78*l.* to each man actively employed.

21,515. Does the salary in the Customs cover all?—Yes.

21,516. For the purposes of comparison, are you prepared to state whether the salaries paid by the Customs are higher or lower than those paid by the Inland Revenue?—I have a statement here which clearly shows that in the two lower scales of salary, the Inland Revenue salaries are higher.

21,517. It is the case, is it not, that in the Customs you have to employ a good many officers of a lower grade than any that are necessary in the Inland Revenue?—Yes, and at a lower salary.

21,518. At a lower salary and doing lower duties?—Yes; the boatmen are doing lower duties.

21,519. I wanted, if possible, to get from you the point at which, in your opinion, the duties would be pretty well analogous, that is to say, which grade in the Inland Revenue and which corresponding grade in the Customs would require a man of a certain calibre and salary to do the work; can you form an opinion upon that point?—The duties performed by the two grades of officers in the service which are similar are those performed in the warehouses by the out-door officers and the examining officers in the Customs, and the assistants of Excise and the supervisors in the Inland Revenue; the latter go up to 210*l.* or 220*l.*

21,520. Take, for instance, the warehousing system. Could you take some warehouse where an officer of yours was entirely employed upon warehousing duties, and compare him with an officer of Excise in a corresponding warehouse in the Inland Revenue. Are their salaries absolutely identical?—They are not identical; you will find that there is a difference between the salaries of supervisors and the salaries of examining officers, and between the salaries of out-door officers of the second class in the Customs and those of the assistants of Excise.

21,521. I want to get, if possible, at the point of contact between the services?—The Inland Revenue last year changed the titles, and, I think, the scales of salary of some of their subordinate officers of Excise. Above their assistants of Excise they have now officers who go from 115*l.* by 5*l.* to 140*l.*, and they have officers of the first class who go from 155*l.* to 220*l.* These salaries approach the scale for our second-class examining officers.

21,522. Do you consider that this would answer as nearly as possible to your examining officers of the first class and the second?—It would as regards our second class.

21,523. Then your examining officers of the first class are higher paid, are they not?—They are higher paid, and they have higher duties. In the warehouse they are what we call the checking officers. They check the work done by the second-class examining officers.

21,524. Do you happen to know in the Inland Revenue whether these officers of the first class are checking officers or not?—I do not know that.

21,525. Of course I naturally understand that you speak with reserve of what is the work of the Inland Revenue?—I do not know it.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

21,526. But I want to get from one side or the other, where is the point for making a comparison, where the work of the two departments must be so very nearly alike as it is in warehouses, that is, the rank of officers that we are to compare; you see that is a very important question, bearing upon the subject of economical effect or otherwise of an amalgamation?—I think you will find that the bulk of the work is done by the class of officers I have named in the two services. I do not think the Inland Revenue employ any more highly paid officers than I have named for their warehouse work—not for the bulk of it.

21,527. I understand, with reference to the providing of officers and the work at the various ports, that they are all worked upon the same system as that which you described to us with the exception that in some ports which are larger, the collectors are assisted by surveyors, and in other places the collectors act also as surveyors, and at some of the smaller ports you come down in the grade till you get down to the coasting officer?—Yes; I will put in a return showing the number of the ports under each grade of officer (*handing in same*).

21,528. I see this return gives first a list of the larger ports at which collectors have surveyors to assist them, and next a list of ports at which collectors act as surveyors also, and next a list of ports under superintendents, and next a list of ports in charge of the principal coast officers of whom you have already spoken, and then stations, not being ports, at which principal coast officers are placed?—Yes.

21,529. The Return also gives in each case the amount of Customs duties, the amount of Excise duties collected by Customs, and the foreign trade inwards and outwards?—Yes.

21,530. Are there any points at which the Coastguard now discharge any duties for you?—Yes; at several stations from which we have withdrawn our officers they do some work in connexion with light dues.

21,531. That is not properly Customs work. Do they exercise any of the duties that are ordinarily exercised by your own officers—purely Customs duties?—If the Coastguard were not there we should have to put an officer there to do those duties. For instance, those looking after the registration of the fishing boats is Customs work.

21,532. Customs work in a sense?—Under the Board of Trade, but the Act imposes the duty on Customs officers.

21,533. I am now talking of the Customs in its narrowest sense as collecting the revenue of the country. Do the Coastguard do any of that work for you?—The only work they do in that way is raising a charge for the collection of a small quantity of dues upon the coast trade—light dues. That is Board of Trade work really. They also receive and forward the transires of Coasters which are *bonâ fide* Customs documents.

21,534. Do they do any preventive duty?—Yes, they do some preventive duty. We should have to put officers at those places for preventive duty if they did not do it.

21,535. Is all the preventive duty of the country done by the Coastguard?—No; it is done by them at portions of the coast where we have no officers.

21,536. Does the Coastguard do preventive duty in the ports?—No.

21,537. Then in the ports you reign supreme?—We reign supreme with a few exceptions. In the River Thames, for instance, in the lower reaches of the river they do part of the work, and also in the Humber.

21,538. As a general rule, round the coast of the country the Coastguard do all the preventive duty outside the ports or the stations where your men are stationed?—That is the theory of it.

21,539. Besides that, in many places where they are stationed for these preventive duties, they do some of the work which the Customs ordinarily do for the Board of Trade, or some other Government Department, such as the registration of fishing boats, and so forth?—Yes; where we have no officers. (*Mr. Prowse.*) Such as collecting documents relating to the coasting trade, and also taking charge of any casual foreign trade. The Coastguard assist in that.

21,540. What was the year when the Coastguard was put under the Admiralty?—(*Mr. Murray.*) 1856. They, however, I believe, regard their duty more as it affects the defence of the country than that of the Revenue.

21,541. I think you have told us that, besides the staff you have mentioned at these ports, there is in addition a large employment of extra and glut officers, as they are called?—Yes; though it has been reduced very much of late years, there is a large number employed, I dare say as many as a thousand men.

21,542. I understood you to say last time, when we got into these minute details, that you thought those men were more satisfactory than some of the lower established men?—Some of them are very good.

21,543. Would you be in favour, as a rule, of increasing the number of men of that sort who are not upon the establishment, and therefore not entitled to a pension?—No; I think not. I would not employ more than we are doing now, if as many, because, in my opinion, their employment has been and is still open to grave abuse.

21,544. I do not mean with reference to total numbers, but I mean would you prefer having a smaller number of established men for the lower work of boatmen, and so forth?—No, I think not, for the reason I have given.

21,545. (*Lord Lingen.*) You have got such a title as a preference glut man, have not you?—Yes, those are the men who are getting 3*s.* 6*d.* a day instead of 3*s.*

21,546. Are they paid wages irrespective of their employment?—No, if they are not employed each day, they are not paid.

21,547. As a rule, are they pretty generally employed?—Yes; fairly regularly.

21,548. When those men become old and past work, have you encountered any difficulties in disposing of them?—I should say that there were a great many of these extra men in the service who were retained long after they ceased to be efficient, but when the matter was well looked into they were discharged.

21,549. Have they been discharged with any sort of pension or revision?—No.

21,550. Did that cause a great outcry?—No, it was done gradually.

21,551. They completely expected those conditions, and accepted them when the time came?—Yes; they were only supposed to be employed when they were required, but they had been kept on after they ceased to be efficient. I may say that recently we had a case at Cardiff where we discharged some rather suddenly, and they made a protest against it; they asked us to give them more time, and we gave them, practically speaking, a month's notice, but the Treasury disallowed that.

21,552. (*Chairman.*) Could you give us the proportion which you think the Customs work, before the goods get into the warehouse, bears to the rest of the work?—I should say that certainly two-thirds of the work is before they get to the warehouse.

21,553. And all that is purely Customs work that is done outside the warehouse?—Quite so.

21,554. Inside the warehouses, as I understand, there is practically no difference in the work that has to be done between what is done by the Customs and by the Excise?—There is this difference only, that in many respects we take in the warehouses goods direct from the ships which the Excise do not.

21,555. But as to dealing with the goods, for instance, gauging or measuring or some technical work that is done, is that done in the warehouses?—Yes, the re-gauging is done inside the warehouses.

21,556. Is there any difference between the way in which these things are dealt with in the Customs warehouses and in the Excise warehouses?—No, I believe the excise are able to gauge their spirits closer than we are, because they have not got to deal with foreign casks, but still as a rule the proceedings inside the warehouses are very much the same on both sides.

21,557. Do you think the officers so far are interchangeable?—Yes, very much so.

21,558. And at present the regulations under which the warehouses are worked are identical?—They are identical.

21,559. They are worked under one Code?—Under one Code.

21,560. We have been told that there are a great number of alterations in that Code since it was esta-

blished, which consists of nearly 700 articles?—Yes, there have been many alterations made after communications between the two departments. They have both agreed to them. We have now an officer employed bringing out as it were a new edition of the Code.

21,561. Would you say that these alterations have been rendered more necessary by the fact of having two departments to deal with?—No.

21,562. But that they are the natural difficulties in the interpretation of a very complicated Code?—Yes, and corrections of the system and improvements.

21,563. In your judgment, fully two-thirds of the whole work that is done by the Customs is connected with dealing with the goods before they get into the warehouses?—Two-thirds of the work is so, but not the whole cost of the collection.

21,564. I need hardly ask you whether that is not far the most important part of the work?—It is the most difficult and the most responsible part.

21,565. Although 97 per cent. of the actual income is collected ultimately through the warehouses, that does not represent the whole cost of collection?—No, nor the whole labour upon it, nor the responsibility.

21,566. Could you sum up shortly the special work which is required of your officers in the interests of the Revenue, for which special training is required?—I should say that for the waterguard service a man is all the better the longer he is kept at it. Experience is required in that service.

21,567. It requires a knowledge, as we understand very readily, of boating and shipping, and where to expect contraband articles to be found?—Yes; and an officer can only learn that by practice.

21,568. Gauging is another mattor?—Yes, import gauging requires experience too, because the officer has to deal with casks the staves of which may be of different thicknesses, and an actual variation in the staves, of which a Customs officer has to judge by experience, makes a good deal of difference in the measurement of the cask as far as the contents go. Now, the Inland Revenue have no business of that kind. Then there is all the special work in connexion with the landing of the goods.

21,569. Do all those duties put together require any special knowledge and experience?—Undoubtedly.

21,570. In what form do papers relating to those duties come up to be dealt with at head-quarters. Wherein does the necessity chiefly consist of a special board or superintendence at the Customs?—Mr. Prowse has brought here to-day a specimen of a ship's report, which is the commencement of the work (it is a small one), and the different books used by the officers which eventually come to the head-quarters to be checked.

21,571. Take the port of Liverpool in the first instance. The collector at Liverpool deals with a great many points that the collector does not deal with in the port of London?—Yes, very largely.

21,572. Therefore, as you told us last time, a great many papers come to some of the superior officers in London that are dealt with by the collector at Liverpool?—Yes.

21,573. How high do they come in the official hierarchy, so to speak; where are they stopped in the Customs House?—The majority of them are dealt with on the stations or in the Long Room. When anything goes wrong it comes into the secretariat and has to be inquired into and the decision of the Board taken on it.

21,574. Do the same kind of papers at the same stage come to the secretariat, whether they come from the port of London or the port of Liverpool?—Yes, I might say if anything finally goes wrong in the port of Liverpool it will have to be reported to the Board.

21,575. Without going wrong, what kind of questions come up as a matter of daily routine from Liverpool to the Board?—I should say nothing comes up as a matter of daily routine; if everything goes smoothly, the collector can work it by himself. It is when anything goes wrong that it has to come up to head-quarters.

21,576. (*Mr. Cleghorn.*) When difficult points arise?—Yes. In the same way, in the port of London, most of the business will work itself through the Long Room, or through the inspectors and surveyors.

21,577. The Board know nothing about those cases?—They know nothing about them as long as they go smoothly.

21,578. (*Chairman.*) Does the Board deal with some questions of a lower class, arising in London, than it does in cases coming from Liverpool? Does it do some work which in Liverpool is done practically by the collector?—Yes, it does some of the work, but not very much of it. In the administration of the port of London the inspectors have powers delegated to them which would have to be exercised in Liverpool by the collector himself.

21,579. (*Lord Lingen.*) The collector in London gets 1,000*l.* a year, the collector at Liverpool gets 1,200*l.* Is that odd 200*l.* paid mainly in consideration of his being at a distance, and therefore really in a position where he has to discharge a higher responsibility? Is that the notion?—Yes. I may say that five years ago the salary of the collector at Liverpool was 1,800*l.*, and it has been since then reduced to 1,200*l.*

21,580. But the difference, whatever it is, represents the distance at which he is from head-quarters, and thereby his greater responsibility?—Quite so.

21,581. (*Mr. Cleghorn.*) I take it that the term collector in Liverpool means a gentleman with different duties from the collector in London?—Quite so; the collector at Liverpool is the head of the whole port, out-door and in-door, whereas the collector in London has little to do with the out-door work except so far as some of the worst is ultimately audited in one branch of his office, viz., the jerquers.

21,582. So that the name of collector is the same in both cases, but the duties of the two are very different?—(*Mr. Prowse.*) The collector in London makes no payments. He only collects.

21,583. He is merely the hand for receiving the duties?—Quite so.

21,584. But the collector at Liverpool?—He receives duties.

21,585. And he is the head of the whole establishment, both in-door and out-door?—Yes; payments in London are made by the Accountant-General.

21,586. How are the payments made in Liverpool?—The collector in Liverpool makes his own payments for salaries, and that adds to the importance of his office. It is a considerable business.

21,587. Does he pay those salaries out of the cash collected in Liverpool?—Yes, he keeps back remittances for the last two or three days, if necessary, in order to have money.

21,588. (*Lord Lingen.*) Might we say that that difference of duties arises from the fact that the collector at London has got the Board and the Central Establishment at his elbow, and that the collector at Liverpool has got to do all these things for himself? Is that it?—That exactly marks the position.

21,589. (*Chairman.*) I think we have come to the point now when we may ask you what your views are, from the experience you have had at the Board, of the suggested amalgamation or consolidation of the Board?—(*Mr. Murray.*) When I first joined the Department I was in favour of amalgamation, but I have since seen reasons to change my opinion. My main objections to amalgamation are three: first, that it would make too large a business for one Board well to manage; secondly, it would be imposing fresh duties on the officers, which would impair their efficiency; and thirdly, I think, while the area of saving is in a certain degree limited, the area for increased expense is large.

21,590. When you say the area of increased expense is large, you mean that in all probability some of those results which have very often attended amalgamations would ensue, namely, a levelling up of salaries?—Just so. The number of officers upon different scales whose salaries would have to be equalised more or less is very large indeed; it amounts to about 86 per cent. of the officers employed in each Department.

21,591. Whether amalgamation be followed or not, is it your opinion—I think you gave us your opinion upon this before, but I am not quite certain—that the work might be done by a Chairman and Vice-Chairman, or by a Comptroller and Deputy-Comptroller?—I think that if the staff is properly organised, the proposed directing authority would be better than a Board. At a Board two or three of the best hours of the day are sometimes lost by three men and a secretary sitting as a Board for the transaction of business for which two at the most are often sufficient. But the directing power should not be less than three, if pro-

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

vision is to be made for ordinary leave and absence on inspection duty; this inspection duty is important, and of late the Board has not been able sufficiently to attend to it. As a rule, there should never be less than two directing officials in attendance at the office.

21,592. The point of your views against amalgamation is that the various duties which are now done by Customs officers are quite sufficient to take the men of ordinary average ability all their time to learn?—Quite.

21,593. It would not be desirable to put fresh work upon them?—I think not.

21,594. In fact the Customs work must remain a separate branch of the collection of the Revenue?—I think it must.

21,595. Whether managed by one Board or not?—Yes.

21,596. (*Lord Lingen.*) Would you put this as a typical case that the duties of a superviser of excise who has to superintend manufactures in various stages, spirits and beer for instance, are totally and wholly different from those of any waterside officer?—I should say you quoted a very good case. I should be very sorry that our man should have to learn all the duties in connexion with the duty upon beer in addition to what he has now to learn.

21,597. There is nothing in common between the two?—Nothing.

21,598. (*Chairman.*) Have you considered where the duties could be amalgamated. Is there any particular station that you have in view where you could see your way, if you had a free hand, to get the united Customs and Inland Revenue work done by the same officer?—I think if there was a local inquiry made, savings ought to be made at many of those places where there are two collections at present. For instance, in the Custom House in London at this present moment there is a collector of Inland Revenue for one of the districts of their London collection. There would be no difficulty whatever, if there were no assessment to be done, in the money being received by the Customs clerk in the Long Room. The same is the case in Dublin, where two collectors are sitting in the same building.

21,599. (*Lord Lingen.*) Have you an Inland Revenue collector in Thames Street?—Yes, he was moved into the Custom House about a year ago.

21,600. Is he there now?—Yes, he is and his staff.

21,601. (*Mr. Cleghorn.*) Does he take Inland Revenue money at the Custom House?—He takes Inland Revenue money at the Custom House. He was located at Tower Hill. About a year ago we found room for him in the Custom House. So inside the same building there are two collections going on, and, in my opinion, there is no sufficient reason for that.

21,602. What is his staff?—There is a collector and a surveyor, and I think we provided for a staff of 15 altogether.

21,603. Do you mean that you have 17 Inland Revenue officers in your building?—It is a year ago now, and I will not be sure about the numbers, but I think it was something like 15.

21,604. (*Lord Lingen.*) Then a certain amount of the local collection for the Inland Revenue is paid to their officer in Thames Street?—Quite so.

21,605. Just the same as another portion of it might be paid to the corresponding Department in Somerset House?—Yes, or to the Post Office.

21,606. It is a mere extension of Somerset House into Thames Street?—That is all. Then, again, in the Custom House at Dublin, as I have already said, we have two collectors sitting in the same building, an Inland Revenue collector and a Customs collector. I think there again, if some local arrangement were made, after local inquiry, some saving might be made.

21,607. (*Chairman.*) But that could be done without amalgamation?—Yes.

21,608. And it does not involve amalgamation?—No; you would want an inquiry on the spot. They could do the work for us, or we could do the work for them in the same way as we do other duties for the Board of Trade. At ports where their officers must be stationed they could take the Customs collection, perhaps, and if Customs officers must be in another place, they could take the Excise collection.

21,609. Has the Inland Revenue collector who is stationed in your office in Thames Street nothing to do but collect; has he no assessment duties to perform?—I do not know.

21,610. If he had assessment duties to perform, and it was a convenient place to put him, that would be a reason, would it not, for not making him a Customs officer?—I expressed the opinion some time ago that our officers could only take the receipt of money; they could not be responsible for the assessment.

21,611. As a matter of fact, does the collector of the Inland Revenue at Thames Street have any assessment work in connexion with the Excise to do?—That question I cannot answer. I do not know enough of his duties.

21,612, (*Lord Lingen.*) Therefore the duties connected with assessment would at present be duties quite foreign to your officers, would they not?—Quite; and that is why I said they could not be responsible for assessments.

21,613. (*Chairman.*) That leads me to the point that has been raised about the geographical position of the Board. Suggestions have been thrown out from time to time that it might be possible to dispose of the valuable site of the Custom House, and that the Customs work of the port of London might be done at Tower Hill or somewhere else. What have you to say about that?—As long as the locality is somewhere near where it now is, I do not think it will signify whether it is done at Tower Hill or at the present Custom House; but the head office for the port of London should be very close to where it is now, because the merchants, who are daily in communication with the Customs, have their places of business all located near the Custom House with a view to these daily communications.

21,614. Supposing there was an establishment to deal with all these merchants in connexion with their Customs business, say in a convenient place near Tower Hill; what do you say to the necessity of having the Board and the secretariat immediately in contact with those officers; would it be any serious objection if they were at Somerset House?—My experience is that one constantly wants to see the inspectors and the heads of the departments in London. The inspectors must be in their districts, but of course you could send for them to Somerset House, although it would be a longer way for them to go.

21,615. The Board is not in the same contact with the officers at Liverpool necessarily?—No, I was speaking with reference to the management of the port of London. If you move the Board to Somerset House, the first thing you would have to do would be to put a more important officer in the position of collector, as he would then have to undertake all the detail of the port, which now falls into the hands of the Board. He would then have to be in a position something similar to that of the collector at Liverpool, but in one still more responsible.

21,616. (*Lord Lingen.*) In the course of the day's work does the collector come personally much in contact with yourself and the other members of the Board?—Yes.

21,617. Constantly?—I should think I see him two or three times a week.

21,618. (*Mr. Cleghorn.*) Not two or three times a day?—No, it may be that I should want to see him twice in one day, but I should think the average would be two or three times a week. (*Mr. Prowse.*) The port of London officers are very much made use of on points of practice. London is supposed to gather up the best forms of practice, and it is convenient to have the collector of the port of London, or the inspectors of the port of London, or the officers in the port of London, as references on points of practice raised at other ports, and much use is therefore made of them in those connexions. (*Mr. Murray.*) We have constantly to send for the surveyors and the inspectors on general points. (*Mr. Prowse.*) And not purely on London business. (*Mr. Murray.*) For instance, if anything goes wrong anywhere along the coast, if there is any clear case of smuggling, or anything of that kind going on, I always like to consult with Mr. Hincks, the head of the waterguard in London, before steps are taken, because he is a very experienced officer.

21,619. (*Mr. Cleghorn.*) It would be, in your view, a great inconvenience, to say the least, were that sort of business not done at the river side?—I think so; of course it could be done at Somerset House, but I think it would be found to be inconvenient both to the merchants and to the service.

21,620. Cases of doubt or differences or any point that arises as to the charging, where you require to go to the supreme authority, are they dealt with immediately, or do they stand over till the next day and go before the Board?—They go direct to the committee which deals with the subject in question.

21,621. The same day?—The same day, and they are dealt with at the committee if they can be, if not, they are reserved for the Board the next day.

21,622. In those cases it would not matter very much where the Board sat then?—Not in a case of that kind: not in cases of what you may call appeal.

21,623. They could be dealt with quite as well at Somerset House or in Westminster or anywhere else?—Yes.

21,624. (*Chairman.*) What are the points on which your Board principally comes now in contact with the Inland Revenue Board, the principal points say upon which you have correspondence?—I have a statement here of the correspondence between the 1st October 1887, and the 30th September 1888. On warehousing questions there were 22 letters; as to the Code and alterations in it, 13.

21,625. (*Mr. Cleghorn.*) Do those figures represent letters from both sides?—No, these figures represent our letters to them.

21,626. Not theirs to you?—Not their replies. (*Mr. Prowse.*) It would give a kind of average, because the letter and the reply go to make up one letter. (*Mr. Murray.*) You may double these figures. On British spirits there were 11 letters, and on miscellaneous questions 35. Then we come down to a number of small things, analysis of samples 4, removal of goods 12, importations of maltine and beer 24.

21,627. What is the total?—179.

21,628. In a year?—Yes.

21,629. (*Chairman.*) Those, I understand, are communications of all sorts passed from you to the Inland Revenue Board, with reference to matters of business in which it is necessary to consult them?—Yes, some of these were very formal, such as monthly returns of warehouses.

21,630. Those would not be letters, would they?—I include them all as letters.

21,631. (*Mr. Cleghorn.*) It would be an average of about three a week apparently?—Yes, something like three a week. (*Mr. Prowse.*) Many of these are merely forms, not correspondence in the widest sense.

21,632. Do you mean printed forms filled up?—Such printed or lithographed forms as the transmission of samples, and matters of that sort.

21,633. Quite routine matters?—Many of them are. (*Mr. Murray.*) For instance, there are four applications for tobacco labels.

21,634. Do they not originate any letters to you?—Yes, they probably might send the same number to us.

21,635. You have not got an account of those?—No; I could have one made out.

21,636. That would double the communications?—(*Mr. Prowse.*) Every one of these would not require an answer, some of them of a periodical return, or something of that kind.

21,637. (*Chairman.*) The warehousing system is, of course, the principal point in which you come in contact with the Excise?—(*Mr. Murray.*) Yes.

21,638. And as we know, and as these papers show, there has been a gradual tendency to diminish the number of warehouses, or, at all events, to simplify the management, to bring as far as possible each port under one board?—Yes, we have gone a considerable way in that.

21,639. And correspondence has recently taken place, I think, between the Treasury with reference to the warehouses in London, Dublin, and Cork?—Yes.

21,640. I think in 1883, was it not, there was a stop put upon any further transfer of warehouses from your Department to the Inland Revenue?—In 1883 or 1884, I forget which, in 1884 I think it was.

21,641. At that date with reference to nine ports, I observe in the correspondence I have just mentioned, you state that the Inland Revenue had estimated the cost of managing those warehouses at 6,650*l.*, and that the Customs had subsequently reduced the cost of the administration of those houses to 5,771*l.* a year?—Yes; and I think it has come down lower since, and that reductions have been made at those ports since then.

21,642. One is bound rather to ask for an explanation how such a very large reduction is possible, from 9,200*l.*, the original amount, to 5,771*l.*?—I am afraid the ports were not in all cases properly looked after till inquiries were started at that date.

21,643. Inquiries were going on into all the warehouses all round the coast, I believe?—Yes.

21,644. (*Mr. Cleghorn.*) Do you mean there was a larger staff than necessary?—Yes. There have been very large reductions made in the department, and I am bound to say I think the reductions might have been made sooner.

21,645. Both in numbers of men and rate of pay?—Yes.

21,646. (*Chairman.*) Have all your own warehouses, and, as far as you know, all the other warehouses at all the ports around the coast, been thoroughly looked into now, and do you believe there are any means of effecting further reductions in the management of those warehouses?—I do not say there cannot be further reductions made. Inquiries are constantly being made into those questions when the Surveyors-General go round, and also sometimes when the members of the Board are able to go round.

21,647. You have just stated that you are bound to admit that it might have been possible to look into the question of reductions earlier than the date we have just been referring to?—Yes.

21,648. Do you think that statement would be true now?—I think the ground for retrenchment is small now, but still there may be ground.

21,649. It is not alleged by anybody that the Customs warehouses are more expensive than those of the Inland Revenue, but in your opinion is there room for reduction at the present moment so far as regards the management of those warehouses?—I should doubt whether there is much room.

21,650. What is your view as to the best system of managing the bonded warehouses of the country, I do not mean merely as between you and the Inland Revenue, but generally speaking, do you see any disadvantage in maintaining them as they are now?—No. I see no great disadvantage in things remaining as they are. But if I had my own way I would put all the warehouses at the ports under the Customs and let the Inland Revenue retire from those ports.

21,651. And would you put all the inland bonded warehouses under the Inland Revenue?—Certainly, when not situated in ports.

21,652. There are nine ports, are there not, in the United Kingdom where there is the duplicate system of warehouses?—I could not say how many ports. I should doubt whether there are so many as that. (*Mr. Prowse.*) There are only five or six, as far as I can remember, at which there are duplicate warehouses—London, Dublin, Cork, Belfast, Glasgow are the most prominent, and I think the most important ones.

21,653. I believe it is a limited number only of ports at which both departments have warehouses?—(*Mr. Murray.*) I do not recollect the exact number at the moment.

21,654. Do you think there is any inconvenience caused to the trade by having duplicate warehouses?—I should doubt it. I think that as far as economy went we could work it cheaper, supposing all those at the ports were under the Customs.

21,655. (*Lord Lingen.*) Have you got room for the amalgamated business?—I think so.

21,656. (*Mr. Cleghorn.*) Would you require any increased staff?—Yes, we should have to increase our staff. (*Mr. Prowse.*) Not in every case, but generally. Some warehouses could come over—if they are near to our warehouses they certainly would come over, subject to an overlapping of officers. It is impossible to arrange the officers so that their time is always, and under all circumstances fully occupied.

21,657. (*Chairman.*) Are there any ports round the coast of the United Kingdom where the Inland Revenue have bonded warehouses, and where the Customs have none?—(*Mr. Murray.*) Yes, they took over all the warehouses at a good many of our ports in 1882 and 1883.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

21,658. That has given rise to no inconvenience, I understand?—No.

21,659. (*Lord Lingen.*) In those ports the goods from abroad would go as a matter of course into the Inland Revenue warehouse, would they not?—They were ports at which there was no direct foreign trade. (*Mr. Prowse.*) That is ports at which there is no regular importation of dutiable goods.

21,660. Do you mean that from year's end to year's end there is no stray keg of spirits coming in to those ports?—(*Mr. Murray.*) Not as a rule. (*Mr. Prowse.*) It has occurred once or twice.

21,661. If it did it would go into the Inland Revenue warehouse?—(*Mr. Murray.*) Into the Inland Revenue warehouse, but it would be landed by a Customs officer who would attend for the duty.

21,662. It would go as a matter of fact into the Inland Revenue charge?—Yes; if so desired by the inspector.

21,663. And it would be got out again from Inland Revenue officers, who would account to you for the duty?—Yes; the guiding principle was that they should be given over the warehouses at ports where there were no direct importations of dutiable goods.

21,664. (*Chairman.*) In your opinion the best system would be that at all the ports the warehouses should be yours?—That is my opinion.

21,665. But you would not go back from the present state of things?—No; but if we were to begin *de novo* I should do that.

21,666. At present you do not see the desirability of any changes one way or the other?—No, I should leave things as they are; but that is a change I should make if a change was to be made.

21,667. (*Mr. Cleghorn.*) As I take it you have a preference for continuing to have two sets of warehouses?—Yes.

21,668. (*Chairman.*) As regards the duplicate establishments, the gist of the recent correspondence between yourself, the Inland Revenue, and the Treasury, has been, has it not, that you have been suggesting, where their duplicate establishments exist, at the Tower, at Dublin, and at Cork, for instance, they should come under your management, as being more convenient and economical?—We suggested that we should continue to carry out what was recommended in 1882, that the seaboard warehouses should be under the Customs at the larger ports, and that those at a distance from the landing places should be under the Inland Revenue.

21,669. Has any conclusion as yet been arrived at on that point?—No.

21,670. Are you aware of any inconveniences that are caused to the traders who have to deal with two departments from the fact of there being two departments?—All I can say is, we never have any complaints on that point. We have no complaints addressed to us.

21,671. In the matter of export of beer, and things of that kind, for drawback, is there any trouble caused in consequence of there being two departments?—The export of beer of course is managed by us. The merchant sends a notice to the Inland Revenue, and that notice is passed on to our officers, and then our officers take the samples and send them up to the Inland Revenue to test them. Then our officers see to the beer being actually put on board the ship.

21,672. (*Lord Lingen.*) Is it put direct on board the ship from the Inland Revenue warehouse, or does it go through one of your warehouses?—It may go from any warehouse.

21,673. It may go direct from the Inland Revenue warehouse to the ship?—It can do so.

21,674. Does it?—As a rule, I believe, it always does so. I do not think we warehouse beer at all.

21,675. Therefore, for purposes of exportation, the Inland Revenue warehouse is the same as your warehouse, with the single exception that your officers go and see what it is that is going to be exported?—Yes, they first take samples to send to the Inland Revenue for taking the strength, and then they also take samples to satisfy themselves that it is beer and not water which is being exported— for this purpose they test a barrel or two.

21,676. But the shipper is not obliged to come into contact with both your departments if he wants to export beer from an Inland Revenue warehouse?—To this extent he does. He first sends his notice to the Inland Revenue, and then he comes to the Long Room to get what is called a pricking note to send down to our export officer as his authority to ship the beer.

21,677. Must he send some actual person to do that?—Yes, he must send somebody to do that.

21,678. Could not they send you a notice from the Inland Revenue just as well as requiring him to come down to Thames Street?—They say it is necessary for him to come there, because very often they find they cannot ship the beer in the ship they meant to do—it is shut out, and it has to go by another ship. It is the details of trade which I believe come in here. (*Mr. Prowse.*) He also has to put in the export documents giving the quantities and values for statistical purposes.

21,679. For the purpose of exportation it would be more simple for the exporter to have his goods in your warehouse than to have them in an Inland Revenue warehouse?—It would if it were a question of warehousing; but this comes from breweries.

21,680. The steps would be fewer?—The steps might possibly be fewer, though I do not see how. (*Mr. Murray.*) Anyhow if there was an amalgamation all those steps must still be taken by the exporter.

21,681. (*Chairman.*) He would not be in any better position, as I understand you to say, from the mere fact of having to deal with one board?—Not a bit. Every step he takes now he must take then.

21,682. (*Lord Lingen.*) If it was in your own warehouse, would he still have to come in person to the central establishment in Thames Street?—Yes, he has to do that, I believe, as much as anything, in order to make certain of the ship that he is going to send the beer away in.

21,683. (*Chairman.*) That is only in case of a man dealing with the beer in London?—London, and Liverpool, and Glasgow, are the three largest ports from which beer is exported; I should think three-quarters of it is exported from these ports.

21,684. (*Lord Lingen.*) Do you say it would be impossible for the Inland Revenue to take all those steps for him, so that they would send him a note saying, "Your beer is ready for removal." I cannot quite see, if all that has to be done is that your officers should go and see what it is in the Inland Revenue warehouse, and take whatever notes are necessary about it there, why after that the man has got to come in his own person down to Thames Street?—He has to arrange about the ship he is going to export the beer on.

21,685. Supposing he says in his notice to the Inland Revenue, "I want to export this by the ship 'Speed-"well' that is lying in the East India Docks," why do you want him after he has given that information?—There must be an authority for our officer there to allow these drawback goods to be put on board.

21,686. But why cannot the Inland Revenue, after communicating with you, communicate that authority?—They do not know where the ship is lying, but our officers do.

21,687. The man who would take this out of the warehouse, his carter knows where the ship lies?—I should doubt it.

21,688. (*Mr. Cleghorn.*) Is not it the practice that the shipper arranges for the ship beforehand?—They do, but goods are frequently shut out for all that, and have to be sent by another ship.

21,689. I should think if a brewer has a quantity of beer to export, as he knows where it is going to, he arranges with a vessel to take it at a certain amount of freight. That will be one of his first stages, before he comes to the Custom House at all?—Then he must get an authority from our Long Room to put that beer on board.

21,690. As I understood it, the gist of Lord Lingen's inquiry was: Cannot that be done through the Inland Revenue Office without the interposition of the Customs?—Do you mean the Inland Revenue are to send our officer an authority to allow the beer to be put on board? (*Mr. Prowse.*) It is a combined operation. The merchant is exporting goods, and he is claiming drawback. As an exporter, he must appear at the Custom House to pass his export documents giving his quantities and values for statistical purposes. Beer for drawback is a British export; that must be accounted for by

the export specification, or by the shipping bill. *Quoad* that, it is properly a Customs transaction; *quoad* the drawback, it is an Excise transaction. The brewer would send beer, not from the bonded warehouse, but from his brewery, which would be under Excise supervision. He would send it to the station from which he was going to ship it. He would also give notice that he intended to claim drawback, and would notify the intended exportation to the Custom House officer, the searcher we call him on the quay, who sees to the beer being exported. It is a somewhat complicated arrangement, and must necessarily be so. As to the exporter, he must in any case appear all these times; he must take all these steps; he must claim his drawback, whether he claims it from the Excise or from a combined Board, or from the Customs exclusively; he must claim it from somebody. He must also comply with the law as to the requirements in reference to exportation. That is the position, I think.

21,691. Do you think that if there was one set of officers only to deal with that there would be nothing saved?—Absolutely nothing saved to him. The stages to him would be precisely as they are now as long as the law remains as it is now with regard to exportations.

21,692. (*Chairman.*) In the first instance, naturally it occurs to anybody who is not acquainted with the business, that when a man is exporting beer, or whatever he is doing, when he is transacting any business in which he has to deal with the Customs and Excise, that it would be simpler to go to one department that did the whole thing?—(*Mr. Murray.*) Yes.

21,693. Would the explanation which you have given us with reference to exporting of beer apply, to some extent, to the export of British spirits?—Yes; only there is more care taken to see that every cask of British spirits goes on board.

21,694. I mean with reference to the transactions between the two departments to which we have been referring, they are substantially the same as far as circumstances will allow?—Yes.

21,695. Now to come to the number of men that you employ. What is the total of the men that are employed upon waterguard? Do I give the number rightly at about 1,400 for the whole service?—Yes.

21,696. Then what is the staff for landing and export duties?—1,250.

21,697. Do the duties which you set out on page 2 of your first memorandum specifically state what these duties are; will you give, shortly, a list of what the waterguard duties are. May I take it that the waterguard duties upon which 1,400 men are employed may be said to be quarantine, sealing of stores, boarding of vessels, rummaging, and re-rummaging of ships, and general watching against smuggling?—Yes, I think that is a fair *resumé* of the waterguard duties.

21,698. Then do I correctly describe the duties of the landing and export staff for which you have 1,250 men as being the charge of a ship on arrival at the docks; then the report, then the reception of entries for goods for immediate delivery or for warehousing, and an examination of passengers' baggage, or other things which might be dutiable?—(*Mr. Prowse.*) The taking of entries is a little mixed up with the Long Room functions. Entries are in the main, clerical operations; the officer's duty is acting upon the entry, allowing the entry to be acted upon, checking the goods out of the ship.

21,699. Those are the duties and that the total men employed, viz., 1,400 waterguard, and 1,250 on landing, making the total to 2,650 or thereabouts of established officers and extra men employed; if amalgamation was introduced the work of those men would be in no way touched, as I understand?—(*Mr. Murray.*) In no way at all.

21,700. Their services are altogether outside of what there is a possibility of expecting from the Inland Revenue men?—They would not be touched by amalgamation at all. Their duties could not be performed by Inland Revenue officers.

21,701. Now the warehousing branch. Do I rightly put the figures as employed in your warehouses at 1,200?—Yes.

21,702. That is confessedly common ground between the departments?—Yes.

21,703. What are the principal questions which arise, and which have to come for settlement before the Board as affecting the warehousing system?—The warehousing system under the Code works itself very fairly without any great strain. But the questions which come before the Board are chiefly in connexion with the grant and withdrawal of privileges for warehouses, the deficiencies in goods when they are delivered; and with unauthorised removals.

21,704. All these grants are common with the two systems of warehousing, are they not?—Yes.

21,705. Do you see any reason why those warehouses should not be managed by a joint committee; that is to say, why all those questions which are referred now, I presume, to the Board of Inland Revenue, and which you have just mentioned as coming to your Board, should not be referred for decision to a joint committee, whatever might ultimately be decided to be the higher controlling authorities, one side or the other, of the Revenue?—That idea would be workable, I think.

21,706. I have understood you to express an opinion that you think that, in lieu of a board, the Customs might be managed fully as well, or might be managed better, by a controller and a deputy controller, or a chairman and deputy chairman?—I think that a third directing officer would be required.

21,707. Supposing the same thing were true for the Inland Revenue, do you think if they were separately responsible for their own special duties that the warehousing could be managed and all inconveniences and differences of treatment got rid of by the united authorities meeting, in some form or other, as a warehousing committee to settle the question in some way?—I think it might work; but I think in many cases it would be found that decisions would have to be arrived at without the meetings of this committee.

21,708. Supposing the committee met twice a week, I am only asking you to see whether it is practicable?—It is a new idea to me; but I do not think it is impracticable at all. We would then have every important question in both departments referred to a joint committee, and have the decisions in both departments therefore similar.

21,709. That would be the decisions of the joint authorities?—Yes; I think that is workable. (*Mr. Prowse.*) It would be particularly useful in the matter of new privileges to warehouses. (*Mr. Murray.*) It would also save correspondence, I think.

21,710. That perhaps incidentally raises the question, how is that privilege of a new bonded warehouse granted, is the ultimate authority the Treasury?—If there is any appeal. The process is this: People wishing for warehouse privileges apply to us first, and we send down to the port to know whether the bonding accommodation is sufficient for the trade of the town, and if the collector reports that it is so, our orders from the Treasury are that no new bonded privileges are to be given. If, on the other hand, he reports that the trade of the town requires additional warehousing accommodation, if the application was to the Customs, we should apply to the Inland Revenue if they had warehouses in the same town, and inquire whether they saw any objection, and if they did not object we should then grant it.

21,711. (*Lord Lingen.*) Of late years, I suppose, hardly any new bonded warehouses have been called into existence, have they?—We have taken the privilege away from a great many, and in some cases we have granted new ones. We are putting an end as much as we can to the small warehouses and the badly-drained warehouses, but we are granting fresh privileges in the cases of large buildings; we do it in communication with the Inland Revenue.

21,712. (*Mr. Cleghorn.*) Have both departments power to put locks on such warehouses?—Not common locks. We do not put Customs' locks on Inland Revenue warehouses, nor do the Inland Revenue officers put their locks upon ours. Upon all our Customs' warehouses there are Customs' locks.

21,713. Exclusively?—With the traders' locks of course.

21,714. As regards the Government, one department only puts its locks on a warehouse?—That is all.

21,715. So that an Excise officer has no access to a bonded warehouse under the Customs, or *vice versâ*?—That is so.

21,716. (*Chairman.*) I imagine that in interpreting the Code differences of opinion have arisen between yourselves and the Inland Revenue?—Very rarely.

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

21,717. If they have arisen, how have they been settled, by reference to the Treasury?—Yes; but as far as I can make out there have been two such cases only.

21,718. That is since the regulations were made uniform?—Yes.

21,719. I do not want you to dwell much upon that point, because I understand you to be of opinion that it is both desirable, and you think practicable some way or other, to join without amalgamation (of which you are not in favour), the authorities at the head of both the Revenue departments, for the purpose of administering the warehouses?—That is, as I have said, a new idea to me.

21,720. Would it be a good thing?—I think it would, but as it is a new proposal I am only expressing an opinion on short notice. It would have the distinct advantage to which Mr. Prowse referred as to the question of the granting of new privileges, and I think it very likely would lead to a more satisfactory working of the system of deficiencies in the stock.

21,721. Is there any dissimilarity in the way in which the two departments work in regard to deficiencies?—No, the practice in both departments is nominally the same with respect to the deficiencies which the surveyors can allow; but then there is an appeal to the Boards where the surveyors cannot take action, and of course the decisions of the two Boards may vary in their leniency or otherwise to the trader. Therefore it would be distinctly advantageous, I think, if all such cases of deficiencies were dealt with by a common committee.

21,722. (*Mr. Cleghorn.*) Do you mean where a trader puts in a claim for deficiency in stock?—Not only deficiency in stock but deficiency in a particular casks. If there is a larger deficiency in a cask than the regulations allow, the trader must either pay or appeal. All these questions could be settled by the common committee to which the Chairman has referred, and I think that would be a distinct advantage. (*Mr. Prowse.*) It is for the remission of duty on excess deficiencies, the Code only allowing a certain deficiency within the discretion of the officer.

21,723. (*Chairman.*) I have asked you already with reference to the expense of the warehousing system, and you have said that there might be some economies introduced here and there, but that you are not aware of there being any such necessity for any large reduction, as was the case not very many years ago when there was that reduction made with reference to those nine ports?—I do not think there is room for much reduction now, and I think, if you will allow me to put in some figures here, they will show you that there cannot be much. The amount of duty collected by the Customs Department on goods in warehouses was in the year ending 31st March 1887, 21,370,948*l.*, the estimated cost of the collection of that duty was 168,995*l.*, that is the salaries paid to the officers. That is at the rate of 15*s.* 9*d.* per cent. taking into calculation the salaries of the officers alone who were dealing with those goods. In the following year there was 21,020,270*l.* collected, and the per-centage was 16*s.* 1*d.*; if the cost of the men who actually received the money is also added, the per-centage cost was 17*s.* 8*d.* and 18*s.* respectively. I do not think, therefore, there is much room for reduction. But in one way economy may still be effected: in my opinion the class of officer who is now employed on clerical work in the warehouses is not the one best fitted for it. We are employing second-class examining officers, that is out-door officers, to do work which is really clerical work, and they are not so nimble with their fingers in working with their pens as clerks are. If we employed clerks on this purely clerical duty, and to a certain extent boy clerks on some portion of it, we should make a further reduction. (*Mr. Prowse.*) That is on the warehousing accounts.

21,724. I want to put this to you as a general question, whether you have any reason to believe, with reference to ports other than the nine ports of which we have been speaking, any reduction is possible under any system, on such a scale as was evidently possible by the admitted figures in the case of those nine ports?—No, they have been looked into too closely since then. I may say Mr. Prowse has himself had a very large share in effecting these reductions; he has been to all those ports and looked very closely into their establishments.

21,725. Is it fair to ask you whether you have an opinion upon the economical management of your own warehouses as compared with those of the Inland Revenue?—I will not express an opinion in favour of our own. I believe our own management is economical, but I will not make a comparison between the two. (*Mr. Prowse.*) It should be explained that our reductions since 1882 and 1883 have been not on warehousing business exclusively, but generally on Customs business as administered at those ports, and in some ways, for instance, we have simplified the work.

21,726. Was there not a different system of accounts adopted in 1882?—(*Mr. Murray.*) Yes; a common system of account was adopted. There were certain books to be kept by both departments. There were to be ledgers in every warehouse. They were found to be useful in the Inland Revenue system, and it was thought they would be advantageous for our system too. Practically speaking we do not find the ledgers are of any use. We do not require them, because the stock accounts in the different warehouse are really kept in the Statistical Department at the Custom House, so there is no advantage in our keeping the ledgers at all, and we have only kept them up the last few years with a view to the question which is now being discussed. We were directed to keep these books, and we did not like to give them up if there was any possibility of the two departments being amalgamated, because if the amalgamation took place we thought that it would be better that the system of accounting in both should be exactly the same at the time of the amalgamation; but the ledgers are of no use to us.

21,727. From your point of view they are of no use to you?—No; and when this question of amalgamation is once settled we shall certainly, if we are left alone, give them up and reduce the expenditure.

21,728. (*Mr. Cleghorn.*) Have you a staff employed in keeping those superfluous books?—Yes, and they will be saved. We shall reduce the per-centage that I read out to you just now still further.

21,729. (*Chairman.*) Have you any estimate of the cost of the Inland Revenue warehouses that have been taken over from the Inland Revenue?—I have got no actual evidence.

21,730. Some arguments have been at some time adduced that the competition or rivalry between the two departments in dealing with traders sometimes leads to a little better accommodation of the trade at the expense of the Revenue?—I should doubt that.

21,731. You do not think that with a view of attracting traders, the officers of your Department, or the officers of the Inland Revenue Department, so far as you have been able to observe, have an inclination to deal more generously with particular individuals in order to get the trade?—I think not.

21,732. Do you know that the argument has been used?—I have heard of it, but I do not put any faith in it.

21,733. A general statement has sometimes been made that in both departments (I am not alluding entirely to yours) there are men who being necessarily employed at particular stations might use some of their time in doing the work of the other department. An instance has been given to us of a man at Victoria Station, London, who has to await the arrival of Continental trains. It is said that such a man as that might very fairly be doing something else between the arrival of the trains in the way of Inland Revenue work?—I do not think the argument would apply in the particular case you mention of the baggage officers, but it might at stations along the coast.

21,734. As long as there are no assessment or other responsible duties which require special knowledge of Inland Revenue business, you do not see any reason why they should not be employed in doing the work?—I see no reason. Our officers have now to travel a great deal about in connexion with wrecks, and I think it may very often happen that an Inland Revenue officer stationed close by might do some of the work in connexion with a wreck; it is merely taking charge of it and perhaps selling it.

21,735. And to some extent do you think it would be desirable to make the duties interchangeable where possible?—I think both the departments might help each other in that way with their local officers in the same way as we help the Board of Trade. (*Mr. Prowse.*) The Post Office help the Inland Revenue already in the matter of many licenses. (*Mr. Murray.*) They collect 900,000*l.* a year for the Inland Revenue.

21,736. Then the question of amalgamation, as I understand it, is really one of degree more than anything else; it is not a question of principle?—I have always said that I think amalgamation is perfectly possible; it is only a question of advisability. No doubt you can amalgamate both Boards, and you can work the system; the only question is which system is the best to work, the one we have now got, or the one which would then exist.

21,737. (*Mr. Cleghorn.*) I rather think the Chairman gathered from a previous answer that you were in favour of fusion, at all events to a certain extent, of the duties of the officers of the two departments?—I am not in favour of a fusion of the directing powers, but I am in favour of each department helping the other where its officers can do common work.

21,738. That is a fusion to a certain extent?—Yes.

21,739. (*Chairman.*) Then possibly short of amalgamation you might think that there might be a joint committee for those purposes, that is to say, that the authorities—to use a general expression—of each of the Revenue departments, supposing they remain separate, should meet together for other purposes than merely the warehouses?—No, I do not think that. The only way you can settle the kind of question we are now speaking of, as to whether an officer of one department could do any and what work for the other department, would be by local inquiry; somebody must go round to inquire and settle it; it would then have to be sanctioned at head quarters by some experienced person, representing both departments, who would have to go round the coast and settle in what spots that could be done; their recommendation could then be sanctioned at the respective head quarters.

21,740. Do you find any difficulty at present in doing the work that you do for the Inland Revenue or in the Inland Revenue doing the work which they do for you?—No.

21,741. No hitch at all?—No; it is at present limited to the collection of revenue in our warehouses for them, and collection of the revenue in their warehouses for us.

21,742. (*Lord Lingen.*) To what was the interruption of that process of reducing the number of bonded warehouses throughout the kingdom due?—I think it was mainly due to the result arrived at in dealing with what were called the test ports. It was settled with the sanction of the Treasury that the two chairmen should select certain ports out of 61 ports at which the inquiry should first be made. The inquiry was made and the result was found not to be in accordance with the expectation of the Bonded Warehouse Committee, and on that the Treasury directed that no further steps should be taken in the matter.

21,743. Local or political opposition to the reduction had nothing to do with it?—Nothing whatever.

21,744. Not even in the smaller towns?—No; the only trouble we ever had from local opposition during the last five or six years has been when we formed the coast into districts.

21,745. Instead of individual ports?—Yes; then we had some strong local opposition, but that very soon died away.

21,746. (*Mr. Cleghorn.*) There has been evidence given here as to the large amount that the present Custom House might realise if it was sold; have you any views upon that?—No doubt it is a very valuable building; some kind of negotiation went on about 1880 between the Government and the Corporation of the City of London with a view to its purchase for the enlargement of Billingsgate, and I believe they offered at that time 700,000*l.* or 800,000*l.*, but the negotiation fell through, and the Government finally determined, in 1882 I think, to keep the Custom House.

21,747. (*Lord Lingen.*) Supposing the Custom House was sold, where is it proposed to provide the same accommodation?—You cannot get the same accommodation, but the idea is that sufficient accommodation for the Customs might be found on a spot of ground which is now almost entirely owned by the Crown on Tower Hill, and that the staff might be located there in a situation quite convenient for all the purposes required. I do not think, however, that the site is large enough. at present the staff of the Registrar General of Shipping and Seamen, consisting of about 60 people, is also accommodated in the Custom House.

21,748. Is land less valuable there?—I think it would be rather less valuable, because the Custom House, abuts on the river, and the space it occupies might be turned into wharves.

21,749. (*Mr. Cleghorn.*) While the Tower Hill property does not?—No.

21,750. (*Lord Lingen.*) That would involve greater labour in removing the goods to your warehouses for bonding and inspection, would not it?—No, it would not affect that question at all, because there is nothing landed at the Custom House quay; the goods are landed at different parts of the river aud trken to the warehouses straight; but I do not think if an attempt to sell the Custom House was made now that it would fetch as much as it would have done 10 years ago, on account of the new bridge below the Tower.

21,751. (*Mr. Cleghorn.*) The view has been expressed to us that the sale of the Custom House would produce millions?—I know that has been said, but a purchaser must first be found. (*Mr. Prowse.*) The Tower Hill site would not be big enough for us as it is at present; there must be a great expenditure to make it fit for our purposes, whether it is limited to the port of London or whether it is intended for the general work.

21,752. Whatever amount may be realised from the sale of the Custom House would be reduced by the fresh expenditure necessary to adapt the other site for the purpose?—Yes, to a great extent.

21,753. In whatever case, whether there was amalgamation or not, there would still require to be an establishment on the river side and a house for the public?—Not necessarily on the river side, but in the immediate vicinity of the present Custom House.

21,754. So that there will be further expenditure required to adapt any other site for the purpose?—Very considerable expenditure.

21,755. You said there had been reductions made all round, and I think you had something to do with them?—I have had a good deal to do with the changes which have come into operation.

21,756. Could you tell us what was the aggregate amount of those reductions?—No; I could of course produce an estimate, but I could not even venture a guess at it at the moment.

21,757. Could you not tell us from the estimates of one year as compared with the estimates of another year?—On every proposal submitted by me to the Board for a change involving a reduction, there is an estimate of the saving, and those estimates could, of course, be collected and totalled. (*Mr. Murray.*) I will, if permitted, put in here a return which will give some information on this part of the subject. This is a return prepared by the Accountant and Controller-General, showing the actual expenditure on the effective services of the Department in each of the years, from 1880–81 to 1887–88 inclusive. It will be observed, that being for the effective services only, the cost of the Pension List is excluded. Within the periods named it will be seen that there has been a reduction of 201 in the number of officers employed (exclusive of a large reduction of about 400 in the number of glutmen) and a reduction in the expenditure on the effective service, including the cost of glutmen, of 111,180*l.* a year. Or taking the year 1883-4, which was the year in which the warehouse changes were completed, though they were partly carried out in the year 1882–83, the actual expenditure for the salaries of the effective service was 808,039*l.*, as compared with an expenditure in 1887–88 of 732,036*l.*, and the expenditure for the current year will be less.

21,758. Is that reduction of 111,188*l.* wholly due to reductions that you have made in the service either by getting quit of superfluous men, or reducing salaries, or altering the system, or how?—A very large portion of that is due to improved administration. I am not prepared to say that a considerable portion of it is not also due to the introduction of the new warehousing system; but at the very least I should put more than 76,000*l.*, viz., the portion which has accrued since 1883–84, and in that reduction I again say that Mr. Prowse has had a leading hand, as due to improved administration.

21,759. Do you think that it is possible to carry that any further?—It has gone further than that this year, and will probably go further next year.

21,760. How much is it this year?—We have not come to the actual expenditure, but the estimate for the expenditure is about 13,000*l.* or 14,000*l.* less than it was in the preceding year, and we shall have reductions again in our estimates for the year 1889–90. I should

Mr. H. H. Murray, C.B., and Mr. R. T. Prowse.

26 Nov. 1888.

like to put in this return giving the actual expenditure on the effective services in each year from 1880-1 down to the year 1887-8 (*handing in same*).

21,761. (*Chairman.*) In this return you have handed in I think you have not included the charge for non-effective services, such as superannuation?—I have not, for this reason: that our expenditure for the non-effective service is at present abnormally high. At the change made in 1882 and 1883, when the new system was introduced, which was introduced against the opinion of the majority of the Board, our pension list was swollen to the extent of about 30,000*l.* a year more than it was before. While we have that abnormal expenditure for the Custom service proper we still have about 5,000*l.* or 6,000*l.* a year on our pension list for Colonial pensions and Coastguard pensions.

21,762. That is, you still bear the charge of all the superannuations of the old order of things when you dealt with the Customs in the Colonies, and when you had the Coastguard under you?—Yes.

21,763. Do they still appear on your vote?—They appear on our pension vote.

21,764. What was the main change in 1882 which you say the Customs rather objected to which resulted in this large superannuation?—It was a change from the accounts being kept by the in-door clerical staff to their being kept by the out-door staff, and the result was that a very large number of the clerical staff, being unwilling to join the out-door service, were pensioned off.

21,765. (*Mr. Cleghorn.*) Is this figure of 732,036*l.* the figure which you said worked out to 15*s.* 8*d.* per cent.?—No; that was only upon the staff employed in the warehouses.

21,766. The whole thing we have been told is 4*l.* 6*s.* 8*d.*, or something like that. I wanted to know how you made out the difference between 15*s.* 8*d.* and 4*l.* 6*s.* 8*d.*, which we are told is the total per-centage?—(*Mr. Prowse.*) The one set of figures includes the water-guard and landing services which are non-remunerative to the Department, also the cost of pensions, and of all the services rendered for other Departments. The other set of figures is directly on remunerative results on the work done in warehouses. The preventive duties do not return anything. That is the explanation of the difference.

21,767. In fact there is a large amount of duty done by the Customs Department which is not expressed by revenue?—Which is necessarily not expressed by revenue.

21,768. There is no revenue derived from a large amount of the duties that they do, and of course those duties which have to be paid for swell the expenses?—Yes.

21,769. Therefore it is to that extent a fallacy to work out the per-centage of the costs of the Customs Department by the revenue it receives?—Yes.

21,770. Does the Board meet daily as a committee?—(*Mr. Murray.*) The Board meet daily.

21,771. What proportion of the business that they deal with comes from the outports as compared with that which originates in London?—I could not say the proportion, but a very large amount of it.

21,772. Therefore as far as that is concerned they might as well sit at Somerset House or in Westminster or anywhere else?—Yes, except so far as the Board may wish to consult with the London officers respecting it.

21,773. Is it necessary that they should sit at the Custom House?—No, not for that purpose.

21,774. For the proportion that arises from London business proper, is it necessary that they should sit at the Custom House and settle it at once, then and there?—No, a great deal of it would perfectly well bear waiting, but when you wanted to consult any officers of the port you would have to send for them and take them further west, and they would take longer in coming to you.

21,775. But that could be done the next day or the day after?—In most cases I think it could.

21,776. Business would not stand for want of that?—No, I think not, because the collector would have to take a great deal of responsibility upon himself; you must have a big man at the Custom House. (*Mr. Prowse.*) With considerable and enlarged powers.

21,777. He would have to take action there unless it was a very special point without referring it to the Board?—(*Mr. Murray.*) Yes, he would act upon his own responsibility a great deal.

21,778. The same as the collector at Liverpool does?—Yes.

21,779. Therefore to that extent it would be immaterial whether the Board sat at the Custom House or not?—It would be inconvenient to some extent, but the Board could sit at Somerset House. (*Mr. Prowse.*) I think in any case, supposing such a change to be as the removal of the Board to Somerset House, we should want a local committee for the merchandise marks cases. I do not think, perhaps, the Commission fully apprehend how very considerable an addition has been made to our ordinary work within this year since the Merchandise Marks Act came into operation. The number of papers on that subject are very numerous. This work has quite doubled the number of our registered papers. Every merchandise marks paper has to come before the Board and must be decided upon by the Board, because the decisions are too responsible to be left to the officers. There are very delicate questions of property turning upon the marks under the prohibition clauses. (*Mr. Murray.*) I should like you to examine Mr. Seymour upon that. He has had the special management of the merchandise marks business from the very commencement; it is a very serious addition to the work of the department. (*Mr. Prowse.*) And highly responsible, because the importers are always naturally struggling to get their importations delivered as soon as possible. There are very delicate questions of property arising under the Act if seizures are ordered.

21,780. And all that, you think, would be best done at the Custom House?—Certainly, because supposing the Board to be moved, London precedents are so valuable in such a case. These cases come from all the outports, and they come at the rate of over 100 cases day by day. I think our daily number of papers is something like 110 on that subject alone; it is almost a department in itself. (*Mr. Murray.*) And these questions involve large sums of money, because many of these articles are liable to confiscation as being illegally marked. (*Mr. Prowse.*) It is all un-remunerative work; it is no question of duty; it is a question of what is legally admissible in the way of marks on foreign-made goods.

21,781. I suppose we may take it that on the whole, assuming amalgamation to take place, you do not think that more than a money-saving of 10,000*l.* or 11,000*l.* a year would be effected?—(*Mr. Murray.*) I do not think you will make that, for this reason; as I said some time back in my evidence I think, there will be a good deal of difficulty in levelling the salaries of the two departments of those officers whose emoluments at present are limited to 200*l.* a year. I think there you would lose a good deal more than you would gain by the abolition of certain offices in the case of amalgamation. To level up our second-class out-door officers alone to the assistants of Excise would cost at least 9,000*l.* a year.

21,782. At the places where the two departments have each warehouses, by combining the two, do not you think there would be a counter-balancing saving there?—I do not think so. (*Mr. Prowse.*) There would be so far a saving that the supervision would be saved; supposing all the bonded warehouses in a port, where the two departments are represented, came over to the Customs, certainly much if not the whole of the supervision would be saved. I do not mean the work in the warehouses, but the supervision of that work.

21,783. Do you mean that one man could do the work of the two?—Yes, the collectors and the surveyors; at any rate it would be almost an inappreciable item of addition where any addition had to be made.

21,784. But the actual working staff?—They must remain as they are of course. It does not matter whether it is an Excise staff or Customs in that case, except for the difference of pay, whatever it might be.

21,785. Reference was made to the Custom House officers at Victoria Station or Charing Cross checking the Continental luggage; are those men employed exclusively on that work?—(*Mr. Murray.*) We have made that work their sole work. Formerly the staff was employed, partly on baggage duty there and then partly on Customs' work in the port; we found that was uneconomical and it was settled then that there

should be a separate baggage staff employed at Victoria and Charing Cross.

21,786. Do those men do anything else?—They do nothing else. (*Mr. Prowse.*) But the service is a very irksome one. It begins before 6 o'clock in the morning as the mail trains from Dover come in. That lasts a short time. Then they come on again in the evening for a succession of passenger trains, Dover and Folkestone. The Queenboro' train, I ought to have said, comes in the morning also. That all makes the service at very awkward times of the day and at broken periods.

21,787. They do nothing between?—Nothing between. We give them that amount of relief. They go away (after serving in the morning) for the rest of the day, and then they go back for the evening trains; but if evening trains are delayed through bad weather, they have to remain as part of their day's work.

21,788. Of course they are only required to be there at fixed times?—At fixed times it is now, when there is no longer a tidal service.

21,789. When the trains come in, that is all?—That is all.

21,790. Then there will be, according to the amount of luggage, half-an-hour or an hour?—Yes, at each train.

21,791. Then they have nothing more to do?—No, but in the evening that means a continuous service, speaking roughly, for about three hours, because the trains come in at different intervals. There is not only the Folkestone train and the two Dover trains, but there is a supplementary service. I admit fully that it is not an arduous service, but it is very irksome to the officers, because it comes at awkward times. We make them up a day's work as nearly as we can of about seven to seven and a half hours. Of course by re-arrangements they could be made to do some other work. When we made the change it was partly because the baggage duty interfered with the work at the regular Customs Stations, because the officers had to go away before the day closed to get up to Charing Cross and Victoria Stations. (*Mr. Murray.*) It was found more economical to keep them as a separate staff for that work alone. (*Mr. Prowse.*) In a small way we worked those officers in for the foreign parcel post examination at the Post Office. In a small way we work these officers in for the examination at the General Post Office of the parcels post.

21,792. I suppose they do not collect any duty which at all pays their wages?—No, they collect that duty which has to be collected; but the work is almost entirely preventive, and will continue only as long as the Government force us to examine every package to see whether there is dynamite; until this order is relaxed, every hand-bag even has to be opened.

21,793. There is a staff of men at Folkestone, when you arrive there, who examine your hand baggage?—Quite so. (*Mr. Murray.*) The present system of baggage examination is under positive orders from the Home Office.

21,794. (*Chairman.*) May I take it, with reference to that return, that when you mention the staff of pensions that have become extra ones, and have been put upon it since 1882-3, that at that year you had some re-organization of your department in the clerical staff?—A very large one, in consequence of the introduction of the new warehousing system.

21,795. The introduction of the new warehousing system entailed an alteration in your general staff?—It did; a very large alteration.

21,796. I dare say you will have the headings of that return properly altered?—Yes.

21,797. Last time you gave us some evidence about the work you do for the Board of Trade in the way of collecting statistics. Is there anything else that you do for the Board of Trade of which you have not told us?—(*Mr. Prowse.*) Our collectors are Superintendents of Mercantile Marine for the Board of Trade at all ports except the very large ports. At the large ports the Mercantile Marine business is managed by a local committee of shipowners with a Superintendent appointed directly by the Board of Trade. At the smaller ports the Collector of Customs manages the Mercantile Marine business for the Board of Trade. It is a considerable factor in the duties of Customs House officers at ports.

21,798. Take it shortly, the men in your employ do a good deal of work connected with shipping?—Yes, and wreck work. All our collectors are receivers of wreck under the Board of Trade. All correspondence, and depositions, and questions in relation to wreck, are managed locally by them in communication with the Board of Trade.

21,799. (*Mr. Cleghorn.*) Do they make you an allowance?—Yes, on the votes; there is a sum transferred from their vote to the Customs vote. (*Mr. Murray.*) But it is paid into the Exchequer.

21,800. It reduces your expenses?—The charge is upon our vote. The sum which is paid by the Board of Trade to us for doing that work is carried to the Exchequer as an extra receipt; it does not diminish our vote at all.

21,801. (*Chairman.*) I suppose it has been found very convenient gradually putting this work, which fresh Acts of Parliament propose to put upon the Board of Trade, upon your officers at the port?—(*Mr. Prowse.*) Certainly, because they are there, locally.

21,802. It has been much more economical than having Board of Trade officers for the purpose?—Undoubtedly; if special officers had to be appointed manifestly salaries and expenses generally would be increased. (*Mr. Murray.*) There is one other point I should like to allude to, if I may. That is the work we do for the Home Office in connexion with the importation of explosives, and the movement of explosives. That is very considerable now. No explosives, except gunpowder and cartridges made of gunpowder, are allowed to come into England now except with a licence from the Home Office, and our officers have to see, when any explosives are brought, first that the importer is licensed to import the special explosive which he has imported; secondly, that he has not imported more than what he is authorised to import; and, thirdly, which is the most difficult of all, to see that they are properly packed, so as to be allowed to be removed inland after they are landed. The regulations issued by the Home Office as regards the packing are remarkably minute, and our officers have to know them. No dynamite can be landed from abroad or removed coastwise without our officers taking cognizance of it, and, when dynamite is landed from abroad samples of it have to be opened by our officers and brought up to the Home Office to be analysed.

21,803. That is work which very conveniently can be done by your men who have to board ships and look for packages and so forth?—It could not be done by anybody else, and in some ports it causes a great deal of trouble.

21,804. Is there anything further you would like to add to your evidence?—I do not think of anything that we wish to add.

The witnesses withdrew.

Adjourned to to-morrow at 12 o'clock.

SIXTY-THIRD DAY.

7, Whitehall Place, Westminster, S.W., Tuesday, November 27th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
LORD BASING.
Mr. A. B. FREEMAN MITFORD, C.B.
Mr. A. S. HARVEY.
Mr. R. W. HANBURY, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. DAVID PARRY WILLIAMS called and examined.

Mr. D. P. Williams.

2 Nov. 1888.

21,805. (*Chairman.*) You are a Surveyor of the Customs in the port of London, I believe?—Yes.

21,806. There are three classes of surveyors, are there not?—Yes, and I am a third-class surveyor.

21,807. Have you risen from being an examining officer?—I was originally a clerk, and I have been through the grades of a gauger, an examining officer, and then a surveyor.

21,808. You were originally a clerk, you say?—I was a clerk for a few months, because I was not old enough to be an officer of the Out-door Department.

21,809. Were the clerical and the out-door services distinct at that time?—At that time they were quite distinct, but they are not so now.

21,810. Wherein are they not distinct now?—The clerical work of the Out-door Department is now done by the Out-door Department, but the clerical work of the Out-door Department when I entered the service was done by a separate branch, called the Warehousing Branch.

21,811. That change was made in the year 1882-83, I believe?—Yes, in 1882. At that time the officers of the Out-door Department could not enter until they were 20 years of age, and I was a clerk until I was 20 years of age.

21,812. (*Lord Lingen.*) Are the situations of second-class collectors' clerk and of out-door officer distinct original appointments?—Yes.

21,813. The old system was that the first-class clerks, the principal clerks, and the collectors were wholly recruited from the men who had entered as second-class collectors' clerks?—Quite so.

21,814. And the out-door officer might rise from the second to the first-class of out-door officers; then he might become an examining officer, and then he might become an inspector; those being two distinct lines of entry and promotion?—Quite so.

21,815. Will you say where at present they intercommunicate, or are they still distinct lines of promotion?—They are still distinct lines, except that the clerical portion of the work, that is, the keeping of the accounts of the Out-door Department, is not done by clerks, but it is done by officers of the Out-door Department, "Examining Officers."

21,816. Where does the out-door officer sit when he is doing his book work; in the collectors' office?—In an office, not in the collectors' office, but in what is called the Warehouse Keeping Office.

21,817. Is that something new?—That is new.

21,818. Before these men sat in the Warehouse Keeping Office, in old times, was that work done by the second-class collectors' clerks?—No; there was a separate establishment called warehouse clerks.

21,819. That now is consolidated in the out-door officers?—Yes.

21,820. But the lines of promotion are as distinct as they ever were?—Quite so, only that the officers of the Out-door Department are now doing part of the work which used to be done by clerks.

21,821. (*Chairman.*) Then the grade of service begins at the second-class out-door officer, does it not?—Yes.

21,822. He enters, subject to open competition, between the ages of 19 and 22?—Yes.

21,823. Then he rises upwards by promotion until he gets to be an inspector—at all events that is the chance which he has at present?—Yes.

21,824. Did I understand you to say that you began as an out-door officer?—No; I began as a clerk. I would not have accepted an out-door officership, which was a lower position. I entered under the old system entirely. I entered under limited competition.

21,825. You said you are a third-class surveyor?—Yes.

21,826. What is the principal work that you look after?—The work which the surveyors attend to personally is the administration, that is, the overlooking what others have done, and checking frequently; in fact, they have charge of the discipline of the service, the control of the work, and the appointment of officers to the work.

21,827. You have the control of the discipline of those below you?—Of those below us.

21,828. How many surveyors are there in the port of London?—There are about 54 at the present time in the port of London. I think, if you allow me, it would be better perhaps to commence with the "out-door officer," and work up to the surveyor, and then, perhaps, I could shortly show to you the work.

21,829. Take it in your own way?—I will give you a sketch of the work very rapidly. When a ship comes to the Thames she is boarded at Gravesend, and she passes through what are called Quarantine Regulations, and arrives here in charge of two or three officers. Those officers are "out-door" officers; that is the rank which we commence with.

21,830. They are put on at Gravesend?—They are put on at Gravesend, and they are responsible that no goods shall leave the ship without proper documents; that when the goods leave the ship they shall be taken account of, and if not cleared immediately, they have to furnish the documents to accompany the goods to the various warehouses. They have also to assist the examining officer generally in carrying out his duties.

21,831. Where does the examining officer come in?—I am going to touch the examining officer now. When the ship has arrived at her moorings, or at the quay side, the commencement of the discharge of the cargo at once takes place, and all these goods are taken charge of, taken account of, as I said before, by the "out-door officer." The dutiable goods are tallied, and an account of their destination put in the several documents and books. The free goods are dealt with immediately, almost always at the side of the vessel. The examining officer then takes charge of the free goods for examination, always supposing that the proper documents are passed. He examines the free goods for various reasons. I might say that a little mistake occurs generally in supposing that these officers are solely collectors of duty. Their work consists in a very great measure of equally important work, but it is not

with regard to the collection of duty only, and I perhaps might point out to you the reasons for the examination other than revenue reasons. Firstly, he will examine free goods for the detection of dutiable articles, and as many articles are liable to duty at some times, and at others being manufactured in a different way are not liable to duty, that requires some care, and also in various instances great experience. For instance, ethers are sometimes liable to duty and sometimes free; turpentine is sometimes liable and sometimes free; soap is sometimes liable to duty and sometimes free; fusil oils, tinctures, chemicals, all those kind of things have to be readily dealt with to decide whether they are liable to duty or not.

21,832. And the examining officer, in the discharge of those duties, has to go upon his own experience and his knowledge of the different aspect of all these articles, and to understand the technique of the trades?—Quite so. There are many ready tests for them, simple tests, which they have, and in cases of difficulty the surveyor comes in, as I will point out later on.

21,833. (*Mr. Hanbury.*) What do you mean by "sometimes"? Is that owing to the different duties in force at different times, or to the different composition of the articles?—To the different composition of the articles. For instance, soap may be made without spirit, and it is sometimes made with spirit; in fact, for some years there was great difficulty in making transparent soap without spirit. I believe they are able to do it now, but for many years transparent soap always contained spirit.

21,834. (*Chairman.*) If the examining officer has a difficulty in settling, say, whether a case of soap is made with spirit, to whom does he go? does he test it himself—is he capable of testing it himself?—He would ask his surveyor, and his surveyor would probably have a knowledge of this kind of soap from previous tests, and bring his experience to bear. If he then had a doubt he would send it to the laboratory, and it would be decided at the laboratory by exactly the same class of officers.

21,835. Is there a laboratory at every port?—Not at every port.

21,836. At every considerable port?—At every considerable port; for instance, there is one at London, at Liverpool, at Hull, at Bristol, and at Cardiff, I believe.

21,837. You have told us about the examining officer, and where the surveyor comes in; as you say for that purpose of reference the examining officer refers to him?—He is a reference for the examining officer. I was going on farther to point out that he would examine for what are called prohibited articles.

21,838. (*Mr. Harvey.*) The examining officer?—Still the examining officer; I will deal with the surveyor presently; I am working up to the surveyor. There are copyright questions, for instance, which we are responsible for, false coins and counterfeit coins, extracts of coffee, chicory, tea, tobacco, or admixtures of them. They are all prohibited and must be readily grappled with. For instance, I myself was passing along the other day when we had an article entered as painter's colours, and I saw at once that it was a preparation of tobacco, which would be a prohibited article.

21,839. (*Chairman.*) Were they endeavouring to get in tobacco under the colourable guise of painter's goods?—It was probably an endeavour to get a mixture of tobacco into this country, which is a prohibited article. Mixtures of tobacco are not admitted at all, that is in consequence of the trade here having to pay duty on tobacco before it is imported—before it can be used for making those mixtures.

21,840. How did you discover this attempt to defraud the Revenue?—It is almost difficult to tell how one judges; by the colour, the smell, the kind of article altogether.

21,841. The gist of all that is, without going more into detail, that it requires very considerable experience and knowledge of that kind of work which you are expected to do to be able satisfactorily to protect the Revenue?—Quite so. Those are Revenue questions. Then explosive articles may be mentioned next. We have a very great deal to do with explosive articles, the regulations and conditions under which they are imported are, as you are probably aware, very stringent, and it is necessary that they should be so, otherwise we might have explosives brought up very near to London, and that would cause mischief. We are also responsible for the carrying and conveying of dynamite, and a very anxious time we had of it recently with regard to dynamite. Dynamite is not very easily detected, because it comes in so very many forms.

21,842. You have to deal with all kinds of difficult questions of that sort; I do not think we need go into them much farther, because we have got lists of what they are. We want to get at the nature of the work more than anything else. Now you have reached the surveyors, I understand?—The surveyor is responsible, first of all, for the attendance and discipline of the officers, and for the proper distribution of the work.

21,843. (*Mr. Harvey.*) Of the examining officers?—Of the examining officers, the out-door officers, and everybody underneath him. There are examining officers, out-door officers, boatmen, extra men, and the whole classification below. He advises on all points of doubt, and he re-examines and checks very frequently what has been done by the examining officers.

21,844. (*Lord Lingen.*) Would it be the exception if the collector dealt with the discipline and ordering of the out-door establishment?—If it is a small port the collector is the surveyor; he is both collector and surveyor.

21,845. If there is a surveyor on the spot?—Then the collector generally deals with the officers through the surveyor.

21,846. And supposing anything was to go wrong, do you report to the collector or to the inspector?—Direct to the Board through our inspector.

21,847. Not to the collector?—Not to the collector; the collector in London is not responsible for the discipline of the Out-door Department. There are many hundreds and I may say very many thousands of cases under the British Marks Acts retained for the consideration of the Board, and the surveyor is responsible that the circumstances are properly set forth in the reports.

21,848. You would not even transmit your report to the Board through the collector, I understood you, but through the inspector?—Through the inspector.

21,849. If it is a port at which there is a collector and a surveyor, but no inspector; I think that there are only inspectors at Liverpool and London, are there?—Quite so.

21,850. Then would the surveyor at one of those ports still send in his report?—He would report to the collector.

21,851. To his inspector?—Where there is an inspector he would report through the inspector.

21,852. Where there is no inspector?—Through the collector.

21,853. Why through the collector in that case?—The collector becomes inspector in that case.

21,854. The surveyors, as I understand, have a control over all the subordinate out-door officers below them?—Quite so.

21,855. But they do not, beyond having extra responsibilities in dealing with things in that way, have any other work to do that is not done from below upwards; I mean no work that is different in its nature?—No work that is different in its nature.

21,856. They do not deal with other articles?—No.

21,857. But they are superior officers engaged in the same business?—Yes.

21,858. Is that true also of the inspectors who are above them; that they are an upper grade of the same class?—Quite so. There are a few things which are not done by the examining officers, for instance, all taring, which is very responsible work, is done by the surveyor alone.

21,859. Perhaps you will explain what taring is?—Supposing there are a thousand chests of tea, assuming all those chests are not turned out for tare, and they are given an average tare. The difference of a pound tare on a thousand chests of tea would be a very considerable thing, it would be a question of a thousand pounds really to the seller of the tea, either for or against him. That tare is always fixed by the surveyor alone.

21,860. (*Mr. Harvey.*) On what principle does he go?—He selects so many chests and weighs them.

21,861. That is to say, he wants to get specimens of the whole cargo of tea?—Quite so.

21,862. What you mean by "taring" is that he selects the number of specimens that should be taken?

Mr. D. P. Williams.

27 Nov. 1888.

—Quite so, and weighs them, and he says that is the average tare for that parcel.

21,863. (*Lord Lingen.*) Is the tare the technical word for examining and testing?—"Taring" is the technical word for finding the weight of the wood in a chest of tea, everything other than the tea, that is the wood and the lead lining.

21,864. (*Chairman.*) As you cannot weigh the case and all its outer portion that contains the tea as you can weigh a cask before you put spirits in it, then you have to take the tare to get at the real weight of the tea contained in the case?—Quite so, in fact they tare for spirits in the Excise.

21,865. That is the duty of the surveyor. Then if the surveyors are in any difficulties about any of these questions, do they go to the inspectors?—They go to the inspectors.

21,866. Who have all gone through that sort of work before?—Who have greater experience still. Inspectors take whole districts.

21,867. Still, talking of tea, nearly all the tea is dealt with in London, is not it?—The greater portion of it. I believe you will have evidence further of what is done with tea in warehouses.

21,868. (*Mr. Harvey.*) When is the tare taken, or where is the tare taken?—In the warehouse; we send it from what we call the Landing Department and hand it over to the Warehousing Department, and then it is taken over or weighed or bulked, as the case may be, and is weighed and repacked and brought into condition for the market, and upon the findings of the Customs it is sold. Each chest is sold on the Customs account in the same way as wines and spirits are.

21,869. The warrant, for instance, that the dock authorities issue, what is that based on?—Based on the Customs account.

21,870. At what point is that warrant issued?—Immediately on the warehousing, when the account has been taken.

21,871. All that is based really on the Customs account?—Yes.

21,872. (*Chairman.*) The work that you do as a surveyor, and that is what you have been describing, does not extend to anything in connexion with the warehouses, does it?—Not at the present moment, only I might be changed.

21,873. Your time is fully occupied in a different class of work?—In connexion with free goods principally.

21,874. Landing and shipping?—Landing and shipping and examining of free goods. If we have any dutiable goods we forward them to the different warehouses, where they are treated.

21,875. The surveyors of the same class as yourself, or second or first-class surveyors, might equally be employed in connexion with the warehouses?—Yes, there is practically no difference in the duties of the first, second, and third-class surveyors.

21,876. Is the work interchangeable or is it so highly technical that as a matter of practice surveyors and out-door officers are kept to the same kind of work?—No. They generally select surveyors for the different duties who have greater experience in them; but as a matter of fact a surveyor is supposed at the present time to know the whole routine.

21,877. (*Mr. Hanbury.*) How do you get your training?—A man would be in the service three or four and twenty years before he becomes a surveyor. I was 22 years myself before I was made a surveyor.

21,878. (*Mr. Harvey.*) It is all based, is not it, and must be based, on experience?—Experience; nothing else will ever give it to you.

21,879. Have you ever acted as a jerquer?—Yes.

21,880. Will you tell us how you audit; the business of the jerquer is to audit the report of a ship, is not it?—I think I can show you that very simply by showing you this ship's report.

21,881. Was this drawn up by the examining officer?—No; that was drawn up by the captain of the ship or his brokers.

21,882. (*Lord Lingen.*) Is that the ship's report?—That is a copy of a report.

21,883. Is the manifest the same thing as a report?—Yes, it is very much the same thing, only we speak of reports and the brokers speak of manifests. The report is practically a copy of the manifest.

21,884. (*Chairman.*) That is the report which the captain of the ship is by law bound to furnish to you upon the arrival of the ship?—Quite so.

21,885. (*Mr. Harvey.*) Then it is the business of the jerquer to see that every one of these items is accounted for, is not it?—Quite so.

21,886. Supposing a particular item is not accounted for, what would the jerquer do?—Then he queries the Out-door Department. One of the examining officers would receive a query as "Mark so-and-so." S.L. in a diamond for instance, "three bales of tobacco, short of report."

21,887. I am afraid you will have to amplify that a little. Upon what does the jerquer act? On what ground does he check any one of these items?—I will go over it again. Suppose you reported "S.L., three "bales of tobacco," and supposing he finds those three bales of tobacco not accounted for, no documents, not brought to account in any way whatever, then they are short of that report; that is to say, that they have not come to account. Therefore he queries the officer of the Out-door Department as to what has become of them.

21,888. I think we must get you to tell us first of all what you mean by accounting for them?—We will suppose that three bales of tobacco were left behind in Hamburg, and that by an error they were reported; the report goes right through until it is finally jerqued, and we find that these three bales of tobacco have not come. It is then referred to the officers of the Out-door Department to find out why they did not come, and if they were originally shipped; and, if they were originally shipped, what became of them, whether they were smuggled or not, or what else has become of them. There is then obtained sufficient evidence from the brokers and the master of the ship to convince the Board and the officers of the Customs that they have not been illegitimately dealt with.

21,889. Then, in fact, I suppose I might say that the whole of these contents of this particular ship shown in the report you have handed in are what are included in the bill of lading of that ship when she started?—There are different bills of lading, you know.

21,890. This is the detail of what would be on the bills of lading, is not it?—Quite so.

21,891. Then it is the business of the jerquer to see that everything that the bill of lading said was in that ship was in that ship?—Quite so.

21,892. And that every part of that is accounted for, either as a free article or as a dutiable article in London?—Quite so.

21,893. (*Lord Lingen.*) That is a ship coming in?—Yes. We have not spoken of export goods yet. You will notice a great diversity of articles on that particular ship. That report is a fair sample of the goods which arrive from Hamburg.

21,894. (*Mr. Hanbury.*) Do the surveyors act as jerquers now?—No, there is a special department for jerquers.

21,895. Where does this special department of jerquers appear in the Estimates?—On page 5 of the Estimates, you will see a paragraph to the effect that the collector is the head of the Jerquers Branch.

21,896. (*Lord Lingen.*) Do you count the packages?—Yes, they are all counted. All packages of any value are tallied. Would you like me to say anything more about the British marks question, which has been a very serious one lately? I should like to give you a very rough detail of what has been going on with regard to that.

21,897. (*Chairman.*) We should be glad to hear what you have to say upon the work which has arisen since the passing of the new Merchandise Marks Act?—I have got here a memorandum of a few goods which we have been receiving recently. We have detained since the 1st January many thousands of parcels; there is no doubt about that, that we know from the returns.

21,898. (*Mr. Harvey.*) Will you put in evidence first of all what are you duties under the Act?—Our duties under the Act are to stop everything which has a resemblance in any way to British manufacture or which may purport in any way to be British manufactured goods, and under that heading we have stopped pianos, wire, iron goods, glass manufactures, flour,

telephone apparatus, cartridges, preserved meats, nails, steel sleepers and rails, musical instruments, furniture, electric instruments, truck wheels, porcelain, provisions, needles, braid, cotton and woollen yarns, cutlery, rifles, and agricultural implements. These I have taken from my own station, roughly.

21,899. (*Chairman.*) A very great variety of articles, in fact?—A very great variety of articles which are very important to the trade of this country.

21,900. What is your action with reference to them? Do you look at the marks that are on them?—Yes; we examine them in the usual way. So many packages are opened and we look at the marks. If the marks are, in our discretion, such as might be taken for British marks, they are detained, and then they are referred to the Board as to whether they shall be seized or whether they shall be permitted to have the marks taken off, or whether they shall be allowed to go as they are.

21,901. (*Mr. Harvey.*) The underlying idea being that foreigners are endeavouring to make use of British marks in order to obtain a better sale than they otherwise would?—They undoubtedly have been doing so Since the institution of the British Marks Act I heard the other day that one of the most eminent firms of cutlers had their business increased 50 per cent.

21,902. (*Chairman.*) The point is that it has thrown a good deal more work upon your Department?—Quite so, and responsible work, because if we stop things which ought not to be stopped we are liable to at least complaint and great friction, and though the Crown is not liable to it, charges for expenses are made. I saw a case the other day where the merchant had written to the Board of Customs to refund charges for demurrage.

21,903. That is responsible work at the Board of Customs, but do you say it would require any very special knowledge in the first instance on the part of the inspecting officers such as yourself?—I think it requires business tact and experience to deal with these articles readily, because you have only just a few minutes to think. For instance, you see a brand with a man's arm, and perhaps Jupiter on the top of it; you have readily to determine as to whether that could fairly be considered a British mark or not.

21,904. (*Mr. Hanbury.*) How do you know which are British marks and which are not?—We do not know, and that is the question; we have to determine whether it is a colourable imitation of a British mark.

21,905. (*Lord Lingen.*) Does not the Patent Office furnish you with its Journal, giving all the British marks which are registered?—This has nothing to do with registration; this is the question of British marks generally. We stop everything that might be taken for a British mark.

21,906. (*Mr. Harvey.*) Then you must have got a British mark in your mind else you have not got the evidence to base your action upon?—Suppose we have needles and they are marked "Best Steel Needles"; we should stop them because they are needles which might be sold and were sold in the Colonies as English needles, whereas they came from Germany—thousands of packages.

21,907. (*Mr. Hanbury.*) Why? because it was in English do you mean?—An English denomination—colourably English.

21,908. (*Chairman.*) The fact is, that the mark upon those needles, if they came from Germany, should have been in German?—Quite so.

21,909. If "Best Steel Needles" in German had been on the case that would have been the proper mark?—Quite so.

21,910. Whereas "Best Steel Needles" in English presumably is a sign of a pretence that they are English goods?—Yes; we have some ploughs at this present moment detained, merely because they are called by an English description.

21,911. Perhaps you will come now to the exporting side of the question?—The duties with regard to export goods are these; to see that goods which are exported free of duty or from a warehouse are duly shipped. For instance, we have a great quantity of British spirit which comes from the compounders, that is different to whiskey. A compound spirit is spirit such as gin which is made with a flavouring, whiskey is what we call a plain spirit, and comes straight away from a distillery or free warehouse. Now the compound spirit has already paid duty, and on delivery for export the duty is refunded, what we call drawback. We receive all that gin for drawback and see that it is duly shipped, and make the returns to the Excise.

21,912. Do the Excise supply you with the information as to what the stuff is?—It comes from a duty-paid warehouse; it comes from a merchant's own warehouse; it does not come from a bonded warehouse.

21,913. If it comes from a merchant's warehouse direct to you for shipment, it comes upon the authority of the Excise?—Yes, it comes upon the authority of the Excise.

21,914. Therefore, all your duties are confined to seeing that the same amount of goods are shipped as is entered upon the note?—Quite so. We take them to account; they are gauged, and the strength taken, and the amount of the duty assessed by us, and returned to the Excise.

21,915. You have some other duties in connexion with them, have not you?—Yes. On receipt into our warehouse they are gauged for quantities. Of course the quantities are given on the receiving note, but that is checked by us, because spirits, I need not tell you, lose in transit very considerably. Therefore they are checked by us, and upon the return which we give to the Excise the drawback is paid. Then after that, we are responsible that they are duly shipped and exported. The same applies to beer. The same also applies to British plate. The question of plate, perhaps, is not a very great one now. Plate, on being deposited in a Customs warehouse and exported, is admitted to drawback, but it is only so admitted if it has never been used, and there have been many attempts indeed to foist old plate upon the authorities instead of new.

21,916. In these cases the Customs have to do their best to distinguish between second-hand plate and new plate?—Quite so. I had some little time ago a salver brought to me which was nicely burnished, and looked very much like new plate. Every hall-mark has a date letter. I saw that the date letter in this case was a very old one, and I thought to myself that no merchant would have kept this in his establishment for all these years if he possibly could. I traced it, and I found afterwards that this plate had been sold and re-sold by different sets of customers, and it was seized.

21,917. Take the case of spirits and beer. I understand that these spirits have left the merchant's warehouse, and that they have been already dealt with by the Excise, and the duty paid to the Excise?—Yes, the duty has been paid.

21,918. Then the reason why the Customs gauge them when they are going for export is to see what the loss has been in transport?—The duty may have been paid months, even years, before. It may have been paid a very long time ago, because the duty is paid on the first manufacture of the spirit.

21,919. Then what is the object of gauging?—To ascertain the quantity

21,920. You test the quantity, and see how much has been lost since the duty was paid originally?—No, not so; it is all filled into different casks, and it is what is called compounded. A spirit when the duty is first paid is a plain spirit; then it is afterwards rectified, and compounded, and made into gin or other compound.

21,921. You are talking now of compounded spirit?—That is the spirit upon which most drawback is got, because whiskey is generally kept in a warehouse under bond, and exported in the same way that foreign spirit is.

21,922. In that case you have no gauging to do?—Exactly the same thing happens, only the duty has never been paid. We only return on whiskey what is called an allowance. I think it is an allowance of twopence a gallon.

21,923. (*Lord Lingen.*) Then your gauging on the duty-paid spirit from an Inland Revenue warehouse is a sort of check that the duty has been paid on the right quantity, is that it?—No, it is a check on the right quantity for drawback—that we are going to give the drawback on the right quantity.

21,924. (*Mr. Harvey.*) Because it is going abroad?—Yes. It does not matter to us how much they paid duty on originally, but it does matter how much we are going to give them back duty on.

21,925. (*Lord Lingen.*) Supposing, now, this case had arisen, which is not very likely, but still is possible, if there had been an under-charge on the part of the Inland Revenue it is possible that the man might get more drawback than he had paid?—Quite so.

Mr. D. P. Williams.

27 Nov. 1888.

21,926. You do not compare at all what the charge has been with your drawback; you do not say, "On "this quantity of spirit so much has been paid and so "much we will repay you"?—When the duty is first paid that is somewhat remote. Of course it is in different packages. It is a different article now by the time it comes for drawback.

21,927. It gets broken up into different lots?—Into different packages, and instead of being a plain spirit it becomes gin, or it may become orange bitters or many other things.

21,928. In fact you deal with the drawback exactly as if it was an original duty?—Exactly, only these quantities are checked by the Excise in the rectifiers warehouse before they come to us, and we confirm those quantities when we receive them and duly ship them.

21,929. (*Chairman.*) Who does the gauging? Is it difficult work?—The gauging is done by exactly the same officers that do these free goods. The gauging as done by the Customs is, I will not say an extremely difficult work, but it requires great care and very long experience. I have had very considerable experience in gauging and I know what the difficulties are. In dealing with casks of spirits which come from abroad you cannot possibly get at the inside of them, you can only deal with the outside of the casks, and these vary in shape very greatly indeed. The casks from different countries vary in shape; casks from the same country, holding different articles, vary in shape; the timber varies in thickness, and the whole thing requires a very long experience to tell what allowance should be made for shape and timber, but I think we may claim that we are doing it fairly accurately, inasmuch as the whole business transacted by the mercantile community as far as wines and spirits are concerned is based on the accounts given by the Customs. Wines and spirits are sold entirely by Customs account, and I think if the inaccuracies were great, traders would adopt some other system of selling or buying their goods.

21,930. (*Lord Lingen.*) The gaugers are no longer a separate class, are they?—They are no longer a separate class. A very slight inaccuracy in gauging—for instance, a cask of perhaps 100 gallons, the mere shape of the cask would make a difference of 3 or 4 or 5 gallons, and when you know that a gallon means about 16*s.* on the higher strengths of spirits, it becomes a very serious matter indeed. With the Excise it is much more readily got by weighing. Weighing is absolutely accurate; it is like weighing a pound of sugar.

21,931. (*Chairman.*) What other duties have you had with reference to export that are of an important character?—I think I have fairly enumerated them all.

21,932. Are you familiar with any work at the other other ports, or have you been always at the port of London?—I have been on special duty at Bristol and Dundee.

21,933. Those are large ports?—Those are large ports.

21,934. But you have not been at any of the smaller ports?—Not on duty.

21,935. You cannot speak, therefore, as to the mode in which these duties are done when there is only a small staff at the smaller ports?—Practically the man who is able to do one is now able to do the whole, only in London, from the vast quantities of each which he has to do, a man naturally drifts into one department or the other, but we have men in London who could at a minute's notice take any particular duty—many of them.

21,936. As you have told us, the whole of the work was done by the out-door officers straight upwards, the only difference being the degree of responsibility?—The difference in the outport is that the man is every day, perhaps, dealing with all these different things, only to a very much lesser degree. For instance, a man may be weighing tobacco for one hour and gauging a cask of spirits the next, and dealing with free goods the next.

21,937. Are you able to say which is the lowest rank that has the responsible authority of the smallest district that you have—Customs district, or Customs port, or Customs division, or whatever the proper title may be?—I think they call them superintendents now, but I am not able to speak on that with accuracy. There generally is an examining officer at most of these places,

21,938. Have you any Excise officers alongside the work of the Customs in the port of London?—Yes.

21,939. Where do you come in contact with them in your work in the port of London?—The Excise have nothing at all to do with what I have been speaking of—with the examination of the free goods; they have no work of that kind; their work is entirely warehouse work—dealing with goods—with known articles.

21,940. You say their work is entirely warehouse work?—Entirely warehouse work.

21,941. (*Mr. Harvey.*) Do you know all the duties of these various out-door officers from personal experience?—I think so.

21,942. Would you say it was a continuous service, that is to say, taking an examining officer or surveyor of these out-door officers and lower division officers, would you say they were employed all day long and every day?—No, I do not think I would—not all of them.

21,943. Is not the work necessarily to some extent intermittent?—In London here they are pretty well employed all day.

21,944. Take the examining officer at Gravesend, who has to go off with these watermen and rummage; that is the first duty, is not it?—Yes.

21,945. Suppose there is no boat there at all, what has he to do?—He is lying out in the river, and is working pretty hard, if it is in bad weather.

21,946. What is he doing?—He is standing by.

21,947. Waiting?—Waiting in a very uncomfortable position.

21,948. Would you say of the whole out-door service of the Customs that it was rather intermittent than continuous work?—Yes, if you mean by intermittent not actually doing the work; but I call it continuous if a man is standing by.

21,949. I want to get my question answered, whether you think it is continuous or intermittent work?—My answer to that is that it is intermittent in one sense and continuous in another. I say that a man is continuously employed if he is on duty waiting.

21,950. Where does the Excise work impinge on your work? For instance, where do you come in contact with the warehouse as a Customs officer?—It really does not impinge in the sense of impingement, but occasionally there may be two warehouses, one under the jurisdiction of the Excise and the other under the jurisdiction of the Customs, in which the exciseman is dealing with spirits for duty and the Customs officer is dealing with similar spirits for duty.

21,951. Would you feel yourself competent to undertake the Excise duties of a warehouse?—Any Customs officer could do so at once—must, by the very nature of his experience, be able to do so.

21,952. Could any Excise officer undertake the Customs duties?—No; he could not gauge, for instance, without experience.

21,953. Could be rummage?—No, certainly not.

21,954. Then you would say, would you not, that so far as warehousing is concerned, you think the Customs officer could undertake the Excise officer's duty?—Undoubtedly.

21,955. Have you had personal experience of warehousing duties?—Yes, very great experience, in dealing with exciseable articles, such as whiskey and gin and all those kind of things.

21,956. Would you say an Excise officer's duty in connexion with warehousing was an intermittent or continuous duty?—It is continuous, inasmuch as the man is employed, say, from 10 to 4, or whatever the time may be, but he may not be actually at work all that time, because he may be waiting for warrants to come down, or something of the kind. For instance, supposing a man has to deal with 30 or 40 casks of spirits in a day.

21,957. You are speaking of the Excise officer now?—Of the Excise officer. He may get there at 9 o'clock in the morning and he has not got a single warrant to deal with, but at 10 minutes past 9 ten warrants come down, at half-past 10 he has dealt with these 10, and he is waiting for another one to come down in a few minutes; but he is here on the spot all the day, and he does not leave his station.

21,958. So far as your experience is concerned, do you think there would be any economy of men or work if the same officer who is discharging Customs duties also had charge of the Excise duties in the warehouse? —Yes, I do decidedly. I think there would be economy on some stations. It would not be a very gigantic economy, but at certain places there would be an economy if the Customs officers also took over the warehouses, which are under the charge of the Excise.

21,959. There are gaps of time in the work of each one which would then be utilised to some extent?—Certainly, at some of the outports more especially.

21,960. (*Mr. Hanbury.*) Do you say that of your own knowledge?—I should say that of my own knowledge.

21,961. (*Mr. Harvey.*) Do you think that the Excise duties in connexion with warehousing require a long and continuous experience of that sort of work alone? —No, I really do not. The dealing with spirits, as dealt with by the Excise, is not a very intricate operation. For instance, the way in which the quantity is ascertained is a very simple one. It is simply taking the weight of a cask, and as each gallon in that cask has got a unit it is merely dividing by that unit and finding the quantity, and that is done by tables.

21,962. You have had experience, you say, of Excise work?—Quite so.

21,963. Do you think you are the better Customs officer because you have had that experience?—I do not a bit.

21,964. Do you think you are a more efficient Customs officer because you have had experience in warehousing? —I quite see the drift of your question, but what I mean is that the work that was done by the Excise I knew as a Customs officer beforehand.

21,965. Would you say that a man who was brought up in Customs work would be because of that knowledge a better Excise officer?—No, I would say that he was as good, because he could not be a better; he could deal with the work which is done by the Excise; but it would not be fair to say he was a better Excise officer; he would be an equal one.

21,966. However, you do clearly think that if the warehouses were united, so that the man who had the Customs training also took charge of the warehouses for Excise purposes, there would be no loss of efficiency in the services?—Quite so. What I say is that the Customs officer knows the Excise work practically, plus the Customs work. I mean the well-trained one, of course.

21,967. To what class of men are you referring? Do you refer to all these examining officers?—Yes.

21,968. Do you refer to the out-door officers below them?—They have not the same kind of work; there is nothing similar in the Excise at all.

21,969. The examining officers you do refer to?—The examining officers I do refer to. The out-door officers could do a very great portion of the work which is now done by the lower grade of excisemen.

21,970. Would you detail a little more clearly what sort of work they could do?—They could weigh casks.

21,971. Is there any other work that you think they could do?—They could take charge of the warehouses to see that they were duly locked and unlocked, and under proper supervision and act generally in charge, superintending operations.

21,972. You would then, in fact, say that if there were only one system of warehousing, and one system of officers to control it, and these officers were brought up with a thorough knowledge of the Customs' business, that the warehousing system of this country would not suffer if they did the Excise as well as the Customs' work?—Certainly.

21,973. And that there would be a distinct economy? —Yes, I think so; this applies, of course, to places where there are Customs' officers already at Customs' outports.

21,974. Then besides we may say, may we not, that the smaller the places the greater the economy?—Quite so.

21,975. (*Chairman.*) Do I understand you to say that this would apply in other ports than those at which there are now duplicate warehousing establishments, would the economy in fact that you anticipate result in a case where there is only one warehouse which may belong either to the Customs or to the Inland Revenue, or does the economy, which you contemplate, arise from the fact that two warehouses (as there are in London, Liverpool, Newcastle, and six or seven other ports in the United Kingdom) might be done away with as being under duplicate management, and if so, should it be done under separate officers?—It would be difficult to do away with the number of warehouses because they are the property of individuals.

21,976. I am not talking of doing away with warehouses, I am talking of putting them under one management?—The same officer might take charge of two sets of warehouses which are now under different departments.

21,977. At the majority of ports is it not the case that there is only one bonded warehouse?—There are very few ports with only one.

21,978. There are only I believe 10 ports in the United Kingdom where there are duplicate establishments and bonded warehouses?—That is quite possible, I am not conversant with that.

21,979. Then if you leave out of sight those ten ports, where I can understand the economy you speak of would result, where do you think the economy would come in, in the case of bonded warehouses at the other ports?—I do not suggest economy at places where there are not two sets of officers already.

21,980. Two sets of warehousing officers do you mean? —Yes.

21,981. Therefore the economy would only be confined to those ten large ports?—Quite so.

21,982. (*Lord Lingen.*) Do the Inland Revenue do any gauging?—I am not aware that they do.

21,983. At what stage do they levy the duty on home made spirits, can a distiller put his spirits into a bonded warehouse and not pay the Excise duty upon them until he takes them out again for home consumption?—Yes.

21,984. Then when they are going to levy the duty upon them are they not obliged to gauge as much as you are for levying the drawback?—That is only guaging for what we call ullage. The "content" of the cask, the "capacity" of the cask has already been defined beforehand and it is simply the quantity which is less than full as then defined, which is a much more simple operation.

21,985. But the quantity of spirit that is in the cask, do they get at that by any process except that of gauging in some form or another?—It is gauging in a form but it is a much more simple form. The great difficulty of gauging is to find the original capacity of the cask. Having obtained a knowledge of how much a cask contains you can easily arrive at how much the ullage or emptiness is.

21,986. Why is that process not equally available on drawback, what is the exact difference between the practice of the Excise in levying the duty on home-made spirits which is drawn for home consumption and your process in calculating drawback on spirits that are going to be exported?—Dealing with drawback goods is very much more easy than dealing with goods on importation. I quite agree with you there. The casks have already been ascertained for capacity before they come to us for drawback. We merely check them to find that there has been no mistake, as occasionally there has been perhaps to the amount of half a cwt. or something of that kind, but in that case it would be simply misreading the weights.

21,987. The processes that to the best of your knowledge you perform for the drawback and that the Inland Revenue performs for the duty are not identical? —They are very much the same; that is what we call re-gauging the casks.

21,988. Then they probably are so nearly the same that an Excise officer could do the ganging in a Customs warehouse?—Yes, certainly.

21,989. I rather understood you to say that gauging was so peculiar a process that the Custom officers would be always ready to perform the Excise duties in warehousing, but not *vice versâ*?—You are confusing the question of the original gauging for "capacity," and re-gauging for duty having ascertained the capacity of a cask. What I call gauging on importation is a difficult process, a very difficult process, because you are dealing with an unknown quantity entirely. It is something like measuring a field surrounded by a wood, and you do not know the thickness of the wood, and you are

Mr. D. P. Williams.

23 Nov. 1888.

measuring outside the wood, that is really what it is. We are measuring outside the cask; we do not know what the the thickness of the timber is, nor what is the shape of the cask's staves, that is import gauging. Gauging for duty is totally different, we have the "content" or "capacity" of the casks given. The cask say is fixed at 100 gallons, we know that it is a 100-gallon cask, and all that we want to ascertain when gauging for duty is how much less than 100 gallons is in that cask.

21,990. Is there any process by which the outside of the cask will tell you how much is inside it?—Yes there is, that just is the process, we gauge outside the cask to find out what is inside it.

21,991. (*Mr. Harvey.*) Why do you not do it equally in both cases, in the Excise case and the Customs case. Lord Lingen's point is this, why is it more difficult for you to gauge a cask than it is for an Excise officer?—The Excise man has the cask perfectly empty; he weighs that cask and he fills it with spirit; deduct the weight of the cask from the gross weight, and you have the weight of the spirits. The spirits we will say weigh between 9 and 10 lbs. to the gallon, according to their strength, we will say 9 lbs. to the gallon, divide the weight of the spirits by 9, and there you have the contents of the cask absolutely, that is as simple as it can possibly be.

21,992. Now come to your gauging?—This is our method of gauging. We have a cask, we know nothing at all about the timber; we do not know its thickness; we only know there is a cask full of spirit. We have first of all to ascertain what it is, and what allowance should be made for the shape, then what is the thickness of the timber—whether there are any irregularities inside the cask, whether the heads are made thicker one side or the other—and all these allowances have to be made from the outside dimensions of the cask to find what really is inside. That is a totally different thing.

21,993. The fundamental difference is that the Excise authorities deal with an empty cask, you deal with the full cask. They dealing with an empty cask can tell its weight, deduct that weight from the weight in full, and they therefore get the total amount of weight of spirits?—If you can give us the weight of the imported cask, that would be all ready—perfectly right and perfectly simple—but we cannot find that out, we have to estimate that.

21,994. The cask comes to you full, and therefore you cannot weigh it as apart from its contents?—No, we cannot turn it out, because we would injure the goods to a very great extent.—When I tell you that the weight and dimensions of the cask would very often make 3, 4, and 6 gallons difference, more than that, indeed in some instances, 10 gallons difference in the cask, you can easily understand that it requires considerable experience to deal with it.

21,995. (*Lord Lingen.*) As to the thickness of the timber, do you estimate that by any outside calculations, or do you drill a hole into it?—With the majority of casks an experienced gauger will do it without drilling a hole, but if there are difficult casks, casks of which we have not had previous experience, we drill holes here and there.

21,996. As to how much this spirit may be deficient of filling the cask, how do you find that out?—That is done by dipping. A rod is dipped into the cask.

21,997. Therefore it is at last a series of manual operations and not anything like mathematical calculations?—At last, but at first it is a mathematical operation. Given the "content" of the cask it becomes easy, and that is the whole difference between the Excise and the Customs that we have no means of getting at the "content" of the cask.

21,998. Are casks of a certain contour made very much of one weight and pattern, is that so?—It is not so.

21,999. Then do you often dispatch a cask on which you have not performed any manual operation like drilling a hole in it, or piercing it to find the weight of spirit?—Hundreds.

22,000. You do?—We dip the liquid to find the weight of spirit, but do not drill holes in the cask to find the thickness of the timber.

22,001. Do you ascertain the depth?—We always ascertain the depth.

22,002. Then these manual operations may require a certain amount of skill and neatness of handling, but there is no particular training necessary for this?—Not so much as the particular training, which I wish to emphasise for finding the original capacity of the cask. If that is fixed I should say it is not of so serious a nature. The difference between the Excise method of gauging and ours is that they have a simple method and an easy method of ascertaining the "content" of the cask and we have not. We have to deal with something we do not know.

22,003. (*Mr. Hanbury.*) And the Excise have not had your experience therefore?—No.

22,004. Whatever might be the details of the work at the two kinds of warehouses, the general effect of your evidence is this that if they were amalgamated at the 10 ports named, you would be able to do all the work that the Excise do but the Excise would not be able to do your work?—Certainly that is beyond a doubt. I have not spoken about the work which we do in the laboratories, for instance the wines as you know are distilled.

22,005. (*Chairman.*) That would imply a certain knowledge of chemistry?—Quite so, and that is done by exactly the same set of officers.

22,006. Then the Customs outdoor officer appears to require to know something of everything?—Yes, he does, he requires to be a very experienced man.

22,007. He gets it up as best he can, and then as time goes on, and as he rises in the service, he is found to have a little chemical knowledge and so on?—When I first entered the service the out-door department was only recruited direct from the Treasury, that is, the higher positions. It is only of recent years that the "out-door officer" could rise to this position, and I came direct from the Treasury to the out-door department.

22,008. (*Mr. Hanbury.*) How far are they recruited from the Treasury now?—Not at all.

22,009. Where does the recruiting begin?—At the bottom, at the out-door officer now. At the time I entered the service a man who had been an out-door officer could not have become a surveyor.

22,010. (*Mr. Harvey.*) You have a right of re-rummaging, have not you?—Quite so.

22,011. How often, within the last six months, have you re-rummaged?—Say, a hundred times.

22,012. Does that indicate that your examining officers do not do their duty?—It does not. You may send half a dozen examining officer. I have seen it done—into a ship and rummage and rummage again, and they will not find what is hidden in the ship; then the next man goes straight on to it. A ship is a very big thing you know to send two or three men round; you would be surprised to see the way in which they hide the things; for instance, I saw the other day a steam-gauge; this steam-gauge was fixed on a buttress, a little clock-like thing. Something or other induced the officer to say, "I will have that steam-gauge down," and underneath that gauge there was a hole which was filled with tobacco. That might have gone on for months, because it would only occur to one man here and there to take down a steam-gauge. Tobacco is hidden in all manner of places of that kind. What we do by our system of rummaging and re-rummaging is that we find a great deal of it, and that serves as a warning to others when it is found out, because the cases are fairly severely dealt with.

22,013. Have you really had to re-rummage as much as a hundred times within six months?—Yes, I should say nearly a hundred times. I generally rummage two or three a week at any rate.

The witness withdrew.

Mr. JAMES FLEMING called and examined.

Mr. J. Fleming.

27 Nov. 1888.

22,014. (*Chairman.*) You are a surveyor of Customs in the Port of London?—Yes.

22,015. And I think a surveyor of the first class?—Yes.

22,016. How did you enter the service?—I entered as a clerk in the Tea and East India Department by nomination and limited competition.

22,017. Have you been an examining officer on your way up to surveyor?—No; I became a surveyor in 1882 when the clerical warehousing establishments were broken up.

22,018. When the Customs was reorganised as regards the clerical work especially?—Yes.

22,019. Then you have not had experience as an examining officer?—Not as an actual examining officer myself; of course I have had the usual experience for a good many years past of superintending the work of the examining officers and checking it.

22,020. Since you have been a surveyor?—Since I have been a surveyor.

22,021. When you were made a survevor you came there without any previous knowledge, as I understand, other than the clerical work?—Yes, knowledge of the clerical work only, but that is now performed by the examining officer, whilst it was formerly performed by the clerks, so I carried with me the knowledge of that portion of the examining officers' work which was formerly done by clerks.

22,022. In the old times a clerk was not a clerk then but he was something else, that is to say, besides doing clerical work he did some of this examining work?—He did work that is now called examining officers' work, although it really is a kind of clerical work, that is the work of checking the quantities and issuing delivery orders and seeing of course that regulations were complied with according to the requirements of the service.

22,023. You did not do any searching or examining for free goods and so on?—No, I never had any experience of that kind myself except as a surveyor.

22,024. I believe the work that you are principally engaged in is in connexion with the warehousing department, is it not?—Yes, that is what I have come here to give account of, and that is what I have had most experience in.

22,025. The regulations for the two systems of warehousing are identical, are they not, between the Customs and Inland Revenue?—They are identical.

22,026. There is one code of regulations?—Yes.

22,027. In administering that code have you yourself come into contact in connexion with the Inland Revenue warehouses, with any different decisions that have been given; are you familiar with any cases of that sort?—I do not know of any and practically I believe there are none except such as may arise from this, that the Customs warehouse mainly contains goods that come in from abroad and the Excise warehouse almost wholly goods manufactured at home. We take, for instance, brandy, strong spirits from Hamburg, wine, rum, tobacco, tea, fruit—things of that sort; trade will not readily change merely because we have altered our system in the Government service. The merchants that were in the habit of warehousing their goods in Customs warehouses still continue to do so, they have got used to the system, and I suppose the system suits them.

22,028. Now the systems are identical?—The systems are theoretically identical, but practically the man who sent his goods to a particular warehouse or kind of warehouse, say a Customs warehouse, does not readily transfer his goods to an Excise warehouse merely because the regulations would permit him to do so.

22,029. (*Lord Lingen.*) I suppose for one thing his carter knows his way, and he probably knows some of the officers that are there, and that the thing works in a channel of trade?—Everything has been arranged in the course of time to suit the particular class of business. All the warehouse officers (I am not speaking of Customs officers), the proprietors of the warehouses and their servants in the warehouses, and all the carmen and the lightermen, and every man connected with the trade, has been brought up to attend to his particular trade, and consequently the man who is interested in having his work properly performed will not readily change whatever changes we may make.

22,030. (*Mr. Harvey.*) He has less friction by sticking to the old mode?—That is just it; trade stays in its own channels.

22,031. In dealing with the goods that are in the Customs warehouse, is there any material difference in the way in which they are dealt with?—There is no difference in the system; if there is any difference it is through some fault in the officer in not observing the regulations. But the difference will be of course that we have to a very great extent classes of goods which scarcely ever go to the Excise, and they have some classes of goods which do not so frequently come to us.

22,032. (*Chairman.*) So far as you know the work of the Excise, would you say that there would be any difficulty in the same class of men—I will not say whether Excise men or Customs men—dealing with all the various classes of goods that come to both departments within the warehouses?—Within the bounds of the warehouse I should say not; the moment the account has been taken and the goods have got into the warehouse, why then of course they can be equally dealt with. The officers under me are dealing every day with some kinds of Excise articles, and no doubt in many Excise places they are dealing with some kinds of Customs articles.

22,033. You have always been in the port of London have not you?—Always in the port of London.

22,034. Do you think any substantial economy and improved administration would follow from putting all the bonded warehouses in the port of London under one authority?—In London of course the Customs business is far in excess of the Excise business; the Excise business is a mere trivial matter in London compared with that of the Customs, but in the inland places the case is reversed.

22,035. I mean where there exist duplicate establishments or bonded warehouses, as there do in the port of London; do you think that supposing that the Customs had the charge, so far as the Government is concerned, of all the bonded warehouses, that a very sensible economy would be effected?—No.

22,036. You do not?—No, because every warehouse is worked, and has been for the last six years, at the lowest possible rate. I never knew a time in my experience of 30 years when economy was so thoroughly looked after as it has been during these last few years.

22,037. It is very satisfactory to know that, but it has been suggested to us now that we are looking into the question of amalgamation, that in the case of the ten ports where there exist the duplicate system of bonded warehouses, that is one under the Customs and the other under the Inland Revenue, an economy would be effected by putting them under one Board or the other or under one management?—Most certainly, there would be in places where there is not very much work for either party, but in London, you see, nearly every warehouse is so big that it needs many officers, and you have not to deal with fractions of an officer merely. Every man is fully employed, and you cannot make the work any less by putting the two together; putting the two together is a mere addition.

22,038. Your experience and knowledge of these warehouses leads you to say that the Customs men at all events are fully employed in these warehouses?—Yes they are, certainly, in London.

22,039. And whatever convenience might follow from their doing Excise work also would be merely where you would not want officers?—We should simply have to take over the officers that are fully employed at say Haydon Square, which is very near my station. I could not work it by any fewer hands. I presume they are fully employed, certainly my men could not do the Haydon Square work.

22,040. (*Mr. Hanbury.*) Are the salaries about the same at the two kinds of warehouses?—Probably they are very much the same on the average. The names do not correspond exactly, but I should say the averages within the warehouse are very much the same. The average salary, taking a Customs officer beginning as an

Mr. J. Fleming.

27 Nov. 1888.

out-door officer on to the end of what he can attain to, is decidedly lower than the average salary of an Excise officer taking what he can attain to. You will easily see that if you look at the estimates.

22,041. Please limit yourself to the men connected with warehouses?—Reckoning from second-class examining officers down to assistant examining officers and down to out-door officers, I should imagine the average would be very much the same. We have a large number of out-door officers only paid as such or with sometimes a trivial allowance extra, who have to do the duty of examining officers, and they materially cheapen the rate of pay, they bring down the average very considerably.

22,042. (*Chairman.*) Of the Customs?—Yes.

22,043. As regards the establishment in the warehouses, so far as you know the men who do the Excise work, do you think there is any substantial or practical difference between the pay and salaries they get and the salaries your establishment pays?—I should imagine there ought not to be and would not be.

22,044. It is not a question of what ought not to be, but the question is whether it is?—I do not think it is, because the maximum of the second-class examining officer is 220*l.* a year, and below him there are assistant examining officers who can do nearly all his work, and are doing it in many places, and also out-door officers acting as examining officers. Not knowing, of course, that that question would be asked, I did not make a calculation, but I should say that the average cannot be very often different.

22,045. As a matter of common talk among the men in your establishment you must hear a good deal about these things; which is supposed to be the best service as regards the warehousing work?—There is no separate classification for warehousing, and consequently a man does not reckon that his prospects are bounded by what he can get in a warehouse; what he can get on a wharf, or on the river, or in the docks will enter into his calculations.

22,046. Is your service the more popular?—Candidates prefer going into the Inland Revenue service, most decidedly; they begin better off. In fact an order had to be issued prohibiting out-door officers of Customs from competing for Excise vacancies for at least two years. Our out-door officers are very much worse paid to begin with, and the ultimate prospect in the Inland Revenue appears to be on the average better, but in the intermediate classes in the middle portion of their career I should say the Inland Revenue officials are on the average worse off.

22,047. At all events, to come back to the old point as regards the warehousing about which you principally speak, there is no substantial difference?—No.

22,048. And I understand it that in the port of London at all events you do not think any substantial economy could be effected?—Nothing particular; it could not be. But in making a comparison between any two warehouses, as regards cost of management, everything would depend on whether they happened to have a greater or smaller proportion of junior officials, or of men at or near the minimum salaries of their classes. So long as there is not in either department a separate classification for warehouse officers, I do not see how a trustworthy comparison can be made, unless we take the average rate of pay in each of the two departments as a whole.

22,049. You cannot tell us anything about the outports, can you?—I cannot.

22,050. You have no knowledge of them?—I have no knowledge sufficient for me to give you any evidence. I have only such general knowledge as a man may acquire by being at head-quarters and hearing a good deal and conversing with officers who come from the outports.

22,051. Have any complaints reached you from the trade as to the different way in which regulations, as affecting the warehouses, have been interpreted by different sets of officers?—No, no complaints that have any foundation. Of course, if a man cannot get that done which he wishes to have done, if it is contrary to the regulations, he will always tell you that "I can get "it done at such and such a warehouse," but we attach no importance to a statement of that kind. We know the regulations are the same, and presumably the men obey them. I have had no complaints, if that is what you mean, that our system is more difficult for a merchant, or more hampering for a merchant, than the Inland Revenue system, none whatever.

22,052. (*Mr. Harvey.*) Do you think the convenience of the merchants is consulted equally at both?—I should say so.

22,053. And that the only reason why a man selects one warehouse in preference to another is, either the nature of the goods or the tradition that he is accustomed to a particular warehouse?—I should think it would be most probably so.

22,054. (*Chairman.*) Is there any rivalry, do you think, between the separate establishments; a laudable desire to get the greatest amount of the business, which may possibly be supposed to be prejudicial to the Revenue by changes in the mode of treating articles in bond. Do you think there is any truth in that statement, if it is made?—No, I do not think there is. Of course the two departments have latterly been looking on each other as to which is to swallow the other, and to that extent there may be a kind of rivalry. I do not think there is any rivalry with regard to the method of performing the business.

22,055. But it may possibly be suggested—in fact I think the suggestion has been made, that where there exist duplicate bonded warehouses in London, or other large places, the natural tendency of the officer in either establishment is to do the best he can to secure the most of the trade for his own particular department, and that may be an inducement to make the regulations affecting the Revenue rather easier?—I do not think so. I am satisfied it has not the slightest effect.

22,056. (*Lord Lingen.*) A man has no pecuniary interest in doing it, of course?—No, he has no pecuniary interest.

22,057. It can only be on account of such credit as they can obtain in the trade?—Yes, a man would be a fool who would do that, because his gain must be trivial; must be remote and contingent, and not to himself personally, whilst he runs a risk of being punished for breaking the regulations.

22,058. (*Chairman.*) The suggestion has been made to us that the effect of that kind of rivalry—not for the sake of the money, but for the sake of the credit of getting the most work for the establishment—has been possibly prejudicial to the Revenue?—I have never known a case to justify it.

22,059. (*Mr. Harvey.*) Do you think the present rivalry between the departments, so far as it exists, tends to check officialism and red tape, which under one single system of government might operate more than it does now?—I really do not think it has the slightest effect; men do their duty wholly apart from any remote possibilities of the kind.

22,060. (*Chairman.*) From that point of view, as connected with the warehouses, have you any opinion to give upon the question of the amalgamation of the two Boards, and of the services generally?—No; I did not understand that I was to express an opinion either for or against amalgamation.

22,061. You have heard it talked about a great deal, I dare say?—Yes; we have. We all of us naturally prefer to remain in the branch that we belong to. We might go farther and fare worse, but I suppose the same feeling is to be found on the other side also.

22,062. From the Revenue point of view, as a public servant of considerable standing connected with the Customs, do you see any advantage to be gained or not?—I see no advantage whatever, and I do not really think that it matters a straw; as far as regards the public, the business would be done on precisely the same lines as it is now.

22,063. Do you say that when you take into consideration the different kind of goods for export and so on that have to be dealt with in the case of merchants who have to deal with two departments, there is no substantial difficulty caused by the fact that the trader who deals with these various articles has to deal with two departments instead of one?—I do not think he has to deal with two departments instead of one any more than you can say that he has to deal with many warehouses instead of one. An importer's goods may be in several warehouses, and of course he has to deal with the proprietors of those warehouses, but it makes no difference; if he chooses to have his whiskey in a Customs warehouse he can have it transferred to us,

and if he chooses to have his brandy in an Excise warehouse he can have it transferred to them. It matters nothing, I consider, to him where the Board sit, or how the men are paid, or whether they are on one classification or on two.

22,064. I was just now thinking of a trader who is dealing with some kind of dutiable goods in which owing to the manner in which he intends to dispose of them he has to have transactions with the Inland Revenue from an Excise point of view, and the Customs either with reference to drawback for export, or in some other way; does he meet with any difficulties in consequence?—I should think none that amalgamation could possibly remove.

22,065. It would be in fact the same thing; in any case he would have to deal with the same article under two different aspects?—Just the same.

22,066. And it would be two departments of the same amalgamated Board; is that your view?— Just so.

22,067. (*Lord Lingen.*) Have you had any experience at getting goods from the Inland Revenue custody into Customs custody for exportation and drawback of duty?—Yes.

22,068. In all cases is it true that the goods must come from the Inland Revenue warehouse into Customs warehouse before they can be exported and drawback granted, or may they go direct from an Inland Revenue warehouse on board ship?—Beers are always sent direct by the Inland Revenue on board ship in London. They have got their own establishment, with a port surveyor.

22,069. Is there a drawback on beer for exportation?—Beer is not one of the things in which I have any skill, but I presume there must be, for samples are drawn before the exportation takes place.

22,070. Let us take the case of spirits. If British spirits are in an Inland Revenue warehouse, can they be put on board ship direct from the Inland Revenue warehouse, or must they come from the Inland Revenue warehouse to a Customs warehouse?—I think as a matter of practice they are nearly always exported through a Customs warehouse, but I do not know that there is any real necessity for bonding it there. I should think they export straight from Haydon Square, but that is an Inland Revenue matter that I am not exactly acquainted with.

22,071. I thought perhaps from there being officers of both departments at the waterside, or in the Customs establishment, that you might have come in contact with them, and be able to say what the practice was?—I believe they can export if they please. I know no reason why they should not. But the persons who are most likely to have a knowledge of the foreign or colonial market, so as to be able to place British spirits with buyers, will be merchants who carry on business at Customs ports, and are in the habit of keeping their dutiable goods in Customs warehouses.

22,072. Do you know whether for that purpose or not the Inland Revenue itself gauges, or is all the gauging done by Customs officers?—The Inland Revenue have their content taken by weighing an empty cask. They fill it with spirits, and they take the gross weight. They refer to a table and they decide upon the content according to a certain scale laid down upon those tables. All spirit begins immediately to waste after it is put in a cask. There is a very considerable amount of waste both in the liquid and in the strength. When they are sending it out for delivery for any purpose whatever in the Inland Revenue, they must dip it to ascertain how many inches and tenths are dry. We do precisely the same.

22,073. In the case of spirits, the Inland Revenue would do all that dipping for themselves?—For themselves. They do not do gauging in the sense of ascertaining the contents by the use of our complicated rules. We are driven to do that because we have no other means of ascertaining the contents of a cask of brandy, for we dare not turn it out. We should have to empty it, and to weigh the empty package to ascertain the tare, which would not be allowed.

22,074. Do those complicated rules give you the contents of the cask if it was full?—Yes.

22,075. Then you have to ascertain how much it is short of the full by dipping and other mechanical operations?—Dipping and doing the calculations according to certain rules.

22,076. Do the Inland Revenue people go through the same process in their warehouses?—That latter process of ascertaining the ullage, as we call it—that is the value of the deficiency—that is done by them the same as by us.

22,077. The other they do not, because they have already done it; is that it?—They have a better opportunity of doing it. Spirits are manufactured in a distillery, where they can watch the process; consequently they can ascertain the content much more accurately than we can—much better. I would rather have their system, if we could adopt it, of simply weighing the spirits.

22,078. You get casks for exportation which you have never seen before, and you have to ascertain what their gross contents is?—Certainly, we have no other means but our rules of ascertaining.

22,079. And those rules the Inland Revenue has no need to resort to?—No, because they have a more accurate method which they can adopt.

22,080. (*Chairman.*) What kind and what amount of what is properly Customs work is done in the warehouses?—Take tea or tobacco; perhaps tea would be the easiest to take. The packages are brought up in carts, locked vans from the docks. The locker unlocks the vans and the warehouse keeper takes possession of the packages, and when he has got a proper number together he sorts them out in what he calls "beds" for taring. They are all weighed gross with an examining officer sitting by watching the weights and recording the weights in landing books (I have got specimens here); after the weights have been taken the mechanical work is performed by the warehouse keeper's servants. If they are China teas, which mostly go on an average tare—a certain number of packages—a certain proportion according to a fixed scale are always emptied out, and the empty packages are then tared to ascertain the average tare in the presence of the surveyor. The surveyor then decides what the average tare shall be to govern the whole of that bed whatever the number may be. The effect of that is that his decision decides for commercial purposes as well as for Customs purposes what the tare of the packages is to be. The merchants who import the goods, the dealers who buy the goods, and the grocer who ultimately gets possession of the tea, and so on, all abide by the Customs tare.

22,081. (*Mr. Harvey.*) In all tea warrants one nearly always sees a number of marks, the numbers with the weights of each respective package, and then, at the bottom, so much deducted for tare. That, I presume, is the outcome of this system that you have been describing?—Certainly. The Surveyor of Customs strikes the average tare which governs the transaction throughout.

22,082. Then the consignee in this country accepts that without question?—Without question.

22,083. Although clearly it must be a most important element in dealing with a quantity of tea?—Yes, we reckon the taring the most important duty almost that we have to perform, because of its bearing both upon the Crown's interests and the trader's.

22,084. (*Chairman.*) Should we find any difference in the trade as to the mode in which this work is done by the Customs?—No.

22,085. Do you think if we were to examine all the principal tea merchants, and ask their opinions we should find a general satisfaction with the way in which this work that you have been describing has been done by the Customs?—Certainly.

22,086. (*Mr. Harvey.*) Have you had instances of any being thrown back because the consignee thought the tare has been excessive?—Very rare cases; one or two in a twelve months or so. We may hear that a grocer had got home a package of tea and he found that the tare was more than was stated; that of course would arise from the package having been re-leaded or hooped after the tare was taken. Such cases occasionally occur but very rarely.

22,087. (*Lord Lingen.*) When tea is landed and you have weighed it in this way, and entered the particulars upon the warrant, supposing you have got it into a bonded warehouse in London, and it is consigned to a great tea dealer in Birmingham, and he wants to keep it in bond, but in Birmingham and not in London, what happens in getting it to Birmingham?—He passes a bond for the removal and warehousing at such and such a warehouse in Birmingham. That bond is passed in the Long Room of the Customs; the Bond Office. There

Mr. J. Fleming.

27 Nov. 1888.

is a warrant which is presented at the station, or it may be, brought down by the Customs messenger to the station where the tea is lying. On proper examination in the landing-books clerical examining officer will calculate the weights, write off "delivered for removal "to such a place" enter the corner, number and date and so on, and then such a weight. The goods will then be given over to the carman, taken by him to the railway, and after a few days a certificate of receipt would arrive from Birmingham, a despatch having been previously sent. The despatch would be sent by the clerical officer at the time, or immediately after his having issued the delivery order; the certificate of receipt would arrive a few days afterwards, and if it did not arrive within a reasonable time of course a query would issue as to what had become of the goods.

22,088. All tea in London goes to a Customs House warehouse on landing as a matter of practice?—That is the practice.

22,089. Supposing for any reason an importer had a mind to take the tea to an Excise warehouse, all the process of weighing and so on would be done exactly the same in the Excise warehouse now as in the Customs warehouse?—It should be so done.

22,090. Is there anything at all special in the experience that is wanted for ascertaining the weights and properly making the entries on the warrants?—No, an ordinary intelligent man with a reasonable amount of teaching and experience will of course do it, no matter where he belongs to.

22,091. With a very moderate amount of teaching and experience?—I should say that it does not require a very great deal. It takes a very long time to be thoroughly skilled in all regulations, but it does not take a long time to learn any one part of the duties.

22,092. I should like to put the case in this way: supposing a Customs warehouse where tea now goes was withdrawn, and the Inland Revenue warehouse was kept up, would the Inland Revenue people find any difficulty in doing what your people do with tea packages?—I should imagine not. At the beginning of course they would, but as soon as they learned it there would be no difficulty whatever.

22,093. (*Chairman.*) I suppose I may take it that generally, as a matter of fact and practice, inside the warehouses the service may almost be said to be amalgamated?—It is amalgamated practically, the regulations are the same, absolutely the same book issued. The Board cannot alter a word in the Code without the agreement of the Inland Revenue. Of course special orders may be given for special cases arising where merchants ask for any reasonable relaxation of the regulations, and the Board will always give way if a good ground is shown for setting aside the ordinary regulations. We have those things daily. For instance, the other day—it is a very small matter, but it happened at one of my warehouses. The regulations required that wines should contain 1·78 gallons per case, but one firm of shipowners, or people supplying a ship, said that they did not want to use large cases, they only wanted to send a dozen pints of burgundy in each one of their ships for use as stores, because there was little demand for it, and, if we did not allow the dozen pints of burgundy, which, of course, would be much less than two gallons to be bottled and given them they could not ship the small quantity they wanted. It was a trivial matter, and our Board at once assented.

The witness withdrew.

Mr. William Henry Hinks called and examined.

Mr. W. H. Hinks.

22,094. (*Chairman.*) You are one of the inspectors of the Customs at the port of London?—I am.

22,095. There are five of you altogether, are there not?—Yes.

22,096. You, I think, principally take charge of, or superintend the waterguard duties of the port, including all the preventive and other duties of the Customs?—Yes.

22,097. Your class only exists in London and at Liverpool, I think?—That is all, but on the Tyne we have something of the same nature; I was on the Tyne myself.

22,098. As a surveyor?—As an inspector of the waterguard with the rank of surveyor.

22,099. Is yours a necessary office where the waterguard has so much duty as you have to do in London?—Quite so.

22,100. Perhaps you will tell us what your duties are?—The waterguard work commences, of course, at the limits of the port. The port of London extends now to Queenborough, taking in Southend, Sheerness, Hole Haven, Thames Haven, Gravesend (which is the boarding station for the port).

22,101. Is there only one boarding station for the port?—The boarding station for the port of London within the Medway is at Garrison Point at the entrance to the Medway, but the boarding station for the Thames proper is at Gravesend.

22,102. You say you are inspector of the waterguard; what is your waterguard; do you include watermen in the waterguard?—All watermen.

22,103. Do you include any of the out-door officers above them in the waterguard?—I have above 200 out-door officers.

22,104. There are 294 out-door officers of the second class, I see?—I have about 170 out-door officers at Gravesend who guard the vessels between Gravesend and the docks in London.

22,105. Those are the men who are put in charge of the vessels coming up from Gravesend?—Quite so.

22,106. Are they out-door officers? — Out-door officers.

22,107. All of the second or first class?—A few of the first class, the majority of them of the second class; for this reason on the first entry into the service they all begin their duty at Gravesend.

22,108. You were going on to tell us what your duty was?—The waterguard duty consists, of course, in the protection of the Revenue, in the first instance, in the case of, we will say, 10,500 vessels from foreign parts arriving in the Thames in course of a year, and also includes all matters relating to explosives, quarantine, cattle, and dangerous oils.

22,109. You, in fact, deal in the preliminary stage, including the preventive duties on the water, with all those kind of questions which are subsequently dealt with by the examining officers, and so on upwards. It is all the preliminary stages of the same inquiry into the same articles, the quarantine being the only exception?—Commencing with the duty at the lower part of the river. I have also all the officers at the dock on waterguard duty, and the rummaging of the vessels are under my control. This duty commencing at the lower part of the river, and in regard to quarantine cattle and explosives principally dealt with there is, as regards revenue matters continued by the examining officers and surveyors at the up-river stations where the ship may discharge.

22,110. The work of the Customs in connexion with the cattle trade is only of quite recent years, is not it?—For many years now.

22,111. Had the Customs to do with cattle import before the cattle plague regulations?—At least for the last 13 or 14 years.

22,112. You practically are responsible for all the duties of the Customs up to the time that the ship gets to a dock, or to wherever she is going to unload?—And all during the time she is discharging, because all the waterguard rummage the vessels during the process of discharge and clear vessels after being discharged—all the duties appertaining to the vessels with the exception of the examination of the goods after landing.

22,113. (*Mr. Harvey.*) When do you consider you lose your grip over the cargo? When do you feel that "I have done with that cargo?"—In the waterguard I have all the free goods on the river discharged under my supervision as well.

22,114. That we have followed into the Long Room, and so on, but when do you consider that you have done with the vessel?—As soon as the cargo is out of the

vessel in the docks; as soon as the vessel has been discharged, unless bonded stores remain on board, or the vessel loads dutiable goods, in which case she is in charge of the waterguard during her continuance in the port.

22,115. (*Chairman.*) Do the other inspectors do the same work as you do at different times, or do you distribute your work?—Not at all; they have nothing to do with the waterguard.

22,116. You are attached to that particular work?—Yes.

22,117. Do most of your watermen of the first and second section, as they are called in the estimates, come in on nomination?—The watermen all come in on the nomination of the Treasury.

22,118. What sort of men do you generally get?—It was intended that we should have men used to the sea. We take them on probation. I send them for a preliminary trial, to see that they know something about a boat before we take them on probation at all.

22,119. We have had some evidence about these men. Are you satisfied with the sort of men you get?—Quite satisfied. As compared with a few years ago they are a very superior class.

22,120. (*Mr. Harvey.*) You trust them to rummage do you?—Quite so; they are very good men.

22,121. (*Chairman.*) They are very good for that?—Yes.

22,122. (*Lord Lingen.*) We had some evidence that they were men not used to boats; is that very soon got over by a little practice?—It would be preferable that they should have had some idea of the water before they came in, but if a man is a muscular man, with a little practice we find that he answers our purpose very well.

22,123. But the class you get by this nomination you find physically, and from their aptitude in learning their duties, satisfactory?—Yes.

22,124. (*Mr. Freeman-Mitford.*) Do they pass any physical test?—They have to pass our medical man, and have to be of a certain physique, in height and size round the chest.

22,125. (*Chairman.*) Do any of these men rise afterwards to become out-door officers?—Not out-door officers. They never pass into out-door officers in London.

22,126. They always remain watermen in London?—They are promoted to be assistant examining officers, and examining officers.

22,127. (*Lord Lingen.*) They have a sort of junior promotion open to them; the boatmen have to be assistant examiners?—They have everything open to them the same as out-door officers; it would be by competition. They can enter a competitive examination for examining officers just the same as an out-door officer.

22,128. (*Mr. Harvey.*) But they do not become out-door officers?—They do not become out-door officers.

22,129. They can compete for the examining officers, but they do not become out-door officers?—Of course, as you are aware, in London and Liverpool we have a distinct class of watermen and boatmen, and at some of the small outports, the out-door officers have to do the duty of boatmen.

22,130. (*Chairman.*) Do you know much about the small outports, or have you always been employed in London?—I have been at Lymington in the port of Southampton as principal coast officer, Galway, as landing waiter, Fowey (Cornwall), examining officer, the Scilly Isles (Superintendent of Customs), the Tyne (Surveyor and Inspector of the Waterguard), and London (Inspector).

22,131. Your acquaintance is with ports of very different size and importance?—Yes.

22,132. With reference to some of these smaller districts, where the Customs House officers are not fully employed in Customs work entirely, do you think that there would be any difficulty in some of those cases in the Customs officer taking over in addition some Excise Revenue work?—In many places the officer is not fully employed at all times on Customs work. For myself, I was more a Board of Trade officer than a Customs officer for years—my work was far more for the Board of Trade than for the Customs.

22,133. I am speaking now of some places where a Custom House officer has to be stationed, some small creeks, as I think they are called, some quite unimportant districts where he must be placed to see that nothing wrong goes on in defrauding the Revenue, but where he has got a great deal of time on his hands. It is suggested that there are cases where it is possible that some of the Inland Revenue work might be done by them?—It is quite possible in many places.

22,134. (*Mr. Freeman-Mitford.*) In the Scilly Isles, for instance, the duty of the Customs officer is very little, I suppose?—They have no Inland Revenue there; they have no licenses, and there is no income-tax payable there.

22,135. (*Chairman.*) Your men that you have for rummaging and doing your work in the beginning have to understand a good many of the regulations; they have to be quick men to pick them up?—Quite so, especially on account of the very large vessels which are now in use. It is so very different than formerly. We have vessels of 6,000 tons with a crew of 175 men; the vessel is almost like a village. The rummaging of those vessels is so very different to what rummaging was a few years since.

22,136. Have you many men come in as watermen or as out-door officers who have been accustomed at all to the sea; have you had many sailors?—I could scarcely say the proportion, but, as a rule, the majority of out-door officers are young Irishmen coming fresh from school.

22,137. They do not come from the sea?—No, more from the land.

22,138. (*Lord Lingen.*) Do they learn sea duties pretty readily?—Really, the out-door officers have very little to do with sea duties. It is the watermen who have to understand that.

22,139. I thought you sent out-door officers on board the ship to rummage?—Not to rummage, simply to guard the vessel.

22,140. Is all the rummaging done by boatmen?—All done by boatmen.

22,141. (*Mr. Harvey.*) The port of London you are acquainted with?—The port of London.

22,142. Who orders a re-rummage. We have had evidence of a re-rummage; would the surveyor order that without any reference to you?—I have a staff set aside on purpose for that, a re-rummaging staff.

22,143. What are those men—watermen?—Examining officers, with a crew of watermen, the same as the first rummage crews would be.

22,144. Would you mind telling us what your daily duty is in London. In the first place where are you stationed?—I live at Gravesend.

22,145. You superintend I suppose that which these examining officers do when they first go on board the ship?—Quite so. I have 10 surveyors under me in addition to examining officers throughout the ports.

22,146. How do questions come before you. What moves you to take action?—They, the officers, are guided by their general instructions in the first instance, and then all the papers are sent to the head office, and I am in London every day for three or four hours at the Customs House; the remainder of the time being taken up in visiting all the stations to see that the officers have been doing their duty, and answering questions that may be put to me on practice by the officers at those stations.

22,147. That is the duty of superintendence. What sort of questions are referred to you on paper?—All questions relating to waterguard duties, such as to ship's stores, to quarantine, to explosives. I have to see that the explosive samples are sent to the Home Office, and that all the requirements as to licenses, packing, marking, &c. as required by the Act are complied with. I have a very great deal to do with explosives, and it is gradually increasing. All questions as to seizures in the port of London. I had last year more than a thousand seizures. All the seizures are reported to me, and I have to call the Board's attention to any particular thing that may be connected therewith, and if they are questions that have to be dealt with summarily before the magistrates, the officers consult me if there is anything particular in the affair before they go before the magistrates.

22,148. Can you initiate a prosecution?—All ordinary prosecutions are conducted (unless it is large

Mr. W. H. Hinks.
27 Nov. 1888.

quantities seized) without any special directions from the Board or myself.

22,149. That is to say, do you have to decide whether a man shall be prosecuted or not?—Quite so. It does not come to me as a matter of course. If the thing is straightforward it is done, but it is reported to me immediately. A memorandum comes to me the same day, but the officer has often gone to the Court before I have known of the case.

22,150. Then in fact the surveyor, I suppose, has the power of initiating the prosecution in a perfectly obvious case?—It does not even go to the surveyor. If the matter is a straightforward one, the examining officer goes immediately to the Court when it is opened in the morning and conducts the prosecution.

22,151. Then that is reported through the surveyor to you?—Reported through the surveyor.

22,152. (*Mr. Freeman-Mitford.*) Do you reside in a Government house?—Yes, I reside in the Government house at Gravesend.

22,153. (*Chairman.*) Do you come in contact with any of the Inland Revenue officers in your work?—Not in the matter of duty.

22,154. You would not be affected in any way supposing amalgamation were decided upon?—I should think not.

22,155. (*Mr. Harvey.*) You have nothing to do with warehousing?—Nothing.

The witness withdrew.

Adjourned.

SIXTY-FOURTH DAY.

7, Whitehall Place, Westminster, S.W., Wednesday, December 5th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

EARL BROWNLOW.
LORD LINGEN, K.C.B.
Mr. A. S. HARVEY.
Mr. R. W. HANBURY, M.P.
Mr. H. L. W. LAWSON, M.P
Mr. MACLURE, M.P.
Mr. H. WALPOLE, C.B., *Secretary.*

Sir REGINALD WELBY, K.C.B., recalled, and further examined.

Sir R. Welby, K.C.B.
5 Dec. 1888.

22,156. (*Chairman.*) The attention of the Treasury, no doubt, Sir Reginald, has been directed for many years to this question of the proposed amalgamation of the Customs and Inland Revenue, and the Commission would be very glad to hear any opinion that you have formed upon the subject?—The question of amalgamation, I should say, has never really been discussed by the Departmental Treasury. No scheme has ever been before it upon which its judgment has been elicited. But, of course, over many years we have been well aware at the Treasury that the subject was in men's minds, and many of us remember the time when it was actually in discussion in Parliament in 1862. The Report of that Committee did not recommend amalgamation, and I should say that it was not again seriously considered until, perhaps, the time when the Treasury, in consultation with the Inland Revenue and the Customs, decided to appoint that Warehousing Committee of which, no doubt, the Commission has heard a good deal in the evidence they have already taken.

22,157. Having regard to the constitution of that committee, and the results which followed from it as regards warehousing, do I understand you to mean that that has rather led to a more serious consideration of a still further amalgamation?—Yes. The idea of the Treasury in appointing the Warehousing Committee was that there were many points upon which it was essential that the Customs and Inland Revenue practice should be assimilated, and that the most practical step towards amalgamation was to approach it from the side of the warehousing regulations.

22,158. Speaking, first, of those warehousing regulations, there is absolute unity as regards the regulations now, is there not, in the form of a code?—Yes, I think I am justified in saying there is.

22,159. Do any difficulties come before the Treasury in consequence of the mode in which that code is worked by the two departments?—We have heard of a difference of view occasionally taking place between the Board of Customs and the Board of Inland Revenue in the manner in which they interpret that code, and that consequently there may be danger of divergence in practice. I have never heard myself anything that leads me to think that up to the present moment any very serious divergence has happened.

22,160. Is, or is not, the Treasury called upon to an extent that might be termed frequently to decide between conflicting explanations of the code?—I do not think so. At the same time, without going through the official correspondence, I could not state that with any positiveness. It is only very recently that the detailed official correspondence of the Customs and Inland Revenue has come before me; and I should not be able to speak with any positiveness without referring to the record of correspondence. But I think I am right in saying that there is nothing very serious that has taken place. It is rather a possible risk of the future than any serious divergence between them at present.

22,161. It is stated in a paper submitted to us by the Inland Revenue that diversities of practice have arisen owing to the instructions being interpreted by local officers of the two separate Departments, and to such an extent has this been the case, that Treasury authority has even been obtained in some instances to admit of different practices being followed?—I am aware that reference has been made to the Treasury on the subject, but I was not aware that it was a matter to be stated so strongly as that.

22,162. At all events, it is the opinion of the Treasury that, if absolute uniformity of practice could be secured in the different warehouses, it would be a desirable thing in the interests alike of economy and efficiency?—The view of the Treasury is that every effort must be made to secure that uniformity; at the same time, perhaps, I may be permitted to add that there is a method of attaining that uniformity by making arrangements for more intimate communication between the Boards on the subject without it being absolutely necessary to adopt amalgamation in order to secure it.

22,163. Still to keep to the question of warehousing, and to leave for the moment the question of the interpretation of the code, I believe considerable steps have

been taken towards lessening the number of places where duplicate establishments exist?—That has been the case.

22,164. There has been a recent correspondence, has there not, between the Treasury and the Inland Revenue and the Customs, arising out of a proposal by the Customs to take over certain bonded warehouses in London, Dublin, and Cork?—Yes.

22,165. Has that question been settled?—No, it has not been settled at the present moment, because, incidentally, along with it has arisen the question of the working of the new regulations, and also there has been a difference between the Customs and the Inland Revenue as to whether it would be right to make this transfer, leading to a suggestion upon the one side for a re-appointment of the committee. The Treasury have not made up their minds that that is a necessity. Therefore, the question is still under their consideration.

22,166. Is not the idea in that correspondence on the part of the Customs that they should take over the warehouses now under the management of the Inland Revenue which are at these important ports, and which are immediately near their own Customs warehouses?—That is the case; my recollection of the correspondence is that it has opened up the question as to what had been the Customs action with regard to certain ports, the fate of which was left in suspense at the time of the adoption of the uniform regulations, We wanted to learn what the Customs have actually done with regard to these ports.

22,167. I suppose there has been a very great economy in the warehousing establishment since the year 1882?—Very large.

22,168. Still more since 1862, of course, when the question was first mooted in a practical form?—I should say chiefly since 1882; since the report of the committee. I am not aware what took place between 1862 and 1882, but a very large economy has been effected since 1882.

22,169. Are you able to express an opinion,—I do not press it if you would rather not do so,—as to making a comparison between the economical administration of the warehouses by one Department or the other?—As far as my observation goes within the last five or six years, there has been on the side of both Departments almost an emulation in economy. I think, on the whole, that the Inland Revenue have been a singularly successful Department in administration; and if I had to give an opinion between the two Departments, I should give it, over a long period of years, rather in favour of the Inland Revenue as the most successful in securing economy and efficiency.

22,170. Confining your attention now to the state of things as it exists at the present time, is there anything in the management of the various warehouses respectively by the two Departments which would lead you to express an opinion as to their management in that way now?—Within such limited experience as I have I should doubt there being now much difference. As far as I can see, it has become a race between the two Departments.

22,171. Do you attach any importance to this emulation between the two great Revenue Departments which possibly might not exist in the case of a complete amalgamation?—Undoubtedly cases come before us in which the one department is corrected by the opinion of the other department. A rather difficult question of practice arises, we will say, in the Customs. As so much of the Excise business is of a kind more or less akin to that of the Customs, the Chancellor of the Exchequer would take the opinion of the Excise, and I think that very often results in a very valuable check. Of course I do not push that to the extent of saying that that consideration should override, or would be a good and valid argument against, a very large economy; but it is an incidental advantage of two establishments which should not be lost sight of.

22,172. (*Lord Lingen.*) Would the Chancellor of the Exchequer under any circumstances consult the Inland Revenue on a Customs question? I did not quite understand whether that was what you implied?—Yes, of course, but that would be a rare occurrence; but I think I could produce instances in which one Board has been consulted as to its practice, or as to what its decision would be upon a question somewhat akin to its own business.

22,173. (*Chairman.*) That rather leads you to the inference, I imagine, that from that point of view it might be desirable to keep the separate Boards, or a separate management of each Department, at all events, to look after the revenue?—I would simply confine myself to speaking of it as an incidental advantage which ought not to be lost sight of. I do not think it happens so often that I should venture to put that as an argument against a well-considered scheme of amalgamation under which the Government might think that both economy and efficiency might be promoted.

22,174. (*Mr. Lawson.*) May I ask, as a matter of practice, whether to your knowledge this joint advice has been taken advantage of constantly?—No, I should not say so. I have only mentioned it in answer to the direct question put by the Chairman. It is not a point upon which I should lay a great deal of stress if I were simply arguing the question of amalgamation.

22,175. (*Chairman.*) As I understand it, it is your own personal opinion, gathered from the time you have been at the Treasury, that from the public point of view it has been, and might conceivably be, advantageous to the Finance Minister of the Crown to have the opportunity of consulting two great authorities in the matters of revenue, who deal with revenue from two different points of view?—I may say that, only within the last few weeks, a paper came before me in which incidentally it was mentioned that the heads of the Treasury had been put in an advantageous position for forming an opinion upon a revenue question by what I may call the cross-fire of the two Boards.

22,176. Does that advantageous position, and the cross-fire that you speak of, apply in the Treasury generally, without going so high as to the Chancellor of the Exchequer. In the ordinary management of the departmental business connected with the finances of the country, should you say that the Treasury had found it to be an advantage to have that cross-fire existing?—I should attach a considerable amount of importance to it as an incidental advantage of the present system. I think it extremely useful for the Treasury to be able to ask the advice of the head of one Board upon a matter of practice in which the other Board is concerned; I do not mean to say to appeal to him as against the other Board, but to learn what his opinion would be, and what his course of action would be, upon a difficult point.

22,177. Now, upon the view of economy, I suppose you will probably agree with this, that, in order to substantiate the desirability of such a very large change as this would be, it would be necessary to point out that a considerable economy would result?—Certainly.

22,178. In the first place, what do you understand by amalgamation; because a great deal turns upon that?—A very great deal turns upon that, because it is very possible that you might have a nominal amalgamation without a real amalgamation. That, I take it, from all evidence and experience, for a very long period was the case after the amalgamation of the excise and stamps and taxes. I am not prepared to say that is the case now, but certainly up to within the last 10 or 15 years, I take it, the Inland Revenue people themselves would have been almost unanimous in saying that the amalgamation of those two branches was more nominal than real.

22,179. I apprehend that the view that they take now is, and the practice, in fact, of the Department is, that in reality those branches are amalgamated completely up to a certain point, but that it is still found desirable to have two or three heads at the Inland Revenue who are responsible for those various separate branches, and those separate branches only?—I think so.

22,180. Whereas the Board deals in common with all cases?—Quite so, and I take it the Board always did so. The Board were rather in the position of a minister dealing with the opinions put before him by the experts under him. What I mean is, that what took place in 1848 was the amalgamation of the Boards, and, practically, of nothing else. That I call not a complete amalgamation. I believe I am right in saying that the Inland Revenue authorities have worked of late years very sedulously at employing the officers of the two branches upon the common work of the two branches. I am not able to speak authoritatively on the subject, but my impression is that they have been very successful, and that the process of amalgamation has gone very much farther now than it had 20 years ago.

Sir R. Welby, K.C.B.

5 Dec. 1888.

22,181. Then to ask your views about the present suggested amalgamation. It has been suggested to us that it would be desirable to put the two Boards together, and to leave them to effect some large economies which are shadowed forth. Have you considered in what way that could be done?—I am very much opposed to that.

22,182. Will you give your reasons why you think that is not satisfactory?—The reason why I am opposed to it is this: it is a very important step in administration that is proposed; and I think that those who have to express an opinion upon it ought to take very little upon trust. Of course the *primâ facie* view of the Treasury must always be in favour of a scheme which promises economy; their weakness is to lean to that side. But, at the present time, it is most important that it should be satisfactorily established that a real economy would result. The authorities who are in favour of amalgamation point, and with reason, to the effect of previous amalgamations. I do not think that it would do to take too hastily that as clear proof that anything of the same kind could happen hereafter. Take the amalgamation of the stamps and taxes, which produced a saving of about 18,000*l.* a year. In 1834 the constitution of offices was very different to what it is now. Many of the old-fashioned habits and abuses of the last century were still existing. It was a very facile reform to make. I do not remember exactly what the number of Commissioners was, but the two Boards, I should think, then had about 10 or 12 Commissioners.

22,183. You are speaking of 1834 now?—Yes, of 1834. The consequence is that you might get a considerable proportion of that 18,000*l.* a year out of the mere reduction of the Board without anything more. So, again, there is a curious fact connected with that reform. I do not know whether it has struck the Commission. The Commission are probably aware of the leading figures of that amalgamation. The two different branches of the revenue cost, before amalgamation, together 123,000*l.*; after amalgamation they cost 105,000*l.*; 13 or 14 years later, when the stamps came to be amalgamated with the excise, the amalgamated branch had risen to 147,000*l.*

22,184. From 105,000*l.*?—From 105,000*l.*, or 24,000*l.* or more over the top expenditure before amalgamation. Of course I should add that the income tax had been imposed in the meantime, though the expense of the income tax at headquarters is not very large, inasmuch as the collection, as the Commissioners are aware, is given to local officers, I mention that as a thing that may be explained, but as a thing that it is very necessary to have explained when an appeal is made to the success of the old amalgamations. I have been shown a paper which the Board of Customs placed before the Commission, and I see that they state the possible saving by amalgamation at 11,000*l.* I am not aware in the paper the Inland Revenue placed before the Commission that any estimate was made, but I imagine that they would anticipate a bigger saving than 11,000*l.* From the Treasury point of view, 11,000*l.* or 12,000*l.* is a very small economy to start with. I think our general experience is that, as amalgamations and as re-organisations are being worked out, a number of claims arise not foreseen in the somewhat sanguine temperament with which great reforms are undertaken; and it may happen that such a saving as 11,000*l.* or 12,000*l.* is reduced in operation to nothing at all. Therefore I should say, on the part of the Treasury, that we should look upon a very great administrative measure of this kind, which only started with a saving of 11,000*l.* or 12,000*l.*, as requiring a most detailed scheme to be laid before us before we could express an opinion in its favour.

22,185. (*Mr. Hanbury.*) How much of that saving is due to the amalgamation of the two boards?—I think the Customs point to the saving of one commissioner.

22,186. (*Lord Lingen.*) It is only an estimate, after all?—Quite so; but I think it is based upon one commissioner being saved.

22,187. (*Chairman.*) Has it occurred to you, in the opinion you have just given, that when you come to fuze or amalgamate two departments of this sort, it is very difficult to cut down the salaries for analogous work in one department to the level of the other, but the result is to level up rather than level down?—Yes.

22,188. Does that constitute, in your mind, a real difficulty, until the whole plan is shown?—Yes; and I should like to give the Commission a single fact which has struck me, to illustrate that very point, of how easily a small economy may disappear. Of course the Commission will understand that, in these figures which I am laying before them, I am putting before them a purely *primâ facie* view. I do not say it is an objection, because, until I see the scheme, I make no objection, and I offer no objection. In the Estimates of the present year, on turning to the Excise out-door department, I find there, under the head of first class and second class officers, and assistants, rising from 50*l.* a year to 220*l.* as a maximum, that there are 3,182 officers. I take the sum that is actually asked for their payment in the current year—449,000*l.* A little way further down you will see in the Estimate certain extra payments; for instance, the assistants receive besides their salary a certain payment every day they are on duty. I have added one or two of the items of that kind; that makes 16,000*l.* a year. I find that, in round numbers, it comes up to a total for the 3,182 officers of 470,000*l.*, giving an average to each officer of this force of 149*l.* I turn to the out-door department of the Customs, and I take the Port of London, because the London officers are almost certain to be the highest paid of the class; and I find there are 1,277 officers coming under what I should call the out-door department. The top salaries are rather higher (but that applies only to a few officers) than those I have mentioned in the Inland Revenue; some of these officers rise to 300*l.* a year. I find that the average salary of those 1,277 (also adding in some extra pay) comes to 123*l.*; and here I would mention that this class of men is not, I think, the class of men with regard to whom the House of Commons is now so specially watchful. The criticisms, as I read the debates in the House of Commons, are directed rather to the higher paid officers, and a reduction of salary in the class of officers of whom I am speaking is not advocated. Supposing the effect of amalgamation were to be (I do not say it would be necessarily so) a levelling up of salaries, there would go 36,000*l.* at one stroke.

22,189. (*Lord Lingen.*) 123*l.* becomes 149*l.*?—I do not say that that is necessarily so. I do not say it would be a consequence, but what I do say is that, as far as the Treasury is concerned, we should require to have before us some very good reasons to make us believe that the distinction could be maintained.

22,190. (*Mr. Hanbury.*) Do you say then that in the Inland Revenue they give 149*l.* to a man for similar work to that for which in the Customs they only give 123*l.*?—I do not go as far as that. Those two classes of officers are out-door officers; they would have to be in some shape or other amalgamated. You must get them on to a common establishment. My own belief is that the work which is put upon the Excise out-door officers is of a more important character, and a more responsible character, than that which is put upon a great number of out-door officers in the Customs. I can imagine (I am speaking without, of course, technical knowledge) that the men who are set to watch distilleries, to observe the working of the spirit and beer regulations in breweries, and in spirit-distilling places, require more skill and more vigilance, perhaps, than the out-door officers of the Customs. But what I do say is this: that if amalgamation comes you will have to put all the officers upon a common establishment, and the agitation will be on the part of the out-door officers of the Customs to get upon the same kind of classification as their colleagues in the same department.

22,191. (*Chairman.*) That agitation already to a certain extent exists, does it not?—Yes; but not to a very notable extent.

22,192. (*Mr. Lawson.*) I am bound to say, so far as my experience goes, that it is the Excise men who say that they should be put on the same level as the Customs?—I am particularly anxious at every step to guard myself by saying this: that I am only placing before the Commission *primâ facie* criticisms which I think ought to be made before we, at the Treasury, would feel justified in giving a hearty assent to any amalgamation scheme.

22,193. (*Chairman.*) You are objecting to any amalgamation proposals which do not show in detail the matter in which the proposed economies would be effected right through the staff from the Board downwards?—Yes. On that I express a most decided opinion.

22,194. (*Mr. Lawson.*) Do you think that the great majority of the men in the Customs, who comprise the

out-door officer class, do work that can be compared with what is done in the Excise?—I have already said that I think, without having technical knowledge on the subject, that the Excise out-door department have what I should call more responsible work. But when you come to put the two classes of out-door officers on the same establishment, there would be agitation, which it may be difficult to resist, on the part of the out-door officers to be raised.

22,195. I do not think the comparison is quite fair, because if you look at the Excise and the Inland Revenue, you will find the two greatest figures are for officers of the first and second class, numbering 1,400 and 1,000 roughly; then at the Customs the biggest figures for the Port of London are what they call out-door officers, first and second class; they are both, as I understand, doing very much the same work, or intended to do work of the same character; do you think those can be compared?—They form the out-door officers. We know of old times how men doing inferior duties, when they are brought on to a Government staff, have obtained advantages which they would not have obtained otherwise. I think I may appeal to Lord Lingen's recollection upon one point: when the Post Office and Telegraph service beat Mr. Fawcett (I use the words advisedly), the opinion of a great many people was that a number of men not doing very responsible work, in consequence of agitation, and claiming to be put upon an even footing with other Government officers in the Post Office, got a great deal more than would have been given them in a private establishment.

22,196. (*Chairman.*) Your general argument is this (without pressing you upon any detail as to a particular class of officers), that you assert most emphatically that until the details of the proposed amalgamation can be shown, satisfactorily classifying the various officers without a process of levelling up going on, the Treasury would not feel itself justified, as far as they are concerned, in sanctioning a scheme of amalgamation?—Of course I speak of the departmental Treasury, and the form in which they deal with it, that is my most distinct opinion. I understand the difficulty on the part of the departments in putting forward a scheme of amalgamation, and of course it is a question whether a scheme of this kind ought to be published beforehand. I understand that is a practical difficulty, because if a department were to put forward a scheme of amalgamation which would touch the interests of the officers, or what the officers should consider their interests, it would be tempting beforehand an agitation which I quite understand a department is unwilling to incur; and therefore it would be a question whether the scheme is one which would be actually put into print, and put into everbody's hands; but that a scheme ought to be put forward I feel quite clear.

22,197. (*Mr. Harvey.*) And the advantageous result must be very considerable to counterbalance that evil, must it not?—I think so.

22,198. (*Mr. Lawson.*) Possible evil from Parliamentary pressure again?—Certainly. Of course the fact of bringing the Customs and Inland Revenue staff into one body increases the force which can exercise Parliamentary pressure.

22,199. A scheme for levelling up would not come from within, it would come from without the service; it would not be proposed in the departments, it would be proposed in Parliament by some private member, we will say, that is your fear, is it not?—That would take place which took place in the Post Office, namely, the agitation became so great that the Postmaster-General was obliged to represent to the Treasury that unless considerable concessions were made they would simply be beaten in Parliament. Members of Parliament who are on the present Commission may recollect a very serious agitation of this kind in the Excise. It was brought forward in Parliament. I can only state my recollection that it was thought a most serious matter, and a question at one time whether the Government would not be beaten upon it.

22,200. (*Mr. Hanbury.*) When was that?—Lord Lingen will remember the year, probably, better than I do; about 1882 or 1883.

22,201. (*Chairman.*) Then leaving, so far as I am concerned, at present the question of future economy (I think I understand the view you take of that), have you anything to say upon the subject of the collection of the revenue; *primâ facie* the Treasury would naturally be in favour of any scheme which would improve the collection of the revenue. Do you think there are any reasons in favour of amalgamation to be derived from that argument?—I will repeat what I have said before. Going over a long period of years, I think the Inland Revenue have been a very successful administering department; and I should incline to think that if the amalgamation took place, as regards collection of the revenue, it would probably tend to improvement rather than otherwise.

22,202. Then may I ask you if you have formed any views about the possible difficulties which might ensue from the creation of one large revenue department—one chairman, presumably, of the whole amalgamated Board or amalgamated management, whatever form it might take, and having the whole revenue of the country to administer; from the Treasury point of view do you think that would be satisfactory?—In answering your question upon that, I must ask you to take it as purely my own personal opinion. In what I have been saying as yet I have been endeavouring to represent what would be the ordinary view of the departmental Treasury upon proposals of this kind. Personally, I think that the amalgamation of the Customs and Inland Revenue should present a very large and distinct economy: something that will show to the public a saving sufficient to override many minor objections before it is adopted. One point upon which, within my experience, I think that there is an objection to the amalgamation in itself is, that I do not like to see the few experts that are round the Chancellor of the Exchequer reduced in number. For a large number of years now I have been generally present at the Budget discussions, and certainly the experience that I have gained from that is, that the Chancellor of the Exchequer generally has rather too few than too many advisers, especially upon the subjects connected with taxation. The Commission will observe that in subjects connected with taxation it is almost impossible for the Chancellor of the Exchequer to go outside a few very responsible officers. It is almost impossible for him to take advice in the outside world, because there are very few people who are experts enough for their opinion to be of value; and next the consultation of irresponsible persons might lead to rumours getting about which a Chancellor of the Exchequer would desire to avoid. At present the Chancellor of the Exchequer has only two responsible officers in matters of taxation to look to, namely, the Chairman of the Board of Customs and the Chairman of the Board of Inland Revenue. I do not think those are too many, and that in some shape or other they ought to be replaced to him, and that it should not be reduced to the mere question of one officer representing the whole field of taxation.

22,203. (*Lord Lingen.*) It would be also true, I suppose, that in addition to those principal officers, very often, if it was a question of stamps, the head of the Stamp Department would come with the Chairman of Inland Revenue to answer any questions that might be necessary, or one of the members of the Board, like Mr. Adam Young, would have come with his chief to answer any questions that might be raised on those parts of the administration that he was most conversant with?—Quite so; of course the technical officer is constantly called in; but, as a general rule, the early and important discussions take place with the responsible officers, that is to say the head officers. I do not say that it is an absolute necessity by any means; I say that, according to my experience, those advisers are not too many now. Take the principle of our government. The responsible government is conducted by men who are approved by Parliament, and who are put at the head of great departments without any special knowledge of the work of those departments. They are put there because they have approved themselves in the greatest competition that exists anywhere to be competent Parliamentary leaders. The Secretary of State for War and the First Lord of the Admiralty are in the position of officers without technical knowledge, who decide from their general knowledge upon the questions as explained and put before them by experts. I think the result of the system shows that the able and common-sense man put at the head of a department corrects and decides upon the opinion of his experts with very great success. The same thing applies in many cases to the Chancellor of the Exchequer. He often comes to the Exchequer without having made finance a special study. It appears to me most important then, that he shall have at hand thoroughly competent and responsible experts to place the facts before him. If those are properly placed before him

Sir R. Welby, K.C.B.

5 Dec. 1888.

and properly explained, he is well fitted to decide on the financial policy to be adopted, and to carry it through Parliament. But let him have inefficient or insufficient advisers there, and then the country suffers, the Parliamentary party suffers, and the service suffers. Of course it is impossible for me to say that it is essential that there should be two chairmen of boards, and that mischief will happen if there is one chairman, and that it will not happen if there are two. I only confine myself to saying that the Chancellor of the Exchequer, in my experience, getting on for 20 years, of these Budget discussions, has not too many advisers in ordinary circumstances upon the questions of taxation.

22,204. (*Mr. Harvey.*) You think two minds are better than one?—Yes.

22,205. (*Lord Lingen.*) You draw a distinction between the present chairmen who, in the daily administration, do not do much more than act as a court of appeal. You draw a distinction between them and any man, however highly placed, who was plunged into the daily administration, that they can take a wider and better view, and become better advisers?—I do, because I think that the organization of the service ought to be so formed that the highly paid and responsible men are the real advisers. Of course we are perfectly aware that the public service does not come to an end if there is no political government. The public offices can carry on the business, but nobody would admit, because that can happen, it would be a good state of things. In like manner, supposing there are incompetent or broken down heads of the big departments, you can carry on the service, you can consult the subordinates, but that is not an organization at which you ought to aim.

22,206. (*Lord Lingen.*) You would not put the heads of branches, however highly placed and however able, on the same footing for utility as advisers, as you would put men in the position of the present chairmen of the two Boards?—No, I should not.

22,207. (*Mr. Hanbury.*) Because, I suppose there is a great advantage in having these two advisers perfectly independent of one another?—Of course they are independent critics of schemes put forward.

22,208. (*Mr. Lawson.*) Is your opinion based upon theory or upon actual experience?—The Chancellor of the Exchequer, within my experience, might on various occasions have had with advantage more advisers.

22,209. In some cases, have you not known the vice-chairmen take up the position of financial advisers who would be able, in any case, to do so whether there were two chairmen of the Customs and Inland Revenue or not?—That happens, and of course must happen. The vice-chairman very often is a very capable man, but what I repeat is that the organization ought to provide that the head men are the responsible men, and the proper advisers. I am apprehensive as to reducing the number of men who, being the responsible men, are in a position, or ought to be in a position, to give a general study to those most important subjects, which go home to everybody. An ill-devised or an ill-carried out tax hits everybody, and there is no department in which it is more important that the responsible minister should act upon the very best information.

22,210. (*Lord Lingen.*) I rather gather from your evidence that you do not think that there is any such improvement in prospect as urgently calls for the change in the present system?—I would not go so far as that; if I had reason to believe, or if evidence is brought forward to show, that a very great economy would be effected. I am not in a position at the present time to say that an economy of that kind can be effected, but I will answer the question by saying that I should be opposed to amalgamation unless a very considerable economy could be effected thereby.

22,211. And that, demonstrated in a much more particular manner than has yet been the case?—Than has yet been the case, within my knowledge.

22,212. As between these two boards there have been two great and obvious branches of financial policy, one raising the revenue from the subject at home, and the other raising revenue from imported goods. Those would be the clear branches of distinction for which you would want separate advisers for the Chancellor of the Exchequer. Is that so?—I was rather representing that I thought it desirable that the Chancellor of the Exchequer should not have fewer advisers on the subject of taxation than he has at present.

22,213. At present he is advised by the two permanent officers who have in their experience those two great branches of taxation?—Quite so.

22,214. I do not want to start that as another hare, but merely to mention it in passing. Disregarding that distinction of the Customs and Inland Revenue, you might take another distinction, of goods on the one hand, whether at home or imported from abroad, and stamps and taxes on the other. That would be another view of the subject which might be taken, but still would leave two heads?—It is starting a new hare. That, I confess, if the Government were in a position to consider this matter afresh, is the division which I for one should advocate.

22,215. I will leave that point for a moment. I daresay we shall come to it again in your evidence, and I will go to certain subsidiary departments which are more or less the same for the two. Now, warehouses may be said to have been practically amalgamated?—Yes.

22,216. Supposing, not what you could call an heroic, but a considerable, economy, might be shown in a single solicitor's department—that is a minor matter—should you be willing to entertain that, and to think that, if a case of definite economy by abolitions and consolidations could be shown, that that was a question that might properly be raised?—Yes, I think that would be a very fair question. You are aware that, under the present arrangement, the solicitors of different departments have been abolished, and their duties entrusted to one single solicitor, who goes by the name of the Treasury Solicitor, but might much more truly be described as the Solicitor of the Whitehall Departments. At the same time, a great deal would depend upon it being shown that a real economy would result from the change proposed. I am under the impression that the two solicitors, responsible as they are for tax legislation and for the legal administration of two large departments, are very fully employed. I should think the Solicitor of the Inland Revenue was very fully employed. At the Customs, as we are all aware, there is much less legislation on taxation. But even with regard to customs, every year some duties are put upon them which give a fair amount of work to the solicitor. My mind goes back to a time when, if there had been only one solicitor for the Customs and Inland Revenue, there would have been a very great pressure upon him. I forget the exact year, but I am referring to a time when Mr. Gladstone was Chancellor of the Exchequer, when there was a good deal of Inland Revenue business, and when, according to my recollection, it was also a very heavy time indeed for the Customs, namely, the time of the American war, and when almost daily references of a most important character were being made to the Customs Solicitor on the subject of vessels suspected under the Foreign Enlistment Act.

22,217. I wanted chiefly to raise this point—that there is a certain amount of work, although different in its detail, which, on the whole, is the same in its character: for instance, warehousing work; and now we have come to legal work, which both departments have got to do, and therefore, quite apart from the policy of retaining advisers for the Chancellor of the Exchequer, a question might arise of unifying what you may call those neutral branches?—Yes.

22,218. Perhaps the Accountant's Branch would be open to the same consideration?—As to the Accountant's Branch, I should have Mr. Harvey's assent. The Accountant's Branch is really only a branch of record, and if it is thought desirable, and if economy could be effected, one branch could, perhaps, record the facts of the two departments.

22,219. I do not want to press these points, but only to point out that there is a field of common administration (it may not be so completely common as the warehousing is) in which these questions of what I may call subordinate amalgamation may be fairly raised. Again, I would say, on the question whether a single department of statistics ought not to serve both boards, that the Inland Revenue now collect the agricultural statistics. I do not know whether they do anything with those statistics?—I believe that it is a mere question of collecting and handing them forward. It is not like the Statistical Branch of the Customs, which not only collects statistics for the Board of Trade, but classifies.

22,220. And digests?—And digests.

22,221. But still a question might arise whether, if we were consolidating these departments, the Inland

Revenue officers might not digest all these statistics in a common department?—Quite so. I think you would find that the Inland Revenue do very little statistical work. I think the only statistics they really collect are collected in the Accountant-General's branch under the superintendence of the Accountant-General. It has been a question in my mind whether the Inland Revenue turn their attention sufficiently to the statistics of their department.

22,222. Then we might perhaps say that as the warehouses have been consolidated without infringing upon the special character of either of the boards, so it is open to consideration whether the departments of the Accountant, the Solicitor, and the Statistical Department might not also undergo some consolidation?—Always provided that you can show a sufficient saving to justify it, certainly, I think, that is a most fair subject for consideration.

22,223. Supposing that consolidation to that extent, or to some extent, commended itself, and could be proved by a reasonable expectation of economy, those common departments would imply a common control and a common action by the boards. Should you see any advantage in retaining two boards, perhaps in diminished numbers, a chairman and a vice-chairman, instead of a board to each if at certain stated periods those two boards met, and with respect to any departments that have been consolidated, and for any matters that were thought to concern the two boards, they discussed such questions as those once a week, or once a fortnight, or once a month, or whatever might be thought convenient intervals?—My view would be that amalgamation is not the necessary remedy for such a divergence of opinion. That object ought to be gained, or ought to be gainable, by such meeting of the boards, or sections of the boards, as would ensure the removal of those divergencies.

22,224. Supposing that these boards each consisted of two officers, a chairman and a deputy-chairman, should you think it worthy of consideration whether at those meetings some officer representing the Treasury—we will say the Financial Secretary—one of the parliamentary officers representing the Treasury, was *ex officio* chairman of those boards?—You raise a very important question. Supposing amalgamation were carried out, the chairman of the one board would almost be, in my mind, too big for a civil servant. It would be a very great post indeed, and I anticipate a desire to place an independent minister at the head of that department, thereby displacing the Chancellor of the Exchequer from being Finance Minister. I think that quite out of the question, though such a thing has been mentioned in Parliament. If amalgamation is effected, I should wish to see the head of the board a civil servant, but brought into somewhat closer touch in administration with his political chief by the association, if it could be arranged, with him of the Financial Secretary to the Treasury. If the two departments are retained, I think there is a good deal in what you suggest, namely, that the Financial Secretary of the Treasury, who is one of the foremost ministers out of the Cabinet, but who is the especial lieutenant of the Chancellor of the Exchequer, should preside at a meeting of the boards.

22,225. I am only thinking at this moment that, supposing the consolidation of the departments up to a certain point, and by degrees, were carried out between the two boards, and supposing from that consolidation you wanted the two boards united, their individuality remaining as it is now, but for these common purposes you wanted them united, then, as they must have a chairman of some sort, would it not be a convenient arrangement, *ad interim*, at any rate, that that chairman should be the Financial Secretary to the Treasury?—Yes, I should rather like to see such an arrangement.

22,226. (*Mr. Hanbury.*) You spoke of certain uniform regulations applicable to both these departments which were differently interpreted by the two departments, and I think you said that the two boards ought to meet and agree as to how these were to be interpreted; do they meet as a matter of fact?—No, I believe they do not.

22,227. Is there any high authority to make them meet, and insist on a common interpretation?—I believe that the members of the board have met and considered questions of divergency of opinion; but I am not aware of any regulation under which they are compelled to meet.

22,228. Have the Treasury at the present moment any power to insist, in a case like this, upon an uniform interpretation by two departments so closely connected?—Yes, I should say they have.

22,229. (*Mr. Harvey.*) That is, they could request the chairmen of the two boards to meet and confer?—Quite so.

22,230. (*Mr Hanbury.*) Mr. Gladstone gave us some evidence the other day as to the question of the administration of these departments by boards. Have you any idea upon this subject; do you think it is an advantage to the public service to have these departments administered by boards, or by one responsible minister?—Of course I have been speaking on the subject of the Chancellor of the Exchequer's advisers. So far as that argument goes, my point would be met by a controller—we will say a single head—which I think is the French system. There are two advantages which I see in a board; one is, if the members of the board are carefully selected as active men who really will work, they can do good service in inspecting the country establishments, so that the local officers shall be acquainted with their chiefs, and should know that their work is from time to time inspected by them. I think there is a great usefulness in that; but then, of course a great deal of that usefulness depends upon the care with which the members of the board are selected. If the boards are carelessly selected, I would sooner sweep them away at once. There is a minor advantage, but it is an undoubted advantage. A decision stated to be made by a board is accepted, I cannot tell you why, but it is accepted with greater readiness than a decision by a single person.

22,231. Accepted by whom?—By the public; I cannot tell you why, but that is the case.

22,232. Do not you think it tends to an undue division of ultimate responsibility?—No, because the chairman, as a matter of fact, has the real power. The other members of the board cannot stand out against the chairman; he really is autocratic.

22,233. (*Chairman*) Then, if there is a chairman and vice-chairman, or controller or deputy controller, of either the Inland Revenue or Customs, why should not they call themselves a board; why should not the decisions be sent out in the same manner as are the decisions of the Lords of the Treasury?—There is a board of the Treasury.

22,234. But the Board of Treasury never sits?—No, but still they are existing. It would probably meet my point if you said that the two men might call themselves the board.

22,235. (*Mr. Lawson.*) As a matter of fact, the President of the Board of Trade calls himself a board?—There is a board, but they never meet. As far as the matter of fact goes, there are a certain number of persons who might be summoned together.

22,236. (*Mr. Hanbury.*) Apart from that question altogether, and whether these departments are administered by two boards or not, you think it is a distinct advantage to the Chancellor of the Exchequer to have advisers, neither of whom is subordinate to the other, and who are independent of one another, and can express their unbiassed opinions?—That is my view.

22,237. Of course that would not be the case if the two departments were amalgamated?—Not to that extent.

22,238. Clearly not, because one would be subordinate to the other?—Yes.

22,239. You have said, I think, that you fear there would be a tendency, if these two departments were amalgamated, for the chairman of so large a department to have too much of his time taken up by purely administrative office work?—That is my view.

22,240. The Chairman of the Inland Revenue, I think, told us that one of the advantages of an amalgamation would be, not a reduction, I think, of one commissioner by an amalgamation of the boards, but by the abolition of two or three; but, I suppose, it is a fact that, if there is sufficient work for the whole of the present commissioners, their work would still have to be done by somebody else under some other name in future?—Clearly so. I should have thought that, with the boards reduced as they are now there was ample work for them. Not very long ago the Chairman of the Board of Customs was seriously ill, and I know personally the great pressure that was put upon the remaining two members of the board, because just at that moment they had to carry out the Merchandise Marks Act, which threw a very great deal of

Sir R. Welby, K.C.B.

5 Dec. 1888.

daily work upon them. I should doubt very much, as long as you keep a board at all, whether there would be any advantage in reducing the numbers, for I do lay stress upon this, that these persons who form the supreme authority of the department should visit the outports, and see for themselves, and hear on the spot, how business is being carried on.

22,241. (*Mr. Lawson.*) How do you propose to change what you think is an evil in the present administration, that the chairmen do actually occupy themselves too much with detail, and not sufficiently with the general view of things?—I do not think it is possible to lay down rules to secure that end, because it must depend so much upon the individual. I can only say, that putting a great deal of fresh work upon the present responsible head is likely to diminish his power rather than increase it.

22,242. I gather that it is the tradition of the office, and, from what you said, that it did not apply to the particular individuals who filled the post of chairman. Does it not seem to you that, if the duties are made so much larger, as they would be by amalgamation, in the case of a single chairman, he would find it absolutely impossible, as in the case of very great private firms, to go into the details, and that he would be obliged to confine himself merely to the general supervision?—Yes, I think he would undoubtedly be obliged to depute some of his present work to other people, but that would be replaced by important work of supervision coming from the other branch. I do not think you would find that it would give him opportunity of making for himself the leisure for a general consideration of those questions.

22,243. Would not the chairman of the amalgamated Board of Revenue be able to take a more complete view of the whole status of the whole interests of the revenue than he can now, when he only sees it from one side?—Yes, I think that may be fairly put, but it is not an argument that I should rely upon myself, because one's experience generally is, that giving a man a very large addition to his work (the daily work of administration is sure to come to him on appeal, if he is the head, the officers under him are sure to bring all the difficult cases to him to decide) would leave him less opportunity for what I call the general consideration of matters.

22,244. In the present system we have heard a good deal about the injurious effects of competition between the two branches of the revenue in subordinate departments—warehousing, for example. May there not be the same sort of effect in the case of the two heads being in constant competition? Do they not rather take a partial view than a national view?—I have never seen that. I would not put this argument forward as a ground against a good scheme of amalgamation; but I think, as a rule, that it is rather a wholesome competition than otherwise. But I must not rely too much on that point. I remember Mr. Holmes telling me once of some warehouse which he visited as chairman of that committee, where the Customs officer lived on one side and the Inland Revenue officer on the other, with only a partition between them, and they had not, as far as he could learn, looked at each others regulations. I do not call that a very wholesome competition.

22,245. You said, in answer to Lord Lingen, that the Inland Revenue did not collect statistics; of course, they do in regard to corn averages, do they not?—Yes, they collect those statistics, and they collect also the agricultural statistics; but these statistics, I think, are only handed over to another department.

22,246. (*Chairman.*) They have no statistical department?—They have no statistical department.

22,247. (*Mr. Lawson.*) There is no reason why, as has been pointed out to us, the statistical work of the Customs should not be conducted in the same way as that of the Inland Revenue, by the information being sent straight up to the office where the returns are ultimately used?—That, of course, might be done. I think the Commission would require to hear the reasons somewhat more at length than I could give them for and against. Several years ago, I remember a committee, presided over by Mr. Childers, on statistics, and I think, the conclusion at which the majority of that committee arrived was, that on the whole, it was more economical to let the Customs' statistics be digested at the Customs house here, than to have them digested at the Board of Trade. The Treasury have apprehension as to the creating of big statistical departments, because there is no limit to the growth of a department that lives entirely on and for the purpose of collecting statistics.

22,248. Of course, statistics are collected, not with regard to a department, but for public use and convenience. Do you think, as a matter of fact, that the present system is advantageous to the public, because it seemed from evidence that we have heard, that there are not adequate means of testing statistics in the Customs at the present time?—I prefer the present system; but I prefer it, chiefly speaking, from the Treasury point of view. I look with a great deal of apprehension to a big statistical department, because I am sure it would be a very expensive one.

22,249. As a matter of fact, the gentleman who at present arranges the statistics, and draws his deductions from them, is not able, or is very rarely able, to get at the material out of which they are compiled?—I do not know that I should admit that point. It is possible that if the raw material of the statistics went to Mr. Giffen he would be able to look out for himself the things which perhaps he now sends down to the Customs for. The digestion in the Customs is not of a very recondite kind. It would have to be made somewhere, and a portion of it is necessarily Customs work.

22,250. You use the word "digested"; are they really digested by the Customs?—Yes; they are, I should say.

22,251. The results of the statistics they collect are left to the Board of Trade?—Any use of those statistics is left to the Board of Trade.

22,252. In the case of the Inland Revenue and Agricultural Returns, it is not done?—In regard to these returns the Inland Revenue is merely a transmitting office.

22,253. Have you formed any opinion with regard to the commercial view upon amalgamation, has that come under your notice?—I have not seen any complaints addressed to the Treasury which will enable me to form an opinion.

22,254. (*Mr. Harvey.*) So, that from the standpoint of convenience of the merchant, you have no reason to think that the merchant is dissatisfied with the present system?—I can only speak within my actual knowledge. It is not a very long time now since these Customs and Inland Revenue papers first came before me, and therefore possibly I speak without sufficient information, but no papers have come before me which I should call complaints from the trade, and which could only be met by amalgamation.

22,255. Do you think the Treasury are in a better position to resist the tendency to level up salaries with distinct departments than if there were one amalgamated board?—I think so.

22,256. Now as to this question of what duties go to the Chancellor of the Exchequer. Take, now, the case of a proposed alteration of the stamp laws, which would very likely affect the commercial community of London, might we take it that the Chancellor would expect to get help from the Board of Inland Revenue as to the probable view with which such suggested alterations would be regarded in the city?—I should think so; he can get it from nobody else.

22,257. And that it would be in his view the business of the chairman of the Board of Inland Revenue, so far as he could, to keep himself in touch with opinion on that matter?—It would be his duty to lay the facts before the Chancellor of the Exchequer. Supposing the Chancellor of the Exchequer should say, now, I want to go into this question, and I want to have all the facts before me, I consider that the Chancellor of the Exchequer has got a right to expect from the Chairman of the Inland Revenue, not only the traditional information possessed by the department, but good information as to what the effect of that proposal would be, and an intimation as to what would be the objections, and the value of the objections, likely to be raised by persons who would suffer by the tax.

22,258. Which views, I suppose, the Chairman of the Board of Inland Revenue could only ascertain by actual personal inquiry?—Quite so; and I need hardly point out what an important point that is, what mischief might take place, if such inquiry is made by anyone but the supreme and most responsible officer.

22,259. Of course, such inquiries being in aid of suggested legislation, are necessarily of the most confidential character?—Quite so.

22,260. To put it shortly as to those questions of revenue, or as to points of advice that a Chancellor might seek on questions of revenue, which would concern both the chairman of the Board of Customs and the chairman of the Board of Inland Revenue, you think that the possible conflict of opinion between them would actually help the Chancellor; that is to say, that out of the possible conflict between those two, he would be more likely to get at the truth than if there were only one officer who embodied in himself all the traditions?—I think so. I think there is a great deal of sense in an argument put forward by one of the French financial writers of this century, in which he advocated the formation of a kind of council of finance, and I believe that to be the form of the French finance department now. There are no boards, but there is a director of indirect contributions, a director of direct contributions, a director of the douane, and a director of the government manufactures, like tobacco and salt, and so forth, and these officers are officers of the treasury; but, as I understand it, they are only heads of sections of the treasury for the purpose of being present as councillors to the finance minister. Otherwise they have large departments under them just like our revenue departments. I am not suggesting such an organisation, but it appeared to me that that organisation is a sensible organisation; you have four or five experts in their different lines there, who are at hand to come and explain matters, and to answer the questions of the responsible minister.

22,261. In your view, supposing an amalgamation were determined upon and carried out, would it be advantageous if the post of chairman were given to any other than a civil servant?—Yes, I think it would; I myself think that there is a great advantage, and has been a great advantage, in bringing in Parliamentary men, provided always that you take a man of sufficient Parliamentary standing who will take to the Civil Service as a profession. The great danger is that you may get a man of sufficient Parliamentary standing, but who is only going to take it as a form of pension.

Sir R. Welby, K.C.B.

5 Dec. 1888.

22,262. Would that, in your view, be one argument, as far as it went, against amalgamation, that the post would be so big that it might, in fact, be made a position for the exercise of patronage?—It would be.

22,263. And that, of course, you would deprecate?—I deprecate it. One of the best chairmen, for instance, we had was John Wood. John Wood's name still lives in the memory of the Civil Service as a very capable head of the Inland Revenue. That was a case in which, I believe, a man was taken out of the Parliamentary ranks with the greatest advantage to the public service.

22,264. Still looking at the question as one of general practice and system, would you prefer that the head of the amalgamated department, supposing the amalgamation were carried out, should be a civil servant, or should be selected generally?—Of course I should like to see the fittest man selected, whether he is a civil servant or not. I would have it open to the civil servant, and if there is a thoroughly capable civil servant eligible, I should like to see him have it. But I do not advocate making the heads of the great offices a close corporation, giving civil servants a right to look to those posts as a matter of course.

22,265. (*Chairman.*) Is there any point that occurs to you arising out of the examination or otherwise, that you would like to add?—I should like to end by saying that I feel rather bound to appear before them as a kind of Devil's advocate, that is to say, to put before them a critical view of amalgamations. While I am naming points upon which I think any persons who have to form an opinion as to amalgamation should be satisfied, I am very far from saying that such a scheme of an economical and efficient department may not be devised as would overcome the objections which should be considered as countervailing, and in some shape as compensating, the advantages expected from amalgamation.

The witness withdrew.

Sir WILLIAM H. MELVILL called and examined.

22,266. (*Chairman.*) I believe you are the solicitor of the Inland Revenue?—I am.

22,267. You have been good enough to send us a memorandum upon the legal aspect of the question of amalgamation?—I prepared it for Sir Algernon West without reference to the fact that it would be handed in here. He asked me for some assistance in the shape of a memorandum upon the legal aspect of the question, and I prepared that for him.

22,268. But you have no objection to its being made use of by us?—Not the slightest.

22,269. Have you prepared any other statement, or shall I ask you one or two questions upon that?—I have prepared rather a note of a statement, which I should like to make to the Commission, with your permission.

22,270. I think that would be a convenient plan?—It seems to me that I should present the subject to the Commission in two aspects. 1st. The advantages which have resulted from the amalgamations which have taken place in past years. 2nd. The advantages to be anticipated if there were an amalgamation of the Customs and Inland Revenue. As to the advantages which have resulted, they are advantages to the Chancellor of the Exchequer in formulating his budget, and carrying his proposals into effect, to the revenue receipts, to the taxpayer, and to the administration. I do not propose, in dealing with the subject in this aspect, to go beyond my own experience, which is now nearly 23 years as solicitor of the Inland Revenue, save to mention that Excise licenses took the place of assessed taxes in the case of Game Certificates in 1860—I am dealing now with reference to the advantages of the amalgamation of Excise and stamps and taxes. The stamp licenses for trades required to be taken out by appraisers, pawnbrokers, plate dealers, medicine vendors, and others were transferred to the Excise in 1864 with great advantage to the revenue, and readily and with total absence of friction, in consequence of the amalgamation which had taken place.

22,271. You are now speaking of the whole question of amalgamation apart from the legal department?—This is apart from the legal department.

22,272. I think I should like to ask you to confine yourself, in the first instance, to the legal department?—I am obliged at the same time to deal with it generally before I get to the legal department. I should perhaps make a statement without reference to any paper as respects the legal department. Let me deal with the question in the first year, 1867. The Commission will remember the great dog scare. The Chancellor of the Exchequer then asked what would be the best mode of dealing with the question of dogs. The mode in which it was dealt with was this. As you are aware, the tax upon dogs was by reference to the dogs which were kept in the year before. It was transferred to the Excise, and what was the result in consequence of this transfer to the Excise? The dog duty was reduced from 12*s.* to 5*s.*; the revenue was exactly the same, or rather beyond what it had been when the duty was 12*s.* The number of dogs was reduced, but still there was the advantage accruing from amalgamation.

Sir W. H. Melvill.

22,273. That is very interesting, but at the same time it does not bear upon the question upon which we want immediately to have the advantage of your opinion, which is how far, from the legal point of view, the amalgamation of the Customs and the Inland Revenue is desirable: I do not understand that this amalgamation of which you have been speaking, was necessarily done from a legal point of view; it was rather from the Chancellor of the Exchequer's point of view, was it not—the general point of view?—Excuse me, what I meant was this. The carrying out of the budget scheme rests with the legal departments, and with the legal department over which I preside in particular. As you know, the budget schemes have to be formulated with immense rapidity. You get, perhaps, only 24 hours' notice, and it would be impossible, if you had communications between two departments, to carry out the Chancellor of the Exchequer's scheme.

22,274. If you had what?—If you had inter-communication between two departments it would be impossible, within the time, to get resolutions drawn. That has always been found an extreme difficulty even in connexion with the Customs. It would have been insuperable in the case to which I was referring of the

Sir W. H. Melvill.

5 Dec. 1888.

dogs, and also in the establishment license case, it would be an insuperable difficulty, and that is why I was dealing with it, and was dealing with it really in a legal aspect, though I quite understand the Chairman's interruption.

22,275. The immediate question before us is not the amalgamation of the Stamps and Excise and Taxes; that is a *fait accompli* for evil or for good; but now we want to deal with the question of the further amalgamation of the Customs and Inland Revenue only. Granted that, *primâ facie*, there is a desirable case for it, we are anxious to know how, from your point of view as solicitor to the Inland Revenue, it would be an advantage to the public, as far as you can see, to amalgamate the boards, and have one solicitor's office under one highly responsible legal officer for the two departments. Perhaps I should first ask you what is the work which you have to do. You have an assistant solicitor, have you not?—I have one assistant solicitor.

22,276. Your department is set out in the Estimates. I see you have four chief clerks?—Yes, one of whom is my clerk-assistant.

22,277. The memorandum you have been good enough to send us will be very useful, but I do not understand you to say that you would be able to undertake all the work from the Customs, so far as you are familiar with it, without an increase of staff?—I do not think it would require an increase of staff.

22,278. You think not?—I think not. Not beyond an increase which we are at present asking for without any relation to amalgamation.

22,279. You have already a very large staff?—Very large.

22,280. And you have had a very large amount of work?—Yes.

22,281. I am not at all saying that the staff is not apportioned to the work. Can you deal in a practical way with the work that might come to you as the solitary legal adviser, the sole responsible head of an amalgamated board?—Only so far as the Customs' duties are concerned, I presume you mean.

22,282. So far as concerns the work that is done by the Solicitor's Department of the Customs?—Yes.

22,283. Are you prepared to say that you think your office could undertake it without any further increase of staff than that which you are asking for under any circumstances?—I think so. Probably it would be necessary, in the first instance, that one of the present staff of the Customs solicitor's office should be attached to us, bringing his special knowledge to us.

22,284. Have you instances in which the same case is advised upon by yourself and by the chief solicitor to the Customs?—Yes. I have this last week joined with him in giving a joint opinion.

22,285. Is there any advantage, in your view, in this joint opinion, looking at it from the public point of view; or is there any disadvantage in the fact of having to consult two legal advisers upon matters which are practically the same?—The question arose under the Merchandise Marks Act, and it was whether British goods in a warehouse were subject at all to the Merchandise Marks Act. You have been, I have no doubt, informed a great deal as to the warehousing system. There are British goods and foreign goods which are indiscriminately in Excise and Customs warehouses. The solicitor to the Customs had advised that by analogy to certain functions thrown upon the Commissioners of Customs by the Merchandise Marks Act, their function extended during the whole time that the Customs goods were in warehouse. Now, inasmuch as under the Merchandise Marks Act there are no functions imposed upon the Commissioners of the Inland Revenue, it is plain, therefore, that though the provisions of the Merchandise Marks Act might extend to Customs goods in Customs warehouses, they could not extend to Excise goods in Customs warehouses, or to any goods in Excise warehouses. That was the question upon which we were asked to consult together and report to the two Boards.

22,286. Supposing a similar case were to come up to an amalgamated board, do you think there would be any advantage in having one legal department?—I think there would be one officer giving one opinion, and probably he would have given that opinion by relation to both classes of goods, and both classes of warehouses, in the first instance—he would have taken a larger view.

22,287. It would have been his duty to know all the legal aspects of both Customs and Inland Revenue work?—That is the point.

22,288. As regards the preparation of legislation for Parliament—I mean the annual Customs and Inland Revenue Bill—is there a co-ordinate responsibility so to speak between you and the solicitor of the Customs with reference to that Bill?—The Chancellor of the Exchequer always looks upon me as responsible.

22,289. As principally responsible for that Bill?—Yes. I prepare the resolutions and hand the resolutions to him, with the exception, I may say, of the tea resolution; that has been the annual Customs resolution for 23 years, with the exception, I think, of alterations in the tobacco duties, and of the wine resolution of this year.

22,290. (*Mr. Harvey.*) The tea duty is still an annual duty, is not it?—An annual duty, which runs from August.

22,291. (*Chairman.*) That Bill is presented from a legal point of view on the joint responsibility of yourself and the solicitor to the Customs, is not it?—A great number of the Budget Bills during my time—I think it is eight or nine—have had nothing relating to the Customs but the imposition of the tea duty. There have been cases in which small amendments in the law have been made in the Budget Bill by the Customs, and as I say, there was the imposition of the bottled wine duty this year. You may take it, however, that it bears but a very small proportion to the Inland Revenue legislation in the Budget. I may add that the solicitor to the Customs always passes that legislation through me, and I take upon myself, though of course in substance I would not think of altering it, to make it read as if it came out of the same *officina* as the rest of the Bill.

22,292. Would you be good enough to confine yourself to the aspect of the legal department and the possibility of making one legal officer do the whole work of advising the Government upon revenue matters?—Mine is really little more than a general statement. I had put down in the memorandum I brought with me instances which bear it out, but it is really only a general statement that so far as my experience goes it would be very much to the advantage that the legal departments should be under one head. I can only give that as a general statement of mine, unless I illustrate it by instances which I could give. Of course I feel rather in a delicate position, because the solicitor to the Customs is a personal friend of mine, and I should be very sorry to say anything, even before this Commission, which would lead to any inference in his mind that I set myself up against him or his opinion. I do not know whether he agrees with me or differs from me upon the general statement, for I have never talked to him upon the subject.

22,293. Is it your opinion, speaking generally, that from a public point of view it would be possible to conduct the legal business of advising the Commissioners of the Inland Revenue and of the Customs by one solicitor's department?—Most certainly, and very much to the advantage of the Chancellor of the Exchequer and the interests of the revenue.

22,294. (*Mr. Harvey.*) Could you tell us as to the proportion in which the Excise or Stamps Branch gives your department work?—Excise gives the greatest proportion.

22,295. Not Stamps?—Stamps is very large. I am able to show you the growth of Excise, for I jotted it down, thinking such an inquiry might be made. Excise prosecutions in London: In 1865 (the year before I came), cases heard, 34; in 1875, 609; and in 1885, 2,257. Those are all conducted by men in my own office.

22,296. To what do you attribute that great increase in prosecutions?—Because we have brought so very much under the Excise supervision which is all a system of penalty and proceedings. Take the case of the Beer Act of 1880, which has enormously increased the prosecutions. We have been prosecuting an enormous number of publicans for dilution of beer in London during the last year or two.

22,297. As to stamps, does it give a considerable amount of work to your Department?—Yes; but of a totally different character. In stamps the major part of the work (save that of advising upon the duty and correspondence which, of course, is very large, as people are writing continually to know what the stamp duty

upon an instrument would be) relates to the judicial function which we perform. We are a court of first instance for adjudicating the stamp duty upon executed instruments, and the number of them, which when I came to the office was 400, is now as many thousands—it is 4,000.

22,298. Do you mean 4,000 cases of adjudication of stamps?—Yes.

22,299. In the year?—Yes, 4.000 in the year. Of course personally I cannot do that; my chief clerks do that, and even those below chief clerks, but from their decision is an appeal to the Court. I need not say that before an appeal I always see the case.

22,300. Now would you be good enough to tell us on what you base your statement that your department could undertake the whole of the Customs' law work with only a very slight increase?—Because I do not think that there is much Customs law work in relation to the Customs duties.

22,301. We have had it in evidence that the Customs authorities have found a very considerable increase of work, and of difficulty in working the Merchandise Marks Act?—That has nothing to do with duty.

22,302. In your estimate as to the capability of your office to take over the Customs work, had you in your mind the possible amount of work that might be thrown upon the Customs office by the Merchandise Marks Act?—I ought to have had it in my mind because it has just been before me, but I was confining myself really to Customs duties—to the duty question. The Merchandise Marks Act is, of course, a question of landing; it is really the prohibition against goods being landed with an erroneous name or mark upon them.

22,303. Still it is, so far as we are concerned, a part of the Customs' work that they are called upon to discharge, and with reference to which one would imagine that references to their legal department might from time to time become necessary; what I wanted to get was the foundation for your statement that you could take over the law work of the Customs with only a slight addition to your own staff?—I am bound to say that I did not have in view the Merchandise Marks Act, but I am not at all aware that the solicitor to the Customs has himself desired any increase of staff in consequence of that new Act; and, therefore, I was looking at it rather in that aspect. I think that that work very likely is ephemeral, and that there will not be the same amount of difficulty in the construction of the Act now and for subsequent years that there has been perhaps in the first year of the working of the Act.

22,304. I suppose we may take it that to give advice on any matter connected with the Customs laws involves long and minute acquaintance with the Customs Consolidation Act?—Yes, one Act.

22,305. You see no difficulty yourself in taking over in your department without any perceptible increase of staff, the whole of the work now done by the solicitor's office of the Customs?—That is my impression.

22,306. I think it would help us very much if you could give us any grounds for that opinion; it is, of course, a most important contribution to our view of the matter. Have you yourself had a practical acquaintance with the working for any length of time of the Customs legal staff?—I should certainly say no. I must answer that in the negative, but I know the class of questions that come before the solicitor to the Customs, and I know that a great number of those questions are very analogous to the questions which come before me.

22,307. Would you think that the Customs prosecutions would in any way require special treatment by your department or special knowledge, or would the knowledge that your men have got of excise and revenue law be adequate for dealing with them?—Perfectly so, I think.

22,308. I observe in your memorandum you stated that "the control of the collection of all the duties by "one central authority would result in benefit to the "revenue, as an absolute uniformity of practice would "tend to prevent evasion of duties properly payable." Would you say that the present division leads to "evasion of duties properly payable"?—I think so, because I think there are weaknesses in our law which are supplemented by provisions in the Customs law and *vice versâ*, so that if you were to weld these two laws together you will get the advantage of each code of law where it is more stringent than the other.

22,309. Do you base that opinion upon actual instances which have come before you?—Yes. Those are instances of which I have made a record thinking they might be of use.

22,310. Those, I take it, are instances (I would emphasise this) in which you think that the revenue has actually suffered—payment has been evaded—from the departments being distinct; is that so?—Yes. I have put it under the head of disadvantages arising from the separation, which, I think, is really what you want. As instances of cases in which correspondence and friction have arisen, I would mention this one first. Section 69 of the Spirits Act, 1880, enables a licensed distiller or rectifier or compounder to add sweetening or colouring matter or any other ingredient to any spirits warehoused by him in an excise or customs warehouse. The enactment proceeds entirely upon the lines that such treatment, which is a compounding of spirits, should only be effected by a person who has obtained an Excise licence, the duty upon which is 10*l.* 10*s.* The section has led to considerable discussion in consequence of objections raised by the Customs to the requirement of a licence for the treatment of foreign spirits in their warehouses, and they raised a question whether the enactment has any reference to foreign spirits, and it is not now regarded, upon the advice of the law officers, as applying to foreign spirits. There should be no distinction as to the necessity for a licence, whether the spirits treated are foreign or British spirits. That is one instance. I will give you another: In the year 1886, there was a considerable quantity of fermented liquor which proved on analysis to be derived from a basis of white wine of low quality, and which was found by the Inland Revenue officers upon the premises of a rectifier. From inquiries, it was ascertained that this liquor had been imported as spirits upon payment of the duty of Customs, and had been removed to the rectifier's with a Customs permit. A rectifier cannot have wine on his premises at all.

22,311. Then, so far, that was a slip of the Customs officer?—Yes. Section 89 of the Spirits Act, 1880, imposed a penalty of 500*l.* and incapacity to hold a licence for three years upon a rectifier having liquor of this description on his premises. The Commissioners of Inland Revenue hesitated to prosecute on account of the action of the Commissioners of Customs, who had allowed it to come in as spirits, and informed them of the facts and directed their attention to the result of the analysis, but the only reply received was that under the law and regulations of the department, that is, the Customs Department, the officers of Customs were justified in accepting the entry passed by the importers of the goods as spirits. Another disadvantage is to be found in the specific provisions of the law relating to the frauds on the revenue which are entirely due to the existence of the two boards. Thus a penalty is imposed by the excise law for frauds in relation to goods liable to a duty of excise, and another penalty is imposed by the Customs law for frauds in relation to goods liable to a duty of Customs. It is not always easy to determine in a case where the same class of goods is liable to Excise or Customs duty, according to the place of manufacture (take the case of plain spirits, for instance), which of the two penalties has been incurred, and the substitution of one simple enactment in respect of goods liable to any duty would be a great advantage. It also occasionally occurs, as in a case now pending at the instance of the Inland Revenue, that penalties in relation to Customs and Excise are incurred by the same person in connexion with a fraud upon the revenue. In such a case, although the Board of Inland Revenue can deal with Customs as well as Excise penalties, there is no similar power in the Board of Customs as regards Excise penalties. That is a very peculiar result of the law.

22,312. (*Chairman.*) That could be remedied without amalgamation, could it not?—That would be remedied immediately by amalgamation.

22,313. But could it not be remedied without amalgamation?—Of course it could by giving the Customs the power.

22,314. (*Mr. Harvey.*) Had those cases been referred to the Treasury? With reference to the case to which you last referred, did you consider it your duty or did the Chairman of the Board of Inland Revenue consider it his duty, to call the attention of the Treasury to the

Sir W. H. Melvill.

5 Dec. 1888.

fact that by a very slight modification of the law that difficulty would be obviated?—No, because it would be for the Customs to do that; it would be a question of an increased power to the Customs. We have the power.

22,315. But the revenue was clearly suffering, was it not?—Clearly, because I think both Boards ought to have the like powers in relation to both duties.

22,316. For a moment, putting aside the question of amalgamation, did it not occur to you that that was a matter which could very easily be put right by the Treasury without trenching upon the general question of amalgamation?—Certainly, the Customs by suggesting an amendment of the law could do it.

22,317. Do you know whether they did or did not make the suggestion?—I do not know, it is only incidentally thrown out by me. It was a case of an Inland Revenue prosecution, and we had the powers in relation to goods subject to the duty of Customs as well as those subject to the duty of Excise; it was the converse proposition.

22,318. May we take it, that in the case of any improvements of the law which occur to you as the result of prosecutions you consider it your duty to report through the Commissioners of Inland Revenue to the Treasury any alterations which you may think desirable in the law?—We do do so affecting our own law.

22,319. (*Mr. Lawson.*) Not with regard to the Customs?—Not with regard to the Customs, and that, I think, is one of the disadvantages of the dual administration, because the necessity for the amendment of the law only comes before one and if it came before the whole you would have the suggestion made.

22,320. (*Mr. Hanbury.*) Do not you communicate with the Customs in a case of that sort?—Not so, because in the particular case with which we were dealing our law suffices.

22,321. (*Mr. Harvey.*) Suppose there was one Solicitor's Office for the Customs and Inland Revenue and the whole question of any general amalgamation of the services were left aside altogether, all the disadvantages that you have pointed out might be rectified?—I think so.

22,322. All that your evidence goes to, I take it, is this: that an amalgamation of the legal departments would result in certain advantages to the collection of the revenue and to the general administration of the Customs, and Excise, and Inland Revenue?—I think so; of course it is not for me to go beyond it.

22,323. (*Mr. Lawson.*) Looking down the estimates it is impossible to tell what the total of the salaries is for your London Office as compared with the Customs, but should I be far wrong if I said it was at least twice as great?—I should think more.

22,324. Have you ever compared your estimates?—I have done so.

22,325. But you do not know what the difference really is now?—I really do not know, but I should say that we were certainly double.

22,326. Do you consider that your work bears the same proportion to the work done by the Customs at the Solicitor's Department at the Customs?—I should say it was tenfold.

22,327. Chiefly from Excise?—And stamps and taxes, and legacy and succession duty, in fact, I cannot tell you all; any one of them is an enormous business.

22,328. I suppose mainly of a routine character?—I beg your pardon, if you were to consult the law officers they would tell you whether it was of a routine character.

22,329. Then you think that you have as many questions to deal with as those which are decided in the Customs, with reference last year, we will say, to that new Act of Merchandise Marks; you have new matters arising from time to time?—Yes, continually; every new duty, as I need not tell you, brings us an enormous correspondence and also, I am sorry to say, litigation.

22,330. In case of amalgamation, I did not gather whether you thought that the increase in your staff would mean any large increase in the estimates?—I think not.

22,331. What proportion do you think; have you formed any opinion?—I have not formed any opinion upon it.

22,332. You have not considered what the staff in an amalgamated office should be?—I think the Chairman asked me, and I answered and intended to answer directly, that I thought it would necessitate no increase of staff in numbers. I thought it possible that in the first instance someone from the Customs should be attached to the office, because there might be some special points connected with their law, and it would be advisable to have somebody conversant with it, at all events, at the first.

22,333. But your point is this, that the work done now in the two offices could be performed at the same cost in one?—The question of cost I have not considered; the question of numbers I thought of.

22,334. In considering the case of amalgamation, did you contemplate it?—I cannot say I contemplated it at all.

22,335. Could you answer that question; do you think it could be done at the same cost in one office?—Of course it could be done.

22,336. And all in one building?—No doubt.

22,337. You say that you are asking for an increase already?—I am.

22,338. To what extent?—I think it is to the extent of four additional men.

22,339. What would that addition come to, do you know, 400*l.* to 500*l.* a year, or 500*l.*, or 600*l.*?—I think it is two supplementary clerks and two established clerks, and that would come, I think, to 500*l.* at the commencement; two at 150*l.*, and two at 100*l.*

22,340. There would be ample work for them to do, even if you did not take over the Customs work?—Doubtless.

22,341. Then I do not quite understand if that is the case how you could take over the Customs work without a further addition of staff?—Excuse me, the great difficulty that we have to contend with is the number of prosecuting clerks who are away prosecuting. There would not be much prosecution, except in London, at all events, from the Customs work.

22,342. Where do the expenses of those clerks come in—under sub-head "P"; expenses of prosecutions?—No, in salaries.

22,343. (*Mr. Harvey.*) Then your point is that they could be conducting perhaps Customs prosecutions as well as revenue prosecutions?—Quite so, in London.

22,344. And that the additions to the actual office work in London would not be sufficient if you take over the Customs work to cause any increase of staff there?—No increase of staff; that is the point that I intended to make.

22,345. (*Mr. Hanbury.*) Do you mean to say, in reference to the men who are now conducting the prosecutions for the Inland Revenue, it would cost no more to engage those same men to conduct Customs prosecutions also?—That is so, because they are not numerically very great.

22,346. Then in that case their time at the present moment cannot be very fully occupied?—My men's time?

22,347. Yes, the people engaged in these prosecutions?—Does not that depend upon the number of prosecutions which come over from the Customs?

22,348. That is what I want to know?—Of that I can give you no information, but so far as I can judge from the same sources that we all can, they are few in number.

22,349. (*Mr. Lawson.*) I have now added up the total of salaries paid in your office in London, and I find it comes to about 12,700*l.*; that is about three times the amount paid in the Customs legal department?—Yes, that would be so.

22,350. (*Mr. Hanbury.*) Are the solicitors at Dublin and Edinburgh in any sense under you, or are they perfectly independent officers?—They ought to be under me, I think.

22,351. What would be the advantage of that?—I think it is very desirable indeed that they should be assistant solicitors, so that their opinion can be readily referred to me, if necessary. I do not like over-ruling their opinion, they being co-ordinate, as it were.

22,352. As I understand, there is no amalgamation even of the solicitors' offices inside the Inland Revenue itself, and yet you are pressing for an amalgamation of

the two great departments?—I beg your pardon; do not understand me as pressing for it at all. I am not pressing for it and do not desire to.

22,353. Suggesting it, at any rate?—Yes.

22,354. Do you think it would be possible to amalgamate the solicitors' offices o the two great departments without that amalgamation extending to the whole of the two departments; would it be possible, even supposing that the Customs and the Inland Revenue Departments remained distinct, for them to have one solicitors' office in common?—Of course it would be possible; whether it would be quite convenient I am not sure.

22,355. Can you suggest any possible inconveniences?—Yes, I can; because, assuming at the Customs there are anything like the constant references, secretaries and everybody going up to consult the solicitor as at Somerset House, without a moment's warning, I think it is natural that it would be inconvenient if the solicitor was in another building. Lord Lingen once came to look into my office, and I think I pointed out the same thing to him when he suggested whether it was possible that my department could be moved out of the building at Somerset House. Upon that occasion I told him that I thought it would be impossible, in consequence of the number of cases that the Board referred, and the personal inquiries that were perpetually taking place, that you could remove the law department out of the building.

22,356. That rather assumes that if there were an amalgamation of the two departments, the heads of those departments would be all fixed in one office, and be able to get to the one solicitors' office at once?—That is my assumption.

22,357. Then it is a question of buildings to some extent?—Excuse me. Of course I am very ignorant of what has transpired before the Commission.

22,358. I am only asking you this fact: You tell me that the difficulty of buildings would arise if you had one solicitors' office for two separate departments?—I think so.

22,359. But that difficulty would equally arise unless after the amalgamation, the chiefs' amalgamated office were all in one office?—That is so. But I am alluding particularly to the secretaries and assistant secretaries.

22,360. Do not other people lower down in the different offices come to you direct then?—Occasionally. Of course the Chief Inspectors and the Controller of Stamps come to me, and many other people come.

22,361. (*Mr. Harvey.*) In the case of a document being brought to you for adjudication of stamp duty, and there being a doubt, do you answer it off-hand, or do you take time to consider, as a matter of practice?—As a matter of practice, I take time to consider, if it involves any difficulty.

22,362. (*Mr. Hanbury.*) I see there are two solicitors at the Inland Revenue and two solicitors at the Customs?—A solicitor and an assistant solicitor.

22,363. What I want to get at is this: Is it the case as at the Treasury, where I fancy three out of the four of those solicitors are not solicitors at all, but barristers; are all of these four solicitors?—I am a barrister, and was called in 1853.

22,364. Will you tell me how many solicitors in are your office?—Mr. Furlong is a barrister, he is the Dublin—the Irish—solicitor.

22,365. I will take your own department first. You are a barrister, I take it, not a solicitor at all?—I am a barrister. I was 13 years at the bar when I was appointed.

22,366. Is your assistant a solicitor or a barrister?—He is neither.

22,367. Neither?—Neither. I think I can explain it to you. He was assistant solicitor, and had been there three years when I was appointed. He had been a solicitor; but in order to go to the bar, as I daresay you are aware, it is necessary to be struck off the rolls, and he was struck off the rolls; and while he was a student for the bar he was appointed to the position which he holds.

22,368. He has some legal knowledge?—Certainly; but I was obliged to give you that answer.

22,369. What is the solicitor at Edinburgh, do you know?—He is, I think, a solicitor. But, of course, in Scotland they have not got the same terms as we have, and I do not know whether he is a writer to the signet.

22,370. Is he what corresponds to a solicitor in England?—I do not know that he was really a solicitor, but he had been for such a very long time the assistant to the late solicitor. The late solicitor had been an advocate.

22,371. How about Dublin?—The officer there is a barrister.

22,372. Can you tell me about the two at the Customs?—Mr. Follett was a solicitor at Exeter.

22,373. And his assistant?—He is a barrister.

22,374. (*Lord Lingen.*) I suppose the Customs have business both from Edinburgh and Dublin?—Yes, they have an agent there. I think they have what is called a law agent for their business.

22,375. That is, that he is paid by bills?—Yes, I think he is paid by bills.

22,376. If this amalgamation was carried out should you be able to conduct the united business with your four chief clerks?—Yes.

22,377. You would?—Certainly; because I have got such a good excise chief clerk.

22,378. Does that equally apply to the six assistant clerks; should you be able to conduct the business with that number?—I am not quite certain whether I am not an applicant already for another assistant clerk in consequenee of the excess of business in Stamps and Excise. My application has been before the Treasury for some little time; but, of course, pending this inquiry, amongst others, it has remained undealt with.

22,379. Supposing the legal business of the Inland Revenue and of Customs was united, the present organization of your department would be suitable for the united work, would it?—I think so. I should not propose to alter it; but, as I daresay you are aware, there are propositions to alter the constitution of all the legal departments.

22,380. Supposing the departments were united, a large part of the Customs work must continue to be conducted at the waterside; legal points that arise in Thames Street, and that must be answered at once, how would you propose to deal with those under your responsibility?—I should deal with them, I presume, in the same way as the solicitor of Customs deals with them now.

22,381. But the solicitor of Customs is there; you would be at a distance of a couple of miles through crowded streets?—Of course I am speaking ignorantly, but I do not know that distance would affect it materially. In my opinion there might be some cases in which he has to give an opinion *eo instanti*, but rarely, I should think. I am speaking ignorantly, because I really do not know that.

22,382. Have you any experience on this matter; do you receive now questions on legal points by telegram?—Yes.

22,383. Constantly?—From our own officers, and we are obliged to answer them to the best of our ability.

22,384. (*Mr. Harvey.*) You do answer them; you do take legal action by telegram?—No, we should not take action, but where an officer says, "a case is going on," there you are obliged to reply *quantum valeat.*

22,385. But now suppose that meant an important question, as to whether certain goods were or were not liable to duty, or whether certain goods might or might not be allowed to pass out of the control of the officer; do you not see that there might be considerable difficulty, from the fact that the head of the legal department was not on the spot?—That might be so, but I thought you were referring to a case in court.

22,386. I was taking up Lord Lingen's examination with reference to waterside goods, and what I would call legal matters at the waterside, necessitating instant action?—No doubt there might be a case in which it would be much more desirable to have the solicitor on the very spot.

22,387. (*Lord Lingen.*) All your establishment that is enumerated on page 46 of the estimates is actually under your own eye, and in your own office; it is not locally dispersed, is it?—No, it is all at Somerset House under me now.

22,388. So that, supposing one of your chief clerks, or one of your assistant clerks, or one of your law

Sir W. H. Melvill.
5 Dec. 1888.

clerks, was detached to Thames Street, I am not saying whether that would work or would not work, but, so far as that had to be done, it would be a change in your present system?—It would, indeed.

22,389. And on the whole, I rather gather, from your manner, that you would deprecate it?—I should deprecate it.

22,390. (*Mr. Lawson.*) I should like to know what is the reason that in so many cases you have quoted in your paper, the difference between the customs and excise duty is so narrow, and yet so marked. I see that in beer the duty of the excise is 6*s.* 3*d.* a barrel, the duty of the customs is 6*s.* 6*d.* In the same way with imported cards the customs duty is 3*s.* 9*d.* per dozen, and on home-made cards the stamp duty is 3*d.* per pack. You see it works out to about the same thing, 3*s.* and 3*s.* 9*d.* per dozen?—I think I can give you the reason. It is because the cards are all manufactured under the supervision of officers of excise, for whom the card makers have to find room.

22,391. Why, when the duties are so nearly approximate as they are in those cases, were they not assimilated in amount?—For the reason that it is a sur-tax as a countervailing duty for the expense to which the home manufacturer is put, or supposed to be put. There is a very curious thing, which perhaps I may mention, in connexion with cards, just showing the overlapping question of the Customs and the Inland Revenue. All the cards are put in stamped wrappers. Those stamped wrappers are provided by the Commissioners of the Inland Revenue, and the law provides that there shall be an Inland Revenue officer at each port, who shall wrap, or superintend the wrapping of these labels round the foreign cards, upon a certificate given by the officer of Customs that the duty has been paid. So that there are two men employed in doing work which should be done by one.

22,392. Does that engage many officers, do you know?—I do not know; but there is an Inland Revenue officer at each port where cards are imported; at least the law provides that there shall be.

22,393. (*Mr. Harvey.*) I should like to draw your attention to one sentence from the paper presented to us by the Commissioners of Customs. They say that "the amalgamation will be more nominal than real, "and that it will be difficult to find any one man who "would be able to grasp the business of so large a "department, and be competent to advise the Executive on all the various points which would arise in "the administration of a department, dealing with "such varied business as is included under the "headings of customs, excise, stamps, and taxes." Now, so far as the Legal Department is concerned, I should like to put it to you whether you see any ground for that statement?—I have already said that I do not; but after that statement, I do it with deference, because I do not wish to arrogate to myself a power which the Commissioners of Customs say could not exist in any one man.

The witness withdrew.

Adjourned to to-morrow at 12.30.

SIXTY-FIFTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, December 6th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.
MR. A. B. FREEMAN-MITFORD, C.B.
MR. A. S. HARVEY.
MR. R. W. HANBURY, M.P.
MR. H. L. W. LAWSON, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

The Right Hon. HUGH CULLING EARDLEY CHILDERS, M.P., recalled, and further examined.

Right Hon. H. C. E. Childers, M.P.
6 Dec. 1888.

22,394. (*Chairman.*) You have, no doubt, from your connection with the Treasury as Chancellor of the Exchequer, had your attention called on more than one occasion to the question of the amalgamation of the two great departments of the Customs and Inland Revenue, and the Commission would be very glad to hear in your own way what opinion you have formed upon the subject.—I was secretary to the Treasury in 1865 and 1866; but I did not go back to the Treasury until I was Chancellor of the Exchequer from the beginning of 1883 to the middle of 1885. During my tenure of the office of Secretary of the Treasury the amalgamation of the Inland Revenue and Customs Departments was in the air to a certain extent, but I cannot say more. It was one of the matters which anybody desiring the economical administration of the Government would think of. But between 1883 and 1885 it was a question in a much more advanced condition, and I gave my best attention to it. If the Commission desire it I can amplify that answer and state what passed.

22,395. If you would be so kind.—I will make no further reference to the former period of 1865 and 1866. I became aware, very soon after that time—I could not name a particular year—that Mr. Gladstone's attention had been very much drawn to the question, and when I came to the Treasury as Chancellor of the Exchequer in 1883 I had frequent conversations with him on the subject, and also with gentlemen serving at the Treasury. My own opinion was that, although some years before, any amalgamation between the two departments would have been practically difficult and perhaps open to objection, while the Inland Revenue itself was consolidated rather in form than in substance—that is, while the three great branches of the Inland Revenue Department were still to a great extent separate—the Excise, the Stamps, and Taxes—after they had been really amalgamated and the unity of the department had been as it were established, the time had come for considering, and considering favourably, the amalgamation of the Customs with them, and for this reason, that not only was the business of the Inland Revenue Department itself in a satisfactory condition on the whole for such an operation, but the work of the Customs had been immensely simplified. The arrangements as to warehouse amalgamation at places where there were warehouses, under both the Inland Revenue and the Custom House, had made great advance, and therefore the question was no longer so complicated as it had been, but relatively simple. Having studied it with very great attention—and perhaps I may say that I had done so while out of office as well as when in office; it had been for some years a matter that I had thought over and made all the inquiries I could about—I came to the conclusion in my own mind that, subject to the discussion of certain specific difficulties which had to be got to the bottom of, that amalgamation could be effectively carried out. I therefore, when Chancellor of the Exchequer, applied myself to the discussion of the question at the Treasury with members of the Treasury Department who were thoroughly conversant with the details and with the difficulties; and in the years 1883–84, I think I mastered most of the points of difficulty, and my mind became

more and more satisfied that the solution was practicable. But there remained two points of grave difficulty, and I came to the conclusion in 1885, some months before we left office, that it would not be politic at that particular moment to carry out what on other grounds I thought was a desirable policy. The first difficulty was with reference to the internal condition of the Inland Revenue Department itself. We were in the middle of a great controversy between the Board and the officers, which had been attended with a good deal of heat, and which had become the subject of Parliamentary question. It had been my duty, on a motion of Lord Randolph Churchill, to explain to Parliament how the matter stood; and until that heat was over, and the question was at rest, I did not think that it would be practicable to take up the amalgamation of the departments and to carry it through readily. That was the first difficulty. The second was that I was not quite satisfied that the new arrangements with respect to the consolidation at certain places of the warehousing departments of the Customs and of the Inland Revenue had quite sufficiently advanced to enable us to take a second step. Of course the Commission are well aware of, and I presume have taken evidence upon, that amalgamation of the warehousing departments. Practically it was this—that in cases where there were warehouses in the same town connected with both the Inland Revenue and the Custom House, one of the two departments should have in future the supervision of those warehouses, and, generally speaking, that would be the Inland Revenue rather than the Custom House. My belief was in 1883, 1884, and in 1885 that it would be politic to have a little more experience of that amalgamation and the difficulties connected with it, and that some of the friction which it inevitably occasioned should be got rid of, before the same thing was carried further, as it would be in the entire amalgamation of the two departments. And therefore I determined in 1884 and 1885 to hold my hand and not make at the moment any proposal to Parliament, with the knowledge, however, that when I saw my way to make that proposal I should have Mr. Gladstone's entire support as First Lord of the Treasury. I think I have given now a historical account of my own connection with the question.

22,396. You have told us of two points of difficulty which existed at the end of your tenure of office as Chancellor of the Exchequer, and I think you referred previously to certain specific difficulties which you thought ought to be got rid of before you could proceed to recommend Parliament to amalgamate those two departments. Are these difficulties outside that you point to?—No; those are the two points. I do not think I used the words "Get rid of," but that we should see more about those difficulties, and that the friction which had existed should be diminished.

22,397. (*Mr. Freeman-Mitford.*) I think the words you used were, "get to the bottom of"?—That would express my view.

22,398. (*Chairman.*) I gather from what you have said that at the present moment the difficulties that you saw at that time having been removed, you are in favour of amalgamating the two departments?—I believe they have been removed. I have had no official connection with the Treasury since. Therefore I can only speak from what I hear, but I believe that the internal difficulty in the Inland Revenue Department has been removed; that there is peace there, whereas there was anything but peace in the years to which I have referred; and I believe that the additional experience of the amalgamated warehouse system is quite satisfactory and the friction is much less.

22,399. Have you considered at all to wha extent you would carry amalgamation or consolidation?—I think that there will be no practical difficulty in bringing the Customs, which, of course, is the lesser department, into the Inland Revenue.

22,400. You would in the first instance, I apprehend, amalgamate the Board—whatever you made the authority that controlled the great Revenue Department, it would be one controlling authority?—Certainly. May I reserve the question whether a Board's action is the best? Reserving that, I think that the superior authority should be amalgamated.

22,401. Then you would proceed to adopt one classification and scale of salaries for all the officers of the two Revenue Departments?—That would have to be done gradually and prudently. I doubt whether with a stroke of the pen, a complete amalgamation in that way, could be effected directly, but the duties could be amalgamated quickly enough. The vested interests of the gentlemen in a certain position in the service would have to be considered, but I should doubt whether within a year or two there could not be carried out complete amalgamation.

22,402. Do you not foresee that certain difficulties might arise with reference to the claims for levelling up salaries, which in these cases are very often very difficult to meet?—Yes; to a certain extent. I believe that there may be slight differences in the prospects of the officers of the two departments and in the exact scales, but I studied that question very carefully when I was at the Treasury and I did not think that that would offer any insurmountable obstacle.

22,403. The opinion of one important officer of the Treasury, Sir Reginald Welby, who came here yesterday, certainly is this: that in the view of the departmental Treasury, it would not be wise to disturb the existing order of things unless a scheme was laid before the Treasury to show how that difficulty to which I have referred could be got over, and substantiating the fact that it would be a real, considerable economy?—Yes.

22,404. Do you see any difficulty in getting that done in advance, so to speak?—No, I do not, provided it is brought into operation prudently, and not too hastily. I think it would be decidedly expedient to have a scheme well discussed first in all its details: and as you could not at once change many of the salaries, you would have to make the changes prospective, although those prospective changes should have been determined in principle when the amalgamation is made.

22,405. I think you said you withheld for the present whether a board was a desirable form of governing the amalgamated department—have you an opinion upon that point?—I dislike administration by boards very much. I should very much prefer a single head of a department with proper subordinate officers, but I do not think that in amalgamating the two departments it would be necessary to make that change at first. I should rather let that follow. I should prefer to have for the moment one board, on something like the present system, trusting to being able after a certain time to substitute for the board the administration by one head and proper subordinates.

22,406. A further objection is presented to us in some quarters that making one head in the sole Revenue Department of the country would be creating too large a place for a civil servant?—I do not think so.

22,407. Do you think there is any danger of its becoming too political an office?—I do not think so. I hope Parliament would set its face against any movement in that direction. We have got quite enough Ministers, and I should be very sorry to see another one added; but I do not think that the work of the Revenue Department when it is unified will be too much for one head, of course assuming that he has adequate assistance.

22,408. You think that it would not be a place beyond the capacity of men whom the Government of the country might secure to thoroughly advise the Chancellor of the Exchequer in all particulars of taxation?—No; I think not. I think that it would not be too much. I have given evidence before other committees and commissions as to the trifles which under our system in some departments go up to the head, and I have deprecated that practice very much. I think a great deal too much of a trifling character does go up to the heads of departments, but that is a question of good administration, and I do not fear that under a reasonable system the head of the Revenue Department need be burdened with greater responsibilities than are entailed upon the heads of other great departments.

22,409. Then it has been suggested to us as an objection to the amalgamation, that it would not be wise to diminish the number of responsible advisers that the Chancellor of the Exchequer has at present at his hand when he is considering the taxation of the country in any proposed change; and it is suggested that it is very desirable that any Chancellor of the Exchequer, however experienced in finance, should have at his hand at least two responsible heads of the two great Revenue Departments, so that there is a kind of cross-fire criticism between the one and the other, which must be in the long run beneficial to the country.—I should not hold that view at all. On the contrary, I should have thought that the Chancellor of the Exchequer would be much better advised by one than by two in the same matter; that is, where the Customs question and the Inland Revenue question are practically the same question, it is much

Right Hon. H. C. E. Childers, M.P.

6 Dec. 1888.

better to get the single advice, and where the questions are not the same, where they are separate, I do not think they are too many for one adviser.

22,410. I daresay you are aware when you speak of the amalgamation and consolidation that has already taken place between the Excise and the Stamps and Taxes, that practically is only an amalgamation and consolidation up to a certain point; that, as regards the heads, you may say practically that two or three ultimately have the control of each separate matter which occupies entirely the work of those separate departments?—That must always be in great departments. You must have heads for the different branches of work, that is inevitable.

22,411. The heads would be the same. As I understand distinctly the chairman, or one authority, whatever it was, whether it was a board or anything else that controlled the Customs and Inland Revenue, would be the ultimate responsible man for the higher questions of Customs and Inland Revenue?—Certainly; and there might be some under him who would advise him in the general survey of his work, but there must be also Heads of Divisions for each branch of work.

22,412. I think that you were at one time a Commissioner of Customs in Australia, were you not?—Yes, I was Commissioner of Customs in Victoria, having also the duties of the Board of Trade, and what little there then was of Excise work.

22,413. Have you at all followed the practice which obtains in the colonies or in any foreign countries with reference to this very important point of getting the whole revenue in the hands of one officer?—This question of keeping separate, rather than bringing the Inland Revenue and the Customs Revenue into one department was considered there, though some years after I left, and the two are now under one head together. I cannot speak with as much knowledge as I should wish as to foreign countries. I think others would be able to give better information than I can.

22,414. There is a Council of Finance, I think, in France, is there not?—Yes, but then in France they have a dozen people to do the work which we do with two or three.

22,415. Do you think the Civil Service of this country is more economical in that respect than the Civil Service in France?—The clerical staff, as far as numbers are concerned, is on a much larger scale in France than it is with us. You may have read Lord Stanhope's book just issued giving the Duke of Wellington's remarks on that subject. He mentions that the Duke of Wellington obtained information as to the staff of the War Office in Paris, and he found that it contained 4,000 clerks, and he compares that with our staff.

22,416. (*Mr. Lawson.*) Is that true now?—That was the case then. I do not know how it is now. But there is no question (I can speak from personal knowledge in some cases) that the clerical staff of some departments both in France and Italy, is enormously in excess of what we should consider a proper clerical staff, much as we, I think, can still reduce in many departments.

22,417. (*Chairman.*) Then do I understand that you, having carefully considered this question, are distinctly of opinion that a very large economy might result from amalgamation?—Yes, I think so. I have no doubt, from looking carefully into the establishments of the two Boards, and also from the experience of the qualified amalgamation with respect to the warehouses, that there would be a very distinct and considerable economy resulting from amalgamation.

22,418. Do you think there would be a larger economy than would be effected by a reduction at head-quarters? In the criticism which the Customs have written to us upon the proposals, they point out that there might be a diminution of something like 6,000*l.* at head-quarters by abolishing two or three Commissioners, and having one Accountant-General and one Secretary, and so forth, and that there might be further economy as regards some of the warehouses at the larger ports, which they estimate at about 4,000*l.*, but that, of course, could be done without amalgamation. They estimate that something like 11,000*l.* or 12,000*l.* would be the economy.—The Customs in my time were very much opposed to the idea of amalgamation, and put it always in the extreme light. The opinion of the authorities of the Inland Revenue Board at that time was, I think, different. They considered that a much larger economy would result, and I confess, as far as I was able to carry my enquiries, my impression is that there would have been a considerable economy. I should in all probability have made a proposal on that footing in 1886 had I remained in office.

22,419. Supposing that we should not be able to see our way to any larger economy than that which I have just said is put forward by the Customs—namely, something like 12,000*l.* a year—would you still think that it would be desirable to disturb the existing order of things or not? do you think that there would be more efficient administration in the collection of the revenue caused by amalgamation?—I think so, decidedly. It is very difficult to give a detailed answer with respect to figures which one is not able to criticise thoroughly; but the amalgamation itself would be good, and I think, if you only get the economy you mention, it would be an additional good.

22,420. (*Mr. Freeman-Mitford.*) In what way would the amalgamation in itself be good?—It would be good in this way—that it would be satisfactory to the merchant, it would bring about simplification of regulations, it would put the whole service upon the same footing with respect to the collection of revenue, and it would help undoubtedly in securing a better organisation in future if you have one department to deal with instead of two.

22,421. In that respect have there been any complaints from merchants, because we have been rather led to believe that the shipper, the broker, the merchant, and the retail tradesmen are all satisfied with the present order of things?—I can speak particularly to the warehousing part of the business. The whole of the discussion which led up to what I have called the partial warehousing amalgamation was carried on with full knowledge of the opinion of the merchants and of those who were interested in warehousing, and I feel confident that the great mass of that opinion was favourable to one system and unfavourable to the double system.

22,422. (*Mr. Hanbury.*) Was there any strong feeling one way or the other, do you know?—Yes, certainly, so far as it reached me at the Treasury; and I had a great deal of unofficial conversation with persons connected with trade, and their opinion was all one way.

22,423. (*Chairman.*) I suppose that, generally speaking, so far as you remember that state of things then, that the difficult question of collection and taxation is carried on without very much friction, and with very fair convenience to the trader?—Of course, the great mass of taxation is the Inland Revenue taxation—the Customs is very much less. The Inland Revenue administration, I think, is in a very satisfactory condition. The Customs arrangements are simple, and could be easily transferred to the Inland Revenue Board. You would not require any great shock in making that transfer, and you would have the other advantages I have named.

22,424. (*Mr. Harvey.*) We have had a great deal of evidence given to us to this effect: that you could not really get an amalgamation between the services, that the subordinate duties are so different, that the knowledge required to make a good Customs officer and the experience required is so considerable, that your consolidation would really be nominal and not real; that, practically, although you might amalgamate certain of your offices—for instance, your Accountant's office, or, perhaps, even your Solicitor's office—that, so far as the officers who are distinctly connected with the collection of the Revenue are concerned, they would continue to remain separate and distinct?—The officers specially connected with the Revenue would be, in the main, the warehousing officers; in less numerical strength, the officers of the Long Room in the Custom House and those who are directly brought into financial relation with the payers of duty. I do not think there would be any difficulty in amalgamating them, or in having a body of officers well versed in that work, and this the amalgamation of the warehouses at any rate has shown. Of course the business of the Customs on board a ship is foreign to any business that the Inland Revenue officers now do, and there always must be a body trained for the work of taking charge of goods on board ship, and of seeing them properly landed, under whatever title those officers act. That is business which is outside the Inland Revenue Department, and for which in future, as now, officers would have to be trained. But I do not think there would be the least difficulty in their being trained under a Board or an authority which governed what are now the two departments. Of course the people who go on board ship, or who have charge of the landing, under whatever title they may be called, have peculiar work—work separate from the warehouse work, or from the work of the offices, or from the accounting work; but the work in the offices and the accounting work can perfectly well be assimilated, and are, in many respects, very similar now.

22,425. Do you not think that positive disadvantages would result if in any way you attempted—for instance, in dealing with the ports of London and Liverpool—to introduce revenue duties into the experience of the officers connected now with those two ports who are at present solely connected with the Customs duties? Do not you think that a positive disadvantage would result if you attempted to introduce revenue duties, even warehousing duties in connection with them?—No, distinctly not as to warehousing duties. I think there would not be any difficulty in gradually bringing the warehousing duties together throughout the United Kingdom.

22,426. You would, of course, extend that to Stamps and Taxes. You would think, I take it, that the distinction between Stamps and Taxes and Customs Revenue is so considerable that you would not think of amalgamating the life career of a man who was meant to collect Stamps and Taxes with a man who was meant to be a Customs officer?—No; they are not, in that sense, amalgamated now. There are particular branches of work for which men must be trained up *ab initio* under any state of things. As I said before, you will have separate branches conducting separate work. But there is no reason why the supervision should not be the same, and there is no reason why, in respect to the receipt of the revenue of Excise, the revenue of Customs, and the warehousing arrangements of the Excise and Customs, there should not be complete amalgamation, remembering that there is already, and working well, amalgamation between the Excise and the very different work of the Stamps and Taxes.

22,427. Does not that seem to you to lend weight to the allegation of the Customs that there could not be any real consolidation and amalgamation right through, because the duties are so distinct?—There could be, in my opinion, as much amalgamation as there is between the Excise, the Stamps, and the Taxes, and much more with respect to certain portions of the Customs business. There are other parts of the Customs business which must be managed by a distinct branch; but the Revenue collection, the warehousing, and the accounting might all be brought together.

22,428. Would you say that there is an amalgamation now between the Excise and the Stamps and Taxes?—No. I have rather put it the other way. I have said there is not in all respects an amalgamation—that there is an amalgamation of supervision, but that there is not a complete amalgamation, and that there cannot be more in some respects. But amalgamation between the Customs and the Excise would be more easy and natural than between the Excise and the Stamps.

22,429. Supposing we could approach the matter now with a perfectly free hand, would you prefer to have one consolidated Board, or would you prefer to have one Board dealing with Stamps and Taxes only, and another Board dealing with Excise and Customs?—That is a very difficult question. If we were beginning *de novo* it might possiby be well to keep up a separate department—I will not use the word board—for Stamps and Taxes; but no one, I think, with our present fiscal system, would dream of initiating separate departments for the Customs and Excise. They, at any rate, would be worked together, and as the Stamps and Taxes have already been amalgamated with the Excise, so far as their supervision is concerned, we need have no hesitation in bringing in the Customs. But whether—taking the thing absolutely with a clean sheet of paper—one would have begun by putting all four under one supervision, I should be sorry to affirm positively.

22,430. May I take it that the present system does not in your opinion involve any grievance to the merchant?—"Grievance" is a strong word. The merchant would very much prefer, so far as I know, that there should be one supervision of the whole of the warehousing arrangements; and where the warehouses are still distinct the merchant does not like it.

22,431. May I ask is that opinion based upon actual complaints made in the course of your experience?—It is based upon what I have read in the course of my official experience and upon conversation. I cannot put it stronger than that. I do not think there was any distinct official complaint during my time addressed to the Treasury, that the merchants had cause of grievance; but they greatly approved of the amalgamation as far as it went, and they were anxious that it should be carried further.

22,432. As to the Exchequer, have you seen cause to think that the Exchequer would gain by the amalgamation? I mean in the actual amount of the revenue collected, or in the promptitude with which it would be collected?—My impression is that it would; but I have not been able to refer to any of the papers of my time, and I could not, therefore, quote exact proof of that.

22,433. We have had some evidence given us to the effect that, so far as agitations are concerned for increased pay, the Treasury find it more easy to deal with them so long as the departments are distinct than they would if they had to deal with an amalgamated department; that, in fact, the pressure of all kinds brought to bear upon the Treasury for increase of salary—for levelling-up, in fact—would be more difficult to deal with in the case of an amalgamated department than in the case of the separate departments. What is your opinion of that?—That is not my view. When similar departments are kept separate there is a perpetual agitation for bringing one to the level of the other, and it is very difficult to deal with that. That is the history of a great proportion of the salary agitations in the public service. I think the Treasury is more likely to be able to deal with it effectively (I am assuming that they are supported by Parliament) when they are dealing with one department than when they are dealing with different departments and different scales.

22,434. As to the financial advice to be given to the Chancellor of the Exchequer; I think, from what you said to the Chairman, you see no advantage in the friction or the conflict of opinion which may be supposed to result from your having two or three advisers?—Two or three departments to advise?

22,435. Yes?—Between having two or three departments to advise, I do not see any advantage. Of course, the Chancellor of the Exchequer, in being advised by the responsible head, whoever he may be, always brings into consultation other practical officers of the department, and confers with them as well as with the chief.

22,436. Do you think that it would be possible for the head of the amalgamated department to retain within his own mind the experience of the three services, embodying so very many complexities as Excise, and Stamps, and Customs?—You say within his own mind. I rather met that by my previous answer. The Chancellor of the Exchequer, in a grave discussion of policy, would not have only the experience of the chief of the department to help him, but he would have the presence and assistance of the experienced officers associated with him. When it was my business to look into any new question I did not satisfy myself by merely hearing what the Chairman of the Board of Inland Revenue or the Chairman of the Board of Customs thought, but with them came their experienced officers.

22,437. I take it that the view which was put before us was rather this—that when the services are distinct the traditions are distinct too; and the Chancellor of the Exchequer is, therefore, likely to get from the two separate departments a distinct divergence of opinion, which very often may lead to better information being given to him?—My answer to that would be that the real distinction is between the Excise on the one hand and the Stamps and Taxes on the other—that the Customs and Excise are practically *in pari materia*, and that you do not want two different heads to advise upon questions of Customs and Excise Revenue. If you want that division at all, you should dissever the Stamps and Taxes from the Excise, and have a separate adviser for them.

22,438. As I understand you, the condition of affairs being what it is, you would not recommend this Commission to take up the question of separating the Excise from the Stamps in order to unite it with the Customs?—Certainly not; but what I meant was this: There may be advantages—I do not think there would, but there might be advantages—in having advice for Stamps and Taxes and advice for Excise, but I see no advantage in having two separate advisers for Customs and Excise, which I have said before are *in pari materia*.

22,439. (*Mr. Hanbury.*) Any amalgamation, I suppose, would only very slightly affect two out of the three departments—that is to say, it would very slightly affect the Stamp Departments of the Inland Revenue and very slightly only the Taxes?—Only slightly.

22,440. So that the whole saving would at any rate refer to the Excise Department of the Inland Revenue?—I should not say that absolutely. I think it would be found that under an amalgamated system there might be officers who would be able to do work for those two branches, but by far the main saving would be in the amalgamation of the Customs and the Excise.

22,441. Do you know—I cannot find it in the Estimates—what is the cost of the Excise Department of the

Right Hon. H. C. E. Childers, M.P.

6 Dec. 1888.

Inland Revenue as separate from the others?—From memory I could not give the figures.

22,442. Not even roughly?—I had that all before me at the Treasury, but it is very difficult after three or four years to carry figures in one's head.

22,443. I ask for this reason, that I see the Customs cost a million a year, or very nearly so, and I wanted to know whether the Excise Department of the Inland Revenue costs more or less than that.—I should think less, but I am afraid you must not take it from me.

22,444. What I am driving at is this—whether the suggestion is one for the smaller department to swallow up the larger or *vice versâ*.—*Vice versâ* undoubtedly. It is one for the Inland Revenue to swallow up the Customs.

22,445. Yes; but the Excise Department of the Inland Revenue to swallow up what is really the larger department?—My impression is that the Excise Department of the Inland Revenue is worked more economically than the Customs, and in that sense it is the smaller department; but that the actual amount of revenue is larger in the Inland Revenue than in the Customs.

22,446. At the time when you entered into this did you go into the question of what would be the actual saving by any amalgamation of this kind on the Customs?—No; for the best of reasons that I had not come to the conclusion to do it. That would have been the final work of 1885 and 1886. What I studied, and studied carefully, were the figures of the amalgamation which had been effected up to that time.

22,447. My difficulty is this, that we have had no complete scheme put before us showing how this would work out in practice as apart from the theory, and I want to know whether you ever had, when you formed that opinion, any complete scheme put before you?—No; never a complete scheme, but a scheme carried sufficiently far to give me *primâ facie* a strong view that it could be carried out to the end. I think I have said that, without adopting an immediate decision, I saw my way to carry it out after a year or two.

22,448. Putting on one side the question of the amalgamation of the two Boards, did that scheme sufficiently go into detail with regard to the subordinate officers—both in London and in the provinces—to show you that a considerable saving would be effected?—Not in detail, but generally. I was quite satisfied by the representations to me that there would be a considerable saving; but, as I say, it had not reached the point for discussing those details.

22,449. The amalgamation has already gone on, we will say, with regard to warehouses. Is it not possible that further amalgamations might take place where the two departments have worked in common without any necessary amalgamation of the whole of the two departments?—Certainly that might be.

22,450. Does it occur to you that amalgamation might take that shape?—Certainly, as a first step.

22,451. Could you suggest any details in which it could be further carried out?—We carried it, I think, up to the time of leaving office, as far as was wise, having regard to the decided friction between the departments on the subject; but my opinion was that it might go on, and if I had been in office it would have gone on much further.

22,452. Could you tell us where—in what particular respects?—I think practically it might have been complete. I think that the warehouses might have been brought under one control wherever there were Customs and Excise warehouses.

22,453. Yes, but going beyond the warehouses, is there any other point at which amalgamation could take place without amalgamation of the whole of the two departments?—I think that would be very difficult.

22,454. You think that kind of amalgamation then has gone as far as possible?—No.

22,455. Short of complete amalgamation?—You might, as I have said, amalgamate entirely the warehouse departments, but no such amalgamation would really to my mind be satisfactory compared with a thorough amalgamation.

22,456. (*Lord Lingen.*) I think I gathered from your evidence that on the whole you are in favour of amalgamation, but that you are also in favour of a previous scheme of taking very great care that no mistake was made in an administration so vital to the revenue of the country?—Certainly, I always dread these great changes unless the results are as far forecast as they can be.

22,457. With regard to the separation of the duties on which you dwelt, take a waterside Custom House officer, and a surveyor of taxes, and vendor of stamps, and an exciseman who is in a distillery—all the distinctions of those duties you think are not greater than in any great department would exist between the branches of it?—No.

22,458. And therefore are not fatal to a common Board?—No, and I would carry on what I said before a little further, by saying that in small ports, where there is very little to do, I think what are now only Customs officers might very readily do some parts of the Inland Revenue work, just as the Post Office now makes certain collections.

22,459. Was your own attention called to this circumstance of the very great number of bonded warehouses that exist all over the country?—Yes.

22,460. And in the same town?—Yes.

22,461. Do you think that a considerable reduction might be insisted upon in the number of those warehouses?—Yes; and that that could be much better done under the amalgamated department, in which the peculiar Customs' traditions in connection with small warehouses could be allowed gradually to pass away.

22,462. Of course your Treasury experience must have told you that locally any reduction in the number of these warehouses is exceedingly unpopular?—Not every reduction; some reductions would be no doubt unpopular where particular merchants have been accustomed to have almost a *privilegium* in connection with particular warehouses, but I doubt whether, in a great many cases, it would be unpopular.

22,463. It may be looked at, of course, from two points of view. The bonding privilege is a great deal like the licence of a public-house—hitherto it has never been taken away, or rarely?—Rarely.

22,464. And to the owner of property, of course, it is a serious thing to him if the bonded privilege is not renewed?—Yes, that is true as to the owner of the bonded warehouse, and he would have to be carefully dealt with. I thought you referred to the merchant.

22,465. I was coming to that: there are two elements of the unpopularity, the one the owners of the property, which is undesirable, and must be faced as best it can; the other the reduction in the numbers of the warehouses, which would also raise a great local opposition.—Much less than I think might be expected. I believe that as a rule the merchants of the country are good men of business, and they like to see good business arrangements, and nothing can be a worse business arrangement than scattering about a small town a number of small bonded warehouses.

22,466. You think that that is equally applicable to the small dealer as it is to the great wholesale dealer? We have had it in evidence, I think, or, if not, it is perfectly notorious, that in many of these warehouses the goods are withdrawn in ridiculously small quantities by the small retail traders?—Yes; the bonded warehouse system undoubtedly has been abused. It was not intended to be a large shop for non-duty-paid goods, so that the duty might be paid when they were removed in small quantities. That was not the intention; but by degrees a great deal of that has come in, and I think we should set our faces against it. I speak there from personal experience, because the question of multiplying small warehouses came before me when I was Commissioner of Customs at Melbourne, and I always set my face against that.

22,467. On this side there is an obvious field for very considerable economy?—I think so.

22,468. If it was steadily and prudently enforced?—I think so; and if the merchants and all those concerned saw that the arrangements were business-like and satisfactory.

22,469. Then we have had this, too, in evidence before us, that whether you call them one Board or two, you must have practically something like the same number of men to do the work. Would you say from your experience, especially in the colonies, that the retention of two Boards of all services may imply a considerable number of persons in the local stations who are not fully employed?—I think so.

22,470. And that by having a single service at home might be filled up to a much greater extent than it is

now and the numbers reduced?—Yes, I quite agree with that, and I would go further, and say, assuming that you retained the Board system, that one Board need not have as many members for the amalgamated service as the two Boards have for the separate services.

22,471. I was thinking rather more of the local officers all over the country. For instance, the Custom House officer in a small port probably has plenty of time on his hands to do any Excise business that there may be there?—He notoriously has. Anyone who has had the experience of living in a place where there are these small establishments knows that during a large part of the time many able officers find themselves without work.

22,472. (*Mr. Lawson.*) In answer to Mr. Hanbury, speaking of the Inland Revenue, you seem to suggest that it was only in the Excise branch there could be any real amalgamation with the Customs?—I thought I qualified that—I intended to do so.

22,473. In what way?—By saying that there were a number of places where, supposing that amalgamation took place, the officers who are now doing, say, Customs duty, could very well do some of the Stamps and Taxes work.

22,474. I suppose, besides that, that you would be in favour of having one Secretariat, one Solicitor's Department, one Laboratory, and one Accounting Branch?—Certainly.

22,475. In the central office?—Certainly.

22,476. Do you think that any great increase of cost would be necessary in the Inland Revenue, saying that the Customs is merged in the Inland Revenue, to supply agents for the new work which would be added to the present duties?—There must be some increase; but I do not think that that increase would approach to the present charge for the two services.

22,477. We will take the Solicitors' Department of the Inland Revenue, which is very much larger than the Customs. Have you any minute acquaintance with it?—Not minute; but my experience in other amalgamations of Solicitors' Departments is that, even where their business was not alike, that amalgamation has ended in economy and in much better administration.

22,478. By much better administration you mean that of course there would be one interpretation of the different codes of the department?—Yes, in a solicitor's office you must sub-divide work. I believe that is the experience of all large solicitors' offices. But under an amalgamation of these departments, you would not require two people for the work which is now done by two if it was one office.

22,479. (*Mr. Hanbury.*) Could not that amalgamation again of the two Solicitors' offices take place without an amalgamation of the whole of the two departments?—It is possible; but I should be loth to recommend it without much more examination than I have been able to give to the question.

22,480. (*Mr. Lawson.*) Does not the obvious difficulty suggest itself to you that it would be impossible, without amalgamating the Customs and Inland Revenue, to have one Solicitor's Department at Somerset House responsible also to the officials in Thames Street?—I am not quite sure that I should use the word impossible, but it would be very difficult.

22,481. Therefore, all through the country, and in London as well, you see the possibility of great saving by consolidation?—I think so.

22,482. And you believe that the simplification would be of great benefit to the trade. I heard you say, and I was interested in your answer, that you thought an agitation for increase of salaries was more effective with two departments than it would be with the one. I have no doubt you were thinking of Parliamentary pressure with regard to certain classes of public servants?—Yes. I think I was, on the whole, successful in resisting Parliamentary pressure. Parliamentary pressure for increased expenditure has sometimes been very severe—in some cases, far more severe than you would have thought from the debates of a day or two ago.

22,483. Is it not the case, and was it not the case in your experience, that the Customs and Inland Revenue officers are continually comparing their positions and salaries, and pressing at the present time for equalisation?—That is so. That was the foundation of that agitation in and before 1884, which was so difficult to meet.

22,484. Taking the most favourable view, do you believe that the force of the agitation would be in any way increased by amalgamation?—I do not. The Treasury would have been relieved from that portion of the pressure which arises from different scales.

22,485. (*Mr. Hanbury.*) Then you would level up?—Not necessarily—certainly not.

22,486. Then the scales would remain different if you did not?—No; you would gradually bring in a uniformity of scale. You would not bring it in by a stroke of the pen, but you would work up to it. The great blot, I think, in some of the arrangements of that kind which have been hitherto made is that they have been made in too great a hurry, that sufficient time has not been left to bring two different things into one line.

22,487. (*Mr. Harvey.*) You mean that the Treasury would set up, for instance, a normal establishment for the amalgamated department, and gradually work into it?—Certainly, a normal establishment and a normal rate of pay.

22,488. (*Mr. Lawson.*) You are aware, of course, that under the Customs there are a lower class of officers than you want under the Inland Revenue—when I say lower, I mean paid at a lower salary, and engaged in less responsible work?—Yes; the officers who do work on board ship, I think, may be considered as lower.

22,489. Established watermen, for example?—Certainly. And what used to be called Tidewaiters.

22,490. You would not be apprehensive that the Treasury would allow these lower officers at a lower scale of salary to have their position bettered by amalgamation?—Certainly not; they have completely different duties.

22,491. Is not it the fact in your experience, when there is a question of dealing with a special branch of taxation, the Chancellor would attach most importance to the advice of the special officers, even though they were subordinate, who had to deal with that particular subject?—That is uniformly the case. I used to see the heads of the Boards very frequently. But I never went into the real details of a new question without having either in my room, or close by, officers of long experience in the particular branch of business.

22,492. Then the position in that respect would not be altered by amalgamation, because that officer would still be available?—Yes.

22,493. And as a matter of fact you might attach more importance to his advice, as he would be a particular expert, than to the general view taken by the supreme head?—You always have to attach their relative weight to experts who may not be of the highest general intelligence, and to those who look at the question from the more general point of view, and who do not profess to be experts.

22,494. Then you attach no importance to the opposition raised on that ground?—No, none whatever.

22,495. Do you believe there is any great advantage to the Revenue from the competition of the great Revenue Departments in the country?—No; I should not have said so; I should have said disadvantage.

22,496. In what way?—Having two people or two sets of people to do work which can be done by one set of people, undoubtedly leads to increased expenditure.

22,497. I did not quite mean that. I meant that with the two departments engaged in duties of much the same kind (I am thinking of warehousing, of course) do you believe that the emulation of one as against the other would make both more vigilant in the collection of the national revenue?—I do not think so; and if that was a sound principle you would have to apply it to a great many cases where nobody has dreamt of applying it hitherto.

22,498. (*Chairman.*) With reference to warehouses, the suggestion has been made to us, at one portion of our evidence, that it might be a good plan to leave all the bonded warehouses at the ports under the Customs' management, and all the bonded warehouses inland under the Inland Revenue; and that that would be going far enough in the way of amalgamation?—Up to a certain point that has been carried out; but still you have the two sets of administrators for really one specific object, and I do not see the advantage while I do see the disadvantage.

22,499. The duties in the warehouses being, as you have said, practically identical whether they be Customs or Inland Revenue?—Yes, really identical.

Right Hon. H. C. E. Childers, M.P.

6 Dec. 1888.

22,500. I have only one other question of a practical character that I should like to ask you. You have told us, I think, that it was your intention, having satisfied yourself as to the policy of this amalgamation, or very nearly satisfied yourself, you have gone into detail, and that in all probability you would have proposed to Parliament an amalgamation?—May I say, if the details turned out satisfactory.

22,501. Because it is part of your opinion that amalgamation ought not to be proceeded with until a definite and clear way is seen to effect economies and to improve at the same time the administration?—Certainly.

22,502. May I ask you in what way it occurs to you such a scheme might be got at; how to arrive at the details of such a scheme?—Speaking off-hand, I think the course I should have adopted would have been to have appointed a small committee representing the two departments and the Treasury, and to have given them the duty of going through the whole of the establishments, and of advising how they ought to be organized in the event of amalgamation being carried out. That would probably have occupied the attention of those gentlemen for six months. I should not have hurried them. On the contrary, I should have wished them to be very deliberate, and having got their report, and that report having then been reviewed by the heads of the Inland Revenue, and the Customs, and by the superiors at the Treasury, I should then have had foundation for action. Without that I think it would be an imprudent step to rush into amalgamation.

22,503. May I go so far as to ask you your advice to this Commission? We are concerned now with the general question of policy, but I daresay that, at all events, some of us feel that it is rather difficult to separate the question of policy from that of detail. Would you think that it would be a proper opinion and advice for us to give, that practically, so far as we can observe detail, of course to speak of it, but generally, supposing we were in favour of amalgamation, to recommend such a course as you have suggested?—I think so. I should humbly advise you to make such a recommendation.

22,504. If we had the good fortune to have you as a member of the Commission, would that be the course that you would recommend us to pursue? Supposing we came to the conclusion upon the evidence we are able to take, that amalgamation upon general grounds of policy would be desirable?—I think so. I think that would be my advice.

22,505. (*Lord Lingen.*) I should like just, in connection with that, to have on the notes your opinion that for the application of administrative schemes in detail the machinery of a Treasury Committee, on which the departments also are represented, of experienced permanent officers, is the best machinery that you can get for working out those schemes?—I may say I have no doubt it is.

22,506. (*Mr. Hanbury.*) Can you say how far the previous amalgamations which you have mentioned, which are of course much smaller amalgamations, effected any genuine economy?—My recollection, from papers which I have seen some time ago, is that a genuine economy was established; but, of course, the business in some respects has enormously increased since the amalgamations took place.

22,507. (*Chairman.*) There is nothing that has occurred to you, is there, that you would like to say?—No.

The witness withdrew.

Sir Alfred Slade, Bart., called and examined.

Sir A. Slade, Bart.

22,508. (*Chairman.*) You are, as we know, Receiver-General of the Inland Revenue?—That is so.

22,509.—One reason among other reasons why we have asked you to come here is this, that upon evidence having been given to us by the Chairman of the Inland Revenue in favour of amalgamation and upon our going through the mode in which that amalgamation could be effected at headquarters and so on downwards, when we came to the office of the Receiver-General, there was put upon our notes an opinion expressed by the Chairman of the Board of Inland Revenue that the office of Receiver-General (as an office, of course; nothing was said personally) might very well be done away with and that in some other way the work might be done. It was obviously necessary, therefore, that we should ask you to express your opinion upon the nature of the work that you have to do, and also to ask you whether you have any suggestions to make with reference to it. I think, perhaps, I should ask you first to describe the work you have to do.—The work of my office or my personal work do you mean?

22,510. The general nature of your official work. We want, as far as possible, to keep every personal question out of the matter.—The work of my office is the receipt of money and the payment of money. We are Paymaster-General of the Inland Revenue and Receiver-General. The work of our office differs very materially from a collector's office, because a collector receives nothing but what he has notice to receive. We receive miscellaneous amounts—anything is paid to us. By turning to the paper that I have here I could give you a list of the various items that are paid in my office.

22,511. You see one is struck in the first instance by the fact that at the Customs the office of Receiver-General has been abolished, but that at the Inland Revenue on the contrary the office of Receiver-General, the abolition of which has been often considered, still remains. What we want to ascertain is the nature of the work which requires such a separate office.—I do not think that the Receiver of Customs has any of the confidential and miscellaneous payments that we have.

22,512. It would be very useful to us if you would tell us what those payments are.—We receive special payments of income tax. As you are aware, any person in this country, whether a trader or banker or private person, who does not wish to have his private affairs disclosed can go to the Special Commissioners, who furnish him with a number and a letter, and he is then directed to pay to the Receiver-General of the Inland Revenue. There is no necessity for his divulging to me what is his name or what is his address, but in order not to do that he would probably have to bring a bag of gold to pay the sum involved. As a matter of fact he pays in ninety-nine cases out of the hundred by cheque, and therefore my clerks who receive that know who has paid the special payment and what that person's income is. They know when a large cheque comes for the payment of the income-tax that a certain firm, say, is making 350,000*l.* a year. This fact the firm does not wish to be known, but it is known to us only and to the Special Commissioners, who are sworn to secrecy, I believe—we are not. We receive the money, and we have the means of knowing nearly everything that is paid on the special payments. There is a very large amount paid in that way every year; I believe we receive as much as 20,000 or 30,000 special payments in a year.

22,513. Is it on the question of the degree of importance and the confidential nature of the receipts that the office differs from that of a high collector?—Yes; and, I believe, from that of the Receiver of Customs, in this particular work that I am on now—that is, this confidential work. Then, in addition to that, we receive the arrears of income-tax. No collector receives them; we receive them, and therefore we know who has been in arrears in his income-tax. The moment an income-tax falls into arrears the collector is no longer allowed to receive it, but it is sent up to us.

22,514. (*Lord Lingen.*) The collector reports it, does not he?—I do not think he does.

22,515. Then how can you become cognisant that it is in arrear?—I think the Surveyor of Taxes would report it.

22,516. Some local officer knows the fact?—Yes; the surveyor; the collector does not do anything outside his office; he merely is a receiver; he sits in his room and receives the money paid to him.

22,517. As regards the notice of arrears, you are not the only people who are sure to know that?—The secretary's office knows it.

22,518. The arrears of income-tax must be reported by some local officer, must not they?—Yes; they must be reported by the Local Surveyor. I was showing that we did a work there which collectors did not do, and which was a variety from a collector's office. Then we receive a payment called "Duty omitted to be charged." When a person dies and when his executors put in the inventory of his goods, &c., the matter is revised by a branch

(I think it is in the secretary's department of the Inland Revenue) which is called the "Probate Compare Branch." They look at what a man has had and then they look back at what he has been paying, and when necessary they come down on his estate and say, "The dead man has been evading his "taxes for very many years; the estate must pay up." I do not suppose this is a matter which most people would like to be made very public, and it is always done very quietly. It is sent to us to receive. We receive all the papers and we see what it is and who it is that is affected.

22,519. (*Chairman.*) Is the evidence you are now giving us meant to show that in your office the work is of a rather confidential nature?—Yes; I am just going into that part of the work now.

22,520. It is confidential collecting?—Confidentially receiving the arrears of House Duty is another small kind of payment which we receive and collectors do not receive. That is where people have not paid their house duty. Then we receive various miscellaneous matters which are not of a confidential nature—I believe not. Corporation duties, for instance. All corporations have lately had imposed upon them a 5 per cent. tax because they do not pay succession duty—corporations not dying, they never pay succession duty. Now they are compelled to make a return of what the annual value of their income is, and to pay 5 per cent. a year at the Receiver-General's Office. I do not know whether the corporations would consider that confidential, but it is not paid into any other office but my office. Then we receive the income-tax on foreign dividends. That was a matter which used to escape. A large quantity of money is paid here for dividends on foreign loans payable abroad, and, as I have said, people used to escape paying. Now we serve notices on all the brokers, and they have to make a return of what they have collected and pay it into my office. Then we receive conscience money. From time to time people come into my office and pay up conscience money or send it to the Treasury. I have known people walk into the room and place a sum of money on the table and decline to give any name or take any receipt. We report it to the Board and ask for instructions how we are to take this through the account. We put it into what is called our deposit account of money that we receive. It is generally dealt with as duty omitted to be charged, or some heading like that. Then we have miscellaneous payments which are a variety of payments which occur in the country, which people ought to have paid, but which they have not paid; and the collector having no charge raised, does not demand it, and they are ultimately told to pay it up to us. We sweep up all that throughout the country. This morning I saw a payment come in from a man who lived in a public-house. He had not paid his licence; he had not paid his Inhabited House Duty, or something else, for some time back, and the order came to pay it up. He was down, I think, at Liverpool, but he did not pay it to the collector there. I am really dealing with one room just now. Then we receive Railway Passenger Duty; we are the only people to do that. All the great railway companies pay the Railway Passenger Duty to us. They pay it once, or twice, or three times a year, so that we see exactly what their traffic is. That is all the work of what I may call more or less of a confidential nature that we do, which is quite distinct from what a collector does. Then, with regard to our payments, we have a pay office and a pay clerk. This officer pays the salaries and pensions monthly of the Inland Revenue. I should think he pays away about 250,000*l.* a year in salaries and pensions.

22,521. (*Lord Lingen.*) Do you mean the salaries of the Inland Revenue at headquarters?—The salaries and pensions—a little more than at headquarters—people attached at headquarters are included. Collectors draw upon us for the money to pay their staff. There are 800 receipts we have to prepare and send out monthly.

22,522. Does the Accountant-General, do you know, do anything of that sort?—No, he pays nothing.

22,523. In other branches of the Inland Revenue does he pay any salaries or pensions, do you know?—Do you mean the Accountant-General at Somerset House?

22,524. At Somerset House?—No, he has no money; he has no banking account and could not pay anything.

22,525. He is purely an accounting officer?—Yes. He is always alongside of me checking me in what I do in every transaction every day. Then we pay all bills relating to the Inland Revenue—tradesmen's bills. We repay income-tax, that is, claims, which very often go on for a long time, of people who think they have overpaid their income-tax. When it is settled that they are to be repaid something, and the Board's order comes to me to repay them, that order remains with me for weeks or months, or perhaps a year, until the person comes to get it. A great deal of these payments can now be made by receivable order-cheques, which is a new thing that has been instituted. A receivable order-cheque is a sort of dividend warrant. We send it to the people who are abroad, or in India or Canada, and the moment they get this, on their putting their receipt on it, it becomes absolutely like a bank note, because we will pay it to anybody who presents it, and they are able to negotiate it when there is money repaid them by the State. Similarly, we repay overcharged legacy and probate duty; that is a very large account very often. As you know, very often people pay the legacy duty when the will is proved, and it turns out that the estate is not worth anything like the amount subsequently estimated, and then they apply to have a return of the duty. Then there is the return of the probate duty and the succession duty. Our payments generally—I mean the payments out that we make—amount to about a million and a half.

22,526. (*Chairman.*) Are you solely responsible as Receiver-General for the accuracy of these receipts and payments?—That is a matter of the legal interpretation of my bond. I should not like to admit that I am liable to anything. That is the bond (producing same). I am under security to the Crown for 24,000*l.* for all moneys I receive or pay or received or paid by persons acting under my instructions and on my order.

22,527. Take the most important payment you would make in the course of the day; does that ever come before the Board of Inland Revenue, or does it proceed straight from you?—Straight from me. The order comes from the Board for me to pay. I pay nothing without an order signed by two commissioners.

22,528. Then you are protected by that order?—Yes, as to the amount; I must pay the proper amount.

22,529. Yes; but, that being so, you must pay upon the proper order?—Yes; I do not think I run much risk in payments; it is in receipts, which I will explain to you later on, where I run enormous risks every day.

22,530. That is upon the point of your having to give a bond?—Yes, that is why I give a bond.

22,531. That is rather a dying-out fashion, or custom, in the Civil Service, is it not?—Yes, it has died out very much. I am very much surprised it has in my office. I will explain to you the way in which my cashiers are brought in. When I joined the office they all found security. Now the Treasury have gradually dispensed with that.

22,532. In your opinion, and just taking it shortly, because it hardly bears upon the immediate question—in your opinion, from the work that you have done there, do you see the necessity for requiring all your cashiers and clerks to give these bonds?—Yes; in an office such as mine is, all cashiers should find security and have sponsors too—bondsmen—because they are able, if they knew how, to rob the Revenue, or me, of a very large sum of money.

22,533. That is no doubt the case. I do not know about banks; but in one or two societies with which I am personally acquainted bonds are given; but is it not the case that in Government Departments which receive money the practice is rather changing?—Yes; but it is not so in private establishments.

22,534. I know of several private societies where the custom of requiring security is rather increasing than diminishing?—When this question of the security was raised I applied to the Bank of England, to the Joint Stock Bank, to the London and Westminster, to Messrs. Coutts, Messrs. Herries & Farquhar, and Glyn Mills, to tell me how they dealt with their cashiers, and they all agreed; they gave me their minimum salary, how they were increased; their maximum salary, and how selected. All except the Bank of England selected them specially for their duty. The Bank of England took them by seniority. All of them find at least 1,000*l.* guarantee. The London and Westminster find 2,000*l.* guarantee, Herries & Farquhar find 1,000*l.* and have sponsors. Taking all these banks together, their maximum salary is about 400*l.* for a cashier, and the minimum about 240*l.* My minimum when this return from the banks was prepared was 80*l.* and the maximum 200*l.* My cashiers are not specially selected. I must take any-

6 Dec. 1888.

body that comes in. I do not know who he is or where he comes from. He has passed an examination somewhere, and I must place him in charge of these large sums of money although he has given no security. When the Treasury decided upon that I sent a remonstrance to them. I said that I did not think this class of people were included in my bond, because when I took office they did not exist. I took office as Receiver-General and entered into a bond upon a certain system, which was that cashiers were specially selected, were all under guarantees, and were highly paid, and had a good future to look forward to, and a good pension. Therefore, I had to my mind the very best guarantee of their honesty. I would rather have the guarantees of a man being in a good position of life, and having a good future to look forward to, if he behaves honestly, than all the guarantees he enters into by paying so much a year to an office, because that is what it amounts to. The Board of Inland Revenue said if it was not in my bond they would take legal advice. They took legal advice, and they did not tell me what the legal advice was, but I may assume it was in my favour, because they said, "We shall apply to the Treasury to alter the terms of your "bond so as to include these cashiers." I then presented a remonstrance to the Treasury, and pointed out that it would deprive me of both my sureties, because they might say, "This is a new matter altogether," and I might find great difficulty in finding sureties who would come into this very much extended liability. The Treasury decided not to alter the terms of my bond. That is the only decision they communicated to me, and therefore I consider it is still an open question whether I am liable for all these cashiers or whether the State is.

22,535. (*Mr. Harvey.*) Assuming that a cashier overpays 10*l.*, what do you do?—10*l.*?

22,536. Take a cashier to-day, and, assuming that his accounts may come out to be 10*l.* short, what would you do?—Tell him to pay it to me.

22,537. You would call upon him to pay it?—At once, on the spot, I should. But I am not talking of 10*l.*, I am talking of thousands of pounds.

22,538. I would rather come to the actual facts, which probably are more concerned with the 10*l.* than with the thousands. What do you do when the cashier comes to you and says, "My accounts are 10*l.* short to day"?—It is a general rule which I lay down that any cashier who is over—who has got too much—should pay to me, and if he is short he shall pay it out of his pocket that very day. Sometimes it has happened that he cannot pay, and then he borrows from his friends, or he says he will bring it the next day. As a rule they pay it down—it sometimes is rather more than they can pay at the moment.

22,539. Then they pay it to you?—They pay it to me. I enter into a book, "paid by so and so on such and such a day." I hold it a month and take every means to see if we can trace it to the public, but if there is no one who comes forward I return it to the clerk, who keeps it, but I have still the record in the book that the money was overpaid, and he initials for it, so that if the owner turned up it could still be repaid to the public. I had a case of a clerk who had to issue a large stamp for which 279*l.* was the amount that he had to receive from the public. He forgot to take the money, but he gave the public the receipt, and the document went down to the stamping-room, where it was stamped, and the man got his document. Luckily for us, the public came back and said, "Oh, your clerk forgot to take my money, 279*l.*" A lower division clerk at 80*l.* could not well pay that. I do not know upon whom it would have fallen if the public had been dishonest, because he had got the receipt.

22,540. (*Chairman.*) Do you think it is necessary, judging from your experience of the office and your experience of the general practice, to require the Receiver-General to enter into a bond for 24,000*l.*?—Yes; I think the Receiver-General and all the cashiers should enter into a bond.

22,541. You have told us, I think, at all events we know that there have been various recommendations made from time to time for the abolition of this office as a separate office. Has the idea been that the work should be taken over by the accountant and Controller-General, or what has been the idea?—I have never seen that put in writing, but I have seen in writing a scheme to turn it into a chief collector's office.

22,542. That would be merely a difference in name, would it not?—Apparently the same duties would have to be performed—very different duties from what the collector has hitherto performed, the officer would have to perform who came in there. There used to be a collector's office in Somerset House alongside of me, called the Collector of London West. He had 800*l.* a year; he was at the head of a small office there, and I had 1,000*l.* a year. His name was Mr. Johnson; he is now retired. I asked him what was his view of the position. He said, "I would much rather have my office than "yours, because, although I have only 800*l.* a year, you "have unbounded risk, and I have none, because I "receive nothing without an order." Now a man walks into my office, a person we do not know, and says, "I "want to pay my probate duty, 30,000*l.*," and I must take it in bank notes, perhaps, and gold. He hands it to a clerk with 100*l.* a year, and I do not know, and I need not know till four o'clock that day, that the clerk has had it, and nobody in the building knows.

22,543. As your bond covers the responsibility of the clerks, you say that yours is a very responsible position?—Yes.

22,544. What would you suggest if you were starting a new state of things as the best way of getting out of that difficulty?—I would deal with the cashiers like all the banks and every house of business, and I would not take a man as cashier unless I knew that he was in a respectable position, that he was properly introduced, and that he had got a proper and respectable home to live in. The banks always insist upon that—that he must live with somebody. And he must have a good salary, and he must look forward to a good provision for his old age if he lives honestly. A person who is brought in under the Playfair Scheme at 80*l.* a year to go to 200*l.*, I knowing nothing where he came from, except that he passed an examination, that is a most dangerous class of man, in my opinion, to employ as a cashier. That is why I raised that question as to whether those people are under my bond; and that is still open.

22,545. (*Mr. Hanbury.*) How many of these Lower Division Clerks have you got who are cashiers—eight?—I have more than eight now. I have nine Lower Division Clerks, I think, now.

22,546. In the Estimates for this year there are eight Lower Division Clerks put down in your Department?—I know I have only four Upper Division.

22,547. (*Mr. Lawson.*) Only three, I think, according to the Estimates?—That is probably the establishment; and not the actual position. I have one more than that.

22,548. (*Chairman.*) Proposals have been made, have they not, that your office might be turned into that of Chief Collector?—Yes.

22,549. That is a difference practically merely in name, the question of salaries being left out for the moment?—That is perhaps my interpretation of it. I do not think it might be the interpretation of those who put forward that scheme.

22,550. (*Mr. Hanbury.*) How far would it make a change—not very much, would it?—If it is to be the collector's office, the Board of Inland Revenue appoint. My office is in the gift of the First Lord of the Treasury. I am appointed and dismissed by the Treasury. The collectors are appointed by the Board of Inland Revenue.

22,551. (*Chairman.*) Except as regards this bond, wherein do your relations with the Treasury differ from those of a collector except in degree?—Practically there is no difference.

22,552. You are a higher kind of collector, if I may say so?—A higher kind of receiver. Collectors are receivers now. They are not collectors, because, although they used to go round and collect, now they do not. I could just explain to you in a minute the great change that has taken place in the whole principle of collection. When they were established in olden days a collector went down to the different centres and collected the money in the districts. People came to him and paid in coin their licences and duties. Now there are such facilities to the public for paying money in various ways that the London collectors (I am talking of them specially now) do not move out of their offices: they sit in their office and the people pay to them there. But the time has now arrived when all the London collectorates could be abolished, because there are a great many licences which are now issued by the Post Office. You can walk into a post-office and you can take out your gun licence or your dog licence and sundry other licences, and the duty is sent direct to my account in the Bank of England. Then there is the new system, which was introduced only this year into London, called the free money-order system. Any person who has to pay the State anything—

to pay any duty, or to take out any licence—can go into any post-office, the nearest to his house, anywhere, and say, "Give me a post-office order for this amount on "the Receiver-General of Inland Revenue." He gets that gratis. That is a most handy way for the public to take out their licences, whether it is dog, gun, establishment, or to pay any duty. This is sent on to Somerset House to me. We have now begun to issue licences. I made the recommendation as far back as 1877, directly I took office. I saw that it was an absurdity having the collector of London West in Somerset House, as well as myself, when we were both doing precisely the same duties, or duties of a similar character, in receiving money, and I suggested that he should be abolished, and that I should take over his work. That was in 1877. I have a copy of the scheme here, which I sent to the Board, but it had no effect.

22,553. (*Chairman.*) He has been abolished, has not he?—They did abolish him, and I have taken over part of his work now, and there is no reason why I should not take it over and that of all the London collectors—they cost 12,000*l.*

22,554. There are five metropolitan collectors, are there not?—Yes; we could be made general receivers of money in London for all payments.

22,555. (*Mr. Lawson.*) May ask what answer was returned in 1877 to your proposal?—I had no written answer, but the secretary of the Board of Inland Revenue came down to me and said, "I should not "advise you to stir that question, because if it comes to "abolishing, your office will be abolished and not the "collector's." Well, I said, I do not mind what the result is, but I think one of them ought to be abolished; and, mine being the larger office, I should suggest the collector's should be abolished.

22,556. (*Chairman.*) He has been at all events since abolished?—He has not been abolished—he has, I believe, been moved to another part of London.

22,557. I am speaking of the office. I do not mean to deal with an individual now. Do you think you could concentrate in your office the work of those five metropolitan Excise collectors?—Yes; of the whole of them. We should only require a few more lower division clerks; we have plenty of superintending power to direct a much larger office than we have.

22,558. (*Mr. Hanbury.*) Was it in this same year of 1877 that they appointed a deputy-receiver?—In the very same year they appointed a deputy.

22,559. What! in that very year they said that the office would be abolished?—Yes; the very same year that the secretary told me that if I pressed that matter it might turn out that I should be abolished.

22,560. (*Mr. Harvey.*) What was the ostensible ground for appointing the deputy?—I never saw the recommendation that went to the Treasury, and so I am not able to say what the ostensible ground was; there was none shown.

22,561. (*Chairman.*) Then you had not expressed any want of a deputy?—Not the slightest; I very strongly objected to it.

22,562. (*Mr. Lawson.*) We may take it that you made a protest to the Treasury?—Yes; I will read to you my letter to the Treasury, dated 5 Nov., 1877.

"My Lords,—

"I am informed that your Lordships have, upon "the recommendation of the Board of Inland Revenue, "approved of the Chief Clerk in my Office being styled "for the future 'Deputy Receiver General of Inland "Revenue' in the Scheme for the reorganisation of my "Office which your Lordships have not finally settled.

"I was not aware that such a change was contemplated "until my attention was called to the use of the Title in "Official correspondence.

"My office is one of peculiar character, and of great "personal monetary responsibility, and I am under "Bond, both personal and by sureties, to the extent of "24,000*l.*, and am responsible, not only for my own acts "and defaults, but also for the acts and defaults of "persons acting under my deputation.

"Having this in view, and considering generally the "possibility of difficulties in the future arising from "persons having a right acquired independently of the "Receiver General, to sign papers as his Deputy, I "respectfully beg your Lordships to consider this ques"tion, and to recall the proposed Title of 'Deputy "Receiver General of Inland Revenue.'

"I am in the habit, with the approval of the Board, of "giving an authority to the Senior Clerk present in my "Office to sign papers 'per pro of the Receiver General,' "but this is an authority given by me, revocable by me "at any time without assigning reason, and is given by "me to one Clerk or another by name.

"If, however, any subordinate in my Department is "authorised to assume the title of Deputy Receiver "General—there would arise an assumption of divided "responsibility which your Lordships may not have con"templated, and which may involve me and my sureties "in larger responsibilities than we previously undertook.

"If this change in title will make no difference either "in the position or in the power of the Chief Clerk in my "Office, then I respectfully submit to your Lordships "that it is not desirable nor necessary to make the "change.

"If, however, it will cause any difference, then I "respectfully submit my request to your Lordships on "my own behalf and on behalf of my sureties, that we "have time clearly to understand the change to be "effected, and to consider its consequences before it is "finally decided upon.

"I have the honor to be, My Lords,
"Your obedient Servant,
"ALFRED SLADE,
"Receiver General of Inland Revenue."

22,563. (*Lord Lingen.*) Was that sent direct by yourself to the Treasury, or was it sent through your board?—I first sent it to Mr. Stanley, who was then secretary. I had not been Receiver-General very long. Mr. Stanley wrote me a letter and said, "I think you had better send "this through the Board of Inland Revenue;" and I did send it through them.

22,564. Then you do not know whether they accompanied it with any comments to the Treasury?—No, they did not show me what they did; they sent me the answer of the Treasury.

22,565. (*Mr. Harvey.*) Do you know that it went on to the Treasury?—Yes, because I have got the Treasury's answer, signed by Mr. R. R. W. Lingen, to say that "they "do not consider it necessary to disturb the arrangements "recently sanctioned under which the title of chief clerk "of his department has been altered to that of Deputy-"Receiver-General"—they give no reasons.

22,566. (*Mr. Lawson.*) May I ask whether it was an alteration in title only or an alteration in salary as well?—There was a rise of salary as well. I think it was an increase of 100*l.* a year. I am not quite sure.

22,567. But it was not the appointment of a new officer?—No, he had been the chief clerk in the office. I said that my appointing a deputy was a different thing, because I could revoke it at pleasure if I had reason to mistrust the man who signed cheques for me; but, when the Treasury appointed him, he was absolutely the Deputy Receiver-General.

22,568. Did the Treasury appoint the deputy personally?—No; the Board appointed with the sanction of the Treasury.

22,569. (*Chairman.*) To go back to the recommendation which I understand you to make now, that you might consolidate in your office the five metropolitan Excise collectors. Before coming to that conclusion you have gone, I presume, thoroughly into the nature of the work which is done by these collectors?—Yes. I am thoroughly acquainted with it—of course I am speaking of their indoor work. In a collectorate there is the officer who sits inside, who is called the collector and who is the receiver. Outside there are two separate establishments, one managing Excise, the other stamps and taxes; and although, as your are aware, forty years ago a Royal Commission similar to this advised the amalgamation of the Excise and stamps and taxes, and it was amalgamated by statute—although they are outwardly amalgamated, they are practically two separate establishments, with separate offices. In every district there is a Supervisor of Excise, who looks after all excise matters. He sees that people who keep a tobacconist's shop have taken out a tobacco licence; if they have not, he gives them notice to do it, and says, "go and pay the collector." The collector does nothing but receive the money. On the other hand, there is the Surveyor of Taxes, who looks after all the income-tax, property-tax, and the inhabited house duty—he does that quite apart from the collector. That is going on simultaneously. Now it is just as easy for the Supervisor to say, "Pay the Receiver-General of Inland Revenue at Somerset House—send a cheque if you have got a banking account,

Sir A. Slade, Bart.

6 Dec. 1888.

if not take out a post-office order, which you can get free, and you need not pay the postage of the letter, and to send it, therefore, will cost you nothing."

22,570. (*Mr. Harvey.*) You do not take a cheque do you?—I take an enormous quantity of cheques. When a cheque is taken I do not part with the stamp or document until the cheque is realised.

22,571. Do you not send a receipt?—I send an interim receipt, "Received your cheque," but he does not get the document stamped until I know it is cleared.

22,572. Take the case of a man in the country under the proposed alteration?—I was only talking of the London collectors, but it would not make much difference, I think.

22,573. You do take cheques?—Yes, I take an immense quantity of cheques every day.

22,574. I am not talking of taking bankers' cheques—transfer cheques on the Bank of England, for instance. Do you take the cheques of private individuals?—I have got an order from the Board as to what cheques I may take, and it includes a variety of people, amongst others it includes the cheques of any public company. Those I actually take and pass value for, but if a private person sent me his cheque and said: "I enclose you a cheque "for my probate duty," I should realise the cheque before I sent him the probate.

22,575. (*Mr. Lawson.*) I should like to know something more about those five metropolitan excise collectors. Would you be good enough to say whether they are placed in different quarters of London?—Yes, one is placed in Great Winchester Street, one is placed at Kensington, one is placed somewhere in South London, one is placed at North Hampstead, and one is placed somewhere near the Tower, I think. I think they are called London East, London North, London South, London Central, London West.

22,576. (*Chairman.*) I suppose they are placed there for public convenience?—They originally were. At first it was a great convenience to have a collector at these places, because people did not send the money by post—they had no means to do so.

22,577. Now you think that these things have changed, but, if it was proposed to remove those collectors and bring them on to Somerset House, would there be any outcry?—I do not think the people would know it, because the supervisor or the surveyor of taxes tells them where to pay, and very often the collector is far away from them. Take where I live, and the collector that I should have to pay to—the surveyor of taxes lives at Portman Square and the collector lives at Hammersmith.

22,578. You mean if you paid the collector in your district?—I should have to send it by post, therefore I would just as soon send it to Somerset House. Most people would rather send it on to head-quarters.

22,579. Are you aware whether or not the public make the great majority of payments which are received by these five collectors through the post?—No; I have no knowledge of that. I do not think the public have yet grasped this free money order system. I do not suppose one man in a thousand knows that you can now pay taxes by means of a post-office order which costs nothing.

22,580. (*Mr. Lawson.*) But I understand you to say that the collector for North London is at Hampstead?—Yes; in Hampstead Road.

22,581. There are many parts of North London which are much nearer Somerset House than Hampstead Road, are not there?—Very many. I tell you people are continually coming to Somerset House for me to issue licences because the collector is so far off. That is since the collector has moved from Somerset House. During the last year I issued two thousand. Then there is another thing affecting the position of collectors, that is the new local taxation under the new Local Government Act. Certain things are to be collected in a certain circle for a single county council. Now the collectors' boundaries are not conterminous with the county boundaries, therefore we shall have an immense complication of accounts. The collectors will have to separate everything they receive by maps, but these new counties are not even conterminous with the large counties of England.

22,582. That would not operate in London?—No, it all comes into London—everything received in London—as I understand to be applied there.

22,583. (*Mr. Harvey.*) Take the ordinary small tradesman in London who has to pay his income-tax under Schedule D. He pays to the collector, does not he?—Yes; the Surveyor of Taxes would tell him to pay to the collector.

22,584. You would not propose that he should walk down to Somerset House, would you? The local collector is probably much nearer to him than Somerset House is?—Yes; but the local collector will in many cases not be so near as the post-office. I propose he should go to the post-office and say, "Give me a money "order payable to the Receiver-General of Inland Revenue for, say, "1*l.* 17*s.* 6*d.*" There would be nothing to pay, there is no difficulty, and in fact nothing to do but to put it in an envelope and direct it to the Receiver-General without paying the postage. As soon as the public know that they will never pay it to the collector.

22,585. (*Mr. Lawson.*) Are they aware of these new conditions?—I have never seen a circular announcing them.

22,586. (*Lord Lingen.*) Let me ask you one question about the collectors. Can you explain why the collectors are put down in the Estimates at page 38, as under the outdoor excise? Do those collectors collect taxes also? If a man wants to pay his license could he go to the collector and get it from him?—Yes; all excise licenses which do not require entry—that is a technical term—entry means where you have got to register the place where any special business is to be carried on, like a tobacconist's shop. All other licenses you can get at a post office. Or again, if they go to the collector the collector would receive the money, and would issue the licence to the public.

22,587. Supposing a man had to pay income tax, would the collector receive that if the man wished it?—Yes. The surveyor gives him a notice to pay to the local collector.

22,588. He would pay it; but the person, A. B., that owed the income tax, to what officer of the Inland Revenue would he pay it?—To the collector through the local collector.

22,589. Then why do they return the collector under the outdoor Excise? One would think he ought to appear in some neutral position?—He is in a neutral position.

22,590. On page 38 of the Estimates you will find the collector is returned under the outdoor Excise; and at page 40, where they are dealing with the Taxes Department, we find Superintending Inspectors and Inspectors; but the highest local or district officer there appears to be the Surveyor of Taxes. Now the collector ought really to appear in that part of the Estimate as well as in the other, ought he not?—Yes. The collector is both a receiver of excise and a receiver of stamps and taxes.

22,591. Framing the Estimate in that way is a little misleading, and I did not quite understand it. He collects, in fact, everything, if people choose to go and pay it to him?—Yes; everything.

22,592. (*Chairman.*) In your opinion, these collectors need not be localised in all parts of London?—Not in London any longer.

22,593. But as far as the convenience of the public is concerned, it would be just as convenient for them to send to Somerset House?—Yes. Owing to the facilities now afforded them of getting most of their licences in post offices they need not go to the collector, and if they cannot do it at the Post-Office they can get a Post-office order and send it on to me. It is less trouble for a man to pay it through the Post-Office.

22,594. (*Mr. Harvey.*) Does that apply to all transactions?—Everything.

22,595. Can I pay my income-tax under Schedule D in that way?—Yes.

22,596. (*Chairman.*) Everything can be paid in that way?—Yes.

22,597. It is now true, is it not, that the Receiver-General's Office is not fully employed—at all events, the Receiver-General's time is not, and probably these suggestions have arisen from the fact that there is not very full work for him?—No doubt I could superintend a much larger establishment than I have to superintend, and ever since I have been in Somerset House I have persistently impressed that upon the Board. Their bias has been the other way—to abolish me and have a collector. Perhaps in their opinion it is more symmetrical to have a collector.

22,598. You have had a natural desire to make your own office more important?—And larger.

22,599. And you now make these suggestions for the improvement and economy of the public service?—Yes.

22,600. Have you estimated how much it would save to bring the collectors in?—Yes. I take it that the London collectors cost from 10,000*l.* to 12,000*l.* a year—that is, the indoor staff. It might appear that making a suggestion of that kind would cause a large burden to be thrown on the pension list; but I would suggest, with reference to the whole of this staff in London, that some of them should come to me—some of the lower grade, I mean—and that the rest should be absorbed in the country collectorates, of which there are over 100. There must be a great many places in them. They must have 700 or 800 places, and they could absorb these men.

22,601. At all events, looking to the normal condition of things, and taking care that any change, if made, must be introduced gradually, I understand you to say that you see your way to a saving of some thousands a year?—I do.

22,602. (*Mr. Lawson.*) That is, allowing for the increase in your own office?—Yes; a few lower-division clerks. A few hundreds a year would do that.

22,603. (*Lord Lingen.*) You would consider the increase in your own office would be rather transfers, would you not?—Transfers.

22,604. From other departments?—From the collectors abolished.

22,605. You would not propose, as part of your schemes, that additional clerks should have to be appointed, but only clerks that are now employed?—Yes; they would be absorbed.

22,606. Transferred to you?—Yes, instead of pensioning them. I would also suggest, while I am on my office, that the office of Receiver of Fines and Forfeitures in London—this is another little receipt-office—should be entirely transferred to mine.

22,607. What are those fines for—selling without licenses and that sort of thing?—They are rather peculiar things. The office is called in the House of Commons Estimates "The Receiver of Hereditary Revenue." It appears that he receives but very little money.

22,608. (*Mr. Harvey.*) Who is the present receiver?—I do not know.

22,609. (*Mr. Lawson.*) Where does he come in the Estimates?—It is very difficult to find. He is somewhere. I once found it out—the Receiver of Hereditary Revenue or Fines and Forfeitures—he is called both.

22,610. (*Mr. Harvey.*) He is not in the Revenue Estimates, is he?—I do not know whether such a person is there. It appears somewhere in the Estimates, but I am not speaking from any knowledge of it. As far as I can make out he does not receive so much money in the course of the year as his own salary.

22,611. Look at page 519, Class 7, "Salary of Receiver "of Hereditary Revenue." The Receiver has 300*l.* and the allowance to the Receiver for office expenses is 145*l.* That is the officer you refer to, I think?—Yes; and I think the total actual receipts that he receives are about 200*l.* a year.

22,612. (*Chairman.*) That also, you think, might be added to you?—Yes; without any increase to my staff—it is nothing—for this reason, it is all paid to my account now. He pays it in bulk to me once in three months, I believe. The whole of his staff would be saved the office, and his salary, even if he was pensioned on his full pension.

22,613. (*Mr. Lawson.*) Have you made that suggestion before?—Yes; I made it once to the Chancellor of the Exchequer.

22,614. To the Treasury?—I made it personally to the Chancellor of the Exchequer, and he said it was a matter that this Commission ought to look into.

22,615. (*Chairman.*) These suggestions that you now make to us with reference to bringing the collectors into your office—have you made them to the Board?—Yes; I made them first in 1877 and then in 1887. When I made it to the Board this was the reply I got:—"I do "not think the London collectors of Inland Revenue"—this is a letter from a member of the Board to me—"should have their work handed to the Receiver-General. There is a good deal of personal communication between collectors and important traders. Moreover, the discipline of the collection must be exercised, and especially so after the recent "order of the Board by some chief "officer." I did not answer that, because I would not contradict it; but I know practically, because I have often talked to the collectors, that the whole of the discipline outside of the office is carried on by the Supervisor of Excise, and if the Supervisor of Excise does not do it he can do it; he is there; and he is again superintended by the Inspectors in Somerset House, who should periodically go down. They must still remain. The Supervisors of Excise are the people who do the outdoor work and go about the streets, and they know where any shops are opened that ought to take out licenses. The Collector does not do that at all.

22,616. (*Mr. Harvey.*) Do you think the same argument would apply to the surveyor of taxes?—The collector has no control over the surveyor of taxes whatever. He is an entirely independent officer; he receives his instructions direct from Somerset House. Reading the instructions the Board send to supervisors I find that they are never told to go to the collector. They are told if they make a seizure of any goods to report it to the Board; if anything happens, report direct to the board. That is what the supervisors do. They are under a department of Somerset House which is called the chief inspector's. These inspectors are periodically sent out—they have a large staff there—to the different parts of London, and to the provinces.

22,617. (*Mr. Lawson.*) Have the supervisors and surveyors the same office?—No; they are quite separate, although in theory they are members of the same department.

22,618. (*Mr. Harvey.*) I understand your contention to be that the personal influence and the personal colloquies are between the surveyor and the public and the supervisor and the public, and not between the collector and the public?—That is so. I should just like to add that since I have been Receiver-General, although my office has been decreased, chiefly upon my suggestions, from a staff of twenty to fourteen, and the cost of the office has decreased from 6,750*l.* a year to 3,921*l.* a year, while this has been going on—that is to say, a thirty per cent. reduction in clerks and a forty per cent. reduction in the cost—the work has increased in many cases 200 per cent. The first year I was Receiver-General the total passed through my accounts was 43,000,000*l.*; last year it was fifty-six and a-quarter millions. I do not give that as a test of work, but all taken together show the increase of work. In the first year I was Receiver-General I received over the counter by my clerks, 7,000,000*l.*; last year I received over 9,000,000*l.*

22,619. (*Mr. Harvey.*) Have you got a record of the number of transactions?—Yes. The number of remittances received by post in the year I went there, was 20,239. You know that all that come by post have to be very carefully opened to see what they are about—it is endorsed on the letter what they are—then they are entered into a book, and then a proper receipt is sent to the person who sent them. There were, as I have said, 20,239; last year there were 39,000, which is an increase of nearly 100 per cent, The number of cheques that I had to sign the first year I was there was, 1,908; the number of cheques I signed last year was 4,709, or an increase of 125 per cent. The number of special payments received at my office in the first year was 3,966, and last year it was 9,800, being an increase of nearly 200 per cent. The number of country legacy accounts passed was *nil* the first year I was there, and there were 30,000 last year. At the same time, while I am saying that, I must put down that a few small items of work were taken away from my office, but the balance, on the whole, has increased. The following work was taken away. Certain distributors of stamps were abolished; this reduced the then work of remittances by about one-third, but, as I read to you, the total work of remittances has increased 100 per cent., notwithstanding that reduction. The next item is the purchase of postage stamps by the public. That was a purchase from me of about 370,000*l.* of stamps a year, and now they only purchase 30,000*l.* worth, because a discount is not allowed to private people purchasing stamps now. They used to get 1 per cent. discount if they came and bought these stamps in bulk. I had a clerk reduced immediately that was taken away. The sale of small impressed stamps from 6*d.* to 5*l.* is now done by recording presses; it used to be done by my clerks. I had two clerks abolished when that was taken away. Those are the only items of work that have been taken away.

22,620. (*Mr. Lawson.*) When you say abolished do you mean that those clerks were transferred?—Some were transferred and some retired—some pensioned. During the time I have been there I have had six clerks pensioned

Sir A. Slade, Bart.

6 Dec. 1888.

under sixty years of age, on pensions from 125*l.* up to 300*l.*

22,621. (*Mr. Freeman Mitford.*) With abolition terms?—I believe of these certainly five got abolition terms, that is to say, they got some years added to them to induce them to go: but that is always the result, you know, of re-organisations or amalgamations.

22,622. (*Mr. Harvey.*) Are your cashiers among those eight lower-division clerks on the Estimates?—Yes; all my cashiers are lower division.

22,623. What do the three senior clerks do?—Do you include the deputy?

22,624. No. I leave the deputy out?—The first senior clerk deals with all that important work which I read to you, called the confidential work. He deals with that partly. It is more than he can do, and he always has to be assisted, but it is all under him. In addition to that, he is supposed to prepare all the accounts for audit. Of all these vast sums that we spend we have to send in monthly a statement to the Audit Office, giving the number of the Parliamentary vote under which this money has been paid away.

22,625. That is accountants' work?—Yes, but we have to prepare it.

22,626. Still, that is accountants' work entirely?—Accountants' work entirely—clerical work.

22,627. What does the other senior clerk do?—The other senior clerk acts as pay clerk. He is the pay officer, and he pays away, as I explained to you, about a million and a-half a year. He pays all the salaries.

22,628. Then your receiver of Duties is a lower-division clerk, but your paying cashier is a senior clerk?—Yes, my receiving cashier, being in the most critical place, takes any amount of money as receiving cashier, but the pay clerk does not take anything.

22,629. As to this confidential work. Suppose a trader wishes to make a confidential return, and he fills up his form and sends it to Somerset House; after a time the order for payment is issued, which is sent, is it not, to the surveyor of taxes at Winchester House—supposing the trader is in the City of London?—I think the surveyor does sit there, at Winchester House. Do you mean the receipt?

22,630. No, the order to receive. I believe I am right in saying that Somerset House issues a document which is sent, under cover, to Winchester House, which is in fact an order to Winchester House to receive a certain sum of money from a particular trader?—Yes.

22,631. Does not the trader as a rule pay that to Winchester House?—I cannot tell you what he pays to Winchester House, I can only tell you what he pays to me.

22,632. Would you say that the actual payment of that money was a confidential element? If the trader walks into the Receiver-General's office and pays a certain sum of money, do you think the actual payment constitutes the element of confidence? Does not the element of confidence consist in his return, which is between the Somerset House authorities and himself?—That is so, but in my case the element of confidence is that he gives me a cheque in his own name, or his firm does. I tell you that occurs in nineteen cases out of twenty.

22,633. Say the firm gives you a cheque for 1,000*l.*, what can you learn from that?—I know that is income-tax for the year 1887. If it is 6*d.* in the pound, I divide out the number of sixpences and I know the income of that man.

22,634. As a matter of fact is not Winchester House in exactly the same position?—I cannot speak to that. I do not know that it is; I was not aware that it was, I was not aware that they received any special payments. There is a stamping department at Winchester House, but I do not think there is any department for the receipt of special payments.

22,635. Special payments are made there as a matter of fact; but still I want to emphasise this, that in the particular payment of that cheque, although your clerk or any one of your cashiers may learn that it represents income-tax, he cannot know what it represents?—He must, or he could not bring it to account: he is obliged to know exactly what it represents; if he does not know, he goes over to the Special Commissioners' Office or refers to the secretary, and says, "What is this?" They say, "Income-tax, 1887-88." He must know that, or he could not prepare the accounts.

22,636. Then, in fact, do you mean to contend that there is no actual confidence at all?—There is the confidence if the public choose to avail themselves of it, although they do not, because they draw a cheque.

22,637. It is hardly a confidence if it is known to the whole of Somerset House?—It is not known to the whole of Somerset House.

22,638. I beg your pardon; if when this money is paid every clerk concerned in it can argue that this is a particular trader's return under Schedule D, and if he is not quite clear upon it can go to some other department and be told that it is his return under Schedule D, does it not strike you that the confidence becomes not to be very valuable?—Yes; because the other department he goes to is the Special Commissioners' Office, who are the very people who have to institute the charge—they do know and they are sworn to secrecy. That is the office he goes to. They will tell him what it is. He says, "E. 25, and some date, has paid me this." They look at their book and say, "That is income-tax." They do not tell to my clerk who it is, but my clerk, having got a cheque for 2,000*l.* from a large firm, he knows exactly who it is.

22,639. But you would not take a cheque of a large firm as a matter of course, would you—would you not expect to have a transfer cheque from a banker or actual notes and gold?—For such a thing as that I take anybody's cheque, because it does not discharge his estate; if the cheque is not realised we still go on at him.

22,640. Then you really do think that the manipulation of that particular cheque does constitute an element of confidence?—Certainly. I know a great many things which I should not like to say that I know about people's incomes which come to me in the most accidental way, from having to indorse the cheque drawn in my favour.

22,641. What is in the trader's mind is that his return which he has sent is an absolutely confidential document between him and the Commissioners, and when he pays his money at Somerset House—which he can do by notes or gold—that it falls into the ruck of a host of other transactions which no one knows anything about?—Quite so, and if he did not send a cheque in his own name it would be quite confidential, and we should have no clue to it.

22,642. As to the dividends on the foreign loans, I take it that there is no element of confidence there that is at all important?—No, I do not think there is.

22,643. There is nothing in that at all?—No; that was only part of the work done by a particular clerk, that is why I brought it in.

22,644. What I wanted to get at is the value of the claim which you set up for special treatment on the ground of confidence. I venture to say that so far as the demands of dividends on foreign loans are concerned that is an absolutely immaterial matter?—Yes; I have brought that forward as different work from a collector's work. I was mingling the two things together—work which was both confidential and different. I do not think anybody receives those but our office.

22,645. Do you exercise any sort of supervision over the receipt of revenue anywhere?—Outside of my office?

22,646. Outside of your office?—No; I do not exercise any.

22,647. You do not go to a collector anywhere and say, Show me your books?—No; I do nothing at all of that kind.

22,648. Who does look after the collectors?—The Secretary, I should think, or the Chief Inspector, but I really do not know. It is not in my department.

22,649. Talking of the local collectors, who sees that they pay over their money promptly?—They have to send in their weekly or monthly sheets, which the accountant checks. We are checked every day and we pay in every day. I think they do it weekly or monthly.

22,650. As to the payment of probate duty, you said that a large sum may be paid in for probate duty, and that if your cashiers were dishonest you would not find out that they had been dishonest till the end of the day; how do you know then what has been paid in?—In some cases I do not know, because a person walks into Somerset House and wishes to get his probate stamped. He has got to pay say 20,000*l.*, he prefers to pay it say in bank notes and gold. Some people are very reticent as to how much the estate is to which they have suc-

ceeded, I suppose for their own reasons. He says, "Where am I to take out the probate stamp?" Somebody says, "There, that gentleman will take it." He goes to him and he says, "Fill up a warrant for a probate "stamp for such an amount." My clerk takes the money, and initials it as received "pro the Receiver-"General."

22,651. Pardon me, what authority has your clerk to take the money?—The only authority is this: The public has raised this charge himself. This is his vouching, it has not been seen by anybody till that moment.

22,652. How does he know what amount he ought to pay?—He does not care provided the public will buy stamps. We will sell him any amount he likes, but the man has probably had a notification from the Probate Office to come.

22,653. Your cashier simply says, "Pay me 20,000*l.* and "you can go and get stamps to that extent from another place"?—"Give me the document and I will pin this "warrant on to it, to show that I have got the money. "I will give it to a boy, you follow the boy and he will "take it to the Stamping Department to be stamped "and give it to you." We generally say, "Come back in "two hours," as it generally takes some time.

22,654. Does that clerk decide for himself what ought to be paid on that document?—No; the public knows, and he is told. The public says, "I want the probate "stamp on that document." I do not think the probate is marked before.

22,655. Then your office, I take it, is one in which you would say that the supervision could be effectively carried out with a very small number of superior officers?—Yes; as it is at present constituted, I should say that a receiver-general and two principal clerks, and two senior clerks, who would act as the pay clerk and remittance clerk, could superintend four times the amount of the lower division clerks that we have got now.

22,656. (*Mr. Lawson.*) Do you suggest that four times the number of lower division clerks might be needed?—No, I do not conceive it would be possible to require that in order to do the collectors' work in London.

22,657. (*Mr. Harvey.*) On what authority do you draw a cheque?—An order of the Board signed by two commissioners which comes to my pay-clerk. As soon as the Board passes the order it goes down to him. He files them and keeps them arranged. Then the public come to him to receive the money. The public have had a notification that on application to the Receiver-General the money would be paid. They bring this notification and say, "We have come to receive the money." He looks at it, sees that the warrant is all right, agrees the name, makes the man sign the receipt, and then draws a cheque, pins the receipt on to the cheque, calls a messenger, and sends it to me. I look through the cheque and the receipt, see that they agree; I enter it into a book and take and sign it. Then it is taken to the Accountant-General, who countersigns it on my general account, because the Bank of England will not pass anything out of my general account until it has been countersigned by the Accountant.

22,658. Did you ever have a complaint that it takes a very long time to get the cheque from the Receiver-General?—Yes. I had innumerable complaints the first five years. After a great deal of trouble (I have got a very long correspondence with the Board upon it) I at last persuaded the Board to allow me to have a large rest of £1,500 always at my disposal, so that now any such delay for small sums is not possible, and I pass cheques rapidly through.

22,659. After a man has got his documents in order, how long does it take to get a cheque from the Receiver-General now?—Five minutes. Three minutes, sometimes.

22,660. (*Lord Lingen.*) Does the whole receipt of the Inland Revenue go through your office?—Yes, all revenue except the Customs.

22,661. We will exclude the Customs?—I think the whole receipt of what is ordinarily called Inland Revenue passes through me.

22,662. All the revenue for which Somerset House is responsible goes through your office?—Yes; or through my account at the Bank of England. Large sums are sent up from the country to my account at the Bank of England.

22,663. That I was wanting to come to. Do the fifty-six million pounds that you speak of include the money that is paid direct to your account at the Bank of England?—Yes, certainly.

22,664. How much is paid directly into your office at Somerset House?—By the return I read to you, last year I took over nine millions over the counter.

22,665. So that about from 45 to 48 millions out of the 56 millions are not paid through your office at all, but directly into the Bank of England?—It is not paid into the Bank of England through my office, but it is paid out through my office.

22,666. I am speaking now of what is paid in; out of that 56 millions 45 or 48 millions are paid to your account in the Bank of England?—That is so.

22,667. With the receipt of that money in the Bank of England, except seeing it into your account, you have nothing to do?—Not with the receipt of it.

22,668. Now, with regard to the payments that you make out from your office; does every clerk in Somerset House on the pay-day come to you for his money, or do you issue pay-lists to the heads of the departments?—In a few cases I issue pay-lists, but the majority come.

22,669. Come to you personally?—To my pay clerk.

22,670. You do then for the staff in Somerset House what the Paymaster-General does for the service at large?—That is so.

22,671. How much money do you issue? You very likely stated it in your evidence before, but if you did I did not catch it—how much do you pay out per annum, speaking generally?—A million and a half.

22,672. Those payments are wholly in salaries or almost wholly in salaries, are they not?—Repayments of duties.

22,673. These would be rather corrections of payments; but the bulk of your out-issue is salaries?—No; the salaries would not amount to one-eighth part of it, I think. I do not think the salaries amount to above 250,000*l.* a year.

22,674. Not in all Somerset House?—No, I generally sign a cheque for about twelve or fourteen thousand pounds a month for the salaries.

22,675. Would you tell me under quite general heads what besides salaries you pay out—under what heads of payment?—Yes, I will give you that; I had it in the return before me just now—Pensions, payments of tradesmen's bills, repayments of income-tax and probate duties, payments of receivable order cheques.

22,676. What would those be generally?—Those are many miscellaneous payments that I get a direction to the Board to pay to people. Some of those are even pensions, I think, now. I think we send to people abroad a receivable order. Then there are also overcharged legacy, succession, and probate duties. The probate duties, as you know, are numerous; there is hardly a large will proved which has not a return of probate duty on it.

22,677. Supposing that it were suggested that the nine millions which you receive directly should be like the other forty-five millions paid directly into the Bank of England, and that, if that were done, your office would be unnecessary—I am not giving that as my own opinion, but I am only putting that case to you—what would be your answer to that?—My answer to that would be that the Bank of England would probably require a much larger staff than I have to receive and give those receipts.

22,678. But they would do it all for their one per cent., or whatever it is, for managing Government business, would they not?—I believe they were asked if they would deal with my remittances which came by post, and I believe the price they asked to pay for it was so high that it could not be entertained. I think that the remittances sent up by collectors and different Inland Revenue officers throughout the country to me to be placed to their credit is really the only part of my work that might go to the bank, but then the bank would charge so much more.

22,679. (*Mr. Harvey.*) They are bills drawn in your favour, are they not? For instance, the collector at Leeds goes to Beckett's and gets bills on Glyn's drawn in your favour?—That is so.

22,680. Will you tell us exactly how you deal with those bills—does the collector remit them to you?—Yes.

Sir A. Slade, Bart.

6 Dec. 1888.

22,681. What happens then?—I have one clerk who deals with that alone—the remittance clerk.

22,682. You endorse the bills?—Yes.

22,683. And send them to the Bank of England?—Yes.

22,684. And that is all you have to do with them?—That is all I have to do with them; they are realised. Then, with regard to transferring to the Bank of England, I should like to add one thing else about it, which is that the Accountant-General's office adjoins mine, and he checks every receipt and payment I make. I do not know how he could do that at the Bank of England. He knows what the collector ought to send up, and, if the collector does not send the right amount, he writes to him. I do not know what the collector ought to send, I merely inform the Accountant what I receive from the collector at Leeds.

22,685. (*Lord Lingen.*) Still we have got the fact that the overwhelming bulk of the revenue is paid directly into the Bank of England?—Yes; the bulk of it.

22,686. You receive nine millions out of the fifty-six?—I do not include in that nine millions any of these remittances, and I have no idea what they amount to.

22,687. Still, if the total revenue is fifty-five or fifty-six millions, and you receive about nine or ten millions of it, the residue of that which goes to the Bank of England is as 45 to 55?—Yes, except what is passed through my office in the shape of remittances, which, as I answered another Commissioner just now, I merely endorse and send on, and inform the Accountant what I have got from the collectors.

22,688. What would be the amount of the remittances that you endorse in that way?—The number I endorse?

22,689. No, the amount?—I have no idea of the amount. I could not state it—it might be millions.

22,690. Do you think it is five millions?—I should say it is twenty millions.

22,691. As I understand, you do nothing but endorse those cheques—you do not verify the amounts; and have no responsibilty for them except sending them on to the Bank of England with your endorsement?—That is all. I enter them into a book. I send a list to the Accountant, so that he knows what I have taken.

22,692. Now these special assessments of income-tax that are paid into your office—you receive, I suppose, notice from the Special Commissioners of how much ought to be received in those cases—is that the process?—No, the public bring a little bit of paper, which they have got from the Special Commissioners, which has got a letter and a number on it, and the amount and a statement saying what it is—he brings that in to me and says: "I wish to pay that amount."

22,693. Then, practically, you, from knowing that paper and knowing the initials, that is your authority for the sum that you are to receive—it is a sort of advice that you are to receive this sum?—That is an order to me to receive it. I retain that paper as my voucher.

22,694. You have nothing to do in that case with how many of those payments there are; but simply, as you receive these pieces of paper, you take the amount of money that is named in them?—Yes.

22,695. And in the same way with the arrears of income-tax—I suppose you receive from some department or other in Somerset House the papers with the sum you are to receive?—Yes, the whole of the correspondence.

22,696. But as to the total amount of arrears, and whether this is the first of the whole series or the last of them, that does not come to your knowledge at all, you have only to receive so much as arrears?—That is so, unless I read the correspondence.

22,697. And the same with unpaid taxes, and the same, I presume, with the composition for the Corporation duties, the 5 per cent. payment on their income and the foreign dividends—all those you merely have to receive—you do not exercise any check whatever on how much may be outstanding under any of those heads, you only have to receive the individual payment?—That is so.

22,698. (*Mr. Lawson.*) Has it ever been proposed, to your knowledge, to amalgamate your office with the Accountant and Comptroller-General's?—I have never seen any such proposition.

22,699. Of course there was an office of Receiver-General at the Customs, and in that case do you know whether that line of amalgamation was followed?—It was partly followed; but if you were to analyse it out in the Customs you would find that a great deal of the work that used to be done by the Receiver-General is now done partly by the Collector of the Customs and partly by an officer called a Cashier—a highly paid officer.

22,700. Then the work is done separately still, although there is not an officer of that name?—That is so.

22,701. What are the duties of the Deputy Receiver-General now at your office?—The Deputy Receiver-General's first duty in the morning is the same as when he was the Chief Clerk. He has the key of the Strong Room, where all the cash balances are put into boxes, and various documents. He goes there and he opens that, and he opens all the letters that arrive, and gives them out to the different clerks they refer to.

22,702. He opens the letters, do you say?—Yes.

22,703. Is not that work generally done by an officer of a lower standing in most departments?—When I say opens the letters, I mean he sorts the letters. He knows the matter of most letters. He sees some are remittance letters, there may be fifty or sixty or a hundred of those, and he puts them in a box and passes them to the remittance clerk, who really opens them. Any letters that he does not know what it is he sets aside at first, and after he has dealt with the others he opens those letters.

22,704. Is not that work which might be done by an ordinary lower division clerk?—I think it is desirable that an upper clerk should go through the letters in that way, as many of them are confidential and contain money.

22,705. What else does he do?—He attends to various miscellaneous work throughout the day, there is always something extra going on in our office. We have now had lately for the last year what is called the amnesty penalties thrown upon us. You will remember there is an Act passed to enable people who had evaded some of the duties, if they brought their papers in before December 31, to get them stamped without paying the penalty. I think that is the purport of the Act. It gives rise to very complicated cases, requiring a great amount of care and looking after. He is dealing with them. When I am endorsing remittance bills he signs cheques. People come for cheques, and we do not want to keep them waiting, and so he has a deputation from me to sign cheques.

22,706. First, as regards the Amnesty Act, that is a passing duty, is it not?—Yes; I hope it will disappear this year, unless it is extended.

22,707. As far as you know, the time that is taken up in doing that work will be otherwise available next year?—Yes.

22,708. What power has he to sign any remittances?—He has got complete power from me.

22,709. From you?—Yes; I have given him a procuration.

22,710. Could you tell us, on an average, how many bills you endorse every day?—I should say the average was about 40 or 50. I have seen it up to 200, and I have seen it down to 25.

22,711. Of course it is very much greater at certain periods of the year than at others?—Very much greater during the first quarter of the year. Then there are certain days of the month when they come in, the 26th and the 1st, I think.

22,712. May we take it that the Deputy-Receiver-General has a general power from you to endorse bills?—Yes; he can sign *per pro* of me.

22,713. Does he, as a matter of fact?—Yes; he signs.

22,714. As a matter of practice?—Yes; he signs continually if ever I am not there; he signs everything.

22,715. But you and he are occupied really in doing the same work?—Yes, we are.

22,716. And the only duty which belongs to him separately and specifically is opening the letters in the morning?—In the evening he makes up the accounts.

22,717. What do you mean?—We make up a large account of everything we have done in the day in a book; the Accountant comes in, and he says, "You have received so much in the day," and we have to, what is called, "agree our totals." That only requires a skilful man of figures to do it, but as a matter of fact he does it; therefore he remains there till the end, and then he locks up the strong-room.

22,718. I understand from what you say that the position of Deputy-Receiver-General is really from any point of view less responsible and less laborious than that of the senior clerks?—Yes; in fact he helps me.

22,719. And even that of the one lower division clerk who is the head of your receiving department and really receives the money—you said that, did you not, that the lower division clerk is the receiver really?—There are several lower division clerks who receive; they have constant work to do, and can never leave their seat.

22,720. Was there any special work at the time the Deputy-Receiver was appointed, that is, in 1877, for which you required assistance?—No; I should say it was less then than now.

22,721. Is your office still organised on the six-hour scale?—Now it is seven hours.

22,722. Since when?—I got it done last year; I was many years at it before I could get it done. I think it was on January 1, 1888, that we began the seven hours.

22,723. Is it seven hours throughout?—My office is seven hours.

22,724. I mean for all the clerks?—For all the clerks in our office it must be so, because we close accounts at a certain time, settle them up, and then all go away.

22,725. Do the senior clerks now have seven hours?—Yes, every one of them.

22,726. Was any increase made in their salary when the change was made?—Yes; 30*l.*

22,727. That was done last year?—Yes; the senior clerks got 30*l.* each, and 15*l.* was paid to the lower division.

22,728. Of course the lower division are on the scale, and there is a contract between them and the Government; but the Treasury must have agreed to the increase of the senior clerks?—Yes.

22,729. (*Mr. Harvey.*) In answer to Lord Lingen you stated that the proposal had been made, as I understand you, for the Bank of England to take over a certain proportion of your duties?—So I understood—the remittance work.

22,730. What is the remittance work?—That is sent by post to me. Large sums are remitted by cheques and bills which might be sent direct to the bank and placed to the credit of my account.

22,731. You are the holder of those bills technically, and indorse them and hand them over to your banker. Is the business of the Bank of England anything else than simply to collect those bills and credit your account with them?—That is all they have got to do now. I compute the bill and indorse it, and send it to them.

22,732. You are the holder of the bill, and you send it to the bank?—Yes.

22,733. Is there in that any specific duties—is not that the ordinary banker's duty of collecting bills on account of a customer?—I should have thought so.

22,734. Do I understand that you have no moneys in your own hands except a small cash balance that you may have in the till to-night?—Do you mean myself personally, or my clerks?

22,735. Your clerks?—My pay-clerk has 500*l.* rest always.

22,736. Quite so; but all the rest of your money you pay in advance?—I pay in every day at the Bank of England as much as I can.

22,737. (*Mr. Lawson.*) It is available every day for the Government then?—The next day after I receive it.

22,738. (*Mr. Harvey.*) I suppose these bills are what a banker would call put short to your account from day to day?—Yes. The Accountant watches them, to see that when due they are credited.

22,739. That is to say, that the Bank of England has collected those bills according to their maturities?—Yes.

22,740. (*Lord Lingen.*) What would the bank do that they do not do now upon these receipts for the charge that was considered too great?—The bank would have to do this—they would have to make out a list of all the bills they had received that day and send it to the Accountant-General, because he is the man who is the controller of what A. and B. have paid.

22,741. Do not they do that now?—We do that now.

22,742. (*Mr. Harvey.*) Do not the Bank of England return a pass-book every day?—Yes.

22,743. Supposing your collector going to Beckett's at Leeds and getting a bill on Glyn's in favour of Sir Alfred Slade, or in favour of the Receiver-General of Inland Revenue at the Bank of England, for argument's sake, would not the whole of that work pass at once into the hands of the Bank of England with only an additional trouble to the bank staff that they would have to endorse certain bills which they do not have to endorse now?—And that they would have to notify to the accountant, and would have to send a receipt to the collector. You see in the case of every one of these bills we acknowledge it at once to the sender. That is what I think the Bank of England were required to do.

22,744. I am afraid we do not understand each other. I am the collector at Leeds. I have authority from the Accountant-General to remit a certain sum of money. I go into Beckett's and I get bills at seven days on Glyn's. Now, then, I report myself to the Accountant-General as having done that. I send the bills on to the Receiver-General, the Receiver-General endorses them and hands them over to the bank for collection. The bank collects them on maturity and hands the money over to the Accountant-General, just as it does to every other customer?—That is so.

22,745. Now supposing instead of the Receiver-General endorsing those bills, the bills were drawn in favour, say of the Bank of England, if you like—is not the only additional duty that would thus be imposed upon the Bank of England the small one of endorsing the bills?—And of writing to the person who sent them to say that they have received his bills for that amount and to report to the accountant.

22,746. (*Lord Lingen.*) The taxpayer's receipt is given by the revenue officer down at Leeds, is not it?—Yes, by the revenue officer there. I only give the receipt in that case to the collector at Leeds. "We have received your "bill for 954*l.*, which has been placed to your credit"—that is all I give to him.

22,747. What receipt would the Bank of England give except putting this sum down in the daily pass-book?—It would give no other receipt, and then the public would want it. A large number of these remittances are not from officials, but from the public who have an order to pay something on some account—we do not know what it is, but the accountant sees to that.

22,748. (*Mr. Harvey.*) There is nothing surely to prevent the man at Leeds from selling that bill. What does he care about the person on whom it is drawn, except that it is a good name, and that the acceptance will be met. The collector at Leeds, I take it, might sell the bills on the market if the regulations permitted it?—I do not see why he should not. He only wants to know that his remittance has come to hand, and that is all I write to him for.

22,749. Then all that it comes to is this, that suppose these bills were drawn in favour of the Bank of England, instead of being drawn in your favour, the Bank, receiving them everyday from whatever quarter they came, would give the ordinary receipt which would be given when it comes to anybody else. Having given that receipt, the Bank of England proceeds to put the bill away in its boxes until it arrives at maturity, sends it to Glyn's, or any other drawee, gets it accepted, and in due course paid. What I want to ask you is this, whether your duty in the whole of that matter is not one which could be instantaneously discharged by the Bank of England?—I have always thought it could, but, as I tell you, when it was put to them the price they asked for performing this was far more than what it cost us, because one clerk, with the assistance of a boy, does the whole of this duty.

22,750. You have no documentary evidence, I suppose, as to any of the negotiations with the Bank of England?—No; I have not. It did not pass through me. I only know it from rumour.

22,751. (*Mr. Lawson.*) Do I understand that the Treasury assign to you your clerks?—No; the Treasury appoint me and the Board of Inland Revenue assign to me clerks that have been passed by the Civil Service Commissioners.

22,752. Those clerks are assigned to you by the Board and not by the Treasury?—That is so.

22,753. Is the Deputy-Receiver also appointed by the Treasury?—He was, in this case, but it is the first appointment; there never has been one before.

22,754. Has there been any alteration of tenure made since?—No; he remains still.

Sir A. Slade, Bart.

6 Dec. 1888.

22,755. Under the Treasury, to that extent he remains?—I think his appointment as Deputy-Receiver-General comes from the Treasury.

22,756. (*Chairman.*) Your particular office, I believe, would not be affected by amalgamation in any particular way, would it?—If we were amalgamated we should re-receive the customs as well as the excise and stamps. At present I only receive excise, stamps, and taxes. Of course if we were amalgamated we should receive customs also. That would make no difference to us whatever. It would be merely a little increase of work, and that would only mean another clerk or two.

22,757. (*Mr. Lawson.*) I should like to follow that out. What would you take over?—The collector of Customs.

22,758. In London?—In London. That is to say, on my assumption that we take over all collectors. I suppose the present idea of the Board would be to appoint a collector of Inland Revenue to collect the Customs at the Port of London.

22,759. Do you mean the collector who now is in the Long Room?—Yes.

22,760. And that you would have to perform the work as done by him and his clerks?—Yes. I should require one principal upper-division clerk with one accounting officer, and lower-division clerks.

22,761. At the present time he has four principal clerks and twenty-six clerks of the upper division. They are in the Long Room?—He has a great deal to do with what you were speaking of—namely, the Receiver of Customs. The Receiver-General's work is done by him.

22,762. Quite so. I suppose the only part of the work that is done in the Long Room at the Customs by the collector would come to you?—I should think that all the work that could be done by post would come by post, but then there is some that would have to be done on the spot.

22,763. At the present time, besides those I have mentioned, there are sixty-one clerks of the lower division, and eight copyists; in fact, it is a large establishment?—Yes; but I should not be surprised to hear that we could gradually get it done by post or post-office orders.

22,764. Is none of it done in that way?—I do not know.

22,765. (*Chairman.*) You must have at the Inland Revenue, I imagine, some cashier to receive money over the counter, so to speak?—I think it would be necessary to have some local man at the Port of London. You could not receive the whole of the duties at Somerset House. I do not think the trade would stand having to come up to Somerset House every time they wanted to clear a cask of wine out, or to pay on a pound of cigars. There must be some officers at the port.

22,766. Under the present condition of affairs there must be at Somerset House somebody to receive cash payments?—Yes; there is an increase in the necessity of it since they have sent away the collector last year; that has increased the necessity. There is a large number of the public who will come to the Central Office to do everything.

22,767. (*Mr. Lawson.*) Do you think, so far as the Customs are concerned, that one of your clerks could perform the duties of a collector in case of amalgamation?—Yes; I think my upper-division clerks, with an accounting officer alongside of them to be their check, could with any number of lower-division clerks perform the duties of the Long Room.

The witness withdrew.

Adjourned till Tuesday next, at 12 o'clock.

SIXTY-SIXTH DAY.

7, Whitehall Place, Westminster, S.W., Tuesday, December 11th, 1888.

PRESIDENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD LINGEN, K.C.B.	MR. H. W. L. LAWSON, M.P.
LORD BASING.	MR. MACLURE, M.P.
MR. R. W. HANBURY, M.P.	MR. H. WALPOLE, C.B., *Secretary.*

DR. JAMES BELL, F.R.S., called and examined.

Dr. J. Bell, F.R.S.

11 Dec. 1888.

22,768. (*Chairman.*) You are the Principal of the Laboratory of the Inland Revenue?—I am.

22,769. How long has that office existed?—Mr. Phillips was practically the principal of the Laboratory since the year 1841 or 1842, but the Laboratory was not organised as a separate establishment till about the year 1857 or 1858.

22,770. The staff you have is given on page 32 of the Estimates, is it not?—Yes.

22,771. I see you have a deputy, six analysts of the first class, six of the second, and two keepers of chemical and scientific instruments?—Yes; I would point out that I have prepared a fresh paper elucidating my Report, and it will raise all the points in my Report. In this paper there is an argument throughout. If the Commission would allow me to go through these points in this fresh paper I think it will place the subject more intelligibly before the Commission.

22,772. (*Lord Lingen.*) Is the former report that you refer to the one that we have already received with the Inland Revenue Reports?—Yes.

22,773. Is this a new edition of it?—This is practically elucidating that report. I am dealing with the various points that were given in that report. First with regard to the Laboratory officers: these consist of a fixed staff of analysts, and a class of officers called temporary assistants. The higher class chemical work, including the samples on which prosecutions are likely to arise, is performed by the analysts composing the fixed staff, while the routine work, such as the distillation of wines, the determination of original gravities of beers and worts, the obscuration of brandies, rums, &c., is done by the temporary assistants, at an average salary of less than 2*l.* per week. In this way the department is worked with the most rigid regard to economy.

22,774. (*Chairman.*) I do not see where the temporary assistants are provided for in the Estimates.—They are on the outdoor establishment.

22,775. (*Lord Lingen.*) They are persons only passed through your office—they belong to the other services, and you are a sort of Chemical Normal School for them, is not that so?—Quite so.

22,776. They do not appear as your assistants, but as assistants of excise or other officers?—Quite so. In order to keep up the supply of temporary assistants, there are eight young officers selected every year by competition, who receive a systematic training in theoretical and practical chemistry at the Central Laboratory and at the Normal School of Science, South Kensington. They attend there the lectures on theoretical chemistry, and in our Laboratory they receive a training in practical chemistry. At the end of 12 months we draft them into the general work of the Laboratory, and keep them at that for perhaps two or three years; then they go out to the outdoor department to take their place again in the service. All the officers therefore employed in chemical work are trained chemists, both in the Central Laboratory and at the chemical stations at the out-ports. The system of chemically training a certain number of officers every year was inaugurated in 1845, and the service has derived great advantage from the officers so educated. They have to assist in preventing adulteration, and, in fact, they have so many technical duties to perform that it was deemed necessary or desirable for the interests of the Service that the Board should have the men educated chemically and trained in scientific subjects. The work of the Inland Revenue Central Laboratory last year was made up as follows:—For Inland Revenue, 35,300 samples; for Customs, 2,042 samples; for India Office, 936 samples; for Board of Trade, 724 samples; for Admiralty, 127 samples; for Home Office, 41 samples; for Post Office, 4 samples; reference samples under sale of Food and Drugs Acts, 50 samples; making a total number of samples of 39,224.

22,777. Do they always send the samples, or sometimes questions only?—They sometimes ask us questions or apply for explanations as well as send us samples.

22,778. Are those questions which are independent of the samples included in the numbers you have just given?—No. The number of samples analysed last year at the nine out-ports was about 13,000. The number I should point out this year will be considerably increased. I expect that in the Central Laboratory the number will amount to over 45,000, and at the out-ports to perhaps 15,000 or 16,000.

22,779. (*Chairman.*) What is the reason of that increase?—The limitation of the water in the tobacco. A large saving has been effected by undertaking the chemical work for other departments. An immediate saving of at least 1,800*l.* a year resulted from the transfer of the Inspection of the Lime and Lemon Juice for the Board of Trade; and a saving of nearly 2,000*l.* a year was effected for the Indian Government. The samples analysed for other departments amounted to 3,924, which represented 2,406 recorded papers to be reported upon, but as we communicate direct with the heads of the respective departments, the whole of the work is done without entailing any labour whatever, either on the Board or on the Secretary's Department. The same course is followed in the case of the Agricultural Returns, collected for the Board of Trade by the Inland Revenue. The work is controlled by the Chief Inspector and practically the Board are not called upon to perform any work in connection therewith. The Inland Revenue have also undertaken within the last few years to collect Agricultural Produce Returns for the Board of Trade, and the work in this case is practically conducted on the same lines as in the other case—that is without entailing any labour upon the Board. This is the principle, in my opinion, upon which all extraneous work should be conducted, and the old-fashioned system of only communicating through the secretary's office should be abolished. As the result of my experience this system gives great satisfaction to the respective departments. They seem to like to be in touch with those who are immediately responsible for their work, and the system in no way affects the supreme authority of the Board. If this principle of devolution were applied to the extraneous work now performed by the Customs for other departments, it would entail little or no labour upon a Consolidated Revenue Board, or upon its secretary's department. It is probable that after a careful scrutiny this principle of devolution might be usefully applied to a large proportion of routine revenue work.

22,780. (*Lord Lingen.*) That is beyond the confines of chemistry. You are speaking now of general administration.—I am drawing an argument from the mode in which we conduct our work.

22,781. To other departments which are not chemical departments?—Quite so.

22,782. Your inference is that?—Quite so. In my report I did not dwell sufficiently in detail upon the intertwining of the work of the two departments with respect to sampling and protecting the duty on tobacco. These duties, like those in connection with the dovetailing of the warehousing system, serve to show in a marked degree how unsuitable—indeed, I might almost say how unbusinesslike—it is to have two managements and two heads for dealing with the same dutiable commodities. Of the samples analysed by the Inland Revenue last year upwards of 15,000 were drawn by Officers of Customs. These samples consisted of beers for exportation, 12,432; liqueurs for exportation, 130; tobacco and snuff, 2,042; lime and lemon juice, 631; making a total of 15,235. The samples of beer and liqueurs are taken for Inland Revenue purposes, and are necessary for checking the drawback of duty claimed on exportation of the same. The samples of tobacco and snuff serve for two objects: 1st, for the purpose of determining the amount of normal tobacco present in the tobacco or snuff presented for drawback, and thereby to enable the Customs to calculate the amount of duty to be repaid the manufacturer. 2nd, for a careful scrutiny and examination to see that the article consists of tobacco only, and that no foreign ingredient has been added to, or mixed with, the tobacco. The samples of lime and lemon juice are taken and forwarded under regulations laid down by the Board of Trade. I specially referred in my report to the inspection of lime and lemon juice, and to the fact of my being authorised to visit the bonded warehouses, and practically to exercise a supervision over the sampling and fortifying of the juice. These regulations work admirably, and are in striking contrast to those in existence in regard to the sampling of tobacco and snuff for drawback. In the latter case we have no authority to interfere or advise in any way, although we frequently feel that we could do so with advantage to the Revenue.

22,783. Why are not the young excisemen that have passed through the training of your office competent, being employed, we will say, in the tobacco and snuff manufactories, to exercise immediately and directly the supervision of which you are speaking? They would do in the tobacco manufactory what you would do with the lime juice in a warehouse, would not they?—These samples that I refer to now are drawn from tobacco or snuff deposited in Customs bonded warehouses, and the samples can only be taken by the Customs.

22,784. I understood you were saying that it was a great pity to have two departments to do these things, and if you had your own way you could do on the original articles what you now have to do by samples, and save the sampling process; was that not what you meant?—No; what I am pointing out is that in the taking of the samples of tobacco and snuff, which are deposited either for exportation or deposited in the bonded warehouses and abandoned, the Customs Officers draw those samples and forward them to us for analysis in pursuance of a Treasury Order, and we have no control over the sampling of the tobacco and snuff, and we have no power to give advice or to interfere in any way.

22,785. What is the exact difference between that and what you do with the lemon juice?—The exact difference is this, that if I find anything wrong with a sample of juice I can go direct to the bonded warehouse and have another sample drawn in my presence, or if I have any suspicion that the juice is not properly mixed, I can go to the bonded warehouse and I can have a sample drawn of it, and bring it away with me for analysis, to see that the Customs Officers have done their duty properly.

22,786. Have you represented to your own Board, and through them to the Board of Customs, that it would be better to let you into the Customs bonded warehouses to do what you do with the lemon juice? Have you ever urged that upon your Board?—I have always considered that it would be an undue interference on my part to do so, and I am afraid the Board of Customs would not listen to our interference.

22,787. I mean that you bring this before us for the first time, and that there has been no refusal to adopt your proposals, from the very fact that you have never made them to the people who could carry them out?—They have never consulted me.

Dr. J. Bell, F.R.S.

11 Dec. 1888.

22,788. No; but then they might say that you have never informed them, might not they?—I do not know that. As I have already said in regard to the sampling of tobacco and snuff for drawback, we have no authority to interfere or advise in any way, although we frequently feel that we could do so with advantage to the Revenue; and if the two departments were placed under one management, there can be no doubt that improved arrangements in this respect would soon be made. With regard to the part which the Inland Officers take in protecting the tobacco revenue, it is no exaggeration to say that their services in this respect represent fully five-sixths of the entire labour involved in charging and securing the tobacco duty. The work of the Customs with respect to tobacco is practically limited to taking charge of the different packages, weighing them, and calculating and receiving the duty payable thereon; whereas the Inland Revenue practically take charge of the tobacco immediately after the duty has been paid, control it during the process of manufacture, and exercise a check over the manufactured article till it reaches the consumer. There are 564 tobacco manufacturers scattered all over the kingdom and the factories of these are visited daily by the Inland Revenue Officers, who rigidly guard the tobacco against adulteration, and in order to restrain the moisture within the limit of 35 per cent., as fixed by law, procure samples of the manufactured tobacco weekly and forward them for analysis. In addition to these 564 daily visits by the officers, the Supervisors make occasional check visits, and once, at least, every year the Analysts at Somerset House visit the whole of the manufactories throughout the United Kingdom. It should be borne in mind that the cost of performing the whole of this work, together with the expense of the analyses of upwards of eighteen thousand samples a year is thrown upon the Inland Revenue Vote. The importance of the services rendered by the Inland Revenue in this connection may be gathered from the fact that one per cent. of adulteration would represent a loss of about 80,000*l.* a year to the Revenue. In my Report I referred to the fact that the Customs undertake the control of the manufactured tobacco imported, amounting to about 300,000lbs. a year, but that, although this quantity is small, it is sufficient to occasionally produce unpleasant collisions between the officers of the two Departments, and sometimes to cause serious hardship and irritation to the trade. I cited three recent cases of this kind, one of which consisted in the seizure of coca-tobacco and coca-cigarettes.

22,789. That is a new sort of tobacco is not it?—The coca is a plant from which the alkaloid cocaine is obtained. I should like to add that in this case the seizure was made about the middle of September last, but the trader had been selling the articles for about four months, and finding a demand for them, he had taken a lease of new and expensive premises in anticipation of a large trade, when he was suddenly stopped. But this was not all, for in consequence of the existence of two Revenue Boards it took nearly two months before an arrangement was come to for the return of the seized goods to the Queen's warehouse with a view to the repayment of the duty and their reshipment to Germany. Now, in the first place, if there had been only one Revenue Board, this business about the return of the tobacco could have been settled in twenty-four hours; and, in the second place, I feel confident that, if we had one Revenue Board and the usual opportunities of advising and consulting with the officers at the ports, such mistakes would rarely, if ever, occur.

22,790. (*Mr Hanbury.*) Do you maintain that if there had been only one Board you would have stopped the sale of these cigarettes four months earlier?—No; I maintain that the chances are that they would not have come in. They would not have been allowed to come in. If there were one Board and we had the power and the position to advise the officers under the whole of the Board, we would take such steps as to train the officers at the ports and advise them as to the best way of dealing with manufactured tobacco as it came in, and so prevent such occurrences.

22,791. (*Chairman.*) Does the present state of affairs under which what you say now is possible, imply incapacity to examine properly the tobacco on landing on the part of the Customs?—The Customs officers have not the same experience that our officers have. Our officers, as I have pointed out, visit the tobacco manufactories, and they are in the habit of examining the tobacco to detect adulteration. All the Examiners before they go to districts pass through the Laboratory, and we teach them the best modes of detecting adulteration in tobacco and other things, so that they are trained how to deal with suspected articles.

22,792. To pursue that point—if this particular tobacco, when it first came in, had gone to an Inland Revenue bonded warehouse for examination—having been sent in gross to an Inland Revenue bonded warehouse—would your officers have taken it?—I have no doubt it would have been stopped.

22,793. But in this particular instance it happened to go to a Customs bonded warehouse?—Quite so.

22,794. Where it was dealt with by the Customs instead of by the Inland Revenue?—Quite so.

22,795. And your point now is that, seeing that the Inland Revenue officers have more experience in dealing with tobacco than the Customs officers, they would have been able to detect it, whereas, as the Customs officers deal with the import of tobacco only, they failed to detect that which would have been detected by more experienced men?—Yes. Moreover they would have known that our laws prohibited the admixture of any foreign vegetable leaf whatever with tobacco, and seeing that it was called coca-tobacco and coca-cigarettes, they would have immediately come to the conclusion that those articles could not be admitted as they contained an admixture of foreign leaves.

22,796. Do you mean to say that there was ignorance on the part of the Customs officers as to the law of the country in reference to the admixture of tobacco with coca?—It may be that the officers of the Customs who admitted this tobacco and cigarettes were not thoroughly conversant with the Excise law.

22,797. I understand the main gist of your argument with reference to this is that the whole of the imported tobacco might be advantageously dealt with by the same class of men—whether under the one Board or not is another question. You say under one Board, but one set of officers, at all events, could deal with it advantageously?—If we had one Board we would have the opportunity, or we would take the opportunity, of making the officers at the ports acquainted with the various forms of adulteration, and explain to them the best way of examining tobacco so as to ascertain whether it was adulterated or not. That is the point of my argument. The Inland Revenue is so concerned in protecting and securing the duty on tobacco that in all cases of legislation affecting that article the Inland Revenue Board necessarily take an important part, and the results of the discussions between the two Boards on such occasions are sometimes embarrassing and unsatisfactory. Two notable instances of this kind may be mentioned. In the year 1863, when Mr. Gladstone wished to benefit the consumers of tobacco in this country and to reduce the import duties on manufactured tobacco, cigars, and snuff, there was great difficulty in getting the two Boards to agree upon a common basis for giving effect to the object in view. In the case of one proposal for repaying the duty upon refuse tobacco, the Customs maintained that it was impossible for them to undertake the destruction of such offal material of the manufactories, as desired by the Inland Revenue Board, and insisted on the manufacturer going to the expense and trouble of shipping it abroad, and yet in 1878 they realised the danger of enforcing its exportation and obtained powers to carry out the original proposal. I should point out to the Commission that on every occasion, from the time of the passing of the Act until 1878, we took every opportunity of pointing out the danger that the Revenue was exposed to by exporting this offal material.

22,798. (*Lord Lingen.*) Did you point that out to the Chancellor of the Exchequer or to your own Board?—It was pointed out to Mr. Gladstone at the time.

22,799. By the Inland Revenue Board.—Quite so.

22,800. Was that remonstrance repeated by the Board to successive Chancellors of the Exchequer?—I do not know. I am not aware whether it was repeated to successive Chancellors of the Exchequer, but at all events it was brought frequently under the notice of the Board of Customs.

22,801. During those fifteen years from 1863 to 1878?—Yes. Again, when the late Lord Iddesleigh was Chancellor of the Exchequer, and proposed in 1878 to increase the duty on tobacco by 4*d.* per lb., the Customs advised that the duty on cigars should be 5*s.* 4*d.* The Inland Revenue Board demonstrated that the rate should be 5*s.* 6*d.* in accordance with the basis laid down and agreed to in 1863. The Chancellor, however, adopted the advice of the Customs but the pressure of the trade to obtain their rights was so great that he was obliged to increase the duty to 5*s.* 6*d.* in his next Budget. Instances of this kind serve to show the serious disadvantage of having two Revenue Boards dealing with the same article, and

also the injury that may be inflicted upon the trade from the want of a proper appreciation of important questions affecting the home manufacturers. In my opinion the two Departments have now become so dovetailed into each other that the difficulties of working them side by side are increasing every year. The duties under the two Boards have become so comparatively restricted and assimilated that all practical difficulties in the way of their union have ceased to exist. It is not in the nature of things, even with one code for the two Departments, to secure uniformity of practice and equality of administration otherwise than by a union of the two Boards. A consolidated Revenue Board would, in my opinion, lead to an effective and satisfactory administration, and large economies would follow in course of time in various directions.

22,802. (*Mr. Hanbury.*) Can you specify those directions within your own Department?—I believe economies would be affected by the union of the two Boards through the union of the Laboratories afterwards, but of course that would be a matter of gradual process.

22,803. Are you able to point out any economies at the present moment? You give us a general opinion that these economies would be effected, but are you able to point to any detail?—I do not know what system is followed there now, but about twelve months ago there were thirty examining officers of Customs employed in laboratory work and four outdoor officers. The salaries of the thirty examining officers varied from 110*l.* to 300*l.* a year. The salaries of the four outdoor officers ranged from 55*l.* to 100*l.* Now, assuming that the salaries of these thirty examining officers amounted on an average to 150*l.* a year, we could replace them by temporary assistants at a salary of less than 2*l.* a week, or about 100*l.* a year. On that basis there would be a saving of about 1,500*l.* a year.

22,804. Is it your contention then that the Customs pay their men too highly?—We do that class of work with men who are paid lower salaries.

22,805. Either the Customs must pay too high or you must pay too low if you pay different rates for the same class of work.—I have pointed out that we do that class of work in the Laboratory at Somerset House with men at a pay of less than 2*l.* a week on an average. My last point is that I find that since the amalgamation of the Boards of Stamps and Taxes and Excise in 1848 the Board of Inland Revenue have been relieved of five growing duties—and troublesome duties they were—namely, the duties on soap, post horses, hops, paper and stage carriages, and I further find that the number of districts and stations is 852 less than in 1848. I also find that the total number of charging officers of Customs, who are, I believe, the surveyors and examining officers, amounts to 1,471, so that if we take 852 from the total number of districts and stations there would be a difference only of 600 represented as stations over what the Board of Inland Revenue had in 1848.

22,806. (*Chairman*). With reference to work that is done by the Customs, which is of the same nature as that which you do, do I understand you that all the really chemical examination of samples and articles of all sorts is done by you now?—Yes, but such samples are practically limited to tobacco and snuff for exportation.

22,807. Then the Laboratory, so-called, of the Customs in London is not really a Laboratory in your sense of the word, is it?—It is not. The Treasury refused to have two chemical establishments.

22,808. Therefore there is only one Laboratory now, is there? Practically, the only Government Laboratory which exists is your Laboratory, is it not?—Yes, that is so.

22,809. And all the real work which requires the examination of a trained analyst is done under your responsibility now?—Yes, for various Government Departments.

22,810. For all the various Government Departments, including the Customs?—I do not know that. The Customs, I think, examine a large number of samples themselves of tobacco and other articles.

22,811. Do you know whether the Customs have any trained analysts?—I think they have one or two who have had some training.

22,812. Are not all those men who are employed in the out-ports and in London in the Customs so-called Laboratories merely examining and outdoor officers who have got a little readiness for testing samples of wine and so forth by the ordinary simple process of distillation?—All those employed in the distillation of wines, the determination of the obscuration of brandies, rums, &c., are ordinary Customs officers, and not, as you remark, trained chemists.

22,813. Then, as far as the bringing together all the work of this character under one head is concerned, I do not quite see (just confining ourselves to that point) where the advantage would be—and in fact even where the change would be, as regards your own particular Department—because this work could be more conveniently done, could it not, immediately at the port, wherever it may be?—Yes, but we have got nine laboratories at out-ports; and at each of those out-ports there is a Customs Laboratory, and no doubt eventually, by having the work done in one Laboratory there would be a certain amount of economy effected.

22,814. (*Lord Lingen.*) Is it correct that at Liverpool, for instance, there is an Inland Revenue Laboratory and a Customs Laboratory?—Quite so. There are nine places where that is the case. They are London, Bristol, Liverpool, Glasgow, Leith, Belfast, Cork, Dublin, and Southampton and Newhaven.

22,815. Is the separation at those places between the two chemical departments greater or less than it is in London?—It is about the same. I am not aware that there is any greater connection.

22,816. Supposing a Customs Laboratory officer at Liverpool has got a sample that he wants further advice upon, would he send that to the Liverpool Chemical Laboratory under the Inland Revenue, or would he send it direct up to his own Board in London?—He would send it direct to his own Board in London.

22,817. And they would pass it on probably to you?—They might probably do so, but not direct.

22,818. But he would not make on the spot, at Liverpool, any use of the Inland Revenue Laboratory, would he?—He would not.

22,819. Would the skill of the Inland Revenue Laboratory at Liverpool be to the skill of the Customs Laboratory at Liverpool about what your departmental skill is to the Customs departmental skill in London? Would the one be as superior to the other, and as much more advanced than the other, in Liverpool as it is in London?—Yes; the Inland Revenue chemical officer in Liverpool would be a trained chemist who had been several years in the Central Laboratory before he went to Liverpool.

22,820. The person at the head of that Laboratory would in all probability then be one who had passed through your own hands?—Yes.

22,821. In case of difficulty would he write direct up to you for instructions?—Yes.

22,822. Without all this circulation through the Boards?—Yes; if he wanted any advice, or my opinion upon anything, he would write direct to me.

22,823. To your office?—Yes, quite so.

22,824. (*Mr. Hanbury.*) How far are these local Inland Revenue Laboratories subordinated to the head office in London?—Whenever they find any difference between their results and the statements of the traders as to the original gravity, say of beers, and so on; they must then send the duplicate sample up to London.

22,825. Then, with regard to the local Laboratories of the Customs, whom are they subordinated to, in the same way that the Inland Revenue Laboratories are subordinated to you?—I do not know, unless to their Central Laboratory at Thames Street.

22,826. You do not know who is their immediate chief?—I do not know.

22,827. You do not look upon yourself as the person to whom they would send their reports?—No, they would not send them to me.

22,828. (*Chairman.*) I observe you state in your report that 'with one executive Board, the convenience of the public would be increased by the avoidance of the annoyance and loss of time which now occur when a question is at issue which concerns the two Departments, by the adoption of uniform methods of analysis, and of the same standard instruments.' As regards standard instruments, that difficulty has been got over, has it not?—Yes, we keep a standard, and the Customs bring their standard every year to compare with ours.

22,829. Then there is no further advantage to be got in that direction now, as far as the standard is concerned? The standard is uniform, is it not?—Yes, but there would be an economy in the union of the two eventually. That

Dr. J. Bell, F.R.S.

11 Dec. 1888.

is to say, the instruments are issued from Somerset House to the Inland Revenue Department, and the instruments for use in the Customs are issued from Thames Street to the Customs officers. If there were a union of the Boards, the instruments would be issued under the superintendence of one officer.

22,830. I think, with reference to the other point, that of analysis, you have already told us something (and you have said all that you would like to say in your report which you have sent to us) of the inconvenience which arises from the different methods of analysis, whether of tobacco or any other things, as pursued by the two Departments?—We do not know what methods of analysis they employ in Thames-street, and they do not know what methods of analysis we employ. We have had some collisions where an appeal was made to us.

22,831. You have had the question of cigarettes containing sugar, have you not, or said to contain sugar?—That is some years ago, but it was saccharine natural to the tobacco. As I have already pointed out, the Customs have not the same opportunity of studying the subject of tobacco as we have. It has been a special subject with us for years, and of course we are thoroughly acquainted with the chemistry of tobacco. The Customs have not the opportunity of becoming thoroughly acquainted with the chemistry of tobacco. If, in the case you refer to, they had been thoroughly conversant with the chemistry of tobacco they would not have made the mistake.

22,832. (*Mr. Hanbury.*) Are there any other articles with which you think they might be chargeable with some amount of ignorance, besides tobacco?—I do not know what articles they examine besides that.

22,833. (*Lord Lingen.*) Do they not examine tea, for instance?—Yes, but I am not aware of any difference occurring in the case of tea.

22,834. (*Mr. Hanbury.*) In fact, you make no complaints except in the case of tobacco?—That is so. We have had more difficulties in the case of tobacco than anything else because it is a big thing. The duty upon that represents nearly half the Customs Revenue; it is a very important subject.

22,835. (*Lord Lingen.*) The tea samples come to you and in considerable numbers, do they not?—No, they do not.

22,836. They do not?—No; we would only get tea samples in the case of a reference under the Sale of Food and Drugs Act.

22,837. (*Mr. Hanbury.*) On the subject of tobacco, have you many difficulties? There are the three or four cases you mention in your first report—do they exhaust the list of complaints?—These cases occur from time to time. I gave some of the recent cases.

22,838. You gave one in September, I think, of this year?—Yes.

22,839. Are they of very frequent occurrence?—Not of very frequent occurrence, but they occur in sufficient numbers to create some unpleasantness with the trade.

22,840. (*Lord Basing.*) I suppose the Board of Customs might adopt your plan of engaging skilful young men who are trained at South Kensington under a skilled chemist to advise them in these matters?—Yes, but I am afraid that would not be an economical method of arriving at the desired result.

22,841. You said a good deal at the beginning of your evidence about the satisfactory results which have been achieved by the initiation of young men through the agency of South Kensington and through your own laboratory, who thus become skilful chemists. May I ask who appoints those young men and selects them for this great advantage?—They enter by competition. They make application to the Board to be allowed to compete.

22,842. And then, once in, they have this advantage of being educated at the public expense. Is that what it is?—Yes, quite so, but they more than recoup the revenue by their services afterwards.

22,843. (*Mr. Hanbury.*) You say they ask the Board to be allowed to compete; is it competition after nomination then?—Yes, they are officers already in the service; they must be at least six months in the service before the application could be entertained.

22,844. (*Mr. Maclure.*) As I understand, these young men have had no chemical training before, but when they have been in the service six months, you allow a certain number to be nominated, and they compete, and are sent to South Kensington, where their chemical education is paid for.—Yes, quite so.

22,845. Why could not they work in your Laboratory as well as at South Kensington?—They are trained in our Laboratory in practical chemistry.

22,846. And in theoretical chemistry at South Kensington?—Yes, because we have no lectures, and they attend the lectures on chemistry at South Kensington.

22,847. How many assistants have you?—We have twenty-five.

22,848. Have those twenty-five assistants all passed a certain standard in your Laboratory or at South Kensington?—All have passed through a preliminary chemical training.

22,849. All who take the samples?—Yes.

22,850. In the Customs are the assistants of equal calibre? Have they passed at South Kensington?—They have not. The ordinary work at the Customs is not so difficult as the work that we have at Somerset House; that is in connection with the Excise samples. For instance, they have only the distillation of wines and the determination of the obscuration of brandies (which is a distillation also) and rums. Our assistants have to determine the original gravities of beers and worts—that is a weighing process and requires careful manipulation. In the other case they simply distil the wines, &c., and ascertain the strength by the hydrometer.

22,851. In tobacco do you do nothing more than just examine it, or do you analyse it to see whether it is adulterated?—We have to tear it all to pieces to see that there is nothing there but tobacco, and to use the microscope very largely for vegetable adulterations.

22,852. (*Chairman.*) Is it a fair question to ask you, as you have been asked these questions with reference to the appointment of these young chemists who do your work, whether, supposing you had to start this laboratory in an ordinary way attached to a commercial firm, you think your establishment is more or less economical than such an establishment would be? Are you now manned with the kind of men you would get if you were to go into the open market?—With superior men, because they are specially trained to our work. If we took in a man from the outside, we would have to specially train him before he would be of any use whatever.

22,853. Take the case of a man whom I daresay you know, Dr. Voelcker, who is the chemist at the Royal Agricultural Society. I assume that he finds his assistants for analysing work, which is probably just as difficult as that which you have to do. He goes into the chemical world, and gets young men coming on, and trained up. Do you think that system would be less good for you than that which now obtains?—I think we are served better now, because we have men that have future prospects in the service, and therefore who devote their attention to our work much more closely and diligently than if we brought in young men from the outside.

22,854. I am not making any suggestion to you, please understand. I am asking you, practically, whether the present system of manning your Laboratory is satisfactory, and I understand you to say that you think it is?—Quite so.

22,855. And that you get a good class of man, who remains with you?—I might give you an illustration, to show you the advantage of having men trained to our work. Many years ago the staff then did not occupy the same position in the scientific world that they now do, and had not the same weight in Courts, and we were obliged to employ professors. We used to employ Professors and others, but we had always to send an assistant to make the analysis for them—even with men in that position.

22,856. I do not wish you to give an opinion upon professors, but upon the condition of your own Department—which I understand you to say is very satisfactory—from the point of view of the young men that you get?—Yes, quite satisfactory.

22,857. You say the work, in your opinion, is well done, and you are satisfied with the class of men you get?—Yes, I am.

22,858. (*Mr. Lawson.*) In case of amalgamation, supposing that the work now done at the Customs were taken over into your Laboratory, do you consider any increase of staff, and consequent increase of cost, would be necessitated?—I think I have already said that there would eventually be an economy if the same class of men that we employ in doing the lower work were employed for similar Customs work.

22,859. I am speaking with reference to your head office. I believe the Customs is without any actual Department called a Laboratory, is it not?—Yes.

22,860. If to-morrow the Treasury decided on amalgamating the two Departments, and the work now done at the Customs were transferred to you, could you do it with your present staff?—No.

22,861. You could not?—No; we would have to replace the men in the Customs.

22,862. Do you contemplate any large addition to your staff for that purpose?—Not at Somerset House.

22,863. That is what I want to understand.—The work would be done down at Tower Hill.

22,864. Do you contemplate keeping the same staff that they have there and merely transferring them to your office, putting them under you?—No, there would be a controlling power exercised from the Central Laboratory.

22,865. That is not quite my question. Do you contemplate the same number being retained in the Custom House as there are now for the performance of these duties, whether the Customs were amalgamated with the Inland Revenue or whether its chemical department were joined to yours. As I understand, you do not think that you could spare any of your men, or that any sensible reduction could be made for the performance of the same duties?—It would not lead to any reduction at Somerset House, to begin with, and, in the second place, all the men that are employed in the distillation of wines and the determination of the obscuration of brandies and so on would have to be replaced by men at lower salaries. That is the only saving that eventually would be effected.

22,866. (*Mr. Hanbury.*) Why should not the Customs reduce the salaries just as much as if the Inland Revenue were over these men?—Perhaps they may be doing that.

22,867. You do not require amalgamation to reduce these salaries.—I do not advocate amalgamation on the ground of economy. I advocate the union of the Boards for the advantage of the service generally and for harmonious working throughout, apart altogether from the question of economy. It is my opinion that great advantages would result from the existence of one Board for the management of the whole thing. I may point out to the Commission that I have been of that opinion for many years. So far back as 1874 I wrote a very strong letter to the then Secretary of the Treasury, Mr. W. H. Smith, on the subject, pointing out the advantages that would result from a union of the two Boards.

22,868. (*Chairman.*) Ever since then has there been, within your knowledge, a gradual fusion of duties?—Yes.

22,869. Various steps have been taken from time to time, have they not, to get Customs men to do Revenue work, and Revenue men to do Customs work?—Yes, and that has created a greater necessity for the union of the two Boards.

22,870. (*Lord Lingen.*) Your official staff proper is yourself, the Principal, your Deputy and twelve analysts, divided into two classes—that is the nucleus of your establishment is it not?—Quite so.

22,871. I want to get this very clearly on to the notes, because I do not think at present it has been quite made out to the Commission. All through, when your assistants are talked of, they are not assistants in any other sense than they are assistants of Excise, who, during a certain part, the early part of their career, are passed through your office?—Quite so.

22,872. It is not a question then at all of going into the market, and getting better or worse people than these, but, with reference to their duties afterwards, they are passed through your office to learn chemistry. While they are there they do a certain portion of your work, and make up an establishment for you, but they are an essentially transitory body whom you are continually pouring into your service, and making it more economical than it otherwise would be?—Certainly.

22,873. That is the description really of the normal part of your establishment, and of those persons who are called assistants, not being your assistants, but assistants of Excise, according to their rating, and appearing nowhere else in the estimates except as assistants of Excise. That is it, is it not?—That is so.

22,874. The analyst is a person told off to your establishment who will remain there throughout his Civil Service?—Yes, quite so.

22,875. He does not belong either to the indoor or the outdoor establishment of the Inland Revenue, but to your Laboratory Office?—Yes. It is an Inland Revenue Laboratory, of course.

22,876. It is an Inland Revenue Laboratory, but still that is his regiment, as you may say?—Quite so. Perhaps it would be desirable that I should point out to the Commission that it is more economical to have these gentlemen on the staff than if we had to go outside to employ men, because they have to attend hearings in Court and so on.

22,877. I understand that in your Department you have adopted the practice of direct communication between your branch, and, for instance, between you and the Home Office, and between you and the Board of Trade—that a reference would be made direct from those Departments to you, and your answer would go direct to those Departments without your Board or the Secretariat being cognisant of either of those processes?—That is so.

22,878. Do you keep a registry of the letters that you receive and despatch from your Department?—Yes.

22,879. Supposing that you received a very sudden accession of work from those two Departments together—we will say from the Home Office and from the Board of Trade—so much so that you were rather under pressure, and at the same time that you received references from your own Inland Revenue Board, should you give any precedence to the Inland Revenue Board, or would they have any official means of knowing that you were occupied by two other Departments?—We generally arrange to cope with the work so as to keep it all under. If anything very unusual occurred, I could easily get the Board to recall a man for a few days.

22,880. This direct correspondence of yours has been organised with the direct cognizance and approval of the Board, has it not?—Quite so. The same thing exists in the case of the reference samples under the "Sale of Food and Drugs Act." We communicate direct with the Magistrates' Clerks and the Magistrates and send our certificates. It would be a mere matter of form to send our communications through the Board.

22,881. The Inland Revenue work is essentially more technical and chemical from the fact that it deals with manufacture, than the Customs work, which merely deals with imported goods and not with manufacture?—Yes, that is so.

22,882. So that, assuming for a moment that one chemical department was constituted, the work that has to be adopted is much simpler, much less in quantity than that with which you are already dealing?—There is a considerable quantity of the less difficult kind of work in the Laboratories at the Customs.

22,883. Now, take the instances of tobacco. Would as many questions arise on imported tobacco at the Customs as arise in the manufacture of tobacco by the Inland Revenue?—Certainly not.

22,884. So that it is less not only in the difficulty of the questions that present themselves, but less in quantity, is not it?—Yes, in that sense.

22,885. Even without the amalgamation of the two Boards, supposing what is called the Laboratory at the Customs was a distinct branch of your own office, like your Laboratory at Liverpool, it would be to a certain extent a gain, would not it?—Yes, they would have the advantage of being controlled by superior skill.

22,886. If they had any question to refer it would come much more directly to you, would it not?—It would, undoubtedly.

22,887. A man could walk across the street, could go into the tobacco bonded warehouse where they wanted to re-export, make an authoritative report offhand, and the drawback could be allowed much more rapidly than it is now, supposing the tobacco raised any question?—Yes, it might be more expeditious, but I should point out that in the case of the samples we obtain in relation to the tobacco and snuff deposited on drawback, our communications with the Customs are in that case direct by special authority of the Treasury. It was pointed out to begin with, that is in 1863, that the communication between the two Departments in relation to those samples must be direct in order to facilitate trade.

22,888. What would "direct" mean. Would the examining officer of the Customs be a sort of expert in tobacco? If there was anything that puzzled him, would he, without going to any superior authority, send the samples to you?—No, if anything of that kind occurred he would send the samples to the Board of Customs, and if they decided to send the samples to us, they would communicate through their Secretary's Department to our Board. The samples

Dr. J. Bell, F.R.S.

11 Dec. 1888.

would come to us from our Secretary's Department, and then we would have to communicate our report again through the Secretary's Department to the Board of Customs.

22,889. Is that what is called direct communication?—No.

22,890. Then what was the direct communication that was established?—It was necessary that we should have the examination of the samples of snuff and tobacco deposited for drawback because of the use made of the offal material which is the refuse of the manufactories. The examination of those samples has frequently assisted us in detecting adulteration. The whole question was laid before the Treasury, and they decided that it was necessary for our purpose in protecting the tobacco revenue that those samples should be sent to Somerset House and analysed there without being passed through the two Boards.

22,891. Then the word "direct" means this—that you should do the work. Is that the interpretation of it?—No. In order to expedite the work between the two Departments, so far as these samples are concerned, it was arranged that our communications should be direct. For instance, any samples of tobacco or snuff which are sent from Liverpool for analysis—that is to determine the amount of normal tobacco in them—are sent direct to the principal of the Laboratory at Somerset House, and we send our certificate back to the Collector of Customs in Liverpool direct. That is under Treasury authority. But in the case you put to me, that is if an examining officer had some suspicion that a sample of manufactured tobacco coming in, or a sample of unmanufactured tobacco coming in, had something added to it, he would not send that sample up direct to me, but he would communicate with his Board, and send the sample up to his Board, and the Board of Customs then would send that sample on with a letter addressed to the Secretary of the Inland Revenue and pass it through our Board, and it would come to us from the Secretary's office. We should examine it and report upon it, and send the paper back to the Secretary's Department.

22,892. That would be the same whether the case arises in the Port of London or the Port of Liverpool?—Yes, quite so. Outside the samples relating to the exportation of tobacco and snuff on drawback.

22,893. What is the direct communication between the two Departments which the Treasury insisted upon in the case of tobacco and snuff?—In the case of tobacco and snuff deposited for exportation or deposited in a bonded warehouse and abandoned, in 1863, when Mr. Gladstone wanted to reduce the duty upon the foreign manufactured tobacco and cigars, it was necessary to make some provision for granting a drawback to the manufacturers in this country upon the refuse material, because in foreign countries the manufacturers had no duty to pay upon the tobacco. Consequently, in order to place the home manufacturer on a footing so as to enable Mr. Gladstone to reduce the duty upon manufactured tobacco down to nearly the cost of the home manufactured article, it was necessary, as I say, to make provision for granting the drawback upon the refuse material. The direct communication between the two Departments has reference entirely to the tobacco deposited in Customs warehouses for exportation, or offal snuff deposited in the Customs bond and abandoned.

22,894. Who, in the Customs, makes the direct communication—the examining officer?—I expect so, in conjunction with the Surveyor.

22,895. I still have not got at the directness. Must he report to his own Board, and a formal letter go from his Board to you? Is that the process?—Not in the case of these samples.

22,896. What does he do instead?—The samples are sent addressed to the principal of the Laboratory at Somerset House.

22,897. Who sends them—the examining officer?—I expect it is.

22,898. In the case of the drawback, then, the examining officer does undertake this direct communication, and he does not pursue this somewhat roundabout routine that he does in the other case.—Quite so.

22,899. But that is confined to the drawback part of the work.—It is. And then I send the certificates back, if it were at Liverpool, addressed to the Collector of Customs.

22,900. Do you have to answer questions respecting samples of wine and spirit other than as to alcoholic strength?—Not unless they were referred to us under the "Sale of Food and Drugs Act"

22,901. Under the Adulteration Act?—Yes.

22,902. Do you get cases of that sort?—We get cases of spirits, but we have not had any cases of wine.

22,903. (*Mr Hanbury.*) With regard to one case which you have mentioned—that is coca-cigarettes—I want rather to follow that out in detail. In the first place, your evidence goes to show that there was some ignorance on the part of the Customs officers in letting those coca-cigarettes in?—It was their duty not to let them in, of course.

22,904. But they did let them in. It will be quite possible to have Customs officers who could deal properly with tobacco, whether the Customs and Inland Revenue were amalgamated, or whether they were not.—If we had one Board there would be a greater amount of intercourse between the officers of the different Departments, and that would tend very much to obviate these things.

22,905. Is there any reason why, without an amalgamated Board, these Customs officers should not have sufficient knowledge to deal with tobacco?—Not if they were trained to it.

22,906. Tell me exactly what did happen with regard to these cigarettes. Did they go into a warehouse?—I do not know what took place at the port of entry. I only know the fact that they had been delivered and that they were being sold in Conduit Street, Regent Street.

22,907. Who called the attention of the authorities to these coca-cigarettes?—I received information on the subject.

22,908. Who from?—From the trade.

22,909. You did not get the information through your own officers?—No, I did not.

22,910. Supposing your own Inland Revenue officers had suspected these cigarettes, would it have been their duty to at once communicate with the Customs officers?—It would have been their duty to seize them.

22,911. To seize them after they had passed the Customs officers. But would it not have been their duty to have also gone to the Customs officers and warned them against them?—No. It would be their duty to report the case to our Board.

22,912. But, as a matter of fact, your officers outside did not know what was going on at all?—No. It was upon information I received that action was taken.

22,913. I ask you this because in your report you say this: "Questions unsolved in one Laboratory may have been cleared up years before in the other." I want to know what communication there is between the two Laboratories, so that they could work together for the common benefit of the country?—There is no communication.

22,914. Do not you think it would be a great advantage to the country if there were?—I think there would be a very great advantage if the whole of the chemical work of all kinds were controlled by one head.

22,915. Do not you think even under the present system it would be a great advantage to have the two Laboratories working together, and is there anything to prevent it?—With two separate Departments under two Boards you cannot get rid of rivalries and jealousies.

22,916. As I understand, you are the supreme authority for laboratory work with regard to a great many other Government Departments, are not you?—Yes.

22,917. Will you mention for what Departments you act?—The Board of Trade, the Home Office, the Admiralty, the India Office, the Post Office, and nearly all the public offices.

22,918. As you act as the head authority for them, why should not you also act as the head authority for the Customs?—I should have much pleasure in doing so.

22,919. But there is no amalgamation between the Board of the Inland Revenue and the Home Office, so why should you not act for the Customs just as you act for the Home Office without any amalgamation?—We did some years ago.

22,920. Why should not you do it now?—The Customs would prefer to have a place of their own.

22,921. Then the objection comes from the Customs, does it?—We never refuse to do any work for them or to assist them in any way.

22,922. I do not quite understand why you cannot work as well with the Customs as you can with the other Departments of the public service?—I have no objection. The fault is not due to me.

22,923. Where is the fault, because I do not quite understand why these two Laboratories should not work well together?—The Customs have had a desire to have a Laboratory for many years, and the question has been fought very hard at the Treasury.

22,924. As I understand, they have not been allowed to have one?—They have not been allowed to have a recognized chemical staff.

22,925. And there is—in name, at any rate—only one Laboratory?—Yes.

22,926. And I assume it was the idea at the Treasury that that would be the head Laboratory for the Customs as well as for the other departments of the public service?—Yes, the intention of the Treasury was that all samples of any difficulty should be sent to us.

22,927. And, as a matter of fact, that has not been done?—I do not know. I am not in a position to say. The Customs do still send us occasionally a sample for analysis, but it is sent us, as I say, through the Secretary's Department. The samples are not sent directly by the officers.

22,928. Going back to this question of tobacco, is there any reason whatever why the Customs, in the case of their having any doubt on the subject, should not send samples of that up to you, just as they would send samples, we will say, of wine or anything else?—There is no reason why.

Dr. J. Bell, F.R.S.

11 Dec. 1888.

22,929. But in practice it is not done?—Occasionally we get a sample or two, but not many.

22,930. What more would you wish done?—I think that it would be an advantage to have the whole of the chemical work done under the control of one head, so as to ensure uniformity of practice throughout the whole of the Laboratories.

22,931. Yes, but so far as I understand, that is the theory at the present moment, is not it?—It may be the theory, but practice is very different sometimes from theory.

22,932. (*Mr. Lawson*). As a matter of fact, I understand that there is no great willingness on the part of the Customs to avail themselves, as a matter of practice and rule, of your advice?—I believe there is an unwillingness, which is somewhat natural in existing circumstances, but all feeling of that kind would at once disappear on the union of the two Boards.

The witness withdrew.

Mr. Charles John Follett, called and examined.

Mr. C. J. Follett.

22,933. (*Chairman.*) You are the Solicitor to the Customs, I believe?—Yes.

22,934. We are anxious to have your opinion upon the question of amalgamating the Customs and the Inland Revenue Departments, and, of course, to have that opinion entirely irrespective of persons; we wish to have it, so to speak, in the abstract, regarding the Boards and the Solicitors and the departmental heads as ideal officers?—I understand you.

22,935. It has been put before us, as no doubt you are aware, that there is a conflict sometimes, and an unnecessary duplication of opinion, between the Solicitor to the Inland Revenue and the Solicitor to the Customs. What is your view upon that?—Speaking in the abstract, and of course without reference to the questions that may affect the general staff of the two Departments, I always have thought that the existence of two Revenue Boards for work which is so very cognate, especially with regard to indirect taxation—that is, the Customs and the Excise—was an unbusinesslike arrangement and rather cumbersome. With regard to the two legal Departments, there have been instances when I thought that that applied very much, because there are two sets of laws for things which are very much identical, especially again, as I say, with regard to indirect taxation, Customs and Excise, and sometimes there is the administration of one and the same Act by the two Boards to some extent. Therefore there has been, on some occasions, a conflict of opinion, sometimes on the same section, and even on the same word, between myself and the Solicitor to the Inland Revenue. That does not often happen, but still, of course, it does happen occasionally. I think that an avoidance of that dual action would be in the abstract a desirable thing. That would be my opinion generally.

22,936. That being the case in the abstract, and without going into the question of individuals, but dealing with the subject as a practical question, supposing that this Commission should express an opinion which would lead to the consolidation or amalgamation of the offices of the two solicitors advising the two branches of the Revenue, in what way do you think it could be best effected? Have you thought that out at all?—Do you mean whether the Inland Revenue should be handed over to the Customs, or the Customs to the Inland Revenue?

22,937. Taking the nature of the work, I apprehend that your previously expressed opinions imply this, that there should be one solicitor?—Yes, they do mean that. And then I think under that solicitor it would be necessary that there should be—I do not know how many, because, of course, I speak without intimate knowledge of the work of the Inland Revenue—a certain number of very responsible men, who would have various branches of work attached to them. I do not know exactly what that certain number should be. I should think one, or possibly it might be a little more, would be enough for the Customs work, but I do not know how many would be necessary for the Inland Revenue, because, of course, I do not know intimately the work there. Still, as I say, there should be a certain number of men who, under the solicitor, would have responsible branches attached to them, and who, to a certain extent, must be recognised as responsible for those branches of work, because one head of a large Department like that could not possibly attend minutely to everything; but, at the same time, that he should have the general supervision and chief responsibility of all, I think, would be the proper course, and would be a workable system.

22,938. Is it a fair question to ask you about the amount of the work and the nature of the cases that come up to you?—Yes.

22,939. Are there many responsible questions that come up to you? Take the Merchandise Marks Act. That has given you some trouble, has it not?—That has given an immense deal of work, involving a great deal of responsibility. Of course, the Commissioners have a great deal to do with the administration of the Act, but all the legal work connected with it has entirely fallen upon myself. I should think the distinction between the work of the Inland Revenue (which no doubt is larger than the work of the Customs) and the work of the Customs may be put in this way: The legal questions which are referred to the Solicitor's Department of the Customs are mainly responsible questions, are mainly questions which must be done by professional men. Generally, in fact almost entirely, they come to myself—in fact the Board look entirely to me. I have to go into the papers and know exactly the contents on nearly every question. There are, of course, a certain number of routine papers, but the responsible papers I have to know entirely myself. That is to be expected. In a small Department, of course, it naturally would be the result that the Board would expect the head of that Department to know everything, and to look into everything himself. The work of the Inland Revenue, on the other hand, I should think is very much more clerical work. I do not mean to say there are not a good many responsible questions raised there, but I should say that although the work there is, in volume, a great deal more than the work of the legal department of the Customs, it lies more in the routine work than in the responsible work. It is perhaps a little presumptuous to say so, but I almost think the responsible work of the Customs, involving difficult and delicate questions, is more than at the Inland Revenue.

22,940. Do you attend the meetings of the Board?—Whenever they ask me to do so.

22,941. Is that attendance frequently asked for?—No, it is not frequently asked for. Sometimes, if any particular question of importance is going on, it may be every day for a time, but it is not frequently asked for.

22,942. Leaving out the Merchandise Marks Act, which of course we can readily understand may give rise to a great many questions, what are the kind of questions

Mr. C. J. Follett.

11 Dec. 1888.

that come to you?—Besides revenue proper, and prosecution for smuggling offences, there are various questions as to the meaning of sections of the Acts which we administer, and as to the warehousing law and other laws affecting the Customs, and besides that there is the registration of shipping and of fishing boats, the laws of explosives, quarantine, health, foreign enlistment, and other public and international matters.

22,943. A great many of these questions of prosecutions and shipping law, and other things, are settled long before they come to your office, are they not?—A great many prosecutions are. A great many prosecutions are settled entirely in the country, or by the collectors, or by what are called the Surveyors in London—that is to say, they carry them into Court themselves; but in the important cases, where it is thought advisable to have the assistance of my Department, they come to me.

22,944. Then do the Board settle the responsibility of the officers below as to insisting on these prosecutions?—Yes. There are certain regulations as to what cases they are to refer, and what they may conduct themselves.

22,945. Do all the questions of this sort that are referred come to your office.—Yes.

22,946. You have no offices outside the head Department, have you?—No.

22,947. Have you anybody acting for you in the different out-ports?—I have at Liverpool, not nominated by the Government in any way, an agent whom I am authorised to employ, and do employ. You would not find him named in the Estimates; he merely sends in a bill, and he is paid his charges, subject to a supervision by me, which is a kind of taxation. There is also a firm at Hull, and also one at Edinburgh acting similarly. There also is an agent in Dublin in the same way. I may change them at any time. It is left entirely to me to employ anybody I like. Perhaps you know that the Inland Revenue Legal Department simply extends to England, whereas the Customs Legal Department extends to all the three kingdoms.

22,948. You say you can employ anybody you like at those ports?—Yes, anybody I like, and he sends in his bill—that is a regular solicitor's bill. It does not come to very much in each place in the year. There is no establishment anywhere but at the Custom House.

22,949. I may take it that the gist of your opinion is really that you think the work might very fairly be done, and that it would be better done by having one solicitor?—Yes, I think so, and I have thought so always.

22,950. Do you think it would tend to greater economy besides improved administration?—I think there would be some economy. Of course there would be some economy in respect to the salary of the solicitor himself. I cannot speak as to what exists now at the Inland Revenue—that I do not pretend to do—but I think that, as to Customs work, at first it would be necessary that there should be the same staff, speaking of professional men only, as exists at the Customs at the moment. I do not mean to say personally, but the same number. I think, however, that that by degrees might be diminished.

22,951. Do you think that the number of cases that come up for decision to the respective solicitors would diminish a great deal when there was one authority to give the interpretation?—Yes, I think they would be diminished. I will not say a great deal, but I think they certainly would be diminished.

22,952. (*Mr. Lawson.*) In giving that answer you are aware, of course, of the very large cost and number of the staff in the solicitor's office of the Inland Revenue in London as compared with the figures in your own office?—Yes, I am aware of that.

22,953. And you still think the solicitor of the amalgamated Revenue Department would have to retain the staff of both offices at first?—I cannot speak at all as to the Inland Revenue, as I do not know whether they are undermanned or overmanned, but I do not think the Customs work could be done at first with a diminished staff. I think when there is one amalgamated staff that by degrees that might be done. I have four men on the professional staff, but I cannot rely on more than three as a rule. Having regard to the leave which they all take in the year, and occasional illness, I cannot rely on more than three. If you have an amalgamated staff that deficiency might be supplied, and I think by degrees you might effect a diminution in that way. But here again I am only speaking with knowledge of my own staff, and not with any knowledge of the staff of the Inland Revenue.

22,954. (*Lord Lingen.*) You are aware, I suppose, that the business which comes before the Solicitor of the Inland Revenue divides itself into two great branches—one that which concerns Excise and the other that which concerns Stamps and Taxes?—Yes.

22,955. On the side of Excise of course there is great similarity between his work and yours?—Yes.

22,956. Have you turned your attention to the great diversity which arises when you come to deal with Stamps and Taxes?—Do you mean as regards my personal knowledge of them?

22,957. I did not mean that, but I mean when you come to make a single solicitor's department your official experience—I say your official experience as distinct from your professional experience—is confined to that part of the work which answers to the Excise?—Yes.

22,958. And not to that part of the work which answers to the Stamps and Taxes?—I have no official experience of the Stamps and Taxes.

22,959. If you had a single solicitor should you be inclined to put him in Thames Street or in the Strand?—In the Strand.

22,960. Take the two cases—first of two Boards, but one solicitor's department for both of them?—I hardly contemplated that. In giving my former answer I was thinking of one Board.

22,961. I will take your answer, please, on the view that you yourself had taken, that there was one Board. Where would you put the solicitor?—At Somerset House.

22,962. But you would quite feel the necessity of having a head clerk, the head of a great branch, placed, I suppose, at the Customs?—Wherever the Board of Customs was located there would have to be such an officer, with some staff.

22,963. Wherever the Customs business was carried on, you mean?—Yes. There would have to be such an officer undoubtedly, because the Board of Customs do sometimes very urgently require personal communication with somebody who can advise them at once.

22,964. What is the lowest official in rank who can now order a Customs prosecution—any one below a collector?—Nobody except a person acting for a collector at the time.

22,965. A collector or some one acting for him?—I ought to say one thing. Perhaps you know that there is not a Collector of Customs in London as there is in the out-ports, but that the Board act really as the collectors in London. The Collector of London is merely a receiver of money—he does not administer anything, but merely receives money and acts for the registration of shipping; he is not a collector in the sense in which the other collectors are. Therefore in London there are various districts. Each district is put under a Surveyor, or sub-collector as he would be called anywhere else, and these surveyors would superintend small prosecutions.

22,966. But at an out-port a collector, if the out-port was of sufficient magnitude to justify one, or a superintendent, or any one taking the place of a collector within his own collection, could order a prosecution, could he not?—Yes.

22,967. And that without reference either to you or to the Board?—Yes; the cases are generally of arrest and immediate trial.

22,968. He would report it, I presume, but he would not stay his proceedings to get an authority to begin it?—No, not to get an authority to begin it, except under certain circumstances which are rather complicated. Tobacco and spirits are, of course, the main subjects of smuggling, and if they exceed certain amounts—20 lbs. of tobacco and five gallons of spirits—that is to say, if they are anything but minor cases, there is an order to him to refer all those cases to the Board. But then it does not follow that he does not conduct the prosecution himself afterwards without any intervention or without any assistance from my Department—it does not follow that he does not, but only that he is obliged to refer those cases to the Board, and they are sent to me to advise upon as to whether they are desirable cases for prosecution or not.

22,969. In ordinary cases he would go into Court himself and conduct them?—Yes; or one of his responsible officers.

22,970. Supposing that it required some more professional advice than that, would he write up to you to send one of your clerks down, or should you authorise him

to employ a local solicitor?—That would depend entirely on the case. Sometimes I send one of my clerks, if I think there is something on which I should like to give special instructions myself or something really involving an intricate point under the Customs Law, or sometimes, if I think it is the least expensive way—just exactly as a case happens—generally, if he requires legal assistance, it is a cheaper thing and an easier thing for him to employ a local solicitor.

22,971. Should you leave the choice of a local solicitor to him?—Except in those towns where it is a regularly recognised thing, as I was mentioning just now—in those towns he goes to the particular firm whom I always employ.

22,972. They would be Liverpool, Edinburgh, Dublin, and Hull?—Yes.

22,973. In those there is a local solicitor who does Customs business?—A local firm of solicitors who do Customs business.

22,974. But otherwise, like any other client, he would go to a solicitor at his own discretion?—Yes.

22,975. That solicitor's bill, I suppose, comes up to you for taxing?—Yes.

22,976. I think you said you were not very often summoned to attend the meetings of the Board, but that a good deal of daily reference was made to you?—Yes.

22,977. Are you in pretty constant communication with the Secretary of the Customs? Whom do you see mostly among the executive officers?—The committee clerks and the secretary are nearly all of them constantly coming to me, or I go to the secretary, just as it suits us. I am in constant communication with some or other of them.

22,978. Is that communication on subjects of such importance that if you were in one place and the Board and principal officers in another there would be very great inconvenience?—It would be so unless there was some head clerk, as you expressed it just now.

22,979. Some managing clerk?—Yes, some managing clerk or head officer.

22,980. An officer of such rank and skill and trust that he could dispose of most questions without referring them further?—Yes. I should say so with regard to questions of ordinary importance.

22,981. On what sort of questions now does a conflict of opinion arise most frequently between you and the Inland Revenue? I do not ask for any particular case, but what class of cases?—I do not mean to say that they have been frequent, because generally we have been very unanimous.

22,982. Where there are two people there is generally some conflict of opinion.—Yes. Where they arise and where they have arisen is on three or four subjects, and rather marked subjects, with regard to the warehousing law, where of course the two systems have direct mutual action, as you no doubt are aware, and work under one code.

22,983. Do you think these questions might be largely obviated by an annual revision of the code?—The code is revised very often.

22,984. Are you consulted in the revision of it?—I was, but not much in the last one.

22,985. Perhaps you might have been with advantage more consulted?—I do not know. I was occasionally consulted about it. Perhaps I might have had some suggestions to make if I had been more consulted, but I should not wish to imply that I make any complaint.

22,986. In these cases where a conflict of opinion arises I suppose, somehow or other, a conclusion is arrived at by compromise?—Sometimes.

22,987. They are not left practically outstanding?—No, they are sometimes settled by compromise, and sometimes—once or twice—by a reference to the Attorney-General.

22,988. When a case of that sort has been thoroughly examined and decided, is a record kept of it?—Yes

22,989. In both Departments?—I keep a record of it, and I take it that there is a record kept at the Inland Revenue.

22,990. Have you found the same case raised a second time?—No.

22,991. (*Mr. Lawson.*) It has been thought possible that under two Departments you might consolidate certain branches which would be common to both?—Do you mean certain branches of the law?

22,992. No, certain branches of administration, yours amongst the number. Do you believe, as a matter of fact, that it would be possible to have one solicitor's office responsible to two Boards, one sitting at the Custom House and the other at Somerset House?—There is a greater difficulty in that than in an entire amalgamation of the two Boards, no doubt; but yet, at the same time, I think that would be possible.

22,993. Does not it strike you that in itself the joint responsibility would be mischievous?—The responsibility to two different Boards?

22,994. Two different heads and two different Boards.—That is rather a new question, and I had hardly thought of it before. I thought of the question more as of the amalgamation of the whole service; but still, at the same time, of course, it does exist to some extent; you have it at the Treasury.

22,995. As a matter of practical work, do not you think it would be difficult to have a Board sitting at the Customs House and its solicitor at Somerset House?—Yes, I think that would be a difficulty, and it would be absolutely necessary that at the Custom House, if there were a Board sitting there, there should be a staff with, as I said to Lord Lingen just now, a head man, a managing clerk, or somebody of considerable responsibility.

22,996. Do I understand that those allowances of which you have spoken to certain solicitors in private practice at Liverpool and Hull appear in the Estimates for Customs Department under the head of Law Charges?—I should think they do, most likely.

22,997. Supposing there were a general consolidation, you could dispense with those charges, could you not?—No.

22,998. Would you, in any case, if you had the advantage of the officers of the Inland Revenue, be obliged to employ private solicitors for Custom House work in the same manner?—If there was any local solicitor for the Inland Revenue at any of those towns, of course I should not, but I do not imagine that there is.

22,999. You would have a solicitor for the Inland Revenue, of course, at Edinburgh and Dublin?—At Edinburgh and Dublin, yes. But I think they are not under the Department in London. I think they act quite independently.

23,000. They appear under the same head, do they not?—They do, but I think they act quite independently.

23,001. You do not know what the Inland Revenue does in the case of these out-ports, do you?—I think it is more the practice at the Inland Revenue for the Solicitor to send men from his own office to conduct nearly all the prosecutions than it is with us. I do not know quite why that should be, but I rather think that he sends them.

23,002. (*Chairman.*) Have you any particular preference, from the Customs point of view, for either system? Would you rather have a stronger staff, and send men to prosecute more from headquarters, or would you rather have your present system?—I think our own system works very well. We very seldom find a failure of justice. The collectors do the work very well indeed, and whenever they feel that they are not competent to do the work they do not hesitate to ask for assistance from me, either direct from my Department or by some local solicitor, and if ever they ask for it they always get it.

23,003. If an opposite kind of practice prevails at the Inland Revenue, would you be inclined to think that that was not quite the most economical?—I think there might be some saving in that respect, but I hardly like to speak much of the Inland Revenue. I believe it is their practice to send from the Solicitor's Department of the Inland Revenue in most cases for prosecutions about the country. I think that these prosecutions are conducted by some of the Solicitor's clerks, who go about the country for that purpose. I hope I have not misrepresented that, but I think that is the case.

23,004. (*Mr. Lawson.*) You yourself are a solicitor, I think?—Yes, I am on the Rolls.

23,005. And you were in private practice as a solicitor before you got this appointment?—Yes.

23,006. Are there any other solicitors in your Department?—None absolutely admitted, but two were trained as solicitors.

23,007. Two of the clerks were trained as solicitors?—Yes, and two members of my staff are barristers. The Assistant Solicitor is a barrister and one of the clerks is a barrister.

Mr. C. J. Follett.

11 Dec. 1888.

23,008. Do you consider it is an important thing that for the public service a gentleman should have had a private training in a solicitor's office in that branch of the law?—I will not say particularly in that branch, but my experience is that he should certainly have had practice in something. I think the appointment of a man to these offices straight off, without practice, is very disadvantageous.

23,009. Do not you consider that there is a wide difference between the position of a man who has been called to the Bar, we will say, and that of a solicitor who has actually been in practice, in respect to their legal knowledge and experience?—Yes, I do, and I think the latter is the most qualified.

23,010. Are you aware that the charge of the Inland Revenue for the head office in London is about three times yours?—Yes, I know it is.

23,011. You say you have no knowledge of the work that is done there, and therefore you cannot give any opinion?—No, I do not like to speak about that, because I do not really know.

23,012. Would you be disposed, from what you know, to say that the questions for original decision coming before you are as numerous as those that are dealt with at the Inland Revenue?—I think so.

23,013. Do you foresee, in an amalgamation, the prospect of a considerable reduction of staff in time?—I do not know that I should like to use the word "considerable."

23,014. Do you foresee a reduction?—A reduction, yes.

23,015. And you do not think there would be any disadvantage supposing there were one Department under one Board at Somerset House, which had merely to send down a subordinate to the Custom House if necessary?—I think that could be worked, and I think it might be desirable.

23,016. As a matter of practical administration, you do not see that there are any insuperable difficulties?—I do not see that there are any insuperable difficulties in that.

23,017 (*Chairman.*) One question about the Customs Law. Is it the fact that there is a good deal of Customs Law which is highly technical and complex?—It is all technical entirely—no person in the outside legal world would know a word of it, I think.

23,018. Does it differ very materially in its nature, so far as you know, from the kind of law that is dealt with by the Solicitor to the Inland Revenue?—As far as the Excise goes—the other branch of indirect taxation—it is very similar.

23,019. That I understand. On the warehousing and all those kind of questions practically there is no difference?—Very little difference, and you can hardly administer one without knowing the other. In fact you must know the other.

23,020. Is there a great amount of Customs Law—Acts of Parliament which deal with the action of the Customs upon other spheres of their work than that of warehousing—which really requires a good deal of attention and extra knowledge?—On all the subjects dealt with by the Customs beyond mere Revenue questions there is a great deal of extra knowledge required.

23,021. I understand you to be of opinion that one legal adviser in the person of a solicitor would be able, with justice to himself and to the Board, to advise the Board upon all of it?—I think so—to superintend as the head of it.

23,022. You think he could?—I think he could.

23,023. Have you anything to add to the evidence you have already given us?—No; I think not.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

SIXTY-SEVENTH DAY.

7, Whitehall Place, Westminster, S.W., Thursday, December 13th, 1888.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

EARL BROWNLOW.	MR. A. S. HARVEY.
LORD LINGEN, K.C.B.	MR. H. L. W. LAWSON, M.P.
MR. J. CLEGHORN.	MR. H. WALPOLE, C.B., *Secretary.*

MR. HENRY PARRY GILBEY called and examined.

Mr. H. P. Gilbey.

13 Dec. 1888.

23,024. (*Chairman.*) You are a partner, as we know, in the large firm of W. and A. Gilbey?—Yes.

23,025. I believe you contribute very largely to the revenue in respect of wines, spirits, and tobacco?—Yes.

23,026. Perhaps you will give us an idea of the magnitude of your operations?—We contributed to the revenue during last year, which you may take as a fair average year, 394,000*l.*, of which 16,000*l.* came through the Customs, and the rest through the Excise. The above sum includes 82,000*l.* from British spirits distilled in England.

23,027. When you say that 16,000*l.* come through the Customs, I suppose you mean that that 16,000*l.* is paid directly to the Customs officers?—Yes.

23,028. But of the remainder, a large sum is collected as Customs duties by the Excise?—As Customs duties by the Excise. We reckon that we pay something like 400,000*l.* a year for wines and spirits, and about 300,000*l.* for tobacco.

23,029. (*Lord Lingen.*) Did I understand you that the bulk of that 400,000*l.* was paid to the Inland Revenue as distinct from the Customs?—The great bulk of it was paid to the Inland Revenue. We only pay about 16,000*l.* by cheques to the Custom House in the City.

23,030. Why is that duty paid to the Inland Revenue. I should have thought that the import duty upon wine would have been paid to the Customs?—As explained already, we pay to the Customs only about 16,000*l.* annually: the remaining sum is collected by the Excise, as we have our own bonded warehouses at Camden Town, and the duties are paid there.

23,031. The actual wine duty you pay to the Inland Revenue officers?—Yes, practically we pay our wine duty to the Inland Revenue.

23,032. But that gets, I presume, into the official books to the Customs revenue, ultimately?—Yes.

23,033. You pay it to the Inland Revenue merely as a matter of trade convenience?—Yes, that is all.

23,034. (*Chairman.*) Could you tell us what figures would represent the duties, if any, that you pay to the Inland Revenue as Inland Revenue duties; because the bulk, as I understand, of this 394,000*l.* is Customs duties for imported wines and spirits?—The Inland Revenue duties would be on British spirits only, which amount to 82,000*l.* The balance would be duties of Customs on imported wines and spirits of which the wine alone would not form a very large item. I should fancy that the wine would not be more than one-fifth of that, because the spirit duty is 10*s.*, and the wine duty from 1*s.* to 2*s.* 6*d.*; so that although the quantity is about equal, we pay seven or eight times as much for spirits as for wine.

23,035. (*Mr. Lawson.*) How much ultimately goes to the Inland Revenue and to the Customs; not what is the method of payment, but how much does the Customs take, and how much does the Inland Revenue take in the year of those figures that you have given us; in other words, what would be Inland Reveune payments proper, and what would be Customs payments proper?—About 16,000*l.* only is paid by us direct to the Customs, but 154,000*l.* for foreign wines and foreign spirits is paid to the Inland Revenue for account of the Customs. The remainder, 230,000*l.*, goes directly or indirectly to the Inland Revenue for English, Irish, and Scotch spirits.

23,036. Which would go to each department?—Which would go to Inland Revenue in the first instance, except as to about 16,000*l.* paid to the Customs direct.

23,037. (*Chairman.*) Are those spirits imported spirits?—Yes, 16,000*l.* is for imported wines and spirits.

23,038. Then that is a Customs duty?—It is a Customs duty; but we take nearly all spirits up to our own warehouse under bond from the Customs into an Excise warehouse.

23,039. What is the 82,000*l.* which you gave as the duty that you pay in respect of British spirits?—This sum represents payments for duty on British spirits sent to our distillery for rectification. We pay somewhere about 12,000*l.*, perhaps, for champagne coming by way of Folkestone and Boulogne. We pay as soon as it arrives without putting it into bond because the duty is so low; in fact, if we took it from the Customs into our Excise warehouse the expense would be so great that we prefer to pay the duty directly they arrive and have them up direct.

23,040. (*Mr. Lawson.*) That represents 12,000*l.* of the 82,000*l.*?—No, the actual payments stand as follows:—

	£
Customs and Excise duties paid through Excise - -	308,000
Do. do. paid through Customs	16,000
British spirits paid through Excise - - - - -	70,000
	£394,000

23,041. I thought you said that the 82,000*l.* were for British spirits?—Yes.

23,042. And the other 12,000*l.* is for champagnes?—Champagnes and things that are paid, as we call it, from the railway, or from the ship direct, as well as about 4,000*l.* for sundry foreign spirits similarly dealt with.

23,043. They are not bonded, are they?—They are not bonded at all?—The duties being low on the bulk of these articles, we prefer to pay the Customs on arrival; thus if we had 200 hogsheads of claret come to-morrow morning, we should prefer to pay the duty of 1*s.* per gallon over the ship's side.

23,044. (*Mr. Cleghorn.*) And that goes to the Customs, does it?—That goes to the Customs direct. It forms part of this 16,000*l.*

23,045. (*Mr. Harvey.*) Where does the claret go to?—We could take it where we like, the duty having been paid.

23,046. Do you take it to your own warehouse?—To our duty-paid warehouses.

23,047. (*Chairman.*) Your own firm, I understand, does not make British spirits?—No, the law does not allow that. We merely rectify the plain spirit.

23,048. I understood you also to say, that you paid a large duty in respect of tobacco?—Yes.

23,049. I think you said it was about 300,000*l.*?—Yes, about 300,000*l.*

23,050. Therefore in doing this large amount of trade with the two departments in respect of wine and spirits and tobacco, you must have had considerable experience as regards the dealing with the two departments?—Yes, over a very long period of time.

23,051. (*Mr. Lawson.*) Could you say for how long?—Just 50 years. I commenced as what is called "a clearing clerk," 50 years ago.

23,052. (*Chairman.*) Do you mean in Government employ?—No.

23,053. As a clearing clerk connected with your own trade?—Yes.

23,054. The point upon which we are anxious to have your opinion is, as to the inconveniences, if any, which your firm experience from having to deal with two separate Government departments?—It is palpable upon the face of it that most of our work is done in duplicate. The Customs must land our goods and gauge them; it is a simple thing; we pass an entry to the Custom House, an overside entry, into whatever dock or warehouse we think will land them cheapest, and then they are examined by the Customs and Excise, and account taken of them. As soon as ever we can get that account taken, they are carted up under bond, or by water, through the canal to our own bonded warehouses.

23,055. (*Lord Lingen.*) The Customs both gauge the casks and test the contents, do they?—Yes.

23,056. Is that done by the Customs officers?—Yes.

23,057. (*Chairman.*) Then it is taken to your own bonded warehouse?—Yes.

23,058. What is the operation there?—The operation there would not be a very important one. It would be merely to check the goods to see that they have arrived in the state in which they have left the Customs.

23,059. (*Mr. Lawson.*) Who does that?—The Excise.

23,060. Do they get the information from the Customs?—Yes, of course.

23,061. How is that sent?—Through the post.

23,062. (*Chairman.*) So far as we have got now then, whether the Customs and Inland Revenue were amalgamated or not, the same work would have to be done by some officers?—Certainly.

23,063. (*Lord Lingen.*) And at two places?—No, I think not. I might illustrate it, if I may be allowed, in this way: some years ago we petitioned to be allowed to land our goods overside into sealed barges, or with an officer attending, to go direct up to our place.

23,064. (*Mr. Lawson.*) Up to your stores at Camden Town?—Up to our stores at Camden Town, because there is water carriage from the river. That would be a most important saving, I say by hundreds of pounds, but it might go into four figures. I presume that the Act of Parliament did not give them the power, or that the Customs could not hold themselves responsible for the revenue, unless they first examined the goods. I daresay in those days there was a degree of strict red tape, which, I am happy to say, in both services we have not to complain of at the present moment. I think that is a case that would strike you as being a very important one.

23,065. (*Chairman.*) As I understand, instead of having your goods examined by the Customs at the water side, you wished that they should be delivered into sealed barges, and taken up for their first examination at your own warehouses?—Yes.

23,066. I do not quite see how that depends upon the question of amalgamation?—Because there would then only be one examination.

23,067. If it is held by any department then there must be an examination at the waterside, does it not follow that there must be an examination subsequently to see that nothing has happened in the transit?—My suggestion would be to avoid this waterside examination, by unloading the goods direct into locked and sealed barges in charge of an officer, who would accompany the goods to our bonded warehouses. You

Mr. H. P. Gilbey.

13 Dec. 1888.

must bear in mind that nine-tenths of the ships are either in the pool, or go probably into a dock, or to a warehouse, and that we have to remove the goods again to a place that we appoint for their examination. We generally appoint the London Docks.

23,068. (*Lord Lingen.*) Would your suggestion apply to a bonded warehouse to which there was not water carriage, if you had, for instance, to put those casks on board trucks?—I think the work might be so organised. Tea, I believe, is placed in sealed railway vans, and goes from one warehouse to another.

23,069. As far as you are concerned, unless it suited your trade to warehouse these goods at the waterside, and to have the work done there, you would like to transfer the waterside duties to whatever inland warehouse you wanted the goods at?—Yes. The limit within which the Custom House grant a Customs bond is 300 yards, or something of that kind, but that limit, if my idea was ever adopted, would have to be considerably increased.

23,070. (*Mr. Lawson.*) What you wish to point out to the Commissioners is this I understand; that in the case of an amalgamated service, there would not be the desire on the part of the one department to duplicate a duty for the sake merely of asserting its own authority, but the result to the revenue would be the same?—Yes.

23,071. And it would be a convenience to the trade if, instead of having this double examination for no purpose whatever, there were a single examination, and the whole were taken at your own bonded warehouse?—Certainly; I think there is no doubt about that.

23,072. (*Chairman.*) Is there anything to prevent that being done now; is it not done in the case of tobacco?—No, I think not.

23,073. Is it not the case at Haydon Square, for instance, with the tobacco coming from Liverpool?—That has been examined at Liverpool.

23,074. It is simply weighed in gross, is it not, by the Customs, at Liverpool, and sent direct to a bonded warehouse, say, to Haydon Square, and there examined by the Excise on behalf of the Customs. Could not that be done in the case of wine also, supposing that the Government saw its way to there being no duplication of the duty?—It could certainly, and I petitioned the Custom House that they would grant it.

23,075. (*Mr. Lawson.*) Is it done in the case of your own tobacco business?—We buy a portion of our tobaccos in Liverpool, and these are sent under bond to London, and we then have the privilege of paying the duty on them to the Customs in London, thus saving the expense and trouble of sending remittances to Liverpool.

23,076. (*Mr. Cleghorn.*) Was that application that you refer to, to have those goods put into sealed barges, not acceded to?—It was not acceded to.

23,077. (*Mr. Lawson.*) It has not been done up to the present time, has it?—No, and it seemed to be impossible in those days to grant it. I should say, however, that within the last five years the desire of the Customs and Excise has been so great to meet the wishes of traders, that things have altered altogether.

23,078. (*Mr. Cleghorn.*) I rather inferred from you that it had been altered since those days which you referred to?—I have nothing to say against either of the services in regard to their desire to meet the wishes of traders. Of course, if I was asked to say which I should prefer to be under, the Customs or the Excise, I would answer that question.

23,079. (*Mr. Lawson.*) But, as I understand, nothing has been done yet in that particular direction to meet you?—Nothing at all, so far as my application was concerned.

23,080. And you believe it, as I understand, to be due to want of intimate relations between the Customs and the Excise, so that they can arrange these things between them?—It occurred to me at the time that the Customs did not wish to lose their authority over the goods, although it must have been a matter rather of sentiment than of reality.

23,081. (*Mr. Harvey.*) Do you think the abolition of that waterside examination would be safe for the Government to adopt universally?—I think it would to a certain extent. I do not say universally, as I think it might not be safe in small matters.

23,082. Would not that put the Government in the very difficult position of having to select one merchant to whom they would grant the concession, and another to whom they would not?—It might put them in an unpleasant and invidious position, but those things are to be met. Of course, if I have got 100 pipes, and another man has got a quarter cask it is a very different thing. I daresay in the latter case the merchant would be satisfied to let the quarter cask be landed wherever the vessel arrives, but with large quantities the case is different, and there can be no doubt that increased facilities would, as in our case, be of great advantage to the trade generally.

23,083. Have any other large importers besides yourselves expressed the same opinion?—I have heard of it elsewhere, I fancy in Scotland and Ireland, and I should imagine that large traders would be sure to avail themselves of it.

23,084. I should like to emphasize the point as to your view on this question, whether or not it would be perfectly safe for the Government to dispense with such an examination?—Perfectly. I can hardly imagine such a thing as that it would not be safe, with the many men that they have everywhere at the waterside, both Excise and Customs. The red tape could be a little relaxed, I think.

23,085. (*Mr. Lawson.*) The officer would be with the goods the whole time, would not he?—Yes, the officer would be with the goods.

23,086. As a matter of fact, when you talk of special facilities being given to large firms against small firms, it is a matter of common knowledge, is not it, that the Government, like every other—I may say business—like every other great organisation, meets, so far as it can, the convenience of the large traders bringing a large revenue?—Every desire has been shown in that way of late years.

23,087. (*Lord Lingen.*) But you could make the rule perfectly impersonal as between one trader and another, could not you?—Certainly.

23,088. Namely, if you land goods of such and such a bulk they will be treated one way, and if they are under that bulk they will be treated another?—Of course.

23,089. (*Mr. Lawson.*) But you are not the only large dealers?—Not at all, especially in Scotland and in Ireland, where merchants are very glad to have their own bonded warehouses.

23,090. (*Chairman.*) Your evidence upon that point comes to this, does it not, that you think that if there had been one Revenue department dealing with the Customs and the Inland Revenue there would have been more inducement to give you facilities in removing the goods than there are under the existing state of things, when the Customs are naturally anxious to protect their own duties?—Yes.

23,091. Could you give us another instance where you think you would be benefited and your trade would be benefited by the two departments being under one control?—There is the saving of time to us. There is a very great portion of time taken up by these two distinct services. If our goods have to go through the Customs it is sometimes a week or more before we get them.

23,092. (*Mr. Lawson.*) Give us a concrete instance?—If I have 100 hogsheads of brandy being landed at the Customs, it must take some time to examine the whole quantity, whereas if they were sent up direct to our own Excise stores, I could take the very first five that were landed and have them examined, and pay the duty. I am only giving that as one instance, but the conveniences must be multifarious.

23,093. As a matter of fact, there are many instances, are there not, in which you find that there is considerable delay imposed upon you in consequence of this duplicate system?—Yes.

23,094. And of the slow method of the Customs work?—Very frequent instances.

23,095. Will you please explain?—If a point arises as to differences of gauge or differences of strength while goods are in transit from the Customs to the Excise, a petition on the subject has to be sent to the Customs to be dealt with. This frequently occupies two or three weeks before a decision is obtained as to whether duties on the deficiency are to be paid. That petition has to go down to the Customs, it being part of their primary duty, and has to come back again.

23,096. Do you find that the communication between these two departments is slow, and consequently injurious to your trade?—I should say to the trade generally it would be.

23,097. And when applications of that kind are now made of course they do not go to one but to both departments of the State?—Yes, to both departments of the State.

23,098. That involves considerable delay, does it not?—Yes, and expense as well as delay. With articles like wines and spirits, delay means great expense.

23,099. (*Chairman.*) Under a system of amalgamation would it not be the case that you would have to deal at all events with two branches of the same department? Suppose that you have your goods landed, then, whether the examination takes place immediately at the waterside, or in your own warehouse, would there not have to be an examination at any rate when the goods come into your warehouse?—Yes.

23,100. And also an examination when they went out?—Yes, but there would be only one examination on arrival instead of two.

23,101. You have the right when it goes out to obtain the advantage of not paying for the ullage?—Yes.

23,102. And also for the diminution in strength which has taken place while it is in your warehouse?—Yes.

23,103. I do not quite see how the operation would be much simpler if you have to deal with one department, for you would have to deal with two branches of it, would you not?—Yes; but there would be one examination only instead of two. I imagine it would be the simplest thing in the world for a man who boards a vessel to see that there are 100 puncheons of spirits, or 100 pipes of wine on board put in to a sealed craft, and taken direct up to our stores; it takes exactly the same time as it would for him to take them up the river and land them at one of the wharves or into the docks; in fact, it would take less time to get to our bonded stores.

23,104. That might all be done, might it not, supposing things remained as they are at the Customs?—I fear it would not be granted.

23,105. I quite appreciate the point of your argument, but I want to be clear what it comes to. It comes to this, does it not, that if arrangements were made whereby those goods were allowed to come and be examined by the Inland Revenue on behalf of the Customs at your warehouse your object would be attained whether there was one department at the head or not?—Yes. At the same time, as the Customs eventually receive the money, they would naturally look to the landing account to see whether they got their money right. If the money has to go back again into the Customs, I presume, at any rate, that it has to be accounted for in their department.

23,106. (*Mr. Harvey.*) Supposing there were only one general head of the revenue; that is to say, supposing at this moment there were only one board and one set of officers, would you still contend that the waterside examination might be dispensed with?—Quite so.

23,107. And could be carried on in the warehouses?—Yes.

23,108. (*Mr. Lawson.*) Do not you think that a certain jealousy with regard to their mutual revenue on the part of these two departments would make the Customs refuse to entrust the whole examination to the Inland Revenue?—I do not think we find that that is the case now to the extent that it was some years ago.

23,109. You could imagine that it would cause a refusal of your petition?—There would be a natural clashing. There is sure to be a friction.

23,110. (*Chairman.*) In the case of tobacco, again, to refer to an instance in which I myself have had the advantage of seeing things done, is not it the fact that the whole of the examination of the tobacco, with the exception of the weighing of it in the gross, is done by the Inland Revenue on behalf of the Customs at present in various bonded warehouses in London. Why should it not be the case also, if there were not special reasons, in respect to wines?—There ought not to be.

23,111. In that instance, at any rate, jealousy has not prevented anything being done?—I think the jealousy question is not so important at the present day. I find that there is a good deal of harmonious working, but several of the Acts of Parliament do not empower the Customs, and others do not empower the Excise to do certain things. Thus the champagne question is causing a good deal of friction just now.

23,112. (*Mr. Lawson.*) Friction between whom?—I am speaking of the trader and the Customs. I do not think you will find that the Act of Parliament gives the Excise any power of dealing with champagne; I mean to say as to the valuation.

23,113. (*Chairman.*) That is the fault of the Act of Parliament, is not it?—Yes.

23,114. (*Mr. Lawson.*) What do you mean by "any power"; any power to do what?—The champagne being in our bonded warehouses, we should apply necessarily to the Excise for it, but the Excise could not decide any point in dispute as to the rate of duty, without first consulting the Customs. They say, "This "question has to be settled down at the Custom "House, you will send your petition." They could not decide upon such a point, nor can they decide upon another very important point also as to vatting and bottling. They give us power almost to a degree which we appreciate, but we have to go, I think, to the Customs on all occasions to check that power and to see whether it is the usual custom in Thames Street.

23,115. In all these cases there is the duplicate process then?—Yes, there is the duplicate process.

23,116. (*Mr. Cleghorn.*) Do you think that that could be avoided with safety were the two departments thrown into one?—With a proper disposition to do so I think it could. I do not see why it should not. Of course amalgamation would be a matter of organization at the present day which should not be very difficult, and could be arranged without any friction I think. It would be a matter, I should say, of great advantage to the trader, and I should think to the Government as well. Centralization is valued very much in business, and the tendency everywhere you will notice is in this direction. Establishment charges are saved by it considerably over and above what people first contemplate.

23,117. (*Chairman.*) Could you call our attention to any other point in which you think advantages would follow from amalgamating the two departments from your point of view?—There is one point I should mention. We have to keep a drawing account at the Bank of England for those wines and spirits that come through the Customs in the City, and we keep another banking account at the Burlington branch. We ought to be able to do it all through one channel.

23,118. (*Mr. Lawson.*) You mean one for Inland Revenue, and one for Customs?—Yes; at present they want a cheque on the Bank of England in the City for payments at the Customs House.

23,119. (*Mr. Harvey.*) Will not the collector of Customs take a cheque on the Western branch?—No, I think that that was refused originally.

23,120. Would you just tell me how you pay duties. Do you get what we call a transfer cheque from the account of your own banker to the Bank of England?—No; I think as far as the Excise is concerned, they holding so many of our goods in their charge, take our cheques. I am not quite sure whether they deliver the goods before they know the cheque is cashed. I think they would not in the City.

23,121. Then do you mean to say that the point of your contention is, that you have to have an account at Threadneedle Street as well as at Burlington Gardens?—We should have to do so, if we did not bank at the Bank of England, or, we will say, another trader who is not likely to bank there, he would have to keep separate accounts. We can arrange our account, having a very important account at the West End Branch. We have to employ a different cheque book and everything of that kind, and of course to keep moneys. Now, I ought also, perhaps, to mention that the number of bonds that we have to enter into is very great, general bonds, and export bonds, warehouse bonds, and distillery bonds, and then the Scotch and Irish will send us spirits under bond. All that, I should think, would be considerably lessened by amalgamation.

23,122. (*Chairman.*) Would you be kind enough to point out how that would come about?—I think if there were only one Department there would be fewer bonds necessary. At present we have to watch those bonds very carefully to see that they do not run out.

Mr. H. P. Gilbey.

13 Dec. 1888.

We are under bond say for 25,000*l.* this week for removals, but if we remove about 25,500*l.* worth, one of the partners has to go down to the Custom House and enter into another bond.

23,123. (*Mr. Lawson.*) Does he have to go to the Inland Revenue too?—No.

23,124. (*Lord Lingen.*) In any place, if you were removing an additional 500*l.* worth of goods, you would have to enter into another bond?—Yes.

23,125. Your difficulty, as I understand, is that you may have to send down to Thames Street for this 500*l.* instead of being able to do it in the Strand; is that it?—I do not raise that point. I think the number of bonds themselves should be reduced.

23,126. (*Mr. Lawson.*) In what way?—I think that we should not have to find one warehouse bond for this, and another for that. We have to give bond that, first of all, the goods that are to arrive go straight up to Camden Town. There are more bonds than are necessary. Upon my plan it would be possible to do away, at least with the landing bond to the Customs.

23,127. (*Chairman.*) You would not be able to avoid that particular bond, would you?—I think so. I do not know how many actual bonds we have to give, but they appear to be very numerous. I think that there would be a diminution of bonds if the duties were under one service.

23,128. (*Mr. Cleghorn.*) Could there not be a diminution in those bonds now without fusing the two services?—Yes, I think probably there could.

23,129. (*Mr. Lawson.*) As a matter of fact, there has not been?—No, there has not been.

23,130. (*Lord Lingen.*) But the bonds necessarily follow the goods. Do you see yourself (beyond desiring a fusion of the boards) how it is to be done?—I think I should be able to suggest a plan if I were asked.

23,131. You think you could?—I think I could; but the authorities possibly would not take my suggestion.

23,132. Would it take such a form as that you should give one large bond and then exhaust it?—The authorities would want only to do for us that which they could offer to everybody else; and, therefore, I do not know that I could suggest a plan right off; but I feel certain that in the case of amalgamation, if the two services are fused together a great many of those things which are now very troublesome would be done away with.

23,133. One way or other the bonds must cover the goods?—Of course.

23,134. (*Mr. Lawson.*) I understand you have to enter into unnecessary bonds, and that that is what you complain of?—Yes.

23,135. But you do not complain, of course, of having to find sufficient bonds?—No.

23,136. (*Lord Lingen.*) What is an instance of an unnecessary bond; because if you got 500*l.* worth of goods beyond your 25,000*l.*, a bond for this 500*l.*, however disagreeable, is very necessary, is it not?—No doubt, but take the following case. Perhaps we might have 10 or 20 carts down to take a hundred pipes away from a vessel, and they would find out just at the last moment that they were 500*l.* short of 25,000*l.*, although, perhaps, there would be a 50,000*l.* bond in existence to cover the warehousing charges.

23,137. But you would not suggest, however inconvenient it might be to your firm, that unless you had given them some extra security they should waive that bond?—Certainly not; but I say that I think the bonding arrangements could be more simplified under one service.

23,138. (*Mr. Harvey.*) In the case you put, I take it that your surplusage of security was not sufficiently large?—In the case I am speaking of it was a security for just one period of four days, say. Of course it is essential that the revenue should be protected. Still, I think, there is a demand for an unnecessary quantity of bonds.

23,139. We should be rather glad if you could point out a specific instance where they might be diminished without in any way minimising the security of the Government?—Many of these bonds are simply a matter of form.

23,140. (*Mr. Lawson.*) Give one case?—I gave a case just now. I said I might have a hundred puncheons of spirit come in this week, and I want to get them up to my warehouse, and do not know exactly that the 25,000*l.* has been exhausted, I should consider it very detrimental and very expensive if they stopped those goods, because perhaps I had not sufficient notice, especially as directly we go down to the Custom House the thing is rectified.

23,141. (*Mr. Cleghorn.*) Would not you have to go through the same process of giving that additional 500*l.* bond, whatever the department?—Yes. I still, however, am of opinion (although I believe you are quite correct in your surmise) that that portion of the demands of the establishment might be minimised.

23,142. If you still had to give the additional bond for the supposed 500*l.* before you could get the goods out, I do not think it matters how many departments you have got to deal with?—I think a more general bond would be sufficient.

23,143. A more general bond?—Yes.

23,144. (*Mr. Lawson.*) Do you mean that you would give a bond for a 50,000*l.* cover?—To cover exports, imports, warehousing, and everything.

23,145. (*Lord Lingen.*) What I suggested, and what I understood you not to approve of, was to give a bond something on the principle of the Cheque Bank, the Revenue Department keeping an account against you until that bond was exhausted?—I cannot disapprove of that at all At the same time, I would suggest a general bond to cover goods for removal, for export, and for the goods in the warehouse. I think we have to give a very large bond for the goods in the warehouse, which are always under the lock and key of the Excise.

23,146. (*Mr. Harvey.*) What is the exact nature of the bond; are there sureties?—Yes, we get two sureties.

23,147. Personal security in fact?—Personal security.

23,148. Not a deposit of stock or anything of that sort?—Oh dear no; we are not overdone with that, we have to use so much of it every day.

23,149. (*Chairman.*) Have you any experience in your trade of Customs bonded warehouses, or do you do all your work in bond with the Inland Revenue now in dealing with your wines?—If we once get goods up to our bond in Camden Town, we have no longer to deal with the Customs.

23,150. You have no other bonded warehouse have you?—No, except our distillery in Scotland, and our whiskey bonds in Ireland; of course we are obliged to have bonds there.

23,151. Upon the question of export; how is that affected as regards your trade by having to deal with the Customs and the Excise also?—That has been very much modified of late. We export only about 1,200 or 1,500 cases a week, and we are allowed (of course I hope it is not a special case, and that every one is treated the same) to put a piece of wire round with the Customs seal, and a hole is bored in the case. I think the Customs nominally accept that. I do not know that they even examine these cases now, because an export note has to go down from our place to the Customs warehouse. The papers, however, must be all passed by the Customs, and that is a point perhaps which is just worth mentioning, as there might be detention in consequence, and goods be sometimes shut out of ships.

23,152. (*Lord Lingen.*) Would a cask, wired and sealed in that fashion, sometimes be allowed to go straight on board without any further examination at all from the Customs?—Yes, and other packages.

23,153. What sort of things?—Cases. The Customs would make a cursory supervision. I do not think they would use the instruments that are necessary in import.

23,154. What would be the saving of labour upon a case that was wired and sealed in this way. What would they omit to do?—They would not open any of these cases. We suffer a great deal from loss of goods imported in cases, because bottles are opened even in small parcels. For instance, if I have a dozen of spirits come this morning, the Customs would open one bottle and the Excise another.

23,155. (*Chairman.*) To keep to this point of having an export of wine or spirits, in regard to any of your goods that you have had in bond, do you find any real inconvenience or any inconvenience from having to deal with the Customs for export?—Only to the extent of their having to go through two departments.

23,156. Is that real inconvenience?—I do not know that it is a real grievance, because supposing the Customs take Excise officers for that purpose, they must take some officers to see they were put on board and to watch their arrival.

23,157. Now about the tobacco; in what respect do you suffer any inconvenience in your trade in that?—Chiefly so far as we have to deal with two departments, as up to the time when the duties have to be paid, the goods remain in the charge of the Customs, and it is only subsequent to that payment that we come under the authority of the Excise. The inconvenience I grant may not be a great one, but such a state of things it seems to me must be an anomalous one, and one involving extra expense.

23,158. How could you make a saving. Could you give us one instance of a transaction of tobacco landed, and after it is dealt with, in which transaction you would be benefited by having to deal with only one department?—I have already said that I think it would be difficult to show the exact way in which we are at a disadvantage in having to deal with two departments, although I still maintain that, looking at it in a business light, such an arrangement seems to be an anomaly.

23,159. (*Mr. Lawson.*) Could you give a case with regard to your tobacco business in which you have to deal for the same matter with two sets of persons?—No; I think not.

23,160. I should like to know how the tobacco is dealt with?—We get the weight notes at the docks and pay the duty to the Custom House, but from that moment we are under the surveyors of the Excise, both as to this new water question and all other questions.

23,161. For that new water question, is the tobacco tested twice, by the Customs and the Excise officers?—No. The Customs test for the amount of initial moisture, and the Excise after payment of duty on the quantity of moisture in its manufactured state.

23,162. The Excise officers alone test it?—Yes; in the latter case.

23,163. (*Chairman.*) I should now like to ask you generally if you have any other point bearing upon amalgamation that you could put before us, from the trade point of view?—I mentioned at the outset that we pay duty direct on some goods from the Custom House to our own stores; but it is generally on goods at the low rate of duty. Some wine now is at a 1*s.* duty, and we sometimes pay duty on 500 or 1,000 hogsheads at the 1*s.* rate of duty, because if we did not we are put to the double expense of sending them from the Custom House to our warehouse. We should not pay that duty in a lump sum if they went direct up to our stores. We should only pay the duty as we wanted the goods.

23,164. Do you mean that in order to be safe you pay more, owing to the nature of this transaction; you have to pay more money out in the first instance than you would have to do to cover it afterwards, of course?—We should pay it by instalments; I mean to say that we should not pay on the 500 hogsheads at once.

23,165. That, equally, could be got rid of without amalgamation. if the facilities, which you say would be so advantageous, were granted, could it not?—Yes, it could be.

23,166. I suppose you would admit there has been a very great simplification and improvement in the bonding system within the last few years?—Yes; and more especially within the last five. I think both services have improved in that respect.

23,167. (*Mr. Harvey.*) I take it that the main point of your evidence is, as far as I have followed it, that the substitution of the warehouse examination for the waterside examination is the principal point in which you see room for improvement?—Yes, as that would leave room for the greatest economy on our part, and, of course, for economy to the revenue.

23,168. That would lead, you think, to greater promptitude, it would save you capital; that is to say, the capital consisting of the larger amount you have to pay now, instead of paying smaller sums from the warehouse?—Yes.

23,169. And you do not think that there would be any risk on the part of the Government?—None whatever.

23,170. And the other point is as to the simplification, if possible, of the bonds you have to enter into?—Yes.

23,171. Those, so far as I follow you, are the two main points of your evidence?—Yes, I think so. I have nothing, perhaps, to do with the economy to the revenue, and of course you do not ask me that question, but judging from a business like our own I think there would be such an economy.

23,172. As representing the convenience of the merchant: those are your two points?—There would arise from their adoption great convenience to the merchant, and other advantages would no doubt follow. This is certainly a point I feel very strongly upon as a man of business.

23,173. (*Lord Lingen.*) I think I understood you to say, that when you had got your goods into an Inland Revenue bonded warehouse, and wanted to draw them out again, there was a reference by the Inland Revenue to the Customs before they would give you the permit. Is that so?—When they once get into our place, excepting for export, the Customs have nothing to do with them.

23,174. They have done with them?—They have done with them excepting to account for the money, and that, I presume, is done on paper, as between one department and another.

23,175. You receive, or the warehouseman receives, with the goods when they come into the warehouse, a statement of their measurement and contents, as the Customs have made it, and then when they have to be drawn out of the Inland Revenue warehouse, of course that Customs document is compared with any wasting that there may have been, or what not. Is that the process?—After the Customs have once delivered, and the Excise have once acknowledged that delivery, I think we are entirely under the Excise, and any waste the Excise has to watch.

23,176. The Excise watches?—Yes; I think we have nothing to do with the Customs after the goods once get into the Excise books.

23,177. (*Mr. Lawson.*) You and your firm, I suppose, are by far the largest customers of the revenue departments in your particular line of business?—In our particular line of business, yes.

23,178. You have long been in favour, I believe, of amalgamation from the traders' point of view, and for the traders' convenience, have you not?—Certainly. I anticipated that it would be carried out some years ago, when a very important investigation was made at our stores.

23,179. Several years ago?—I think it was under five.

23,180. Who made the investigation?—I think there were commissioners from both departments.

23,181. Did they come down and take evidence from you there?—No, they took evidence from our servants, and from the officers of the Excise department at our stores.

23,182. Those were officers both of Customs and Excise?—Yes. I think they were there for some time.

23,183. When you express yourself in favour of amalgamation, you do so because you think that your trade will have greater facilities and convenience, and not from any abstract consideration?—I think the trade in general will benefit, and I am speaking for them as a whole. I hope our own saving will be very great, but I am speaking for the trade in general.

23,184. Of course you are in the habit of constant communication with other wine merchants?—Yes.

23,185. Have you discussed these questions with them?—Over and over again.

23,186. And, so far as you believe, the great bulk of the opinion of the trade is in favour of amalgamation?—I should say so, most certainly.

23,187. Could you name any big firm beside yourselves on whose behalf you are able to speak?—I would rather not do so.

23,188. But you can say that there are several?—Yes, several.

23,189. As business men, they, of course, take the same view, and believe that it must be a great waste to have the same duties performed twice over by two sets of officers?—Decidedly.

23,190. (*Chairman.*) Are the same duties done twice over?—Yes; and I think there is great loss in consequence. Take the case of spirits: in the length of time occupied there is a great loss by evaporation.

Mr. H. P. Gilbey.

13 Dec. 1888.

23,191. (*Mr. Lawson.*) I was going to take the case of the examination both at the Customs and at your own warehouse; but take the case of spirits, what were you going to say?—In the case of spirits, I am of opinion if they are delayed down at the Customs a week or so, we will say, in hot weather, or on the quay, the loss must be very great, and at the same time the revenue does not get the benefit of it.

23,192. The Commission would like to hear some other case besides that of the examination of the spirits which you gave us at the beginning of your evidence, and to which I was alluding when I said that; but give us some other case in which the same duty is twice performed?—I cannot give any point beyond those I have mentioned.

23,193. Supposing that you have to make any communication with reference to conveniences being given to your trade by the Inland Revenue, I understand that they are so mixed up in your business that it must be sent on to the Customs?—Certainly.

23,194. And the matters must be twice considered?—Yes, twice considered. All our petitions go to the Customs, at least, 99 out of every 100.

23,195. Of course your petitions with regard to small matters are pretty frequent?—Very frequent. Trivial matters of leakages and ullages of 2*l.*, or 3*l.*, or 4*l.*, but they are very vexatious.

23,196. Do they all receive double consideration; are they considered both by the Customs and Inland Revenue?—I think most of them are.

23,197. How long does it take you to get an answer to an ordinary petition?—If the Excise have not to consult the Customs we should get it very readily. I would rather, however, you should ask the Excise officers their *modus operandi* as regards action upon petitions.

23,198. But you have had experience of both departments, and without making any invidious comment on the Customs, do you find that greater readiness is shown and greater facilities given you in the one rather than in the other?—I have found that.

23,199. Which?—The facilities are greater with the Excise, certainly.

23,200–1. You have found that your wants are more considered there?—Yes.

23,202. Then, of course, as to different methods of procedure, I believe that there is a different gauging test in the two departments, is there not?—I think of necessity the gauging on the landing of goods is different.

23,203. But as to the actual gauging?—There is a considerable difference.

23,204. What difference have you noticed, and how far has it affected you?—The means of gauging adopted by the Customs, as a rule, is by instruments. It is simple enough, it is true. They have to examine the outside of the cask in order to ascertain the thickness of the wood, and the general character of the cask, after which it is very easy to ascertain what the cask would hold. Of course the system of weighing is the more precise, but you could not weigh everything on import.

23,205. (*Lord Lingen.*) Would you say the Excise do not measure casks?—There is a measurement, but by a different system.

23,206. Do you say by a different system to that of the Customs?—Quite different. The Customs, on arrival, have to ascertain the content, what the cask would hold; but almost invariably at the various distilleries it is an empty cask which the Excise people weigh, and then they weigh it again after they fill it. Of course, that system is more accurate to a $\frac{1}{10}$th than it could be with the Customs, but I think the Customs plan must always be followed on landing foreign spirits.

23,207. (*Mr. Harvey.*) We have it in evidence that that particular examination of the Customs is very much more difficult (because they have to ascertain the content of the cask, the thickness of the wood, and so on) than in the case of the Excise, who can take the empty cask and weigh it and then fill it and weigh the whole?—Quite so. It would not be a very difficult thing for the Excise people to do the same as the Customs. The Excise officers have to employ these instruments, at our stores; at any rate, they have to do so occasionally when there is a cask that we would rather not have emptied.

23,208. (*Chairman.*) At all events there must be some examination of the goods on landing to see what the contents are, and whether that examination is done by the Customs or whether it is done by the Inland Revenue, it must be done by somebody. I mean that there must be a gauging different from the gauging that can be done in the distillery by weighing the cask with and without its contents?—There must, in fact, be an examination which must be done by instruments.

23,209. (*Mr. Cleghorn.*) Would the fusion of the two departments dispense with one of those examinations?—I think not; but I think it would facilitate these matters to a certain extent.

23,210. (*Lord Lingen.*) With inland liquids you have got the empty cask?—Yes.

23,211. With imported liquids you have got the full cask?—Yes.

23,212. And, as a rule, you cannot empty it?—No.

23,213. And therefore you have only got to trust to external measurement?—It will always be necessary to use these instruments more or less, whatever the result of the present investigation may be.

23,214. (*Mr. Lawson.*) Do you believe, from what you know, that in these matters there is as much information sent from the one department to the other as there might be to assist it; do you believe there is a ready communication between the Customs and the Inland Revenue in these matters?—I think so.

23,215. You think that that has now been arrived at?—Yes.

23,216. Have you known the time when that was not so?—I have known the time when there was a jealousy of feeling, but I do not think for a moment that it exists now.

23,217. Do you think that in the tobacco trade there would be any particular advantage accruing to you and other traders from an amalgamation of the services?—Yes. Take the point of examination for moisture, both on the imported and manufactured tobacco. I think it would be preferable to deal with the laboratory of one department only. The laboratory services in both cases are very important services. I have occasion to go to both; of course, I prefer to go to the Excise, because most of our business is done with the Excise, and is a very important department.

23,218. In what cases would you have to go to both?—To the Customs until the duties have been paid, and to the Excise afterwards.

23,219. I am talking of tobacco?—We have further to deal with the Customs if any question arises of drawback, &c.

23,220. Have you dealt with the laboratories of both in respect to spirits?—In respect to spirits, we, of course, have some differences at times as to the exact strength especially under the new rule. In spirits we have occasionally, as I tell you, a little friction, but it soon gets rectified.

23,221. Have you known the officials in the two laboratories take different views of the same case?—Certainly.

23,222. In what case have you found them taking a different view?—I am speaking of very delicate examinations. The Customs have nothing to do with tobacco after it gets into our warehouse duty paid.

23,223. When there has been a difference of opinion between the two laboratories, have you been able to say which has generally turned out to be right in the end?—No, but I think the scientific knowledge at Somerset House is greater than that at the Custom House.

23,224. (*Chairman.*) If you have no other point to bring before us, I think I have no further question to ask you?—I have nothing to add.

The witness withdrew.

Mr. Richard Sedgwick called and examined.

Mr. R. Sedgwick.

13 Dec. 1888.

23,225. (*Chairman.*) You can speak here, as I understand, not only on behalf of the firm of Francis Peek, Winch & Co., but you are also secretary to the Association of Wholesale Tea Dealers?—Yes.

23,226. And that association has already, I believe, discussed the question of the proposed amalgamation of the Customs and Inland Revenue?—Yes, that is so.

23,227. I think I had better ask you whether you are prepared to express any views that they may have, as to any inconveniences which they at present suffer from having to deal with two departments, and whether, in fact, from the point of view of the trade, they see any reason for being in favour of having the revenue all under one department?—Perhaps I may be allowed to state that the experiment was partially made in the year 1882, when the regulations which referred to the Excise were tried to be applied to the Customs.

23,228. Do you mean that that was the making of the one code for the two departments as regards warehousing?—Yes; that was called the assimilation. The result of that was that some of the officers who were then connected with the Customs, and who had an intimate knowledge with the work of clearing different kinds of goods, were pensioned, and other gentlemen were appointed from the Excise. They understood very little of the work then, and the result has been that the experiment has been a very costly one, inasmuch as the staff and the officers were sent out to each of the different warehouses. In the tea trade we have about 24 different places, docks, wharves, and warehouses, in which tea is deposited. The staff was sent from the Custom House to the different warehouses. The result was that when there was any pressure in any particular warehouse, the staff apportioned to it was not equal to doing the work, and where the work was slack, the officers could not be transferred. The Customs have seen the inadvisability of that scheme, and they are now reverting again to the old one; and as a matter of fact, at the present time, there are only four warehouses in which the Customs staff is still stationed. The others have been removed back to the Custom House, where we have one principal, and the work is done under one roof, and any mistakes can be rectified and matters can be put straight on the spot.

23,229. Do I understand you to say that when the change was made in 1882, that there were a larger number of warehouses, wharves, and docks, at which tea could be deposited?—No; the same warehouses existed, but the Customs staff was distributed, or rather an extra staff had to be put on and sent round to these 24 warehouses instead of being at the one, and, as a consequence to the trade, we had to pay visits to 24 warehouses for the purpose of clearing tea, instead of going to the one Custom House.

23,230. (*Lord Lingen.*) The one warehouse that you are speaking of was that in the Custom House itself?—The Custom House has a room where documents are passed, and also another room where the money is collected.

23,231. In its own premises?—In its own premises.

23,232. That part of the business was distributed among the warehouses?—Among the 24 warehouses.

23,233. (*Chairman.*) I gather from you that that attempted improvement in the year 1882 was rather a sort of scattering of the long room over various warehouses, than it was a fusion of the Inland Revenue and Customs in any way?—It was, I take it, an attempt to assimilate the practice of the Customs and the Inland Revenue.

23,234. How was it an attempt?—The Customs officers, some of them at least, were pensioned, and we had to deal with gentlemen who had previously been used to what is technically termed wet goods, that is wine and so on, as against tea, which was called a dry goods article.

23,235. Were any warehouses abolished at that time?—None whatever.

23,236. (*Mr. Lawson.*) I do not understand why the Customs officers, with whom you had been in the habit of dealing, should have been confined to dry goods. You say that you had to deal with a wet goods officer as opposed to a dry goods officer?—Quite so. The officers who were put over it had very little knowledge, or no knowledge practically, of the dry goods.

23,237. (*Mr. Harvey.*) Were all these Customs officers; for instance, up to 1882, goods were sent into anyone of these 24 warehouses after an examination by Customs officers, and into the custody of Customs officers, is that so?—Quite so.

23,238. Will you tell us exactly what happened after 1882?—The goods went to the same warehouses, but as far as the trade is concerned, they had to attend first at the warehouse where the tea was deposited to get certain papers passed with the weights of the teas, and so on, and then pay the money at the Custom House, which is in Thames Street, and then a second visit to these warehouses; whereas when the establishment was at the Custom House, we had simply to go to the Custom House, and the warrant was sent to the officer of the Customs at the warehouse, and the goods were liberated.

23,239. (*Lord Lingen.*) Then, on the whole, you think the change that was made in 1882, was not for the advantage of the trade; is that the gist of your evidence?—That was decidedly so, and I take it that it was not economical either, as there has been a reversion to the old system.

23,240. (*Mr. Lawson.*) I cannot quite understand why the Excise officers came in here?—The point was this. In the country where the entries are comparatively few, there were two departments, the Customs and the Excise quite distinct, and very few entries would be made in one day in the two Departments, and I have no doubt it was a wise thing to amalgamate those two as far as the country was concerned, but in London the conditions are entirely different, the work is so enormous. The duty on tea alone for the year ending the 31st March was 4,600,000*l.* odd.

23,241. (*Mr. Harvey.*) If you will allow me to press you upon this point, I want to get at the warrant. Under the old system, when all the requisite payments had been made, and the tare calculated the warrant went from the Long Room to one of these 24 warehouses, did it not?—Yes; that is so.

23,242. Up to 1882, as I understand you, the whole of that was under the control of officers who had the control of dry goods?—Yes; at the Custom House.

23,243. Then after 1882, who had charge of the duties at the warehouses?—As far as I can make out, they might have been mixed. Some officers were the old dry goods men, but a good many were the officers from the wet branch.

23,244. That is to say, the gist of your contention, is that after 1882, certain wet goods officers were put in these 26 warehouses having charge of tea who did not understand the various operations connected with the tea?—Quite so.

23,245. (*Chairman.*) Can you state further what was the object of doing that?—Economy I should imagine was the intention, and I think, as I remarked, with regard to the country, I have no doubt it was satisfactory, but in London the work connected with the tea itself is quite sufficient to employ many hands.

23,246. What was done then was found to be unsatisfactory, principally, as I understand, owing to the fact that the officers who were in charge of these warehouses or had to deal with the warehouses on behalf of the revenue to a great extent had not had sufficient experience of the tea?—Quite so.

23,247. Since then a change has been made in the opposite direction?—It is a reversion to the old system as much as possible.

23,248. Does that mean that they are keeping one class of officers, namely, Customs officers, to deal with tea?—No; I mean that the clerical work particularly is conducted under one roof. It is a centralisation scheme that is going on as against a decentralisation one distributing the officers at the different warehouses.

23,249. Where does the clerical work principally go on now?—At the Custom House.

23,250. At the Custom House itself?—With the exception of four warehouses where it is stored the whole of the other work is done at the Custom House.

23,251. The bulk of the tea that is imported into this country, all comes into London, as we know?—Yes.

Mr. R. Sedgwick.

18 Dec. 1888.

23,252. Is there a large import at Liverpool?—No; very small now, it is nearly extinct.

23,253. With the exception of London then, where are the principal ports?—It nearly all comes to London; there is very little else.

23,254. Then when you speak of tea being dealt with at other places in England, is it because it is sent from London by railway or round by sea to other bonded warehouses?—Quite so; the quantity that comes into Liverpool is not worth consideration, it is so infinitesimal.

23,255. As regards imports, we need only consider London, in fact?—Only London for tea, certainly.

23,256. Upon this point of amalgamation and dealing with the Excise, where does the trade now find, or does it find, any inconvenience; does the tea often go to bonded warehouses which are under the custody and charge of the Excise?—Yes, probably. I believe they mostly have what they call custom houses in the country; but it will be under the control of the Customs or Excise, I am not able to state which.

23,257. A particular parcel of tea that is imported into London, may be sent, may it not, under bond to a bonded warehouse, say, at Birmingham?—Certainly.

23258. Before it is sent on under bond to Birmingham, what do the Customs do with it in London?—It is first weighed in London for the purpose of ascertaining the gross weight of the package and also the tare, to arrive at really the net weight, to ascertain the amount of the duty which would in the ordinary case be charged upon that package if it were taken into home consumption.

23,259. Then besides the gross weight there is tare taken; that is to say, some cases are opened?—Certainly.

23,260. And the tare is taken?—Certainly.

23,261. Then it is re-packed and sent off under bond to the warehouse at Birmingham?—Certainly.

23,262. When it gets to Birmingham, do you know what is done with it there?—In all probability it goes into what is called home consumption; the duty would be paid there, but the quantity of tea sent under bond now is very small indeed to what is was some years ago, particularly when the duty was higher.

23,263. Why is that?—The duty is 6*d.* per lb., the duty being small the country people unfortunately get us to advance the duty for them here, and the goods are sent down duty paid. There are, of course, cases of tea being sent under bond, but comparatively few, and there are also exports, as you may imagine.

23,264. Leaving out of the question exports for a moment, as regards the general tea trade of the country, practically you may say that all the duty is paid in London?—I should think that we might say five-sixths or six-sevenths of the whole duty would be collected at the Custom House in Thames Street.

23,265. Do the Inland Revenue deal at all as regards taking the tare, or anything else with tea in London?—Certainly not.

23,266. Then you do not come into contact at all with the Inland Revenue, the Somerset House Department, in dealing with tea?—Not with tea; certainly not.

23,267. (*Mr. Harvey.*) Are there no Inland Revenue officers at any one of these 24 warehouses, are they all Customs officers?—All Customs officers.

23,268. (*Lord Lingen.*) I understood in the early part of your evidence you spoke of Inland Revenue officers who had been transferred to this duty with not very sufficient experience, were they Inland Revenue officers converted into Customs officers?—If I did I did not intend to, I meant wet goods officers.

23,269. They were Excise officers converted into Customs officers?—They were wet goods officers converted into dry goods officers.

23,270. (*Mr. Harvey.*) Are you quite clear that they were not all Customs officers?—They belonged to different branches.

23,271. Customs officers who, having had charge of wet goods, were not up to dealing with dry goods?—That is so.

23,272. Then they are not Inland Revenue officers?—I beg your pardon. I did not intend to mention Inland Revenue when I first commenced.

23,273. (*Chairman.*) All you meant was, speaking generally, that it was decentralisation?—It was.

23,274. And that you have now reverted to centralisation more at the Customs?—Yes, and by the amalgamation of the two branches, incompetent people were put in.

23,275. When you use the word "amalgamation," do you mean amalgamation between what two bodies?—The Excise——

23,276. (*Mr. Lawson.*) What do you mean by the "Excise"?—I imagine it to be those who collect the duties on wet goods.

23,277. (*Mr. Harvey.*) I think all that you mean, if you will allow me to put it in this form, is that as a result of this change of 1882, certain officers were put in dry goods warehouses, who, having had experience up to that time in wet goods only, were not competent to take the administration of dry goods?—Quite so.

23,278. (*Mr. Lawson.*) But they were all Customs officers?—That was so. It was taking officers from another department who had not sufficient knowledge.

23,279. (*Chairman.*) I want to be perfectly clear upon this point: does any tea imported into London, confining yourself to London, go in bond to any bonded warehouse which is under the control of the Inland Revenue, and is it examined there by the Inland Revenue officer on behalf of the Customs?—Not to my knowledge; it is Customs officers only.

23,280. Then, as regards the whole of the tea duty, it is all paid direct to the Customs, is it?—Certainly.

23,281. (*Lord Lingen.*) You might perhaps test it in this way: if any question arises, to what department do you address your letters—to the Custom House?—Certainly.

23,282. And never to Somerset House?—Not under any consideration whatsoever.

23,283. (*Mr. Lawson.*) When you say "not under "any consideration whatever," you mean under no necessity whatever. You do not mean that you could not; you mean that you are not called upon to do so?—We are not called upon to do so.

23,284. (*Mr. Cleghorn.*) I think, if I understand you, the Customs alone deal with tea in London?—Certainly.

23,285. (*Chairman.*) Under those circumstances, I suppose, you have no view whatever upon the question of amalgamation of the Inland Revenue with the Customs; naturally you are not brought into contact with the Inland Revenue at all?—No, I mention that to show that in the past our experience rather points in the direction that it is undesirable to bring another department, or rather another set of officers almost.

23,286. You do not want to have your dry goods dealt with by a wet goods man, that is what it comes to?—Certainly.

23,287. If you could tell us anything further which bears upon the convenience of the trade with reference to the suggested amalgamation, we should be very glad to hear it?—The effect of the Custom House being in Thames Street is that warehouses for the accommodation of tea have sprung up in different parts, but all centering as near as they possibly can to Thames Street. The merchants who import teas from China, India, and Ceylon have their offices in proximity to Thames Street. The brokers in dealing with tea are mostly in Mincing Lane, which is not very far from Thames Street; and the whole of the dealers—those who buy the tea, and give credit upon the tea—are also localised near the Custom House on account of the facility for paying the duty at that place. It would be highly inconvenient; in fact, it would almost stop a considerable portion of the trade if we had to go any distance to pay the duty. Tea is an article which is rarely used in the exact state in which it is imported. It is usually drunk after it has been blended, so each tea requires upon an average five or six kinds to be mixed together in various quantities. As a rule, these five or six quantities will be spread over three or four warehouses at least; they have to be cleared; that is to say, the duty has to be paid, and the necessary documents passed at the Custom House for freeing the teas, and they have to be sent off also in one consignment, which is a matter of economy for the consignee, and delivered in one parcel. If there is one kind of tea wanting out of the five or six, the whole consignment is useless until that arrives. If the office of the Custom

House, or the Inland Revenue Department, whichever we might have to deal with, was to be situate anywhere west of London Bridge or far from the present position of the Custom House, I think it would be highly inconvenient not only for the tea dealer but also for the merchants, the brokers, and the warehouse keepers.

23,288. In the dealings of the tea trade with the Custom House, with what officers are they mainly brought in contact at the Customs?—There are two sets; there is the treasury department where they receive the money, and the clerical department, where the different papers are passed.

23,289. Have you ever had to go to the Board of Customs?—Yes, certainly.

23,290. Do the dealers in the tea trade have personal interviews with the Board of Customs at the Custom House?—Not as a rule; it is generally done by petition.

23,291. A petition, of course, could be equally sent to some other place. When you say that it is a convenience to the tea trade, which we readily understand, to have the Custom House in contiguity with the existing warehouses and the existing offices of the different merchants, when this question of amalgamation is discussed I should like to know what Customs officers it is, from your point of view, desirable should be geographically situated where they are now?—The first would, of course, be the Collector of the Customs, the head of the treasury department, and secondly the necessary staff for passing the papers relating to the different warehouses, and also an officer or a board, somebody to whom we might appeal, as we do daily, for instructions to be given to the different officers with regard to goods. I will state an example: an order will be received, probably this morning, for the transmission of goods, say, to Birmingham, and during the day a telegram will come to alter the destination of those goods, perhaps, to Ireland. As we have already passed our papers for the one place we have then to make a petition to be allowed to alter it to another. That an officer cannot do at present, at any rate by himself; it has to be referred to the Board, and the Board, if they do not consider it a frivolous request, pass it.

23,292. (*Lord Lingen.*) And that petition, and the answer upon it, would involve at least a day's delay?—If it were anywhere else but in Thames Street.

23,293. (*Mr. Cleghorn.*) It does not involve a day as the case is, does it?—No, as it is now, it can be done in a comparatively short time.

23,294. (*Lord Lingen.*) You write out a petition, the form is no doubt thoroughly understood, on the spot, and send that in and get an answer to it all in writing; is that the present process?—Yes, that is the present process.

23,295. I did not quite understand whether you suggested that some officer sufficiently high up should be able to give an answer upon that at once without the formality of a petition; did you suggest that?—No, I did not intend to imply that. What the trade look for is that there should be some officers or a board in in Thames Street to give authority.

23,296. To deal with things on the spot?—To deal with things on the spot; it is more necessary, I think, with tea than almost any other article.

23,297. (*Mr. Lawson.*) It does not signify to you, of course, whether the authority be a board or a single officer?—Certainly not, so that the authority is given.

23,298. In fact, you can understand perhaps in some cases there might be less delay if you had not to wait for the meeting of a board?—Certainly.

23,299. (*Chairman.*) Are you familiar at all with the position of the Collector of Customs at Liverpool, say—any out-port collector on a large scale—do you know enough of his work to say whether that is the kind of man who, if this tea was entered at that particular port, would be able to give the necessary authority that your trade requires?—No.

23,300. Your point is that at the Customs it is highly convenient that in that particular position there should be somebody able to deal immediately with the merchants in the tea trade in such a question as that which you have recently put before us?—Quite so.

23,301. And that need not necessarily go to the Board at all; it need not go to the highest authority at the Customs so long as it goes to somebody who can deal with it?—No; there have been cases in the past with the Customs where, upon lodging a security, goods have been allowed to go out for the day, and on the following day any irregularity in the payment, or anything of that sort, has been made right. May I be allowed to state an instance? When the new tea, as it is called, the first pickings of the plant in China and India, is sent over, there is a natural demand in England to see what the leaf is like; sometimes the ships arrive probably late in the afternoon at the docks; it is very desirable that that tea, if possible, should be sent into the country in the same evening. The Customs on these occasions have allowed their officers (to meet the convenience of the public) to remain on duty after the usual time, for which the trade have been very willing to pay, and have paid.

23,302. (*Mr. Lawson.*) Paid who?—Paid the time of the Customs officers over their ordinary pay.

23,303. Their overtime?—Yes, their overtime. There is not time before the train leaves in the evening for these teas to be thoroughly weighed; that is, the gross taken and the tare taken. The gross has been taken, the tea, the lead, and the wood have been taken, and we have paid the duty on the whole; on the lead and the wood, so as practically to secure the Crown. They have the sixpence per pound on the gross, and when the tare has afterwards been ascertained a return has been made to us of that money; that is only done by the officers when they have authority to do it, but in consequence of the plan that was introduced in 1882, some of the inexperienced officials at the warehouses declined even to let us have the teas, although we had paid the duty upon the gross.

23,304. That was set right, I suppose?—It has been set right since.

23,305. It was a small instance of friction, of course, which would not have been permanent, I suppose, because the trade would have protested against it?—Certainly; but we have what we term new teas coming in at various parts of the year. They do not all come in at one rush now as they used to before the Suez Canal was opened.

23,306. (*Mr. Cleghorn.*) You really have no practical difficulty in conducting your trade, have you?—Not with the present staff. I think it has been reduced to as good a position as it fairly can be since clerical work has been removed from the warehouses to the one central place.

23,307. You have no complaint to make then, I take it, as to the regular conduct of your business?—Not with the Customs; certainly not. My impression is, considering the magnitude of the trade, that the Customs' officers generally have done their work with credit to themselves, and, as far as I know, there has been no loss whatever to the Crown of a sixpence in the duty. I think that the checking of the papers, and the liberation of the tea now is, as nearly perfect as it can be. We are only afraid that by any other department taking the Customs under their wings, if I may be allowed to say so, we should have the Customs officers moved from the present place, which has grown into a centre, and the removal anywhere else would cause us great inconvenience.

23,308. (*Mr. Lawson.*) That is to say, unless you had a department or an office more or less in the same place as you have now, it would inconvenience you, but otherwise it would not?—No, so long as the staff is efficient.

23,309. Provided that there is an efficient staff?—Certainly.

23,310. (*Mr. Cleghorn.*) I take it that you would deprecate very much a removal of the place where you pay your duties and get your papers passed to any other locality than in Thames Street?—Certainly.

23,311. (*Chairman.*) You have no knowledge of the very limited portion of the tea trade that takes place outside London, have you?—With great deference I hardly think the outport working of tea is worth consideration.

23,312. Surely it is worth consideration to this extent, is it not, the geographical consideration; if there is some port where there is a certain import of tea, would your observations go so far as to say that the Inland Revenue officers would not be fit to deal with it, leaving London out of the question?—I think that as regards the outports, it would make very little difference whatever, because the quantity of tea is so very small.

Mr. R. Sedgwick.

13 Dec. 1888.

23,313. (*Lord Lingen.*) Do you think out of London, I speak quite in ignorance of the fact, 100,000*l.* per annum is collected in tea duties?—I should think more than that.

23,314. 250,000*l.* perhaps?—No, certainly not. The total revenue up to the 31st of March was 4,613,312*l.* I should not think there is 250,000*l.* out of London.

23,315. And that 250,000*l.* mostly at Liverpool?—No.

23,316. Or spread about?—It is in England and Ireland, and Scotland, Glasgow considerably.

23,317. (*Chairman.*) You represent the Association of Wholesale Tea Dealers. Is that association wholly confined to London?—Entirely to London. I do not like to speak in regard to the outports. I can only give you an idea of the quantity of trade that is done there.

23,318. (*Lord Lingen.*) I gather from your evidence that you rather wish to deprecate anything like a removal of the place where the Customs duty on tea is now levied; but that as far as complaints of the working of the present system you make no complaint?—No, on the contrary I think it is done in a highly efficient manner at present.

23,319. (*Mr. Cleghorn.*) And that no union with the Inland Revenue could improve it?—No, profiting by the experience of the past of that change, we certainly deprecate another one.

23,320. (*Mr. Lawson.*) I cannot quite understand how the experience of the past, when you are dealing only with the Customs, can enable you to form an opinion on the question of the amalgamation of the Customs with the Inland Revenue, because you have never dealt with the Inland Revenue?—The officers who were appointed by the Customs to deal with tea were quite efficient.

23,321. I understand that point, but I take it that so far as your experience goes, you are not able to speak as to the conduct of business by the Inland Revenue?—No, I only know casually about it. I should not like to give an opinion that would make any impression upon your mind.

23,322. It is not within your special knowledge?—No.

23,323. Therefore while you are not prepared to say it would do you good, you are equally not prepared to say it would do you harm, so long as there was an office in the East of London, where you would be able to make your payments for the tea?—We are so satisfied with the present working as regards the tea by the Customs authority, that we are afraid that if we go farther with it we may fare worse.

23,324. (*Mr. Cleghorn.*) If the two departments were amalgamated, and that involved any change in the place for paying the duty, you would be decidedly opposed to it?—Entirely, certainly.

23,325. (*Mr. Lawson.*) On the other hand, if it was found possible to maintain an efficient staff for your purposes in the East of London, you would see no objection to it?—No, not if the same staff were continued. What we object to, if I may be allowed to say so, is a change in the present staff, because we take it that these people have been educated up to the requirements of the tea trade, whereas with the new men we should have to go through a certain time while they were being educated.

23,326. Do you attach much value to the present Board; do you think they have been educated up to your work?—We do not come so much in contact with the Board. Of course there are certain gentlemen connected with the Board who have been long connected with the Customs, like Mr. Murray, who was secretary for some time, I believe; he is a practical man upon it, and we have had no difficulty in dealing with the Board of Customs.

23,327. You would object to a new broom that swept all the men of experience out?—Yes.

23,328. Do you think that if you had an officer in the place of the Board who would attend to these matters of which you have spoken to us, I mean the releasing or whatever your technical term is, you would have any objection to it?—No, as long as the work could be done on the spot.

23,329. (*Mr. Cleghorn.*) I fancy that those petitions that you referred to about transferring the destination of goods are mere matters of form and routine. Have you printed forms to fill up?—No; in those cases we have to write.

23,330. But it is a very short statement, is not it?—Certainly.

23,331. And it matters nothing to the Customs and the Government whether it goes to Birmingham, or goes to Ireland, so long as they have the duty?—Quite so.

23,332. All you want is to get your business expeditiously performed?—Certainly.

23,333. And at present it is so?—Yes, it is.

23,334. (*Mr. Lawson.*) I imagine that although there may not be a printed form, there is a settled form of words which you adopt?—Merely an application asking for certain things; it is a matter that the Board retain to themselves, the power of refusing or not. If they found a firm frequently making mistakes probably they might be inclined to think they had some other intention in it.

23,335. Have you ever known them refuse in an ordinary case of this kind?—No, I have never heard of it.

23,336. (*Mr. Cleghorn.*) So long as they have the duty they do not need to care where it goes, need they?—No.

23,337. (*Mr. Lawson.*) Of course you speak for others than your firm?—Quite so.

23,338. In your experience has there been a case of an ordinary application for a transfer of goods being refused?—Certainly not, if a reasonable one.

23,339. Therefore as it is a matter of routine to a very great extent, it would seem to you, perhaps, unnecessary to trouble the Board with a matter of that kind?—I think I would rather have an officer who was empowered to act. At the present moment whatever the question may be, it is put before the Board, and the Board have power to act upon it, whereas an officer might have some new point before him, and he might have to go to some other body for instructions, hence delay.

23,340. The greater part of your applications would be the ordinary kind that you have described?—The majority are.

23,341. (*Chairman.*) Have you any other point that you wish to bring before us?—In one word, I think we may say that we are practically satisfied with our present position.

23,342. As you said before, you think you might go further and fare worse?—Yes.

The witness withdrew.

Adjourned.

SIXTY-EIGHTH DAY.

7, Whitehall Place, S.W., Thursday, February 21st, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

LORD BASING.
RIGHT HON. H. H. FOWLER, M.P.
SIR CHARLES E. LEWIS, BART, M.P.
MR. J. CLEGHORN.
MR. H. L. W. LAWSON, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. FLETCHER NORTON called and examined.

Mr. F. Norton

21 Feb. 1889

23,343. (*Chairman.*) You are the collector of Inland Revenue at Liverpool?—Yes.

23,344. Could you first tell us shortly what your staff is at Liverpool?—I have nine officials in my own office.

23,345. Do you mean nine establishment officers for clerical work in the office?—I have a personal staff of nine clerks in my office.

23,346. What is the number of inspectors, and so on, that you have under you?—I have seven supervisors, 37 out-door officers (they are called first and second class officers), an expectant supervisor (who is really an acting supervisor); then I have 16 assistants and a stamper.

23,347. Is that the whole of the staff over which you preside, and which does all the work of the district of Liverpool?—That is the whole of the staff over whom I have control.

23,348. Are there any Inland Revenue officers there over whom you have no control?—Yes.

23,349. Who are they?—The surveyors of taxes.

23,350. Are they entirely independent of you?—They are entirely independent of me.

23,351. (*Lord Basing.*) Although the Departments of Taxes and Excise are amalgamated, are they not?—Yes, although those Departments are amalgamated.

23,352. (*Mr. Lawson.*) But the Departments are not amalgamated locally?—Not locally.

23,353. (*Chairman.*) What is the geographical extent of the Liverpool district; does it comprise anything more than the port of Liverpool itself?—It extends in one direction about 15 miles inland; it takes in the borough of St. Helen's; but the chief work is in the port of Liverpool itself.

23,354. Is the district that you take the same as the corresponding district that the collector of Customs takes. Are the districts identical geographically?—No, I should think not the same. For instance, he would have no duty outside the docks. I go inland for 15 or 16 miles.

23,355. Would he go down the coast to any port south of Liverpool?—He would; he goes down to Fleetwood and to Chester occasionally, I believe, to inspect.

23,356. You are aware that we are principally inquiring now into the suggested amalgamation of the two Departments of Customs and Inland Revenue. Could you tell us what work there is which you and your officers do for the Customs; apart from warehousing, is there any work which you do which is properly Customs work, but which, for convenience sake, is done by Inland Revenue officers?—I am not aware that there is any special work which we do for the Customs Department. The two Departments, in several instances, are mixed up together. The public, in transacting their business, have to go, for instance, to two offices. They deal both with the Customs and the Inland Revenue.

23,357. Is it because they are conducting two different operations over the same set of goods, that is to say, they have to deal with the Customs and with the Excise too. Is that what you mean?—Not exactly that. take, for instance, the case of British spirits. The manufacture is controlled by the Excise, and then the article is warehoused with the Customs or with the Excise. It is then exported through the Customs. They have to certify to the shipping, and certain other forms have to be gone through by the exporter, and then the exporter has to come back again to the Excise to obtain his drawback or allowance.

23,358. Those are all transactions, are they not, which would have to be done by a different set of officers under any system?—Possibly they might, but the trader would be dealing with one set of officials and with one department. Take the case of beer. Beer, again, is manufactured under the control of the Excise, and when the exporter wishes to export the article he has to give a notice to the Excise. He then takes the notice to the Custom House, and he has to go also through other forms. The Customs sample the article, and then the shipping is certified by the Customs. Then he has to come back again to the Excise to make a declaration and obtain the drawback.

23,359. Do you think that the process which you have just been mentioning to us, entails any serious inconvenience upon the trader?—It must be a loss of time.

23,360. We have had it in evidence from one of the witnesses who appeared before us, that he did not think it did; he said that he thought having to deal with the Customs for export did not cause any real inconvenience. I think his view was that he would have to go to two separate sets of officers under any circumstances?—I should, certainly, if I were a merchant, think it inconvenient, if I wished to export beer, that I must first take a notice to one office, and show it to a particular officer, and then go to another office with the same document, and then back again to the original office to make a declaration and obtain the drawback.

23,361. Do I understand it to be your opinion that the work which has to be conducted by the two departments with reference to this transaction of which you have been speaking at Liverpool might be more conveniently done by one set of officers?—And one department.

23,362. So that in that respect you have an opinion in favour of amalgamation?—So far as that particular transaction is concerned; it seems to me that it would be a convenience to a merchant if he could transact all his business at the Custom House, or at the Inland Revenue office, or at some central office.

23,363. Do you think it would result in a reduction of staff, and that an economy would thus be effected?—I do not know, perhaps, whether there would be any economy effected in that particular instance I could hardly answer that question.

23,364. Then may I ask you generally, from your knowledge of this very important district, what is your opinion upon the possibility of effecting economy or efficiency by an amalgamation of the two departments of the Customs and the Excise?—I am strongly of opinion that if the Treasury have one Revenue office there instead of two (because we are really subordinate officials of the Treasury there) it would be an immense advantage to the public service; it would conduce

Mr. F. Norton.
21 Feb. 1889.

eventually, and probably at once in many places, to a considerable amount of economy, and I think it would be a great convenience to the public.

23,365. (*Mr. Lawson.*) What we should like to know is with regard to your own particular district, in what specific instances would it lead to an economy of management and labour?—Of course I am scarcely in a position to discuss the Customs arrangements. They have a very large staff of officials there, and, although I may have a general knowledge of what their duties are, I could scarcely answer that question to its fullest extent, but I can give you some instances where it seems to me that there would be a considerable economy. You would merely have one Controller there instead of two; you would have one big official. You would then consolidate the clerical staffs, and would have one set of accounts instead of two. There would be a very great saving all round from that. It seems to me that you would not only get a saving in the collector's office in the clerical work, but you would also get a considerable saving in the chief office from having one set of accountants instead of two as you have now. I dare say that if you appoint a *bonâ fide* committee—I mean a committee with *bonâ fide* intentions—of the two departments, the probability is, that by consolidating, they would be able to effect considerable economy there.

23,366. You mean in the central office?—I mean in the central office.

23,367. (*Lord Basing.*) If you had to collect the tea duties at Liverpool, must you not necessarily engage all the people who are now cognisant of, and engaged in that business; you cannot do it, I suppose, with your own officers?—Do I understand you to mean taking over the Customs officials?

23,368. Yes, connected with the tea duties; you have nothing to do with tea duties now, have you?—Not at Liverpool.

23,369. Supposing there was an amalgamation, you would have to collect all the duties on tea coming into Liverpool?—We should.

23,370. Would there be any economy in your doing that?—I am not in any way asserting that the Customs are not conducting their work in an economical way at Liverpool. I am not in the slightest way doing that. As long as you have a duty on tea you must have some officers to charge it. I presume, if you made one Revenue Board, probably you would have the same class of officers to perform that work, as you have now.

23,371. (*Mr. Lawson.*) As a matter of fact, at the present time hardly any tea does come into the port of Liverpool?—I am not able, of course, to speak upon that. The same argument would apply to spirits or to other duties—tobacco, for instance.

23,372. (*Chairman.*) Have you anything to do with the surveyors of taxes?—Yes, I come in contact with them a good deal. For instance, the surveyors are the charging officers of taxes; I am the receiving officer of taxes, and so far as Schedules D. and E. are concerned, I really collect them from the public. They are all paid in cash over my counter. But with regard to Schedules A. and B., those taxes are collected by local collectors, and then they pay them over to me in a lump sum.

23,373. (*Lord Basing.*) Are you the chief officer in Liverpool of the Inland Revenue Department?—Yes, apart from having any control over the surveyors of taxes. I have no control over the surveyors of taxes.

23,374. (*Chairman.*) If the surveyors of taxes are in a certain sense independent of your control, does not it strike you that the same thing would be still more the case when you come to the question of an establishment of officers that have to deal with shipping, which has very little to do with Inland Revenue. I want to know exactly how the public would gain by putting what you may call the Customs officers, who deal with shipping, in a similar position to that in which the Surveyors of Taxes now are at Liverpool with you?—There is one central office at Liverpool. We are all in the same office. Their offices are side by side with mine.

23,375. The tax offices?—Yes, and the public frequently come to me or the surveyors of taxes indiscriminately, but in case I cannot deal with the charges, I refer them to the next office.

23,376. (*Mr. Cleghorn.*) As I understand, your duties are simply receiving of money?—Precisely, my duties consist in collecting money. We have three branches of revenue there. We have the Excise, and the Stamps, and the Taxes. I am not only collector of the Excise, but I am controlling official and inspector of all the Excise work outside, so that all the officials there are subordinate to me. Most of the correspondence goes through my office, and I deal with all questions of discipline.

23,377. In the Excise Department?—In the Excise Department.

23,378. But in the other departments, is that so?—In the Stamps we have really no charging officers outside. All the stamp work is done inside by my own personal staff. In the stamps, the public charge themselves, and we merely keep a check upon them, give them advice when they hand in any documents to be stamped. But so far as the taxes are concerned, I am merely Receiving Officer. It occurs to me, that the Customs really are on all fours with the Excise. If the collectors can inspect, and be the inspecting officers for the Excise (and all our collectors are practical men, they have all risen from the ranks), they could also deal in time (of course, it would take time—I do not pretend to understand at the present moment the Customs work) with the whole of the staff there on the same lines as they deal with the Excise.

23,379. (*Chairman.*) As regards warehousing at Liverpool, is there a double set of warehouses at Liverpool?—The Excise have two general warehouses there.

23,380. The Excise have two; and have the Customs any?—I really do not know how many the Customs have, but I have no doubt they have more than a hundred. They have a large number. They must have, because they have, I think, altogether 600 officials at Liverpool.

23,381. (*Mr. Lawson.*) And the number of your officials is in all, how many?—We have between 70 and 80 officials.

23,382. (*Mr. Cleghorn.*) As I count, the numbers you gave in the early part of your evidence cast up to 71?—I gave them in round numbers between 70 and 80.

23,383. (*Mr. Lawson.*) That does not include the whole of the Inland Revenue staff in Liverpool?—It does not include surveyors of taxes.

23,384. Altogether, what is the staff of the Inland Revenue, including the surveyors of taxes, as against the Customs?—We have a staff of 83 altogether there. We have 72 altogether, and I think there are about 11 tax officers there. We have six districts, and in some of them they have Lower Division Clerks, and in others Assistant Surveyors.

23,385. (*Chairman.*) Supposing the proposition was made, that the Customs at Liverpool should amalgamate with itself the Inland Revenue, do you think they would be able to take up your work. They are a much larger body?—The collector of customs might be able to take my work, but I do not think that if he were to abolish our 72 officials, he could perform their duties by means of his present staff.

23,386. That could not be done by whichever side we suppose to remain the one power?—No, it could not. Of course that is more possibly a question for the Customs to answer, as to whether they thought they could take over the duties. We require in the Excise a very great deal of practical knowledge. I am now referring to the controlling, the superior positions. I have been in the service now between 38 and 39 years, and I am a student at the present time. We are constantly learning; it really takes a life time to learn to be able to deal with the whole of the various duties.

23,387. Then probably you would not be surprised to hear that that is a state of things which is also put in a very strong light before us by officials from the Customs?—No.

23,388. Their view is the same as yours, that it requires a life-long experience to understand the work; and, therefore, does it not come to this, what does amalgamation mean at the port of Liverpool? Does it mean much more than having two or three heads who are the controlling heads of both departments alike, whereas the really experienced and practical men below are as separate as they are now?—Yes.

23,389. How far do you think, knowing the Port of Liverpool, could amalgamation be carried as a practical

thing; because you yourself say, that it requires very practical men, and you yourself are still with your experience a student?—Do I understand you to ask, if you gave me the duties, what arrangement I should make to carry it out?

23,390. If you had *carte blanche* to morrow to amalgamate the Customs and Inland Revenue at Liverpool, how far do you think you could carry real amalgamation?—They have for instance several staff officers at Liverpool, they have a collector and assistant collector; they have an inspector, and an assistant inspector; and they have several superior officers, persons with salaries of over 500*l.* a year. What I would do is to work in men of both departments; I would not disturb the existing arrangements.

23,391. Would you get rid of some of the heads?—I would merely transfer them to other places.

23,392. That is getting rid of them. I do not mean getting rid of them out of the service; but would you diminish the controlling staff at Liverpool? That is what you mean, is not it?—I do not exactly mean that at once. I would not give any opinion upon that until I was able to go over the work and consult the Customs authorities as to what reduction could be made. What I mean is this; that I would place the Excise or Inland Revenue officials and the Customs officials side by side to let them see the work, but my own impression is that we are so constantly changing our work in the Inland Revenue that, certainly, in the course of three months I think I could make myself thoroughly master of everything done at the Custom House.

23,393. (*Mr. Lawson.*) That is hardly an answer to the question put to you by the Chairman. Surely you must have thought the matter of local amalgamation over before you came to give evidence here; and I should like to know what offices you think might be amalgamated with a view to economy and efficiency, and how far the amalgamation would go. I do not understand you to answer that point. You simply said you might compare the two services and then see: have not you thought that out?—I could hardly know what questions the Commission would put to me; but I am certainly not prepared to say at the present moment that you could make any very great reduction in Liverpool.

23,394. Not "any very great reduction," but what reduction. I only want to get at your opinion?—With due deference to your question, it seems to me that I am scarcely in a position to answer that question. You must give me an opportunity of inspecting the Customs work before I could do so.

23,395. (*Chairman.*) I quite understand your position. Could you give any other instances than those you have already given us with reference to the export, and a trader having to go to both departments, where there is any unnecessary duplication of work, that is to say, where work which is done by your officers and by Customs officers might be done at once, by one set of officers. Does any particular instance occur to you by way of illustration of such an unnecessary duplication of work. I take it for granted you are fully employed; and we will suppose that your officers have their time pretty well filled, and also that the Customs officers are pretty well occupied?—In a large centre like Liverpool they are. We are really getting the maximum work out of every man on the spot. I am quite sure I am, and I have no doubt whatever that the Customs are doing the same.

23,396. That being so, is not it pretty obvious that you cannot effect a reduction of numbers or an economy in that respect unless there is any duplication of work now. Is it any use doing away with the name of one of two men and calling him Inland Revenue or Customs, whichever it might be, unless you can diminish the work, is there any such duplication of work now?—I do not know that any other duplication of work occurs to me than what I have stated.

23,397. If there be no such instance, is not it rather difficult to see, when you come to a practical question, how far you could reduce the number of officers, or how far the public could be benefited in any way?—I certainly think that travelling outside the large ports, such large ports, for instance, as Liverpool, there are very great advantages to be derived from amalgamation.

23,398. May I ask what ports you have been at before, and what your experience has been?—I was collector at Swansea for four years.

23,399. We shall be very glad to have your opinion derived from your experience at Swansea, and from your knowledge of any other port?—I am not quite sure whether they have a collector of Customs at Swansea now, but they had a collector when I was there, and I was thoroughly satisfied at that time that I could have done the Customs work as well as my own.

Mr. F. Norton
21 Feb. 1889.

23,400. (*Lord Basing.*) How long ago is that?—I left Swansea in 1880.

23,401. (*Chairman.*) You think one collector could have done the work there?—I do, and also that there must have been necessarily a considerable reduction in the staff.

23,402. (*Mr. Lawson.*) Might I put this question to you: at Swansea was your time fully occupied in the Inland Revenue work? I do not put it to your own prejudice, but I simply ask it for information?—That is more a question of staff.

23,403. You say that the work of the collector of Customs, and the collector of Inland Revenue, might have been amalgamated at the port of Swansea?—Yes.

23,404. I suppose that means that your time was not fully occupied with Inland Revenue work?—Certainly not in supervising my staff, and in taking cash; but you are obliged to have a collector there on the spot.

23,405. That I am not dealing with?—It really becomes a question as to the work which a collector should perform. If you have an official like a collector of Inland Revenue, or a collector of Customs, my own opinion is that you should employ him in controlling work; and that he should not do work, that could be perhaps done by a second or third class clerk, such as writing ordinary letters.

23,406. (*Chairman.*) That is to say that at a place like Swansea—take that as a type of that size of port—you want an official of a high position at 700*l.* or 800*l.* a year?—Not at such a high salary.

23,407. Or whatever the salary might be—600*l.*, or whatever it is. Do you say that the nature of the work which he has to do is such that he might with advantage control both the Customs and the Excise?—I do. If you will allow me to illustrate what I really mean with regard to the employment—because that is rather a vital point, and of course it extends much farther than Swansea—I mean that if you had placed me, when I was collector of Inland Revenue at Swansea, in control of both establishments, I could have transferred a lot of my work—that is to say, I could have supervised that work—told a clerk to do a lot of the correspondence which I did myself, and who perhaps would have been paid at the rate of 100*l.* a year, whereas you were paying me at the rate of from 400*l.* to 500*l.* a year for doing that particular class of work during the time I was employed on it. Of course that argument would apply distinctly, and must necessarily apply, to a place like Liverpool. Now, I have a great deal of correspondence; in fact, I must necessarily do all the correspondence with the Board myself. I have no doubt the collector of Customs would tell you that he does the same. If you extended his duties—you know he is not ubiquitous, he could not be in two places at once—he must transfer a lot of the inferior work to other hands, but he could supervise that; so far as the controlling work, the real purpose for which you require a superior official on the spot, he could do that.

23,408. (*Chairman.*) If an officer had risen from the Inland Revenue, and had come to be a head collector, would he be able to control those specially technical matters which are within the Customs duties?—Without going into the matter, and without having an opportunity of officially examining what the Customs really do, I could not give a decided opinion upon a point of that kind; but I divide the Customs work into two classes. Nearly all the charging work, the important work that they do—that is to say, the important work for the Revenue—seems to me to be on all fours with the Excise work.

23,409. (*Mr. Lawson.*) What work do you mean?—I mean, securing the duty. All our superior officers are very familiar with all the warehousing work. All of us have had very great experience in that; the moment we set our foot inside a warehouse we are able to control the whole of the staff, and we know whether the staff are doing their duty, or whether the duty is pro-

Mr. F. Norton.

21 Feb. 1889.

perly charged. The other part of the work, apart from the water-guard work, seems to me to be in a great measure clerical. I measure their duties by the pay which is assigned to their duties. The work which is not analogous to the Excise work is done by the outside staff in a great measure, and it is, I think, of an inferior character.

23,410. There will always have to be a water-guard service?—There must be a water-guard service.

23,411. But of course it is quite inferior to the rest of the work that is done by the Customs?—Yes. But the superior work, I think, is entirely on all fours; and that seems to me one reason possibly why amalgamation has not been carried further in the case of taxes. You see the Customs work and the Excise work would dovetail in; but the tax work is of a different description.

23,412. (*Chairman.*) I think you gave your opinion before that the Customs and the Excise were much more nearly related to each other than the Stamps and Taxes were to the Excise?—Yes.

23,413. And that whereas amalgamation had not proceeded so far as many people think in the former instance, still that is no reason why there should not be amalgamation in the present case?—There is one point which occurs to me which I may perhaps mention to the Commission in connexion with the question of amalgamation at the smaller ports, which I think is rather an important one. It is this: that we could not only amalgamate in the ports, where there are at the present time two revenue officers (that is, a Customs and an Inland Revenue officer or collector), but we could remove our Inland Revenue collectors into other ports where there are no Inland Revenue collectors at the present time. I think that might be done in the case of the collector at Canterbury. We have a collector at Canterbury, and Folkestone is in the Canterbury collection. Now, we really do not care where our collector is. The duty may be remitted to our collector just as well at Folkestone as it can be at Canterbury. In another case we have a collector at Stirling; we might remove him to Alloa, which is a Customs port, and likewise the collector at Bangor might be removed to Carnarvon.

23,414. You are naming other ports where there is a Customs collector now?—Yes.

23,415. And your view is, that you might, in the case of Folkestone and Canterbury, take your collector and let one collector at Folkestone do the whole business?—Yes.

23,416. (*Mr. Lawson.*) As I understand the case, you have now got in two towns, more or less adjacent to one another, heads of the two departments of revenue?—Yes.

23,417. And really one controller living in one of the two towns would do the work of both—the area is so small?—Yes, if you amalgamate the department, that is one of the first things we should do. We should remove several of the collectors in inland towns to ports.

23,418. (*Chairman.*) Would that be an equal convenience to the public. Would the public, do you think, feel at all prejudiced by the removing of the collector, say, from Canterbury to Folkestone?—I think not in the cases which I have quoted, because they are all small towns.

23,419. (*Mr. Cleghorn.*) You say remove the Inland Revenue collectors to ports; are there not already collectors at those ports?—There are, but they are not stationed there—their office is not there For instance, we have an officer surveying Folkestone, and no doubt we have an officer at Folkestone who is subordinate to the Collector at Canterbury.

23,420. It is a sort of sub-office, is it?—No, there is no sub-office there; but he is a charging officer. It is the business of the officer at Folkestone to secure the whole of the duty which is accruing there from brewers and from public-houses and other establishments.

23,421. Where does he pay his duties?—The beer duty is remitted to the collector at Canterbury. Public-house license duty is remitted to the collector at Canterbury. So far as all the establishment licenses are concerned, most of them are taken out at the post office there, or possibly there may be a Stamp Distributor.

23,422. Then, as I understand you, you would dispense with the services of one of those principal officers at either Canterbury or Folkestone?—Yes, it must be Canterbury if the amalgamation took place, because we must have a collector at Folkestone, Folkestone being a port.

23,423. Would you close the Canterbury establishment and remove it altogether to Folkestone?—We should remove it altogether to Folkestone, so far as the collector is concerned. There is a supervisor at Canterbury, and we must retain him there. We should merely remove the head—the controlling official.

23,424. How many would that include?—I suppose he would have three or four clerks at Canterbury.

23,425. (*Chairman.*) I do not quite understand why you should not do that now, without amalgamation. Why should you not do away with the collector at Canterbury altogether, and let a supervisor, or somebody of less importance than a collector, do the work?—I have not the data here to give the exact details; but, perhaps, if I explain the constitution of the Excise Department, I may make myself clearer. We have the whole of the United Kingdom divided out into stations, and over each station we place an officer; and that officer is responsible for securing the whole of the duty in that station. We then aggregate five or six stations into what we call a "district," and we place a supervisor over that district, whose business it is, in short, to see that the officer does his duty, by checking and examining his books, and making frequent visits after him. Then over a certain number of districts we have a collector. I do not remember how many districts there are in the Canterbury collection at this time; part of the territory within the Canterbury collection is at Canterbury of course, and part at Folkestone. We generally select the large towns for placing our collectors—placing them in the most convenient spot for the public; but if economy were to be effected by the amalgamation of the Customs and the Excise, I apprehend that in all those cases where a collector had a port in his collection where there was a collector of Customs, we should remove the seat of the Inland Revenue to that port.

23,426. (*Mr. Lawson.*) I suppose Canterbury is not a single instance; there are many more instances of small towns that you could give where the same consolidation might be effected?—I think I mentioned several. I have a memorandum of about seven cases which I could select. Possibly there might be more, because I merely hurriedly looked over the map.

23,427. (*Mr. Cleghorn.*) Have you come to anything like a conclusion in your own mind what (supposing that idea were carried out at those seven or ten or fourteen places) would be the annual saving?—I am afraid that I am scarcely in a position to answer that question, so far as Liverpool is concerned.

23,428. I do not ask you about Liverpool at present, but about those smaller places that you refer to. I understand your theory is, that you would dispense with one establishment, where there are now two, in certain districts. Assuming that is carried out throughout the country, so far as you are aware, what would be the probable saving on the whole?—I have not made a calculation of that kind, but I have no doubt whatever that there would be probably, by an arrangement of that kind, some 12,000*l.* or 14,000*l.* a year saved by that arrangement alone. The saving would not be limited to the collectors. I have no doubt that there are many small creeks where the Customs are obliged to maintain officials who could do the Excise work on the spot and in the immediate locality.

23,429. (*Mr. Lawson.*) Folkestone is not an important place as a port, is it?—No; it is not a very important place, but there are several officials there; you might send the Canterbury collector to Dover, perhaps, the more important port. In looking over the list, I found there were, in the Canterbury collection, two ports. I would not, of course, call them large ports, but the idea struck me that that might be done.

23,430. (*Mr. Cleghorn.*) Supposing that there was a revision carried out over the whole country upon the lines you have now indicated, do you think, so far as you have gone into the matter, that there would be a considerable saving annually in the shape of salaries. I mean, could fewer men do the business?—So far as the controlling power is concerned, I certainly think that fewer men could do the business particularly in the smaller ports. I want to guard myself particularly as regards Liverpool, because it is so exceptional.

23,431. I am confining myself to the smaller ports. If such an amalgamation as you suggest were carried out, you think there would be a considerable reduction in the number of the staff employed (I mean eventually) and that, of course, would imply a reduction in the annual amount paid by the State for conducting its business?—I would give a positive opinion so far as the controlling, the superior positions were concerned.

23,432. But would it not go below the controlling positions?—Giving an impression, and I use that word impression advisedly, giving that impression, I certainly think that there would be eventually a very great saving from the consolidation of the two departments.

23,433. (*Mr. Lawson.*) I understand that you think the clerical work might be, to a great degree, amalgamated in these places, do not you?—The clerical work might be.

23,434. The only thing that you stop short of is the out-door duties of Customs?—Yes, I have not sufficient knowledge. I have, I think, a fair knowledge, but not an official knowledge, and I am not positive with regard to that knowledge, so that I could not express an opinion upon it.

23,435. (*Chairman.*) Have you many difficult questions which cause you to correspond with the head office in London. Do you communicate direct with the Board?—I am in constant correspondence with the Board.

23,436. That correspondence is of a considerable quantity?—It is of a considerable quantity, and, in fact, all delicate points and difficult points come to me. The supervisors correspond direct with the Board, but all delicate and difficult correspondence comes to me.

23,437. And you have to judge what is to go on to the Board, and what you can deal with yourself?—Yes.

23,438. In the questions that arise you stop as much as you feel you can legitimately stop at Liverpool, without sending it on to the Board?—The principle which governs me, is never to trouble the Board if I can manage the matter myself.

23,439. Then, supposing you had thrown upon you to-morrow the Customs work at Liverpool, would not you have to send up a great deal to the Board in London of the Customs work in Liverpool that you could not stop?—I do not know what the traditions of the Customs are.

23,440. Assuming the work of the Customs to be not less intricate and not less troublesome and difficult than the work of the Inland Revenue, assuming that, for the sake of argument, do not you think it follows from that that if the controlling power of yourself as collector of Inland Revenue and that of the Customs were thrown into one person, a great deal more work would have to go up to London, and a great deal more of the correspondence to headquarters?—No, I do not think so, not with proper organisation.

23,441. Do you mean if you had a good assistant?—No. What I mean is, if you have a certain staff it is putting a round peg in a round hole. In organising an office there is always some difficulty in starting it; but having once started it, it is only the difficult points that are referred to you. Therefore the public do not trouble you. A great deal of my time is taken up in interviews with the public; but it is only when we are first starting a particular matter that that is so. I have had an instance of that recently at Liverpool. We have started during the last year a stamping department there, that is to say, we stamp documents. It gave me a great deal of trouble to start that, but now that is in good working order I have very little difficulty in controlling it. The principal concern I have now is to see that the whole of the cash passes into the Exchequer. A great deal of the correspondence I write myself now probably could not be written by the collector of a consolidated department; he would have to depute much of that to others; but the collector would be able to direct the lines upon which this correspondence should go. For instance, the correspondence can be very much economised, it seems to me, in some of the public offices, that is the controlling power of the correspondence, by means of shorthand writers.

23,442. Have you tried them much at Liverpool?—We do not use shorthand writers at all now. We have recently introduced that as a subject for examination for clerkships in collectors' offices.

23,443. In your own correspondence with the Board do you write all your letters yourself?—As a general rule.

23,444. You do not have a shorthand clerk to dictate to in the morning and sign them?—No, as a general rule I do all that myself. I am not aware that the Customs or the Inland Revenue do that. Of course there is a good deal in the training, possibly it is not everyone who could dictate the important official correspondence of that kind off. I am merely mentioning that as an instance by which you could very much expand the controlling and supervising power of a collector or controller, or whatever name you give him.

23,455. Going down in the rank, do you think that what you have said of the controlling power applies also to the supervising. Do you think that the supervisors of Inland Revenue have that sort of position in a place like Liverpool, that they could equally control Customs work as well as Inland Revenue?—I have no doubt whatever that our Excise supervisors, from their training, could very soon acquire a knowledge of the Customs work—that is the charging work. Of course most of them, and I daresay all of them, have had experience in similar work at warehouses.

23,446. The work of the supervisor is all of it, more or less, control, is it not?—No, he is also a check officer. He controls his officers, but he is a check official. He is constantly visiting the various manufactories and the warehouses, and checking the operation and the accounts taken by the officer for the purpose of seeing that the proper revenue is charged, and he also examines the books of the officers, and by his knowledge is able to see whether the officer is doing his duty.

23,447. Then, in your view, with reference to the possibility of the Customs work being taken over by your offices extending right down through the whole of your 70 officials—taking the number at 60 or 70 that you have control over—do you think that they could all take over Customs work?—Some of them, of course, are very young officials, and require training.

23,448. I mean in the nature of the work?—I think so, apart from the water-guard duties, upon which, I presume, you would never think of employing them. So far as charging duty upon imported dutiable goods is concerned, I think so.

23,449. And apart, of course, from the Surveyors of Taxes, on the other hand, which you tell us are almost entirely distinct from yourself?—Yes. I may say also that it has occurred to me that it would be a great advantage to the revenue, so far as smuggling is concerned, if there were an amalgamation of the two departments.

23,450. In what way do you think that would accrue?—I am referring now particularly to smuggled manufactured tobacco. There is no doubt that a good deal of petty smuggling takes place at the present time, and the revenue suffers a good deal by that. There is scarcely any concert between the two departments at the present time with regard to the suppression of that smuggling. Apart from the official documents passing between us, I hardly know that there is a Customs establishment in Liverpool, and I daresay the same remark would apply to the Collector of Customs. As a general rule, the smuggled tobacco is conveyed to the inland towns. Supposing that there were an amalgamated department, and the chief of that department was informed by some of his subordinates that there was probably some concealed tobacco at some inland town, he would have a greater opportunity of following up that clue, because we have our officers spread all over the country, whereas the Customs officers are confined to the ports.

23,451. (*Mr. Fowler.*) Do you mean by that that your detective power would be greater?—What I mean is that the detecting power of a consolidated department would be very much expanded. I am not in any way stating that the Customs are in any way inefficient.

23,452. No, I do not mean that, I think you misunderstand me. What I mean is this: Suppose in Liverpool the Customs have information that there was smuggled tobacco supposed to be in Birmingham, I understand your argument to be that you would have better opportunity of detecting that through the Excise agency in Birmingham than the Customs would have, they having no corresponding agency in Birmingham?—Yes; but I hardly meant as big a case as that.

Mr. F. Norton.

21 Feb. 1889.

23,453. I was going to say would it not be the police in both cases, whatever the case is?—I hardly think so.

23,454. Supposing that you had information, say from the Customs or Excise, that there was reason to believe that there were smuggled goods in any large towns, would you not at once apply to the police. You would have no authority and no power, would you?—Do you mean as an Excise official?

23,455. Yes?—Perhaps I am hardly making myself quite clear.

23,456. Kindly explain the matter?—My impression is, that if the Customs were here, they would not deny that there is a very great deal of petty smuggling taking place in manufactured tobacco, which is conveyed ashore by the men, it being almost an impossibility to discover it by rummaging on some of the very large American liners, the men taking it ashore in small quantities. They would, perhaps, convey some 40 or 50 lbs. of it, we will say, to Manchester, or it may be, to Blackburn or some other inland town. The Customs authorities at Liverpool might not have exact information where this was, but they would know, for instance, that a man from Manchester had been in communication with one of these stokers, and there was reason to believe that he had conveyed some tobacco away. If that came to our knowledge, we should at once, provided it were a consolidated department, communicate with our officers there, who would probably find out this man's address, and work up the case. The Customs, having no officials on the spot, could hardly do that. Most of these detections, unless they are very big ones, require a great deal of working up, and you can only do that by men on the spot.

23,457. (*Mr. Cleghorn.*) Would not it be the duty, think you, of the Custom House officer who has those suspicions you refer to, to communicate them to the other department of the State, and so protect the revenue. Do you think that the fact that there is a Custom House Department and an Inland Revenue Department, operates against the due collection of the revenue. Would not an officer of the State in the Customs consider it to be his duty, if he had any cause of suspicion of smuggling, to intimate that to the other department of the State, the Inland Revenue?—It might be, but we do not find cases of that kind occur in practice.

23,458. (*Mr. Lawson.*) The truth is that the working is not so harmonious as to allow of it?—There is no friction at Liverpool.

23,459. I do not say that there is friction; but there is not the unity of feeling which makes that possible; is that not so?—I do not suppose that they would call in our assistance in a case of that kind.

23,460. You say in practice it is not done, then why is it not done? What would you say is the reason?—They have really no official knowledge of officials there. They do not know to whom to apply.

23,461. Do you mean to say that the Inland Revenue official at Liverpool would not know to what official of the Customs to apply to, supposing that he wished to communicate information or *vice versâ*?—The probability is you see that in a particular case of that kind our officers would not have power at the present time to interfere. Supposing the Collector of Customs wrote to the collector at Manchester on a point of that kind, I do not think that we should have power to seize this tobacco. We might have a difficulty with regard to that, but under an amalgamated Board the Revenue official of course would have the powers of the Inland Revenue and the powers of the Customs.

23,462. (*Mr. Cleghorn.*) An order from head quarters would put that right, would not it?—Possibly it would.

23,463. (*Mr. Lawson.*) You said that in Liverpool there were 600 officers of the Custom House. I should like to know whether from what you hear from common knowledge you consider the time of those officers is fully taken up?—My opinion is that it is.

23,464. Do you consider that the time of your own officers is fully taken up?—I am quite sure it is.

23,465. From the highest to the lowest?—Yes, they are all fully employed now—fully.

23,466. Then do you contemplate that the main reduction, outside London, in the case of amalgamation, would be at the small ports, not the large?—Not perhaps in such a place as Liverpool. I stated just now that my impression was that there would be a saving of from 12,000*l.* to 14,000*l.*; of course that would extend also to a place like Liverpool, and to Dublin and Glasgow, and Belfast, because you would really get rid of one of your collectors there.

23,467. I understand that; but I am rather looking to your own experience, which extends to small ports; from your official work at Swansea, perhaps you would not call Swansea a small port, but still there you found that by amalgamation a good deal would be saved both in the higher and in the lower branches; is that not so?—I do not think I expressed an opinion with regard to the lower branches (because I have not a knowledge of them), except that there would have been a saving in the consolidation of the accounts. There must necessarily be.

23,468. In the case of warehousing, the lower officers who carry out the work appertaining to that duty would be able, you think, in some cases to do a double share; is that so. I am talking of Swansea?—I think the officers, so far as the Excise staff is concerned, are fully employed. I cannot say with regard to the Customs.

23,469. You know in the warehousing there is a great deal of duty common to both departments?—Yes.

23,470. Do you think an economy might be made in that particular branch in a port of the type of Swansea?—In Swansea we really do no warehousing.

23,471. Do you mean there was no warehouse of the Inland Revenue at Swansea?—Yes.

23,472. Therefore, you had no warehousing officers?—No.

23,473. In one of the returns handed in to us there are enumerated 16 towns in England and Wales, where there is a double establishment. I presume the gist of your evidence is, that in many places where there are not in the same town two establishments, still in two or more towns in a small area there are different establishments which comes to very much the same thing as if they were in one town?—Yes.

23,474. And in that case, as in the cases where there are two establishments in one town, a considerable economy might be effected, in your opinion, by amalgamation?—Yes.

23,475. (*Sir Charles Lewis.*) Does it so happen that you ever had any communications from persons dealing with your branch of the Revenue Department upon the subject of the amalgamation. Have you ever heard the subject discussed by traders or others?—I have heard some of them, but only in a very slight degree.

23,476. Nothing to enable you to form any opinion as to what the trade generally would think of it?—No. In Liverpool, nearly all the warehouses are in the hands of the Customs, so that questions of that kind would hardly be discussed with me.

23,477. Are you able to say what would be thought by the trades that have business with your department—are you in a position to say what they think generally?—No; but I imagine that there would be a difference of opinion.

23,478. (*Mr. Cleghorn.*) Then I understand there has been nothing like any popular feeling on the subject of amalgamation?—No; the public has been really quiescent there. When the matter has cropped up it has been received more with a laugh than anything else. Of course, under the present system, we are rather troubled at times by the important traders coming to us, and stating that they can get more facilities from the Customs than they can get from us, and I have no doubt they go to the Customs and say that they get more facilities from us than they get from them.

23,479. So that one will neutralise the other?—Yes. There can be no doubt that, if we had an amalgamated department, by having one system of inspection, greater uniformity would be ensured throughout the country, and, of course, there must necessarily be a saving of expense in that instance.

23,480. In the earlier part of your evidence you alluded to the traders in the case of exporting beer having to go first to one department and then to another, and then back again to get the drawback. Have you had any complaints from traders on that subject?—No, I have not had complaints.

23,481. You have never heard a complaint about traders having to go to the two Departments to get that business done?—No.

23,482. I do not wish to put a personal question, but do you think that the gentleman who discharges the office of collector at Liverpool for the Inland Revenue could combine with that the office of collector of Customs without any difficulty. I do not wish to put it to you individually, but could one collector do at Liverpool for both Departments?—My impression is that he could.

23,483. Without any difficulty?—Without any difficulty, of course after a time.

23,484. Do you think that that would work?—I certainly think it would work, but of course you must select the proper man for a position of that kind; because it would be the most delicate one outside London.

23,485. (*Chairman.*) Is there any other point that you would wish to refer to; if so, we should be glad to hear it?—Office rent is a matter upon which there would be a considerable saving. The vacation of offices is rather an important point in considering the question of amalgamation, as offices are rather expensive.

23,486. In Liverpool would there be a concentration of office work?—I imagine there would be a considerable concentration of office work there. Our offices belong to the Crown, and we occupy them jointly with the officials of the county court, probate court, and other offices. We are not at the Custom House. We are away from it.

23,487. (*Mr. Cleghorn.*) Then you do not pay any rent?—We pay no rent. The offices belong to the Crown.

23,488. Does the Custom House pay any rent?—I do not know how that is. I should think not. I should fancy they are in a Crown building, but I am not positive with regard to that.

23,489. Any saving under that head would be from letting or selling one of those offices that you suppose would be then not required?—Yes, I am speaking generally with regard to offices throughout the country.

The witness withdrew.

Mr. Thomas Walker Clarke called and examined.

23,490. (*Chairman.*) You are the Collector of Customs at Liverpool, I believe?—I am.

23,491. We should like to have a general idea, in the first place, of the staff that you have under you?—Five hundred and eighty-seven established officers, that is excluding copyists and glutmen.

23,492. (*Mr. Lawson.*) It includes boatmen, I suppose?—It includes boatmen, out-door officers, examining officers, surveyors, and clerks.

23,493. (*Chairman.*) You have between 30 and 40 clerks, I believe?—I think 39. That is the list of the staff as it stands.

	Officers.	Glut.
Landing duties - - -	181	155
Waterguard - - -	160	66
Warehousing - - -	104	2
Clerical warehouses - -	93	6
		Copyists.
Indoor - - - -	49	35
	587	35 + 229

23,494. (*Chairman.*) I see that 181 established officers, and 155 glut officers are employed on landing duties; 160 established officers and 66 glut officers on the waterguard service; 104 established officers and two glut officers on the warehousing; and that also in connexion with the warehousing duties you have 93 clerks and six glut men?—Yes, that is so, but the clerical duties in connexion with the warehousing department are performed by examining officers and out-door officers, not by clerks.

23,495. Then I see you have 49 established officers, and 35 copyists for the in-door establishment?—Yes, that is my in-door establishment—the in-door Head Office establishment of established officers, clerks, and copyists.

23,496. Altogether you have the large number of 851 men employed in Liverpool?—At present, but the numbers of glut men vary from time to time.

23,497. I should now like to ask you about the size of your district; to what extent do you go north and south of the Port of Liverpool proper?—To Fleetwood and Preston in one direction, and Runcorn and Chester in the other direction. The Port of Chester goes down to Mostyn. Those are the Member ports.

23,498. Then your district is not conterminous with that of the Inland Revenue?—No, the district is a wide one.

23,499. With reference to your own special duties, I suppose you are responsible for the *personnel* of the service, and that you control all the service?—Yes. All matters are referred to me.

23,500. And you deal with all matters?—All that I can deal with.

23,501. And you send on others to the Board in London?—Yes.

23,502. Are there many such matters that you send on to the Board in London?—Yes, a large number.

23,503. Are they difficult matters?—Yes.

23,504. What has been your official training. Where did you commence life in the Customs?—At Preston, in 1845. I have been 44 years in the service. I commenced at Preston, as clerk and landing-waiter; then I was at Wigtown as controller and searcher; afterwards at Guernsey and Jersey as controller and searcher; then at Boston, Lincolnshire, as collector and surveyor; then at Lynn as collector and surveyor; then at Folkestone as collector; at Dover as collector; at Southampton as collector; at Bristol as collector, and then at Liverpool.

23,505. So that you have been pretty well round the coast?—I have been round the coast. I have had a long service.

23,506. How long have you been at Liverpool?—Since October 1886.

23,507. As you are aware, the Commission is now considering the suggested amalgamation of the two departments?—Yes.

23,508. I will ask you generally what is your opinion with reference to the proposed amalgamation from the point of view of public economy and efficiency?—In my own view, having reference to the interests of the public, the services should be kept separate; that is my opinion.

23,509. Will you give us your reason?—I think that the Customs service is as large a service as can be worked efficiently and economically.

23,510. When you say that, do you refer to Liverpool only and specially, or do you refer to your general observation and experience?—Liverpool especially, it being a very large place, but my experience generally also.

23,511. I can quite understand that what applies to Liverpool might not apply with reference to the *personnel* in some of the small ports; for instance, it has been suggested to us that in certain small places—I do not know whether I might call them creeks—where you have a Customs officer who must necessarily be there to perform the duties of checking the import of goods, it is quite conceivable that he and those under him, if he has anybody under him, might do some of the Inland Revenue work to fill up the time?—I do not think he could. I think that so far as he was taken from his Customs duty he would become less efficient for that without being more efficient for revenue purposes.

23,512. Upon the question of time alone it has been suggested to us that it being obviously necessary that some Customs officer should be, as it were, water-guard to the coast, he really might do something else besides merely watching, and that, therefore, there would be

Mr. T. W. Clarke.

21 Feb. 1889.

an economy by his taking up the Inland Revenue business. Do you think there is anything in that?—I think not I think the reduction has been carried so far, that the staff is now barely sufficient to carry out the work. They are not Customs duties proper at these small places. They are rather Board of Trade work.

23,513. Apart from the Board of Trade work, which we of course know about, do you think it is wrong to say that there are Customs officers in places who really have not enough to do?—I would not like to say that there are, after the reduction of 1883. I was on the Committee that sat then, and we made very strong reductions wherever we could; in fact, we carried reduction to the extreme, at least that was my impression.

23,514 It has been suggested to us that there may be many ports where the collector occupying the position that you do, might devolve some of his duties upon others; that a good deal of his time is taken up or might be taken up with subordinate work, and that an advantage to the public and to the Government might be obtained by giving him the control of both the Customs and the Inland Revenue and that he could quite well do the work of both?—It depends what you mean by control. If "control" implies that he should have a knowledge of the two services to exercise an effective supervision of the officers and the duties, I do not think he could do that. If it is simply a matter of receiving revenue or anything analogous to such duties, it might be done, but I do not think you could give him that position if he must have a knowledge of the Inland Revenue duties.

23,515. I understand, and I think the Commission generally understand, that the position of collector at the Customs or the Inland Revenue at Liverpool is that of a man who is expected thoroughly to understand the whole of the duties of his subordinates from top to bottom?—Yes.

23,516. Otherwise he is not able to control and see that the administration is sufficient?—Yes; and I may say that as regards Liverpool, that would take the whole of the time of any man you would appoint; I have never worked so hard in my life as the two years I have been there.

23,517. I do not want you to speak personally of yourself, but take the ideal collector of Customs at Liverpool. Do you think that a man in that position would be able to take over the whole of the Inland Revenue work. It is not a question of salary, but it is a question of the efficient performance of duty by one man, very likely coupled with the delegation of certain work which is now done by yourself, and which you might give to a man of inferior position—do you think that one collector, one high Revenue officer in Liverpool, could with satisfaction to the public and his duty to the Revenue, conduct the amalgamated business of the two departments?—I do not think he could at Liverpool. The whole of my time is spent in directing; is taken up as a superintending officer. All questions come to me, and I do not know how you could delegate those questions to anybody but myself. I think you must have a head there to deal with questions arising out of the business of the port. In the year 1887 the value of the goods imported at Liverpool was 92,490,112*l.*, and the value of the exports was 102,483,344*l.*, the values of the imports and exports for the whole kingdom being respectively 362,227,564*l.* and 280,763,161*l.*, so that in the management of the seaborne trade of Liverpool we are concerned with a trade which represents a little more than one-fourth of the imports and a little less than two-fifths of the exports of the whole kingdom.

23,518. Is the whole of your official time generally taken up with work which requires special knowledge of the Customs duties?—The fullest knowledge the whole day.

23,519. Therefore from your experience you would not think it desirable that there should be cast upon you the Inland Revenue work besides?—No; I could not do both.

23,520. I take it generally, your experience in the places where you have served leads you to the same conclusion?—Yes.

23,521. Have you heard this question much discussed among the commercial gentlemen in Liverpool?—Not very much, but more or less I have heard it.

23,522. Have you had any complaints or any representations made to you upon it?—No; those that I have heard an opinion from, have said, "leave things as they are."

23,523. Traders are pretty well content generally?—Yes, those I have spoken to are.

23,524. You have the whole warehousing system at Liverpool entirely in the hands of the Customs, have you not?—With two exceptions; there are two rather outlying stations.

23,525. Practically the whole of the bonded warehouses of Liverpool are in the hands of the Customs?—Yes, 113 out of 115.

23,526. What work do you do at Liverpool for the Inland Revenue; do you collect much money for the Inland Revenue work proper?—About 500,000*l.* on British spirits; to be exact, the duty collected was in 1888, 477,799*l.*

22,527. Are you in the course of your official life brought into contact with Inland Revenue officers?—Not myself, but the other officers are. Of course I know the collector, but not necessarily in business matters. The office will know him for drawbacks and those things. We are more or less in contact with the Inland Revenue officials, but not very much.

23,528. Are you able to say what is the relative pay and position for corresponding duties between the two services at Liverpool?—There is this difference: there is a large number of officers in the Customs with smaller salaries than in the Inland Revenue.

23,529. Are you speaking principally of the water-guard?—Of out-door officers and boatmen?

23,530. (*Mr. Lawson.*) Out-door officers generally?—Yes.

23,531. (*Chairman.*) Leave those out of the question; under any scheme of amalgamation, the out-door officers of the Customs would require to be a separate branch, at all events, in the Revenue Department?—You must leave those out and leave out the boatmen also.

23,532. The idea of amalgamation is that to some extent beginning from the top, the controlling officers might be amalgamated?—I think as regards merely the receipt of revenue, there is no difficulty about that; it is the management of the business of the port where the difficulty comes in; the port duties generally, and not the receipt of revenue, which is a very simple matter.

23,533. (*Mr. Cleghorn.*) You mean not the mere receipt of cash?—The receipt of cash is very simple; there is no difficulty in that; the difficulty comes in when you manage the merchants' business, the control of the merchants' business, the shipping business of Liverpool.

23,534. (*Chairman.*) Do you think that there is any prejudice to the revenue caused by the Inland Revenue and the Customs having two different boards?—No, I have no reason to think that.

23,535. Do you think there is any foundation for the suggestion that has been made that possibly there is some want of an efficient check upon the smuggling of tobacco owing to the fact that the tobacco which goes inland is not followed sufficiently by the Customs?—In some cases the Inland Revenue officers have the power of searching publicans' premises in the ordinary course of their duty. We should not have that power, and we should not do it unless we had reason to suspect there was tobacco concealed there. In one or two instances rather a noted Inland Revenue officer has been sent down to Liverpool, and has searched publicans' premises, and some small seizures of tobacco were made; that is all I know of.

23,536. From your experience as the principal collector, I suppose I may call you the principal collector in the provinces, out of London?—Yes.

23,537. The principal collector is, in fact, in some respects more important than the Collector of the Port of London. From your experience do you think that there would be any advantage, as has been alleged, to the revenue from an amalgamation of the departments?—I do not see it at all.

23,538. From the detective point of view, if I may say so?—No. I depend upon the water-guard service for that.

23,539. (*Mr. Lawson.*) Where does your water-guard service begin?—On the arrival of the vessel.

23,540. I mean in respect of officers; whom do you include in the water-guard service in the list that you have given in?—You would include surveyors, examining officers, assistant examining officers, and boatmen, that is the most effective check we have. The duty is very well done, and that is a very effective check. We are quite breaking the neck of all the small cases. I think the day for large smuggling is past, and that it is not done; but there is a great amount of petty smuggling still, which we are checking all we can, and we are practically breaking the neck of it.

25,541. (*Chairman.*) But you would not agree with any statement which said that owing to the want of communication between the two departments it is possible that there is still some small smuggling going on which ought to be stopped?—There is no want of communication, so far as I know. I should act most cordially with them in every respect, and in those instances where the Inland Revenue officer came from London I sent one of my best officers with him to co-operate with him, and he went over to Blackburn with him.

23,542. Is there in Liverpool generally a thorough accord between the Inland Revenue Office and your own with regard to your work?—So far as I know, entirely. I should be very sorry if it were otherwise.

23,543. Have you ever received any complaints from traders about that?—Never a word.

23,544. Upon the special point of the export of, we will say, British made spirits, we have been told by one or two witnesses that certain difficulties were caused to the trader by having to bring certain papers before two sets of officers, and that it would be a convenience to the trader to be able to deal with one set of officers as representing the revenue of the country, both for export and for Excise purposes. Do you see your way to any improvement in the present state of things, short of amalgamation, or do you think that amalgamation would help in that way?—The British spirits exported in Liverpool usually go from Customs warehouses, and there is only one set of officers there. If British spirits are exported from an Excise warehouse, at Liverpool or elsewhere, a despatch and permit with particulars of the goods, and the ship, and place of exportation, are prepared by the Inland Revenue officer at the warehouse of deposit, and sent to the Customs officers, who certify thereon the shipment, and the papers are returned to the Inland Revenue officer.

23,545. The point is this, that a merchant desiring to export British spirits will have to deal, in the first instance, with the Inland Revenue officers, and then with the Customs officers?—Not for the export from Customs warehouses, as in that case he would take them from the Customs warehouses.

23,546. Is that altogether remedied now?—Yes, if they are in the Customs warehouse they are dealt with as brandy or anything else.

23,547. They are in the Customs warehouses?—Yes, and dealt with by Customs officers.

23,548. Still, would he not present a paper or documents, first to one set of officers and then to another?—None whatever. I am speaking of goods warehoused for export; to export on drawback there would be the Excise notice of entry for drawback and the Customs certificate of shipment.

23,549. How would that be. Is it the fact that there is a double set of officers which causes unnecessary delay?—They would be exported from the Customs warehouse if warehoused for export.

23,550. But supposing they were exports from an Inland warehouse in the country, and not bonded at Liverpool?—They would have to come to the Liverpool Customs people for shipment.

23,551. But they would come straight from the Inland Revenue warehouse in the country to the Customs authorities at Liverpool, would not they?—Yes, for shipment.

23,552. Do you see anyway of simplifying that?—No, you must have shipping officers.

23,553. I am asking you for information. I do not want to lead you in any way. Supposing there was this contemplated amalgamation of the two departments, do you see how matters could be simplified?—You cannot lessen the work. You must have a shipping officer. Call him what you like, there must be an officer to see to the shipping of the goods. When beer, for instance, is exported on drawback they have to deal with both parties. We ship the goods, and the Inland Revenue pay the drawback, that is all. With beer exported on drawback they would make an entry with the Inland Revenue officer and bring it to us, and we should send it to the dock, and the shipment is certified, then the Inland Revenue officers get the paper again, and make out their debenture and pay the drawback. We are only the shipping officers, and there must be a shipping officer.

23,554. Are there instances in which you see any cases of duplication of work generally between your officers and the Inland Revenue officers?—No, none whatever.

23,555. In no case. With regard to warehousing, for instance?—We deal with our own warehouses.

23,556. On the assumption that goods have to be dealt with on behalf of the trader in a certain way, and have to be watched for Government purposes, is there any respect in which in Liverpool those goods have to be dealt with by two different sets of officers by any transaction which may be called a duplicate one?—No they are all dealt with in Customs warehouses as Customs goods.

23,557. In reference to goods which are the subject either of the Inland Revenue or of the Customs in Liverpool, do you think that there is work of a duplicate character which might be done away with?—I do not know of any.

23,558. I understand you to be unfavourable to the suggested amalgamation?—Yes.

23,559. But supposing the decision should be come to, to amalgamate the departments to some extent, would you see your way to any reduction of your staff, or of the general staff of the two departments; can you conceive the way of doing it in Liverpool?—If the business remains as at present?

23,560. I am assuming that of course?—No reduction is practicable. Of course if the Inland Revenue take over all the warehouses——

23,561. I do not want you to consider at the present moment whether it is Inland Revenue or Customs?—I mean to say if the work is left as at present, the present staff would be required; if you transfer the work or change the work you transfer the requirements of the staff, that is all. I think the Inland Revenue service is more expensively carried on than ours as far as the warehousing goes, and that is the only point on which we seem to be brought in contact.

23,562. (*Mr. Lawson.*) May I ask why and how?—The Inland Revenue officers are a higher paid set of officers, and I think a greater number of officers on their system would be required to do the same work that we do with fewer officers.

23,563. (*Chairman.*) Do you say that from familiarity with the warehouses of the Inland Revenue?—This is one reason: When I was in Bristol we took over from the Inland Revenue three warehouses; one of them ceased immediately afterwards. Of the two remaining warehouses, at one there was always one Inland Revenue officer, at the other there were always two, and often three; that would be three officers, and occasionally four. We took those duties and those warehouses without appointing any additional officer. We grouped them with other warehouses about, and we have carried on that work without any additional officer.

23,564. When was that?—That was in 1882-83.

23,565. That was part of the general system, which was carried on sometimes in the other direction, of the amalgamation of warehouses. I mean to say sometimes it was an amalgamation of the Customs with the Inland Revenue, or rather the Inland Revenue might quote it in their favour, might they not?—I mean only that they required three officers to do certain work which we did without any additional officers.

23,566. (*Mr. Lawson.*) Might not that be used as an argument in favour of the supposition that the time of your officers is not fully taken up, and that, therefore, they can take additional work without adding to their number?—We grouped those warehouses with others, and managed to work them without special officers.

23,567. I should like a plain answer to that. If the time of your officers was fully taken up, how was it that they were able to do this additional duty and yet any increase was obviated?—We grouped them. Very

Mr. T. W. Clarke.

21 Feb. 1889.

possibly we might have additional glutmen; but we got the work done without additional examining officers.

23,568. Then their time cannot have been fully taken up before?—It was not fully taken up in that sense.

23,569. (*Chairman.*) From the point of view of warehouses, and confining your attention to warehouses, is that not an argument in favour of consolidation?—I do not think it is.

23,570. You successfully consolidated certain warehouses, at all events?—Yes, and did it at less expense than before; and, so far as I know of other warehouses, they work them more expensively.

23,571. (*Mr. Fowler.*) Supposing all the warehouses in Liverpool were put under the control of the Customs?—They are all, excepting one, and a small one.

23,572. Suppose that one was put under the control of the Customs?—That is out of the way, and could not be done without expense. It was given to the Inland Revenue on that account. It is out of our district. It was rather far away. We could not group it with any other warehouse; and if we had had that warehouse we should have employed special officers.

23,573. (*Mr. Cleghorn.*) So that there was nothing gained by that?—There was nothing gained by that. It was gone into fairly, and it was thought, in the interests of the public, that it was better that they should take it.

23,574. (*Mr. Lawson.*) But your general experience is that in the amalgamation of the warehousing there is a saving?—I will not say that.

23,575. But in the example you have quoted?—In the particular instance, having a great number of warehouses all round; the three—the two, it became—we were able to work those two in the groups.

23,576. I want to understand this: In a small port where there were double warehouses they would be close together in all probability; is not that so?—By "double warehouses" do you mean Excise and Customs?

23,577. Inland Revenue and Customs?—I think there are no ports of that class now.

23,578. I do not say small ports; but take Swansea, there are two there; your answer is that you do not think there are any at small ports?—No, I do not think so. I think that is fairly worked out. We have carried that out as far as we could.

23,579. (*Mr. Fowler.*) Do you consider that the time of the staff at Liverpool is fully occupied?—As fully as can be.

23,580. What hours a day do they work?—From 8 to 4 in summer, and 9 to 4 in winter.

23,581. Is that both the indoor and outdoor staff?—Those are the outdoor hours. The indoor hours are seven hours, 9 to 4.

23,582. And the staff is not in excess you think of the requirements?—No; I think not. Every month we are doing all we can; where we can possibly make a reduction we do so, continually.

23,583. You say that the collection of money is not that portion of your duty which involves the greatest anxiety and requires the greatest attention?—No; there is the responsibility, but it is a simple process.

23,584. The great work that the Customs has to do in Liverpool is the water-guard, is it not?—That is the water-guard duties; but then there are the landing duties. The imports of Liverpool are to a very large extent free goods, and it is the examination of those goods that forms a large part of the landing duties.

23,585. That is the great bulk of the goods imported into Liverpool are duty free, but you have to examine them in order to see that they do not contain duty chargeable goods?—Yes; and that is the most difficult part of the work.

23,586. Have you any other duties to discharge at Liverpool with reference to precautions, say sanitary, precautions, under the Privy Council?—On the first arrival there is a quarantine examination, and an examination to see whether there is any infectious disease, that is the first thing.

23,587. That applies to cattle?—I am speaking of ships.

23,588. For passengers?—For passengers and crew. There are quarantine and health restrictions.

23,589. And that has to be done to every ship?—To every ship that comes.

23,590. Have you a special staff for that?—That is done by the water-guard staff and the quarantine staff.

23,591. And they are fully occupied?—They are fully occupied, and have very long hours, indeed.

23,592. How many warehouses have you in Liverpool?—One hundred and thirteen.

23,593. All under the control of the Custom House?—All under the control of the Custom House.

23,594. And one not under the control of the Customs?—One, and a small one under the Inland Revenue.

23,595. (*Mr. Lawson.*) You gave the figures 113 out of 115 as being under your control?—Yes.

23,596. (*Mr. Fowler.*) Have the merchants of Liverpool or the shipowners made any complaint as to the mode in which the Customs business has been done?—Never to myself. I do not know of any complaint whatever.

23,597. You think there is a general public satisfaction with the mode in which you discharge your duties?—I believe that quite.

23,598. And there has been no complaint made to you to the effect that they can get their business better done by the Excise than by you?—I have not heard that, but I have heard the contrary.

23,599. I suppose they sometimes go to one and say one thing, and sometimes go to the other and say the other thing?—That is quite possible.

23,600. How many years have you been in the service?—Forty-four.

23,601. Looking over your varied experience for the 44 years, you do not think that there would be any financial saving if the two departments were consolidated?—I think the reverse. I think it would be more costly.

23,602. Why?—I think the service would be too large to be worked economically; that you would not have the same control as you have at present.

23,603. Let us take Liverpool. There is a collector of Excise there and a collector of Customs?—Yes.

23,604. You have 587 permanent officers under you?—Yes.

23,605. There are about 90 in the Inland Revenue at Liverpool. If you could manage 500, you could manage 90 more, could not you?—It depends upon what I have to do with them. If I had to supervise the work done by the 90 people, and required a knowledge of all their duties, as I ought to have, I could not do that.

23,606. (*Mr. Lawson.*) You could not?—No, I could not. It would require me to be an Excise officer, to have a knowledge of all their work, or to check their work.

23,607. (*Mr. Fowler.*) You say there is no similarity between the Excise and the Customs?—Except as far as warehousing is concerned.

23,608. As far as warehousing, and the collection of money are concerned?—Yes.

23,609. Let us take, for instance, the duties that an exciseman has to discharge at the breweries?—We have nothing like those.

23,610. And you have no staff competent to do that?—Not competent at present.

23,611. I mean at present?—No.

23,612. Do you think that the Excise staff, just putting warehouses out of question, is competent to discharge the duties of the Customs?—No, certainly not, as at present.

23,613. I am taking both as at present. Then you think that if the two departments were amalgamated to-morrow the officers would have still to be kept distinct?—You could bring them together, if you liked,

by transferring them,—by requiring Customs officers to learn Inland Revenue duties.

23,614. I am not saying what you could do in the future. I am taking the men as they stand?—They would be no use to-day.

23,615. The Custom House officers could not do Excise duties, and the Excise officers could not do Customs duties?—No; putting warehousing aside.

23,616. In all my examination I am leaving out the warehousing altogether; but for ordinary Customs work you do not think the examiner could do it without training; and you also say as a practical Custom House officer that the excisemen could not do your work without special training?—No.

23,617. Each department wants special training?—Certainly. I speak for the Customs,—certainly, a good full training.

23,618. Have you had anything to do with the Coastguard?—At those ports that I have been connected with, yes. We do not get much out of them. They are not really Revenue officers now; they are rather trainers for the Navy.

23,619. Do not they protect the coast in the case of smuggling?—Not very much.

23,620. What does protect. What protects a ship running into some little creek along the coast of Lancashire?—The difficulty of getting quit of the goods. I do not think the difficulty of landing would stop it.

23,621. You do not think there is much difficulty in landing?—I do not think that would stop it if you could get quit of the goods.

23,622. Now what is the difficulty of getting quit of the goods?—Persons do not like to deal with them. The day is past for that. We have had a great deal to do with that on the east coast. It is past these 20 years. You do not have wholesale smuggling now. By wholesale smuggling I mean cases in which a ship's cargo consists of goods for smuggling.

23,623. Supposing a man had to run a cargo—we will say of tobacco—on to the east coast, what difficulty would he have in getting it away by train if he carted it up to a station?—I do not think he could do it. It has to go through so many hands. So many parties are privy to it.

23,624. Supposing it was packed, we will say as china, and sent up to some dealer in china?—You may do it partially that way. We had a case of that kind some time ago packed in bales of cotton. They came to Liverpool. It was detected in landing. We watched the goods to London, and we seized them in London.

23,625. Tobacco in cotton?—In bales of cotton; and we seized the whole of it. It is difficult to deal with, but smuggling is done in small quantities practically.

23,626. Putting smuggling on one side, I mean the actual detection of smuggling. Your duties are chiefly the water-guard duties?—That is for smuggling.

23,627. I know; but that also applies to other considerations beside revenue, does not it?—Yes. It applies to quarantine, health, and cattle, and so forth.

23,628. And you have sometimes to perform duties, have not you, for the Government generally?—Yes.

23,629. You are a department upon which certain duties are devolved?—They send anything to us.

23,630. (*Mr. Lawson.*) I want to follow up the question that has been put to you with regard to the consolidation of staff. When you gave your opinion that none could be effected were you not thinking of the out-door service? Do not you think it possible that in the large clerical establishment you have at Liverpool there might be some consolidation?—I think they are all very fully employed indeed. It is a very small staff that we have.

23,631. You have got 36 clerks of the first and second class, you have 36 copyists, boys and others, besides the principal officers?—Yes; but that is not for collecting the revenue alone.

23,632. What are they employed in, Board of Trade work?—A large number would be for free goods. There is the bill of entry. Approximately, the indoor staff is employed as follows:—

——	Clerks.	Copyists.
Collecting revenue	3	2
Pay office seat	2	1
Ships' registry	2	—
Ships' reports seat	1	1
Collection of lights	3	—
Bond office	2	—
Exports seat	3	3
Manifests, specification, jerquing	10	11
Free goods seat	1	1
Queen's warehouse and seizures	2	—
Inspector's clerk	1	—
Wreck office clerk	1	—
Office surveyor	—	3
Check office	1	—
Bill of entry	4	10
Correspondence room	1	1
Vacancies	—	2
	37	35

23,633. I am only asking you whether you do not think that, in the case of amalgamation there might be some saving in the clerical staff?—No, I do not think there can be.

23,634. You say that there has been a very great decrease of smuggling in the last 20 years?—Yes; the type has changed from the wholesale smuggling; that has passed.

23,635. Has that enabled you to make any reduction in your staff of out-door officers of the water-guard?—No; you must keep the staff up.

23,636. Though the smuggling has become obsolete?—But you would soon have it back again. You would be surprised if you knew the great amount of petty smuggling in goods imported. It is only by the constant check of examination and elaborate plans that we can keep it down at all.

23,637. Do you know of any difference in tests between yourself and the Inland Revenue at Liverpool for testing spirit or gauging spirit, or whatever the term is?—We all test on the same principle.

23,638. In some cases we have heard that the test is not the same?—The test is the same.

23,639. Exactly the same method?—Yes, as far as testing goes; but the Inland Revenue begin with the empty cask, and therefore the gauging is different from our own. We begin with the full cask; but when we can begin with an empty cask, as in drawing off the contents of a vat, our practice is precisely the same as that followed by the Inland Revenue Offices.

23,640. But the test is not more efficacious in one case than in the other?—No, I think not.

23,641. It is not more stringent?—No, I think not.

23,642. Do not you think that Liverpool is a special and exceptional case?—As to what?

23,643. From the fact that there is such an immensely larger Customs staff than there is of the Inland Revenue?—Then look at the different duties that we have to perform.

23,644. You could not take Liverpool and say that what holds good there with respect to amalgamation would hold good with regard to other ports?—I am speaking of Liverpool alone.

23,645. You do not necessarily say that Liverpool stands on the same footing as other ports?—At Bristol (I was there for some time) I do not think you could have made any reduction.

23,646. (*Mr. Cleghorn.*) I understand that it is only your own opinion that there would be no advantage gained from amalgamating the two departments; but, as far as you know, the principal traders in Liverpool have not expressed any wish to that effect?—No. I have had it to the contrary. In one case where the warehouse was taken over by the Inland Revenue, I heard that the owner said he wished to Heaven that he might have it back to Customs again. They say they have more restrictions—that the formalities in getting access to the goods are greater. There is notice to be given for operations, and so forth; there is not the

Mr. T. W. Clarke.

21 Feb. 1889.

same freedom for doing the work that we have in our own service.

23,647. May I ask the amount of duties you collected at Liverpool in the year 1888?—3,014,000*l.* odd, according to this return.

Revenue.	1886.	1887.	1888.
	£	£	£
On imports not warehoused -	69,527	81,244	81,519
On warehoused goods - -	3,055,567	3,037,290	2,921,877
Other moneys - - -	11,768	11,199	10,925
Total Customs' Receipt -	3,136,862	3,129,733	3,014,321

23,648. There is rather a decline in three years, according to this return?—Yes, there has been. That I cannot account for.

23,649. (*Chairman.*) Is there any other point with reference to this amalgamation upon which you have any observation to make?—No, I have tried all I can to deal with it in the interests of the public. My own interest in the service is pretty well at an end now; and I do believe honestly that it is better worked by two boards than it would be by one; at all events, that our Customs service is better worked at present than it could be under an amalgamation. That is my opinion only; but that is my best opinion. I look at it purely with reference to the interests of the public.

23,650. Liverpool is, I suppose, the principal collectors department out of London?—Yes, it is the principal in the United Kingdom.

23,651. I understand you to be clearly of opinion that if it was decided to have amalgamation, you would not see your way to economising in staff or making the administration more efficient?—No, I could not. I should be afraid of the contrary. I am sure we are doing everything we can at present; and I think the service would be less efficiently managed with amalgamation. I have tried to look at it on all sides. I have thought of it a good deal; and I am speaking as far as I can, not as a Customs officer, but, as a revenue officer generally.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

SIXTY-NINTH DAY.

7, Whitehall Place, S.W., Friday, February 22nd, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

MR. J. CLEGHORN.
MR. H. L. W. LAWSON, M.P.
MR. J. W. MACLURE, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. DONALD MARTIN MATHESON called and examined.

Mr. D. M. Matheson.

22 Feb. 1889

23,652. You are the collector of Inland Revenue at Glasgow, I believe?—Yes.

23,653. As your staff does not appear to be shown separately in the Estimate, perhaps you will give us shortly what it consists of?—It consists of myself, as collector, nine supervisors, 75 first-class officers, one second-class officer, and 68 assistants. There is also an establishment of 20 clerks in the collector's office, and at certain seasons of the year I employ temporary clerks on tax work; they vary in number, but sometimes as many as 20 such temporary clerks are employed at one time.

23,654. I suppose your collection is pretty well the largest collection of Inland Revenue, except Liverpool?—It is the largest.

23,655. Is it the largest outside London?—Yes, it is the largest.

23,656. Is it larger than in Liverpool?—Yes. I ought to say it is not larger than the whole of London, for we have in London five collectors of my rank; but individually it is larger than any of the five collections.

23,657. (*Mr. Cleghorn.*) Is it larger than Edinburgh?—Yes; it is much larger. The revenue collected by me amounts to close on 2,000,000*l.* yearly. The population, I may tell you, from which I receive taxes and other revenue amounts to 1,402,830; more than a third of the population of Scotland.

23,658. (*Chairman.*) What is the geographical area of your district?—It includes, for excise, the city of Glasgow and the surrounding parishes; it is called "Glasgow and the burghs surrounding it." Then, for taxes, I have got the whole of the county of Lanark, the whole of the county of Dumbarton, and part of the county of Renfrew, and part of the county of Stirling, which would make up the 1,402,830 inhabitants.

23,659. As regards the taxes, I assume that you are nothing but a receiver of money. You have no control over the Office of Taxes?—It is this way. The Taxes Revenue is peculiar. It originates outside the sphere of the ordinary Revenue officials through Assessors appointed by local commissioners. The Board have, in consequence, appointed special officers called surveyors of taxes, who represent them before the local commissioners as guardians, so to speak, of the Revenue, in the conduct of appeals, &c. On the notices of assessment by the clerk to the commissioners, my name is returned as collector, and it frequently happens that parties call on me when there may be any grievance of being over-assessed. They think that I am assessor, and I generally refer them to the surveyors, who are in my own office. I may mention that there are six surveyors of taxes in my office.

23,660. When we speak of the establishment which you control, you would not include the surveyors of taxes among those you control, would you?—In that degree. I receive all the taxes on notices issued by the clerk to the local commissioners. The surveyors themselves do not issue any notices for the payment of taxes. They are issued by the clerk to the local commissioners, who are quite outside the Board of Inland Revenue. Then, when I get the duplicates of assessments from the local commissioners, I issue all the notices myself direct; but there is a preliminary notice issued by the clerk to the commissioners giving an intimation if they are over-assessed that they have a right to appeal within a certain period.

23,661. But with the exception of being the head of the executive to give notices and so forth to these people and to people who are taxed, you do not yourself deal with questions which arise upon the assessment of taxes?—No; the surveyors bring such under the cognizance of the local commissioners. The local commissioners only deal with over-assessments. The surveyor,

as representing the Board of Inland Revenue, has power to bring cases before the commissioners when there are any points of difference or dissatisfaction as to the assessment, and if dissatisfied there is a means of appeal to the Court of Exchequer in Edinburgh.

23,662. (*Mr. Cleghorn.*) Is not that the same process as exists in England?—Very much the same. It is a tax outside the commissioners' rule. Some of the surveyors are appointed assessors in England as well as in Scotland, but virtually the tax is a local imperial tax.

23,663. (*Chairman.*) Then when you gave us the staff as you did earlier in the day, as consisting of the collector, the supervisors, and the other officers, you did not include the surveyors of taxes in that?—Not in these, but some of the 20 clerks that I have got in my office receive these taxes, and they also have to deal with irrecoverable schedules and take account of them. When I get the duplicates of assessment from the local commissioners I am bound to recover that, either by schedules of discharge or relief or cash received, and when the surveyors return a case as irrecoverable, I employ some one in my office to make a local inquiry whether it is so or not. I have to swear as to all these schedules that there has been due inquiry, and that the circumstances as to their being irrecoverable are correct.

23,664. But you deal with matters of excise in a different way from that in which you are called upon to deal with matters of taxation?—As regards the receipt it is much the same, only in the case of the taxes, when I get the duplicate of the assessments from the clerk to the commissioners, I issue the notices myself for payment. As regards the Excise the officers outside issue the notices for payment.

23,665. Then when questions arise and complaints or inquiries calling for the decision of the officers of Inland Revenue, in matters of excise, you deal with them, so far as you can deal with them, locally; failing your power to deal with them on the spot, do you communicate with the Board in London?—We have the class of supervisors. They have certain districts under them. They supervise the Revenue in these districts allotted to them. In any case coming under their notice, they report direct to the Board themselves, or if the Board do not feel satisfied with their report, they refer to the collector for further inquiry. I inquire into all these cases.

23,666. You mean that all the cases do not come from the supervisors to you, and then pass through you to the Board necessarily?—Not necessarily.

23,667. But the surveyors, in many instances, would communicate direct with the Board?—In any case direct with the Board; but if the Board have any doubt as to the merits of the case, they refer to the collector for further inquiry.

23,668. All your officers, I presume, are trained men?—Yes.

23,669. Who have mostly been employed in the lower branches of the Inland Revenue, and risen upwards?—Yes, all trained, except the temporary clerks I have referred to, and these men are trained for copying notices and making out notices. We keep them on as much as possible from year's end to year's end, when their services are required.

23,670. Now with regard to the question of the suggested amalgamation of the two departments of the Customs and Inland Revenue, we shall be very glad to have what opinion you have formed upon the subject from your experience of Glasgow and elsewhere. May I ask you first what has been your experience outside Glasgow? — My experience extends over 40 years in the Excise.

23,671. Could you just give it us shortly? Has it been entirely in Scotland?—From the lowest rank in the service to the position I hold now as first-class collector. I have been between 16 and 17 years collector, first at Reading in Berkshire. I was next a collector at Perth in Scotland. I was next collector at Campbelltown, Argyllshire, and then my present collection.

23,672. Then having had that experience of Inland Revenue work, and I daresay having had your attention called to this question of amalgamation, we shall be glad to hear what you think about the practical effect it would have in Glasgow, whether it would be practicable or beneficial in any way?—Since the introduction of the Code in 1885, making the charging of duty from warehouses virtually inter-departmental, we have had a great deal of difficulty in administering the Code between the two Boards. Differences occur between the Boards themselves as to the meaning of certain paragraphs, and then there is a difference in practice in the two departments. Some warehouse keepers complain that the Customs give them better advantage than we do, and I believe complaints have been made to the Customs that we gave better advantage than the Customs did, and the two departments were in a measure pitted against one another to see which would give most to the trader. The trade sometimes would say, "Well, if you are so strict with me I must go and "warehouse with the Customs; I am told they are not "so strict as you are." And I believe that similar complaints, so far as I can learn, are made to the Customs.

23,673. What is the proportion of bonded warehouses in Glasgow which are under the management respectively of the Customs and Inland Revenue, how many have you?—There are 25 general warehouses under the Inland Revenue in Glasgow, and 17 bottling warehouses.

23,674. What are they?—That is warehouses that are sometimes inside the other warehouses, specially approved for bottling spirits.

23,675. They are all under the Excise, are they?—What I am giving you now are all under the Excise. There are 36 distillers' warehouses. These are the bonded warehouses. We have nine brewers' and seven distillers'.

23,676. (*Mr. Cleghorn.*) In addition?—In addition. Brewers and distillers are a different trade from the warehouses, and some of the distillers' staff is very much larger than at any of the warehouses.

23,677. (*Chairman.*) What we want to know about Glasgow is the general warehouses?—There are 25 general warehouses and 17 bottling warehouses. The bottling warehouses are attached to the general warehouses.

23,678. What other warehouses are under the Customs?—Under the Customs establishment there are three dry goods warehouses, eight dry and wet goods warehouses, and fourteen wet goods only warehouses. These are all general warehouses I give you for the Customs. The total is 25 general warehouses.

23,679. How do your own general warehouses distribute up into dry goods and wet goods. Do you take any dry goods at all in your general warehouses?—The whole of the dry goods for the present are confined to the Customs. That is one of the grievances with the trade in Glasgow. At the time of the amalgamation of the Code, the Customs retained the dry goods warehouses, and several applications have been made by Excise warehouse keepers to have dry goods warehouses approved. It has been an understanding between the Boards that so long as there is any warehousing accommodation in one department, no new warehousing accommodation of a similar kind will be approved in the other department. Repeated applications have been made to the Board of Inland Revenue to approve dry goods warehouses; the Customs always say we have sufficient space for all the dry goods warehousing in Glasgow, and some of our Excise warehouse keepers have complained grievously that they have to go to the Customs warehouse keepers to store their dry goods which they require sometimes for ships' stores, such as tea and coffee and fruit; whereas if it was under one department they could store those in their own warehouses without any addition to the staff.

23,680. Is there a regulation on the other side against the storing of wet goods in the Customs warehouses?—Yes. Those warehouses are all approved by the Customs as dry goods warehouses and wet goods warehouses. That is where spirits may be stored as well as tea, but no tea or dry goods can be stored in a wet goods warehouse without special approval by the Board.

23,681. You say it would be a convenience to the public, and complaints have been made in that direction?—Very strong complaints in that direction.

23,682. They say that all dutiable goods should be warehoused indiscriminately in any warehouse under either Board?—Yes, so long as the establishment was not increased.

23,683. Do the difficulties of interpreting the Code now continue to the same extent, or have they been got over pretty well since the Code was drawn up?—Some

Mr. D. M. Matheson.

22 Feb. 1889.

points have been done away with, but they still continue as regards trade outside. The trade have lost confidence in the Boards. They go to one Board and give them one version, and they go to the other Board and give them another version; and then the result has been that recently the Warehousekeepers' Association have appointed a solicitor to represent them as secretary; in place of going to the Boards to redress the grievance, they go direct to the Treasury.

23,684. Does not that answer their purpose?—The Treasury communicate with the Boards.

23,685. The Treasury go to the Boards?—Yes.

23,686. The Treasury then make up their minds and inform the Warehousekeepers' Association?—The Treasury ascertain from the Boards the actual state of the case, and they exercise their own discretion as to what communication to make to the traders. But it shows merely the difficulty of the two Boards. It shows an unnatural way of doing business. The Treasury themselves have no knowledge whatever of the matters that come under their notice. It is merely known to the Boards themselves, who have a special knowledge in the matter.

23,687. Then, your view is that in this matter of warehousing, and, especially in the interpretation of the code, the traders would be better served if they could get their interpretation of this difficult code from one Board instead of two?—Decidedly. It is an impossibility to have two departments quite distinct, and different officers, administering the same code; a perfect impossibility. I may tell you that, perhaps I should say a fourth of my work in Glasgow arises from the difficulty of working the Code. From day to day traders call at my office to ask for privileges, and I am told, "This is given at the Customs—I want that which is given at the Customs;" and I have to report cases to the Board; whereas, if it was one department these complaints would not come to me at all.

23,688. Is that an increasing difficulty, do you think?—Well, we are getting acquainted with it. It is always a burden; it is always somewhat of a weight. I get a little more accustomed to it; but it has come to this in the trade. that they have fallen away from the Boards and gone to the Treasury. They have lost confidence in the Boards apparently. It was an unusual thing for traders under the Inland Revenue to go to the Treasury except in very grave cases where they wanted the interference of the Treasury to supersede the law for the time being. The feeling of the traders themselves, I may tell you, is very peculiar in the matter. At the meeting of the Glasgow Warehousekeepers' Association in October last, it was moved to petition the Treasury to amalgamate the two Boards, but an amendment was proposed that it was for the advantage of the trade to have two Boards, and by keeping them at loggerheads as they called it, the trade would get terms which would be impossible under one Board, and this amendment became the ruling of the meeting.

23,689. It was carried?—It was carried.

23,690. The meeting was called for amalgamation, and decided the other way?—Yes.

23,691. Is the popular opinion of Glasgow then against amalgamation?—No. It is merely the opinion of a class of the association, a great many of the warehousekeepers themselves go in for amalgamation, but this, I believe, came chiefly from the Customs warehousekeepers.

23,692. You tell us that the Warehousekeepers' Association in Glasgow have to go to the Treasury, because they cannot get satisfactory decisions, from the fact, that they have to go to two Boards. It appears from the resolution and amendment you have just referred to, that they called a meeting for the purpose of advocating amalgamation, and, therefore, it was probably called by people who were friendly to it, and the meeting so called came to the opposite conclusion; what are we to infer from that?—If they had one Board, there would be no occasion to go to the Treasury at all. The section who made the motion for amalgamation had apparently been of opinion that it was desirable, at least, we may take it, on public grounds; but they yielded to the general opinion of the majority, who were actuated by personal motives, on account of the benefit to be derived from the diversity of practice of the two Boards.

23,693. I am not arguing the case at all. It seems from the evidence that you have put before us, that the Glasgow Warehousekeepers' Association so far have had a public meeting, and have decided against amalgamation?—Certainly, but I take it that, when you come to look into it, that would be the strongest possible reason for it, as regards the public revenue.

23,694. Now we begin to argue it?—Yes, but at the same time I may mention to you, that at the annual meeting of the Scottish Malt Distillers' Association, in October last, it was unanimously resolved to petition the Treasury to amalgamate the two Boards, owing to the delay and inconvenience of transacting business with the Customs Department, especially as to delay of receiving intimation of goods having been deposited when loss arises in transit.

23,695. Their views are in favour of amalgamation, are they?—This was intimated to me by the secretary, who informed me that they had applied for amalgamation. I can give you a few instances of the difficulties of working with two departments, which have actually occurred in my experience.

23,696. That would be very useful. Just pick out a typical instance; we do not want many, but give us a good instance?—In August last, the Excise and Inland Revenue refused to allow new raw grain spirit mixed with a portion of Highland spirit to be exported as "Old Highland Whisky;" the Customs allowed it, and asked the Excise Board to define "Old Whisky" and "Highland Whisky."

23,697. Did the Customs ask the Inland Revenue to define what was "Old Whisky" and "Highland Whisky"?—Yes.

23,698. And was the Inland Revenue Board equal to the occasion?—I am not aware whether they made any reply to it. It shows clearly friction between the two Boards. On a question of labels on spirits bottled for exportation, a very serious misunderstanding had hitherto occurred between them. In a case of spirits for exportation, the name of a person stated to be resident in Glasgow was entirely fictitious, and the Board of Inland Revenue directed that it should not be allowed.

23,699. Was that supposed to be the name of the exporter?—Yes, it was an entirely fictitious name. The proprietor of the spirits removed the spirits to Customs warehouse, where the spirit was bottled and labelled with the fictitious name, by the servants of the Excise warehousekeeper, whence the spirits had been removed.

23,700. They were taken from an Excise warehouse to a Customs warehouse?—Yes, and bottled and labelled there for exportation.

23,701. That was a case in which, in your view, and in the view of the Inland Revenue officers, the Customs were too lax in their procedure?—The Board of Inland Revenue refused to allow it.

23,702. Did the Customs Board refuse it?—I am not aware whether it went before the Customs, but the spirits were bottled and labelled in the Customs warehouse, by the servants of the Excise warehousekeeper; he sent his own servants along to the other warehouse.

23,703. In that case, how did the Inland Revenue become aware of what had taken place?—We granted a warrant to remove the spirits from the warehouse to the Customs. They made immediately an application for that.

23,704. I did not mean the first movement, but afterwards?—We took no further notice of the matter, it did not belong to the department, we could not interfere.

23,705. How could the Inland Revenue become officially aware that that which had been forbidden by themselves, when the spirits were under their control, was allowed by the Customs when it was under the control of the Customs?—The traders servants went and bottled the spirits in the other warehouse. They came back, however, to the Inland Revenue warehouse. There was no remark about it.

23,706. They came and informed the Inland Revenue?—Yes, there was no remark made about the thing.

23,707. Are you aware whether that was ever brought before the notice of the Customs authorities?—No, I am not aware.

23,708. Is it possible it might be done?—I should imagine not. I should think not. I think the local officer must have taken a different view—the view of the different Boards. I take it so.

23,709. When that had taken place, and when the authorities of the Inland Revenue were aware what was done, did they not communicate with the Customs authorities and represent that they deprecated such a state of things?—I am not aware whether steps of that kind were taken.

23,710. Does it not strike you that it would have been a proper thing to do to call the attention of the Customs Department, in London, to the fact that the regulations thought necessary by the Inland Revenue were disregarded by their authorities in Glasgow, and ask for an explanation?—That is the friction between the two different departments, they take different views, as in the case of that Highland whisky I was speaking about. The Customs knew, and the Boards allowed it, and they simply said, "What do you call 'Old Whisky' or 'Highland Whisky'." It was simply a matter of opinion on the Code, and the working of the Code, entirely. It was not a breach of any arrangements connected with the regulations at all, it was a difference of opinion.

23,711. In the interpretation of the code?—Yes. Indeed the Customs took it that the code covered what they did, but the Inland Revenue took it that it did not.

23,712. Clearly, the instance that you have given us, namely, how the Inland Revenue interpreted the code to mean that a fictitious name was not allowable to an exporter, and the Customs had taken a different view, was a point that should have been decided one way or the other by some authority?—Well, it is a point of difference between the Boards, and illustrating the difficulty of working the code. I can give you the paragraph which applied to the case, in the general code, and then you can understand the interpretation put upon it by the two Boards. It is the code that ruled the Boards in the matter. It is paragraph 416; it states that "officers must see that no labels are used "by the proprietors, which imply that goods are "bottled under the inspection of the officers of the "Revenue, or which contain any mis-statement within "their knowledge. The goods may, however, be des- "cribed as bottled in Excise (or Customs) warehouse." It was simply the interpretation of that paragraph of the code. The Customs, I understand, took it that this paragraph covered what they did in the matter.

23,713. We quite understand that the different authorities took different views of the code?—Yes.

23,714. Do you think that the remedy for this could best be found by what is commonly known as amalgamation of the Boards and the formation of one Board?—Yes. I may give you another instance, perhaps. These are not imaginary things, but what have actually taken place. In March 1888 a quantity of spirits was removed from the Excise warehouse in Glasgow to a Customs warehouse in England. The particulars of the account for receipt were exactly the same as those of removal. The officer in England made the casting out of the gauge one-tenth of a gallon at proof less in three casks than the officer at the place of removal, and he returned these three-tenths as liable to duty. The distiller, of course, refused to pay the duty, as there was no loss upon the goods on transit, the same quantity was received as was removed from the distillery; but the Customs officers declined to give way, stating that their rule was correct, and that the rule of the distillery by which the proof was cast must be wrong. On referring to the supervisor at the distillery he could not make any difference on the quantity, and for a period of four months correspondence was going on between two departments as to this three-tenths, and the distiller in the meantime could not avail himself of the margin of the quantity removed under the bond, the bond not being cancelled, until at last the Customs were asked to submit the matter to the Board of Customs, as the accounts could not be altered in Glasgow, and at last they gave way. In the case of one Board such a thing could not occur for a week. It would be sent direct to the Board. There is another instance, of a very grave character, which occurred between the Boards in the case of several consignments of spirit into London for exportation from Glasgow in the year 1887 and onwards. The Customs certified on the despatch "Shipped per Dock Com- "pany's account; officer engaged on other duties." The Board of Inland Revenue refused to receive that as an adequate certificate of exportation, and they refused to pay the export allowance on the goods. The Board of Customs declined to give way on the point, and the result was that for several months, from the month of April 1887 to February 1888, many of the merchants in Glasgow were out of pocket several hundred pounds of export allowances. As they could not be repaid, and the export bond could not be cancelled, diminishing, of course, the margin of their export bond, till at last the merchants applied to the Treasury. The Treasury called upon both Boards, and the Customs gave way, and granted a certificate of export by their own official officer at the ship.

23,715. And in that case you say that the Customs should have given a proper certificate in the first instance?—The Board could not pay the allowance or cancel the bond on the account of a person who was not subject to Revenue regulations. The account was simply by the Dock Company, who had no connexion whatever with the Revenue, and the merchant said my goods may have gone to Hackney for all I know. The dock company's certificate will not clear me of responsibility if they are not landed. If an official of the Revenue receives them and certifies they are exported I am all right, and I claim the price of the goods; but for all I know a member of the Dock Company may have used them for his own purposes and certify to the Customs that he has exported them.

23,716. So far as it goes that is a question, as I understand it, of improper action on the part of whoever was the proper Customs officer, is it not?—It seems to have been homologated by the Board of Customs.

23,717. It is not a fault of the system, is it?—It is the fault of having the two departments.

23,718. It is of course possible that departments will even make a mistake, I suppose, even the Inland Revenue Board may make a mistake occasionally, and no doubt in this case you say the Customs made a mistake?—I do not call it a mistake on their part, it is the system they followed. The matter was brought under the notice of the Board of Customs and no redress was obtained from them.

23,719. (*Mr. Lawson.*) May I ask, why was no redress obtained?—I cannot tell you; they thought that the action taken by their staff was sufficient. That was the method they had of exporting, and they thought it was sufficient. What the reason of the Customs was I do not know; but the result was the merchant went to the Treasury and the Treasury caused inquiry to be made, and since then regular export certificates are given by the Customs officers, which is the only method directed by the code.

23,720. (*Mr. Cleghorn.*) That being so no similar case can occur again?—Not without being a breach of the arrangement come to through the Treasury.

23,721. (*Chairman.*) Now, you have given us some instances, but there is no need to multiply those instances?—I think these may be sufficient instances of the friction that occurs; but I will give you another instance of the rivalry between the departments. In consequence of the unhealthy condition of Ann Street warehouse, Messrs. John Hopkins & Co., the Board condemned it and withdrew their approval. The firm got another warehouse about 400 yards distant, but no Customs warehouse in intervening space, which the Board approved. This warehouse was 228 yards from the quays and 78 yards from nearest Customs warehouse. The condemned warehouse was only 202 yards from the quays. The Customs claimed the warehouse as being within Customs warehousing area, although another Excise warehouse at East Howard Street is only 100 yards from the quays, and the Excise Board consented. The result was that two established officers of the Excise Establishment had to be placed on the redundant list, and two fresh officers taken on by the Customs, thus causing expense to the country and injury to the dropped officers.

23,722. (*Mr. Lawson.*) And would you maintain that that could have been avoided in the case of an amalgamated Revenue Department?—In the case of one department there would have been no object, and it could not have occurred.

23,723. (*Chairman.*) I do not quite understand the case I am afraid. Why did the Inland Revenue agree, or why did the Treasury agree to the creation of a warehouse which involved the bringing in of fresh officers, and the supercession of old ones?—I understand that the Customs have been under the impression, when the warehouses were allocated under the General Code of 1885, that there was a warehousing area to

Mr. D. M. Matheson.

22 Feb. 1889.

each department; that the warehouses on the quays and in close proximity thereto should belong to the Customs; that warehouses outside that area should belong to the Inland Revenue. The Customs maintained that this new warehouse was within that supposed area, and in close proximity to the quays; and the Excise must have been under the same impression, but on inquiry it was found that no such area was ever fixed. A certain number of warehouses was then allocated to the Customs, and a certain number to the Inland Revenue, but there was a general basis of opinion that warehouses on the quays themselves, and in immediate proximity thereto, should be under the Customs, but what distance that proximity was, was never defined. This new warehouse that the Customs claimed was really farther away from the quays than warehouses already in the possession of the Excise.

23,724. And the Inland Revenue Board made a mistake in agreeing to it?—Well, the facts would seem to tend in that direction.

23,725. If the Inland Revenue Board had gone to the Treasury then the Treasury would have set it all right?—I should imagine so.

23,726. Then surely it is rather hard to blame the Customs?—The Customs made the claim. It shows the spirit of rivalry between the departments.

23,727. I understand your argument, it is the spirit of rivalry?—Yes. It was equally faulty of the Customs to make the claim. I may now mention, perhaps, some of the inconveniences that arise from having two departments. In the case of beer exported on drawback there is a great deal of interchange of documents between the departments. The exporter has first to apply to the Excise, and gives them a shipping notice. After account being taken of the particulars by the officer he sends it to the Customs to be indorsed, and then, after the shipping notice is served on the exporter, it comes back to the Excise again to make out the debenture for the drawback, and samples of that beer are taken by the Customs. We have to send messengers down to the quays to get the samples to take to the laboratory in Glasgow and analyse them. We have to accept the Custom House officers statement that the sample taken from the beer is the actual sample of beer exported.

23,728. But you make the analysis?—We make the analysis and we pay the duty. The Customs officers might, for all we know, substitute some other sample for the sample.

23,729. (*Mr. Lawson.*) Have you ever known a case?—No; there are several cases of disputed gravity, but I do not know of such a case. The Customs, as far as my knowledge goes, are highly honourable, as honourable as the Inland Revenue; but I merely suggest the want of control between the two departments.

23,730. (*Chairman.*) You have not got the whole control of it under your own responsible officers?—There are two departments dealing with the same thing.

23,731. (*Mr. Cleghorn.*) You suggest it as a possible occurrence? — Merely from the facts; not that such a thing has occurred, because I have every reason to believe that the Customs officers are fully as reliable as those under the Inland Revenue Departments; but at the same time they do the work for another department.

23,732. But an Excise officer might report wrongly, as well as a Custom House officer?—Yes, but the Excise would not have the same control as to discipline over them, nor the same responsibility in doing work for other departments; at least, that is my impression, although I am not aware it has occurred. Then in the case of beer exported to the Isle of Man, the Customs declined to take samples from that beer because they do not count it exportation. They have Customs House officers at the Isle of Man, but we in the Inland Revenue have to send officers specially down to the quays to take samples of beer to the Isle of Man, although officers of Customs are there on the spot, entailing a great deal of expense and inconvenience because we have to keep an officer at hand when any exporter comes in and says "I am sending by a steamer this "afternoon to the Isle of Man," to send that officer down to the quay to take the samples when there is a Custom House officer at the quay who could take it on spot without any inconvenience or trouble; but I believe the Board of Customs have refused to meet us as to drawing of samples of beer for the Isle of Man.

23,733. (*Mr. Cleghorn.*) They may possibly have reasons of their own which you are not aware of?—It is simply that the Customs treat the Isle of Man as part of the Customs system. They have officers there.

23,734. (*Mr. Lawson.*) Do I understand that in case the two departments could use the same machinery, there would be no necessity for the Inland Revenue officers attending to the export of beer to the Isle of Man at all?—At least the Custom House officers would draw the samples.

23,735. In the Isle of Man?—No, on the quays in Glasgow.

23,736. What do you call drawing the samples?—When beer comes we must have a sample to ascertain the gravity of it.

23,737. (*Chairman.*) Supposing that you had one Board and the whole offices amalgamated, how would beer for export be treated?—They would simply cause the officer at the quays to draw the samples. They would not require duplicate officers to be kept. There are officers of the Customs at the quays already for taking account of goods for export or other work.

23,738. The only difference would be that these officers would be under one Board instead of being, as now, under two?—And also doing this business as well as doing other business at the same time instead of sending a special officer down for the purpose. We send a special officer, and really keep him as a sort of reserve His own business is restricted to that extent; that he has this business to perform. We could put more Inland Revenue business upon him only that he is called down again and again for these samples.

23,739. (*Mr. Cleghorn.*) Does that occur often?—Frequently. There is a vast amount of beer exported to the Isle of Man. It is part of the officer's duty, and we make provision for him to attend whenever he is required. Perhaps he could do double or treble the work that he does actually, but he must be there in case he should be required. Then, in another instance, goods taken account of at the ship's side by the Customs are warehoused in the Customs warehouse without further account being taken, that is, goods imported into this country. In the case of the goods being sent to Excise warehouses the goods have to be sent in the same way as though the warehouse was 400 miles off, although perhaps as near the quays as the Customs warehouses.

23,740. (*Chairman.*) How do you mean, sent in the same way?—A despatch has to be sent and the goods compared at the Excise warehouse, causing a delay of two or three days, at times, and additional staff expense in taking account When these goods are received in the Excise, the officers take account of the gauge and strength and every particular, as if they came from England, whereas, with the Customs themselves, they send an officer with them and deposit them in the warehouse without further account, one account only being taken, that is, the account at the ship side. The warehouse keepers complain grievously of this. They say the men's time is employed in taking a fresh account; and there is delay in putting the goods into the warehouse; whereas if they were under one Board they would be removed straight from the ship's side to the Excise warehouse or the Customs.

23,741. Do I understand now that imported goods coming from the ship cannot be taken straight to the particular Inland Revenue warehouse in Glasgow that the consignor requires, even though it be under the Excise?—No; a despatch must be sent with the goods.

23,742. Cannot that take place before the goods are removed that now necessarily go to a Customs warehouse?—No; if they go to a Customs warehouse, no further account is taken than that at the ship's side; but if they go to the Excise warehouse an account must be taken before they are taken there.

23,743. Could not that be provided for by a simple regulation?—Not while there are two boards.

23,744. Not while there are two boards?—No.

23,745. Why not?—The Customs are a different department. The officers of our department would not be responsible for the goods taken account of by the other department?

23,746. Why not?—Simply because being another department there is no provision in the code for doing so.

23,747. Both Government departments are looking after the revenue?—Yes, two different departments and

different administrations. Our officers might say again, "We did not receive these goods from the Customs. A "portion of the cask is wanting." The Customs say, "We took the account at the ship; we say they are "right;" and then the two departments are at issue again; whereas one department could find out where the blame rested, who is the officer at fault. Our board have no power to inquire as to the veracity of a Customs officer, nor do the Customs question the veracity of our officers. That is, I may tell you, a very considerable grievance with the Excise warehouse keeper, as well as not being able to warehouse dry goods in their Excise warehouses. There was a case as regards the dry goods which I may quote. A firm had made terms for extensive premises belonging to the Glasgow and South-western Railway Company for importing and blending Indian tea alone, for which they were to put up machinery in the place. They could not get sufficient space in the warehouse already approved by the Customs, and the matter was submitted to our Board, and the Customs certified that they had sufficient warehousing space already approved for dry goods, and although the Board, the Inland Revenue, approved of the application, they could not approve of this warehouse, because there was already sufficient warehouse accommodation provided. I have since been told that the party went to Liverpool or somewhere to get the accommodation.

23,748. (*Mr. Lawson.*) On account of there not being room in the Customs there?—On account of not getting this warehouse accommodation approved. The Customs dry goods warehouse keepers try to keep the trade entirely in their own hands, and as long as the Board of Customs certified there was sufficient accommodation for warehousing the dry goods, the Board of Inland Revenue have no power under the code to approve a new warehouse.

23,749. (*Chairman.*) There is a rivalry between the two Boards to get as much of the trade as possible into their own hands?—Yes; that is so.

23,750. And to afford as many facilities to the public as they can?—Yes; and through the warehouse keeper. Again there is the same rivalry and trying to acquire additional trade, and some warehouse keepers say to their clients: "We in the Customs get much better "terms than you get in the Excise," and others say: "We in the Excise get much better terms than you get in the Customs," and I believe there is a good deal of pressure brought to bear on the officers in these warehouses to yield points to clients so as to keep their trade subject to them.

23,751. (*Mr. Lawson.*) I cannot quite follow the last case that you quote with regard to the warehousing of tea in the Customs. How does that show if this particular trader was driven to Liverpool, why he was driven?—I do not know that he got a place. I was informed that he got one there.

23,752. The point I want to ask you is this: how does that show that in the Customs there was any great zeal for the collection of the revenue if they deliberately drive a man away on account of the want of accommodation?—I merely speak of the local friction; I am not speaking outside Glasgow. I do not know what goes on outside Glasgow.

23,753. This is a Glasgow case?—Yes.

23,754. The case you quoted to us was as to the importation of tea into Glasgow?—Yes, and the complaint of the Excise general warehouse keeper that they cannot store dry goods in their warehouses, the dry goods being entirely in the hands of the Customs in Glasgow.

23,755. But the Customs would give no facilities for the storage of this tea?—As long as they have space for the storage of dry goods the Board of Inland Revenue cannot approve fresh premises, which would entail further expense on the establishment.

23,756. Why did not the Customs give accommodation to this particular merchant?—They could not, and had not the space. He wanted to put up certain machinery for blending tea on a large scale: their warehouses were merely in the hands of local persons. I may tell you there are no Crown bonded warehouses in Glasgow, but merely premises rented by persons who make a trade of being warehouse keepers.

23,757. The Inland Revenue had the space; they were not allowed to use it?—This person got space with the Glasgow and South-western Railway, where the Inland Revenue had already a wet goods warehouse with same traders, and he wanted a dry goods warehouse along with the wet; but the Board of Inland Revenue could not approve of it in the face of the statement that there was already sufficient dry goods warehousing space approved.

23,758. (*Chairman.*) Could not the Inland Revenue appeal to the Treasury?—They could not under the code. It is an understanding under the code that one department cannot sanction a warehouse so long as the other department certifies that there is sufficient warehouse space already approved.

23,759. In this case you say the Customs certified there was space?—The Customs certified such, but it was not of the nature that this man wanted. I think these, perhaps, form many of the points. I mention to you now the inconvenience of two departments. Under 50 & 51 Victoria, chap. 15, sec. 5, passed in July, 1887, which came into force on 21st May 1887, the duty on manufactured tobacco, containing 10 lbs. of moisture, or more in every 100 lb., was reduced to 3*s.* 2*d.*, less than 10 lbs. of moisture to 3*s.* 6*d.* The duty on tobacco in the course of manufacture, on being dried at a temperature of 212° Fahrenheit's thermometer, if decreased in weight by more than 35 per cent., is liable to a penalty of 50*l.*, and confiscation of the goods. Although the tobacco duty is a Customs duty, the enforcing of the moisture clause is entirely left with the Excise department, which has no direct interest in the prosperity of the Customs Revenue. The Excise Department as such I mean.

23,760. You mean there is no inducement?—Not the same inducement that exists under their own department. They are simply doing the work for another department.

23,761. Your argument is that the Inland Revenue might be lax in performing their duties in seeing what the tobacco was, because it was the Customs revenue not Inland?—Yes, the Customs has no power to enforce its views upon the officers.

23,762. Do not the Inland Revenue collect a good deal of revenue for the Customs, and *vice versâ*?—Yes, but we have very few tobacco warehouses in the country and no control, we merely collect the Customs revenue; it is accounted for to the Customs; it is a Customs duty entirely.

23,763. (*Mr. Lawson.*) I should like you to give a concrete instance to illustrate the cross duties of the Customs and Inland Revenue in respect to tobacco. I want to know where the separate examination would come in if a consignment of tobacco were brought to Glasgow?—There is no tobacco warehouse in Glasgow; the duty is entirely a Customs duty in Glasgow, but we have the manufacture of tobacco. That is under the charge of the Inland Revenue, and indirectly the duty is collected in the process of manufacture. If there is more than 35 per cent. of moisture in the tobacco of course it affects the duty of Customs, and if we allow more than 35 per cent. of moisture the Customs duty is decreased in proportion.

23,764. (*Chairman.*) Let us follow a cask, or whatever you call it, of tobacco landed in Glasgow for manufacture; where is it taken to first?—It is taken to the tobacco manufactory after duty is paid to the Customs. Duty is paid to the Customs on this basis which I told you—if it contains 10 lbs. of moisture or more in every 100 lbs. it is subject to a duty of 3*s.* 2*d.*, if less than 10 lbs., 3*s.* 6*d.*

23,765. I want to know where it is examined?—It is sent to tobacco manufactories.

23,766. Supposing there are 10 large casks of tobacco come, which I have seen in some of these Inland Revenue warehouses in London, is a sample cask examined by the Customs before it is landed on the premises of the manufacturer?—Yes, the whole of it is examined by the Customs to see whether it is subject to the higher duty.

23,767. Where is it examined, in the Customs warehouse?—They have a laboratory at the port where samples are examined.

23,768. Is this tobacco put in the Customs warehouse first?—Yes, or the duty is charged at the ships' sides in Glasgow.

23,769. At all warehouses or the ships' side the tobacco is examined and sent on to the manufactory, and there it becomes an entirely Inland Revenue affair?—Which is entirely under the Inland Revenue supervision.

Mr. D: M. Matheson.

22 Feb. 1889.

23,770. Where is the conflict between the Boards there?—We employ officers to see that in the process of the manufacture, the weight of the tobacco on being dried, at 212° Fahrenheit thermometer, is decreased not more than 35 per cent. That is merely to show that there is no more moisture put into it than 35 per cent.

23,771. That is during the process of manufacture?—During the process of manufacture; but, if the tobacco manufacturer adds more water to it than 35 per cent., he is liable to the penalty. That rests entirely on the intelligence of our officers to keep him entirely within that moisture clause, because that affects the duty. If he adds more moisture, of course there is more duty involved.

23,772. (*Mr. Lawson.*) In case the departments were consolidated, where do you think a simplification of work would come in with regard to that?—The charging department would see that the control of this moisture clause, which is a very important one, was strictly carried out, because the prosperity of the revenue entirely depends upon it.

23,773. You say they do not at the present time?—Yes, they do. I believe our officers fairly perform the duty, and I merely illustrated it to you to show they are not subject to the control of the Customs Board.

23,774. (*Chairman.*) As I understand it, there may be two processes, as it were, or two investigations. The first investigation is when the tobacco is landed to see what proportion of moisture it contains, because it comes under different duties according to its moisture?—Yes.

23,775. That having been ascertained?—The duty is charged upon that basis.

23,776. It is then delivered to be manufactured, and, while it is in the process of manufacture, the Inland Revenue have to watch in order to see that more lbs. of tobacco are not sold as tobacco by putting too much water in it than he is really entitled to add?—Yes.

23,777. Then how would the amalgamation of the Board, or there being only one Board in London, or one set of officers in Glasgow, facilitate that businesss?—The watching of the process of manufacture, as regards quantity of water added, is an important one, because the duty charged originally depends upon that. We watch that for the Customs now, but we are not subject to the Customs control. If the manufacturer added 50 per cent. of water, which he might do, or say 40 per cent.; of course, there is 5 per cent. of duty that he appropriates. The singularity of the duty is that it depends upon the process of manufacture and the quantity of water added. There is a minimum and a maximum quantity of water, and in the process of manufacture there is a similar ratio maintained throughout, and if it is found in the hands of the retailer with an excess of moisture, it is liable to seizure.

23,778. When is the duty paid altogether, the whole duty upon manufactured tobacco?—On delivery at the Customs warehouse or the Excise warehouse where it is deposited.

22,779. (*Mr. Lawson.*) On delivery over?—On delivery over. The duty is charged there on a certain basis of moisture, and then throughout the manufacture there is a limit of moisture allowed which, if it is exceeded, is liable to a penalty. They cannot allow in the process of manufacture a further addition of moisture beyond a certain per-centage.

23,780. (*Chairman.*) If the tobacco is manufactured according to regulation, that is to say, if too much moisture is not put into the tobacco then, is there any alteration in the duty?—No, none whatever; but our officers have to see that that degree of moisture allowed is not exceeded; and that is where our supervision is entirely as regards that in the manufacture. The Customs have nothing whatever to do with it, although it is a Customs duty. That of seeing that the moisture clause is not exceeded is delegated to a different department altogether. That is merely illustrating the point.

23,781. (*Mr. Cleghorn.*) Do you think that the Government and the revenue suffer from that state of things?—I believe that our officers and the Board of Inland Revenue are as anxious to secure the duty in the process of manufacture as the Customs Board themselves, fully as desirous of seeing that the law is strictly observed in the process of manufacture; but at the same time it seems an anomaly that there is a Customs duty and its value, and the very existence and prosperity of it depends upon the supervision of another department.

23,782. But you have no reason to suppose that the department does not thoroughly do its duty?—None whatever. I believe they do it thoroughly and well; but, at the same time, they are not subject to Customs control.

23,783. (*Mr. Lawson.*) You stated at the beginning, when you commenced to give us this case, that you believed the revenue did suffer, I understood that?—I said it "might," not "did."

23,784. Might suffer?—Yes.

23,785. It is entirely hypothetical?—Not hypothetical; it shows the anomaly of one department raising a revenue and another department superintending and enforcing the laws in regard to it.

23,786. (*Mr. Cleghorn.*) Yes, but the revenue might suffer if anything is not properly looked after?—You see within a department itself there is a power of control and supervision. Supposing that the tobacco duty was going down, and that the Customs believed that the moisture clause in manufacturing was not strictly enforced by the Inland Revenue, they could merely make a remonstrance with them. They have no power themselves of ascertaining as a fact whether it is so or not; whereas, if it was in their own control, they could send an officer and ascertain whether these men were really doing their duty.

23,787. (*Mr. Lawson.*) Do you believe that the cost of collecting the duty, in the case of tobacco, is much increased by the double set of officers that are necessary for the two departments?—There is increased cost, no doubt, but the main objection to the dual system is in the want of direct control as to the moisture limit in the process of manufacture on the part of the department directly responsible for the duty, which is a Customs duty. The enforcing of the moisture clause is delegated to a department not subject to Customs supervision.

23,788. What I want to know is, do you think the cost of collection is increased then?—It is this way; if you have two departments doing what one department could do, the cost must be increased. I answer it on these lines.

23,789. (*Chairman.*) Are there more officers employed in the case of tobacco—keeping yourself to this case of tobacco—under this present system than would be employed under a system of amalgamation?—You see there are other things outside that case which should be taken along with it; that is merely a part of a whole.

23,790. Then let me ask you generally; let us take Glasgow, and I will ask you to what extent you wish amalgamation should go. Is it your opinion that any substantial economy in the collection of revenue of both sorts could be effected by amalgamation at Glasgow?—Yes; I am thoroughly of opinion that it would lead to not only economy, but also to greater efficiency and greater facility for the trade.

23,791. Your evidence has been a good deal in the line that there would be increased efficiency and satisfaction to the trade; that has been your view. Now we come to economy?—As to economy, that, I think, would be effected. I mentioned some time ago that a great deal of my time was taken up by the difficulties under the Code in working it, to the extent, I think for some years, of a fourth part of my time, which was, more or less, taken up in that direction.

23,792. Then, that being so, when you say that one-fourth of your time is spent in interpreting the Code, does it mean one-fourth of your time is taken up in consequence of the different views taken by yourself and the Customs?—Not so much as seeing traders upon difficulties, working along with the Customs, as to concessions alleged to be given by the Customs and not given by the Excise; and then, as to reporting matters to the Board in connexion with labels, and in connexion with difficulties in working the Code; and then parties seeing me through the day as to wanting operations carried on with their goods that were not clearly allowed by the Code. There would be greater liberty in the one department in giving concessions when you had no other department to compete with, as the Code binds the two departments to a uniform practice; and the difficulty is in ascertaining what the uniform practice is. We have strictly to keep to the letter of the Code, so as to observe that rule; and

sometimes we restrict operations which under one Board we should not do. We could give a little more latitude.

23,793. (*Mr. Cleghorn.*) When you are told by anyone that the Customs are more liberal or lenient than the Inland Revenue, do you ever go to the Customs and inquire into the matter?—No.

23,794. You never do that?—No, we never do that; we merely take it for what it is worth. There is such a thing as trying to get round us to get better terms.

23,795. (*Chairman.*) Is it your opinion, looking at the work that is done at Glasgow, that one head official collector, or whatever he is called, could be the head of the whole revenue collection at Glasgow?—That is my opinion.

23,796. And that he could be responsible for the control of the establishment under him, and the collection of the revenue, whether Customs or Excise, to the same extent as you are now responsible for your collection on the Inland Revenue side alone?—I think so. I think it is quite practicable. I may mention to you perhaps the grounds upon which I form that opinion.

23,797. If you please?—I have mentioned to you already 25 general warehouses under the charge of the Customs in Glasgow, the general warehouses I have already given you as under the control of the Inland Revenue. There are nine supervisors. On the same ratio I would take it that five supervisors would be sufficient to control the 25 warehouses under the Customs.

23,798. (*Mr. Lawson.*) They have no supervisors in the Customs?—No, they have similar officers, surveyors; but not with the same name, and with, perhaps, in and out, from 60 to 70 officers to manage the Customs warehouses.

23,799. As against the present number in the Customs?—I do not know the exact number in the Customs at present, but I am giving you this as the basis of my opinion. That would make Glasgow consist of 14 districts in place of nine, as at present.

23,800. Nine Inland Revenue districts?—Nine Inland Revenue districts.

23,801. And Customs districts?—I estimate that there would be five.

23,802. (*Chairman.*) Putting them altogether under one officer there would be 14 districts?—14 districts.

23,803. (*Mr. Lawson.*) At the present time there are 14,—nine Inland Revenue and five Customs?—Yes, and I estimate, perhaps, that the addition of Customs business under the Code would add to my work about one-fourth of what it is at present.

23,804. Would that fully employ your time?—Yes, quite fully.

23,805. (*Chairman.*) Is much of your time taken up by work which you might very fairly delegate to a subordinate, and keep more of the higher controlling work in your own hands?—A little improvement might be made in that direction; but the Board of Inland Revenue are very particular as to check by the responsible officers. It is very necessary. We seldom or ever have irregularities in our departments; but slight improvements might be made in the direction of relief to the check officers in matters of detail; but without counting much upon that, I estimate that a fourth of the time which is taken up in cases of dispute in the working of the Code would go to meet this additional work thrown upon me, so that it would not be beyond my power. Of course additional clerks would be required from the Customs; and I think, perhaps, three clerks at the outside could do the work in the collector's office of these 25 warehouses, in addition to the present staff. In connexion with that point I may mention perhaps what you may feel an interest in as to the duties of the two departments in Glasgow. I will give you a general idea; the Customs have the exclusive administration and supervision of all goods imported into the country.

23,806. (*Chairman.*) That will always have to be done by somebody or other; some special officer, will it not?—Yes.

23,807. Whether you are amalgamated or not there must be a special staff to rummage the vessels and to examine the vessels, and to see what the goods are; whether dutiable or not?—Yes, and such as taking preliminary account at the ship's side after the goods may be passed to the warehouse under the general Code applicable to both departments; that is outside the general Code at present, taking the account at the ships' sides. The Customs do that; after that it comes under the general Code applicable to both departments. They have also to charge and rummage and search all vessels for contraband goods. This is all outside the Code as I mentioned to you; and along with this they make certain statistical returns for the Board of Trade as to vessels cleared inwards and outwards, and as to goods and values imported and exported, and the receipt of light dues, all of which arise more or less contemporaneously in connexion with the revenue supervision. The Inland Revenue Department have, on the other hand, outside the source of revenue covered by the general Code the exclusive control and supervision of the manufacture and warehousing at distilleries of all the British plain spirits made in the United Kingdom, as well as the charging of duty on beer, licenses, and the collection of Imperial taxes generally, including death duties, and the control and supervision of all other stamp duties. These are outside the general Code. The duties performed by the Inland Revenue officers outside the Code, such as the account of spirits in the process of manufacture, and of warehousing same at distilleries, the charging of duty on beer, and on licenses generally, may readily be acquired by Customs officers in the course of six weeks, the period deemed sufficient for the instruction of candidates for the rank of surveying officer of excise.

23,808. (*Chairman.*) You are still speaking of duties outside the Code?—Outside the Code. The duties performed by the Customs officers, on the other hand, outside the general Code, such as taking account of goods subject to Customs duties at the ship's side prior to warehousing under the general Code, the rummaging and searching of vessels for contraband goods, the Board of Trade statistical returns, and receipt of light dues may readily and efficiently be acquired by the already trained Inland Revenue officer under the general Code in a like period of six weeks so as to be able to discharge these duties as at present performed by the Customs officers The total allowance by the Board of Trade to the Customs for these light dues and duties outside the Code for the Board of Trade amount yearly to 10,593*l.* 10*s.* 3*d.*, the allowance is for extra duties which are performed for the Board of Trade generally over the country; but I believe that in some cases these duties are included in Customs officers salaries. I am not able to get at that. Before coming to this I may tell you that somewhat analogous duties performed at present by the Customs, outside the general Code, for the Board of Trade, &c., in the matter of statistical returns, are at present performed by the Inland Revenue Department in the collection of statistical returns for the Committee of Council for Agriculture; and the Inland Revenue Department receive the Assay duty on gold and silver plate in the United Kingdom. This department devotes a special staff for the search and suppression on land of smuggling generally. The allowance by the Treasury to the Inland Revenue for gathering statistical returns and for the Committee of Council for Agriculture is 15,800*l.* a year. That is for duties performed outside the functions of a Revenue officer entirely; and putting the one against the other you may say that there are equal duties performed by the Inland Revenue Department as performed by the Customs Department for statistical purposes.

23,809. Outside the Code?—Yes.

23,810. Is your argument further that either one set of officers or the other set of officers could learn in six weeks the duties of the other set?—Quite so.

23,811. And that those are all outside the Code, and that all inside the Code are equally within the knowledge of both parties?—They are already conversant with them.

23,812. Therefore, there is no reason why amalgamation should not be, as far as the working of the Code is concerned, effective within six weeks?—The officers are already conversant with the Code, and the other duties outside the Code could be learnt in that time.

23,813. (*Mr. Lawson.*) Of course, with regard to the water-guard service, there is no class among your officers at all corresponding to that in the Customs?—We have at present what we call preventive men; men employed along with commissioned officers in suppressing smuggling Inland; these might be put as being the same kind though not to the same extent as the Customs.

23,814. The preventive men serve at a larger salary?—No, I think not, 50*l.* Men without any commission at all.

Mr. D. M. Matheson.

22 Feb. 1889.

23,815. (*Chairman.*) They begin at 10*s.* a week, and they rise to 20*s.*, so that they cannot be said to be more expensive than the men in the Customs?—Yes. The men assist the officer in case of searching or deforcing.

23,816. When you talk of amalgamation, to what extent do you think that amalgamation would be practicable?—I think the whole of the Revenue duties in Glasgow could be received by one collector on the lines that I have mentioned to you at present. I gave you the increase of the staff.

23,817. He could not only receive all the Revenue, but you think that further than that, he could control all the establishment that collects the Revenue, and decide all the difficult questions that have to be decided locally?—In the same way as at present in regard to Inland Revenue. Our great difficulty in the work of the Inland Revenue is with small matters such as licenses and taxes. With the warehouses we have very little trouble, except what trouble arises through the general Code. All spirits delivered from warehouses are delivered upon a warrant made out by the officers. The account is made out at the warehouse and these returns are sent to the collector's office with the duty, the clerks receive the warrant, retain a portion of it as receipt, and give the other portion as authority to deliver the goods from the warehouse.

23,818. Are you at all familiar with the kind of questions which have to be setted by the collector of Customs at Glasgow?—Not as regards statistical returns. I am as regards the general Code.

23,819. The statistical returns cannot go for very much, but as to the general work and the control by the collector at Glasgow on the Customs side, do you know what kind of questions and what amount of them he has to settle?—Under the general Code similar questions are put to the Inland Revenue collector. There are the same duties, charged under the same law, charged under the same regulations.

23,820. But outside the Code?—There are the Board of Trade returns. I may tell you that we furnish some of the data that they get up for the Board of Trade; in the case of spirits exported, we put the values on the documents to the Customs. The value of the goods which is returned to the Board of Trade.

23,821. Do you go so far as to express the opinion that a special training in the water-guard duties and the special Customs duties, and so on, is not necessary on the Customs side?—I do not say so, but I may mention to you that these duties could be acquired by our officers in a period of six weeks, the same as they acquire the Inland Revenue duties.

23,822. Then, when we are told that a great many of these duties of the Customs officers are very technical and difficult, more so possibly than those of the Inland Revenue officers, and that it is absolutely essential for anyone who has the control to understand these things thoroughly, you do not quite agree with that view?—At least subject to a qualification that of course a period more or less of instruction is necessary to acquire these duties. These duties are acquired by the Customs themselves you see. There is nothing intricate in these returns, but what an intelligent Revenue officer could acquire within a definite period. It is not peculiar to the Customs Department, that intelligence necessary for the purpose.

23,823 (*Mr .Lawson.*) So far as the statistical returns are concered, I believe it is the case that they are sent up in bulk to London?—I am not aware. We furnish a great deal of it to the Customs. We put the values of the spirits exported on the despatches, so that they merely aggregate that for the Statistical Department. I may mention, too, that the Customs have what they call a statistical department. They keep an account of all spirits transferred from one department to another in London. By uniting the Boards that department could be entirely dispensed with, I believe it is a very costly department. It may take in hand Board of Trade work. In the case of spirits sent from an Excise Warehouse to the Customs a duplicate is sent to that department in London, and an account kept by the Customs Department of the spirits intromitted between the two departments.

23,824. (*Mr. Cleghorn.*) And would the amalgamation of the departments supersede that?—It would entirely do away with that. We have no such thing in our department. We have an Accountant and Controller General in London, who controls the whole revenue of the country; in our monthly returns we show in the accounts the spirits sent from one warehouse to another, and he checks the accounts. The accounts are increased in one warehouse and correspondingly decreased in another. In the Customs there is no means of doing that. This statistical department exists as a sort of clearing house between the two departments.

23,825. (*Chairman.*) Do you think there would be much diminution in the staff in Glasgow if there was one Board and an amalgamated service? Can you give any instance where there is an unnecessary duplication of work beyond those you have pointed out to us?—I am not aware that the staff at the warehouses could be diminished, but as I told you, from the spirit of rivalry that exists, some warehouses might be dispensed with in course of time, if one department had the control of the accommodation of the whole warehousing. They could apply the pruning knife more efficiently.

23,826. I quite understand that from the Government point of view, the bonded warehouses are already too numerous?—Yes; far too numerous.

23,827. Although possibly the trade would not be of that opinion?—Yes.

23,828. But I think some suggestion has been made that all the warehouses at the ports should belong to the Customs; and all inland should belong to the Inland Revenue. That, whatever other objections there are to it, would get rid of the duplicate management at any particular port, would it not?—Yes, and the conflict, the whole difficulty from the first between the two departments, was passing a uniform code that virtually abolished the two departments—theoretically, not practically. If the Board of Customs had taken over the Inland Revenue regulations, and applied them to all British spirits, and obtained their instructions from the Board of Inland Revenue, and the Board of Inland Revenue had taken over the Customs regulations as regards the warehousing of foreign spirits, there would have been no collision between the departments at all.

23,829. Then do you suggest an amended code?—No; I think you have gone too far on the other lines; passed the margin for recovery in that respect. I think the whole of the steps that have been taken, whether with open eyes or shut eyes, have been practically to abolish the two departments.

23,830. (*Mr. Lawson.*) Except as regards staff.—To abolish the two Boards and to have one Board. If, at the time that they agreed between them in 1885 to pass a mutual general code, they had said to the Inland Revenue as regards the warehousing of British goods: "We will take your regulations and work them out for "you. As regards the Customs goods, you take our "regulations and work them, and any amendment of "these regulations must come from us." Then it would be practicable to maintain two departments, but under the general code it is impracticable.

23,831. (*Chairman.*) You have not made any calculation at all; you could not really give us any idea of what economy could be effected in the system at Glasgow?—The economy would lie, in the first place, in the salary of one of the collectors at Glasgow. You might, perhaps, out of generosity, increase the salary of the one who remains, but there would be no clerks continued in the Customs except the three I have referred to as being necessary to be taken over. Then there would be a saving in the cost of inspection. We employ Revenue inspectors down there, and they go over the same ground where the Customs warehouses are. They could do the work that the Customs inspectors do now, where they do resort to inspection.

23,832. That is an instance of duplicating work rather, is it not?—Quite duplicate work, going over the same ground by two classes of officers.

23,833. Just give us a concrete instance of that.—Such inspection as they make—I am not aware what inspectors the Customs keep, but the Board of Inland Revenue at present keep in Glasgow two inspectors to see that the Revenue is properly charged.

23,834. Where do they go?—To all the warehouses—go to them unexpectedly and inspect the books of the officers.

23,835. Is it your view that these inspectors might equally inspect the 25 Customs warehouses?—The same as they are inspecting the other warehouses. They are in the same streets.

23,836. Does not it rather follow that these inspectors of Inland Revenue have not their time fully employed?—We withdraw them. They are only for a certain time of the year on inspection work in Glasgow. They are not fully employed throughout the year. They are sent out at certain unexpected times to see how the work has got on, merely as a check for the Board of Inland Revenue. By what means the Customs ascertain that the local officers are doing their duty, I do not know, but I presume there is something similar in the case of inspectors. If we have one class of inspectors, in that direction there will be a saving.

23,837. (*Mr. Cleghorn.*) You mean the inspectors are not confined to the Glasgow district?—No; they go to Scotland; they are perambulating over the whole country, over Ireland and England as well. They are out from Somerset House.

23,838. (*Mr. Lawson.*) But at the same time you mean while at Glasgow they might just as well go to the Inland Revenue as well as to the Customs warehouses?—Yes, go to the Customs warehouses as well.

23,839. Probably not waste their time?—No doubt.

23,840. (*Chairman.*) Has it occurred to you that there is any other class of officers that might be abolished or diminished in Glasgow?—I think the work would be more concentrated if there was one department. At present each department wants to make itself as big as possible. They do not, if possible, wish to diminish any warehouse, because it diminishes the prestige of the department—makes it smaller. There is a natural feeling of that kind, but with one department the work would be concentrated more, and the feeling could not exist between the departments. There would be greater efficiency, more control, and this influence which is brought to bear upon the officers by alleging that better terms are given by the Excise than by the Customs, or that better terms are given by the Customs than by the Excise, could be entirely done away with, and officers would be left free from any influence of that kind.

23,841. Would you apprehend any difference in the scale of salaries which now exists between officers who are doing similar duties on the two sides?—I believe in some cases the salaries of corresponding officers in the Customs are higher, but even in the case of amalgamation there would be no occasion whatever to dispense with their services where they are at present till they died out. The amalgamation will not involve that these Customs officers will be moved away from the warehouses; they would perform the duties they are doing at present subject to one Board.

23,842. The control would be the same?—Yes. Then as these officers die out one administration could make such reforms as they deem necessary in the face of the matter. The same jealousy as to difference of salary exists at present as would exist if the departments were amalgamated, that is a temporary question that would pass out of view when the present staff disappeared under the united Board. I would mention on that point some of my ideas with regard to the general aspect of the question. The differences of salaries are at present very manifest in some places between the departments, and in the case of collectors at some ports of the Customs they receive, I am told, as high as 1,200*l*. The maximum salary allowed by the Inland Revenue in the case of first class collectors is 800*l*. In my own case I collect nearly double the Revenue at Glasgow that the collector of the Customs does, and the maximum of my salary is only 800*l*., but I am told from emoluments and everything else it is much higher with the collector of Customs who collects, as I have said, only about half the Revenue that I do.

23,843. (*Mr. Lawson.*) Then, do you think with a consolidated department the scale of salaries might be assimilated to that of the Inland Revenue?—Yes, and I may mention to you with regard to this, that in a great many places in the country, not only in Glasgow but where there are two collectors of Inland Revenue, one would be done away with, it would apply to the whole Kingdom. The saving would be enormous in small places, and such other places as we have collectors inland that could be removed to the parts where the Customs collectors are such as now at Canterbury and Dover. There are two collectors there, one at Dover and one at Canterbury, for the Inland Revenue. There is no reason whatever why the collector at Canterbury should not be placed at Dover and do the whole work of the Customs and the Inland Revenue too. The same thing would occur with regard to Maidstone and Rochester. The collector at Maidstone of the Inland Revenue could be placed at Rochester, and that would do away with the Collector of Customs there. In the case of Scotland, at Stirling and Alloa, the collector at Alloa could be done away with, and the collector at Stirling placed there with equal facility to the Inland Revenue. These dual officers could be done away with under the amalgamation. Then, in the case of coast officers of the Customs, if there are principal coast officers and Inland Revenue officers in the same locality, one or other of these two could be dispensed with, and the duties of the departments taken over by the other. The saving in the course of time in that direction would be simply enormous to the country.

23,844. It covers the whole coast practically?—The whole country, yes.

23,845. Do you contend at the present time that at Glasgow you have too many warehouses, taking into account those that belong to both departments?—Certainly, there are small warehouses which we took over from the Customs in 1885 which would never be approved by the Board of Inland Revenue now. There were warehouses in which lockers only were kept; no accounts were kept there at the time, they were merely storage places; but the keepers having the privilege, the Board of Inland Revenue seemed to have no power to withdraw it from them.

23,846. Then that involves a waste of public money in the attendance of officers in warehouses which are not really required by the trade?—Decidedly the officers are not fully employed, and yet we cannot withdraw the officers from them. A large saving could be effected in Glasgow from that alone by applying the rule of not sanctioning any warehouse except of a certain size.

23,847. Then I understand you to admit that the time of your officers is not fully employed?—Not at these small warehouses; they are simply watching the warehouse.

23,848. Still you do not see your way, if the two departments are maintained as separate establishments, to reduce the number, because there must be a certain attendance even at these unnecessary warehouses?—The departments are unwilling to diminish their prestige, I may tell you.

23,849. If you could get over that feeling do you believe it would be possible, keeping the two departments, to diminish the staff of each respectively?—I do not think it would.

23,850. Do you think the feeling is too strong?—Yes. I think the two Boards are too strong in their position to do that.

23,851. And no instructions from head-quarters would make any difference?—The difficulty is to put the instructions in at head-quarters. I may mention to you, in connexion with the coast officers that could be dispensed with, that the discontinuing of the dual offices of Collector of Customs and Collector of Inland Revenue in all towns where the two exist, and where one of them could be dispensed with entirely, would be an enormous saving in itself. In the cases I mentioned to you of Inland collectors, the Inland Revenue collector could be removed to one of the ports of the Customs, whereas a collector of the Customs could be removed from Stirling to Alloa, and Canterbury to Dover, and numerous other places of that kind. Then many of the clerks could be dispensed with in these offices.

23,852. I was going to ask you whether you thought there was much saving to be effected in respect of clerical work?—Yes, as well as with the collectors themselves.

23,853. Have you too many clerks for your own duties?—No, we are very much pressed, but at the same time there would only be a little re-arrangement, as they are doing analogous work to the clerks of the collector of the Customs.

23,854. Supposing there were a single staff of clerks in place of the two sets now existent in Glasgow, what would be the difference as compared with the present proportions?—I think I mentioned as regards taking over the warehouses business that I thought the addition of three clerks to the collectors office in Glasgow would do the whole of the work of receiving duty and the accounts as at present carried on by the Customs in connexion with the Revenue.

23,855. Can you answer that. Are you able to say they might be reduced by a quarter or any figure of that kind?—I should not like to fix a definite figure.

Mr. D. M. Matheson.

22 Feb. 1889.

23,856. But you think they might be considerably reduced?—Yes, very considerably reduced, I think.

23,857. And that would apply, of course, to the whole of the staff of supervision?—Yes, I might give you an instance, perhaps, in the case of Newcastle, where the Inland Revenue have a collector at 650*l.* a year. There is a Customs collector there; but I am not certain as to the amount of his salary.

23,858–9. The Inland Revenue collector at Newcastle is a collector of the second class, is he not?—Yes, these two collectorships could be formed into one, and one of them abolished, and making a moderate estimate one clerk at least dispensed with. The total saving of that port alone would amount to a little short of 1,400*l.*

23,860. 1,400*l.* annually?—By amalgamating; that is putting it at a moderate estimate. I believe it to be a good deal more than that.

23,861. (*Mr. Cleghorn.*) You have no doubt that one collector could do the work of the two now employed?—No doubt whatever.

23,862. (*Mr. Lawson.*) I suppose you argue that if it is possible at Glasgow and Newcastle it follows *a fortiori* that it would be much easier at the small ports?—Much easier at the small ports.

23,863. (*Chairman.*) Are you prepared to say that the traders at Newcastle would take the same view as you do?—Possibly the traders at Newcastle would not, but it is a question of Revenue. These traders are subject to the same laws in respect of their trade under the Code. It is not a matter of liking or disliking any department to them; it is a matter of the laws which have to be observed.

23,864. I do not mean preferring one department or the other. Keep that out of sight as much as possible. I mean this: Is it not possible that the traders might desire to have an officer of the Customs and also an officer of the Inland Revenue to whom they might go with their grievances and get their business done, and might they not view with disfavour the withdrawal of one of those officers. I am not saying it is so. I am only asking you is not it possible that they might if we consolidated those two officers into one?—I think so. I think there would be a great deal of opposition, local opposition. I imagine so. There is that always to be looked for in effecting a reform. You will always find a body of men opposing it, but I am arguing entirely from a Revenue point of view, having regard to the benefit to the country to be derived from amalgamation of the departments.

23,865. (*Mr. Lawson.*) Does the same statement apply to Glasgow. Do you think there would be much local opposition to the consolidation?—I think there would be very much local opposition from certain warehousekeepers.

23,866. On the ground of the convenience of the present system?—From personal interests, of course, there are always men to be found who will never move in the way of progress, but will always keep in the same groove.

23,867. I suppose you would not include the whole of the merchant class in that category?—No. There would be some opposition from the trade. I merely argue on the score of efficiency and economy to the country.

23,868. On the other hand, would you find a certain number of merchants who at the present time in Glasgow favour amalgamation?—Yes, the more intelligent ones.

23,869. Of the larger merchants?—Yes, of the larger merchants. Some of the largest distillers favour it. But in connexion with the proposal that I suggested as to amalgamation——

23,870. I should like to follow out this before you get to your proposal. I want to follow out the question of commercial convenience, and I want to ask you whether you think that the facilities afforded to traders would be in any way diminished in case of concentration?—I should imagine not. There is no change in the proposal of amalgamation that would effect the staff at the warehouses, or the staff at the ship's side; it is merely in the control of the necessary staff.

23,871. To a certain extent there is, because we might hope that the staff would be diminished?—In the event of these warehouses being concentrated.

23,872. That is what I mean, and the question I want to put is, Do you think that the facilities otherwise would be sensibly diminished by this curtailment of the staff?—To this extent, that a person who has rented a small warehouse and has been making a living of it would find it a very grievous thing to be deprived of that for the benefit of the country.

23,873. That applies to the officer himself?—To the warehousekeeper, the person who rents the warehouse. As a matter of Revenue convenience it would be certainly a very great advantage, but the warehousekeeper would object to it.

23,874. Then at the present time do not you consider that the merchants suffer from the difference in the interpretation of the Code by the two departments?—Very materially.

23,875. Very well. Would not they gain by the unification which would follow?—Theoretically, they would. In connexion with that suggestion I threw out as to the amalgamation, the use of the present legal and official terms, such as the "Customs" and "Inland Revenue" should be entirely discontinued from all departmental documents and accounts. Amalgamation would be merely on paper, unless the present designation of "Customs" and "Inland Revenue" were entirely discontinued.

23,876. (*Mr. Cleghorn.*) You mean that there should be one title for both?—One title, and the old titles should be done away with. The a malgamated Revenue Boards should be called the "Board of Revenue," the Commissioners should be called "Commissioners of Revenue," and the officers of the amalgamated Board "Revenue Officers" only; the term "Revenue" to include under sub-heads the present classification. Foreign spirits, wines, tobacco, tea, plain British spirits, beer, licenses, stamps, and taxes. As I have said amalgamation would be merely on paper without that. If you keep to the old names the departments would keep as distinct for generations as they are now.

23,877. (*Mr. Lawson.*) It could not be even on paper without it, I should say?—There are such things as amalgamation on paper.

23,878. (*Mr. Cleghorn.*) I thought you rather gave us to understand a few minutes ago that it would be a good deal more than upon paper?—Yes.

23,879. That it would be a reality in the point of economy?—In the point of economy, yes; and also as regards a fusion of the staff.

23,880. You alluded to the difficulties in working the Code; one can understand that these would arise immediately after the Code was formed; but are these difficulties not disappearing in the course of time?—They are not.

23,881. You get decisions upon one point after another, but when a similar case arises again you do not require to go again to the Board?—Yes, but it seems interminable; although the Code has been in force since 1885, there was no later than yesterday application to the Treasury, I understand, on the points of the Code.

23,882. Have you still as many difficulties in working the Code now as you had when it was first established?—Not quite so many, but still the same friction exists as to the rivalry between the departments.

23,883. (*Mr. Lawson.*) I gather from you that the differences in the interpretation by the Customs and the Inland Revenue multiply year by year?—The trade develops—the trade is very largely developing, and new traders want different things from the old ones—the old traders, perhaps, have been accustomed to the working of the Code, a new man comes in who does not understand the Code so well, but he wants something new under it.

23,884. (*Mr. Cleghorn.*) But a point having been settled by appeal to the Treasury, does that not stand for the future?—Yes, but perhaps there is a slight divergence from that point, and a man goes fresh again to the Treasury on this small point.

23,885. You mean that there are new points cropping up?—Cropping up every now and again.

23,886. Still, upon the whole the difficulties that you had at the first are diminishing?—Perhaps acquaintance with the Code personally lessens the difficulties, and also because they are not so very pressing as they were, although they are still always cropping up.

23,887. (*Mr. Lawson.*) Does a decision by the Treasury ensure absolute uniformity for the future?—On a point which they decide, the two Boards have to observe the decision.

23,888. But if there is the slightest difference of condition, then it does not apply?—The conditions vary so often.

23,889. If there is a small difference of condition it does not apply?—It does not apply, and it has to be brought up afresh.

23,890. (*Mr. Cleghorn.*) When you talk about referring to the Board, is it the Board at Somerset House, or do you communicate through the Comptroller at Edinburgh?—No, we do not communicate through the Comptroller at Edinburgh at all.

23,891. You write direct to Somerset House?—Direct to Somerset House. The Comptroller at Edinburgh is a relic of the old Scotch kingdom that still remains there. There is a similar one at Dublin.

23,892. Is he your superior in any way?—No, not in any shape or form. I may mention that the duties of Comptroller at Edinburgh was, until comparatively recent years, discharged by the solicitor to the Revenue at Edinburgh. I am not acquainted with the reasons of making it a separate office, nor am I aware of any practical necessity at the present time for maintaining such a separate department of the Revenue, either at Edinburgh or Dublin.

23,893. You also mentioned the rivalry between the two departments. Is not it possible that there may be advantages attending that, as well as disadvantages?—To the trade there is. I mentioned to you that the Warehousekeepers' Association voted for the rivalry because it would be for their benefit.

23,894. So that there must be advantages there?—To the trade, yes.

23,895. At that meeting that you referred, to where the amendment was carried, how many were present?—It represented the whole of the Warehousekeepers' Association of Glasgow, the whole of these 25 warehouses of the Customs and 25 warehouses of the Excise Departments.

Mr. D. M. Matheson.

22 Feb. 1889.

23,896. And how many of the merchants and firms would be included in those?—I am not aware of the number of members of the association, but they would be all representative men there.

23,897. So that the meeting would be a very important one?—A very representative one.

23,898. Any resolution they came to would be entitled to very considerable weight?—As regards their own affairs; but as I mentioned to you, one of the warehouse keepers under the Board of Inland Revenue moved for an amalgamation of the departments, with a view of diminishing the friction between the two departments. The other warehousekeeper who moved the amendment to keep the Board separate and distinct as the trade would benefit more from it, was a Customs warehousekeeper; and then on reasoning the matter out and listening to the argument, they all came to the conclusion that they would be better with the two Boards than with one—that the trade would get more benefit.

23,899. That was the conclusion they came to from their own point of view?—Yes, and that might, perhaps, from a Revenue point of view, be taken as the strongest argument for amalgamation.

The witness withdrew.

Mr. James Scott called and examined.

23,900. (*Chairman.*) You are collector of Customs at Glasgow, I believe?—Yes, I am.

Mr. J. Scott.

23,901. Does your district extend very much beyond Glasgow itself?—No, it is a river port; Greenock takes the lower part, and the Firth, and so we are quite a river port.

23,902. Then you do not include in your district Greenock?—No; Greenock is an independent port.

23,903. What is the staff that you have at Glasgow?—The out-door staff I suppose you particularly refer to?

23,904. Just take it generally?—With the clerks, 142 permanent officers.

23,905. How many of those are in warehouses?—In warehouses at the present moment there are 53.

23,906. Am I right in saying that you have about 24 warehouses?—We have 27. The tobacco warehouse is divided into two. Perhaps you could properly say, therefore, 26, because the tobacco warehouse has two stacks, one on each side of the street. Counting them separately they make 27, but if you call the tobacco warehouse one warehouse, then they make 26.

23,907. We are engaged, as I daresay you know, in inquiring whether it is desirable from any point of view to amalgamate the Customs and Inland Revenue Boards and establishments?—Yes.

23,908. What experience have you had elsewhere?—I have been at a great many places. I have served at 11 ports. I was last at Grimsby.

23,909. And you have been some time in the service?—Yes, I have been 40 years.

23,910. How long at Glasgow?—Nearly five years.

23,911. Therefore you have had a large experience of the Customs work?—Yes.

23,912. What is your view with reference to this question?—In my opinion it would not be advisable in the public interest to amalgamate the services looking at it from the public point of view. I could give you a few of my reasons for that.

23,913. We would like to have your reasons, if you please?—The Customs have so much work that is of a character of much interest to the public that it would be inconvenient to the public if they were not kept entirely independent.

23,914. (*Mr. Lawson.*) Would you explain a little further what you mean by "much interest"?—I could give you the particular heads that I refer to. There are so many things, such as quarantine and many other things, connected with the public interest that it would be well to keep the Customs an independent service and not to merge it with any other service, because if it were merged with another department and placed under an administration composed in part of Commissioners who knew little of these special matters, and who had no time for obtaining a knowledge of them, the change would not be to the public interest.

23,915. (*Chairman.*) Then your view is generally that if there is one board to administer Customs and Inland Revenue, it is not likely that the special subject of Customs would get sufficient attention from experienced men?—Yes. In cases of appeal to the board, if the board were composed partly of gentlemen, who could not go over this varied ground, it would be weaker for the public than having a board who thoroughly understood all the points, and who were trained to it for years.

23,916. (*Mr. Lawson.*) What do you mean by "trained to it for years"?—With experience, as our officers.

23,917. You said a board trained to it for years. How does that apply to a board who may be composed of gentlemen who have been introduced into the service late in life?—There will always be one or more members of the Board who have been Commissioners for years, some of them may have been at the Board for many years; and then there are the secretary, solicitor, and surveyors general of the Customs. At present Sir Charles Du Cane is the oldest member.

23,918. He was not a civil servant?—He is the oldest member of the board. By that I mean he has been the longest at the board.

23,919. (*Chairman.*) Perhaps you will kindly go on with what you have got to say, taking it in your own way?—Some of the points that I referred to that come specially under the Customs are the Copyright Acts.

23,920. (*Mr. Lawson.*) What do you have to do in connexion with them?—We act in the interests of the proprietors. We sometimes receive complaints that we are not strict enough in the interests of the proprietors of the copyright.

23,921. (*Mr. Maclure.*) That is by stopping American printed books and Tauchnitz and things of that sort?—Yes. Then there are the quarantine regulations and the public health in connexion with the local authorities.

Mr. J. Scott.
22 Feb. 1889.

23,922. (*Mr. Lawson.*) To what extent do you deal with the public health;—The quarantine. The Customs House appears to be, as it were, a gate, so that we have to see that diseases and other evils are not admitted. Then the landing of foreign animals. There is no body who could be an executive under the Privy Council to prevent the introduction of cattle plague except the Customs.

23,923. (*Chairman.*) Why not?—Because the Customs are on the quays; they are on the spot.

23,924. Why should not somebody else be on the quays besides the Customs?—Well, somebody else may.

23,925. We are now upon the subject of amalgamation. I do not want to cut you short, but we should all admit that whether there was an amalgamated service or not there would have to be special officers to do the work that you now do?—Yes, but here are our officers who are obliged to meet those ships for other purposes. You could not bring strangers down to our business of this kind to meet the ships and do the rummaging, and the passengers' business, and all that, and meet them on the quays.

23,926. (*Mr. Lawson.*) Are you on the quays?—We are on the quays.

23,927. Are you yourself on the quays?—Occasionally; visiting and inspecting.

23,928. Not regularly?—Not regularly.

23,929. Are any of the superior officers?—Yes, the surveyors.

23,930. No one higher?—No.

23,931. (*Chairman.*) I understand you are detailing the special duties which the Customs officers do with a view of showing that special knowledge is required in the Board and in the controlling officers above them?—Yes.

23,932. You have given us these special duties; of course there is rummaging and taking accounts at the ship's side, and statistical tables and light dues, and all the other subjects that you do?—Yes; and then there is the Foreign Enlistment Act.

23,933. You have also a good deal of work connected with shipping and landing and all that?—A great deal of work connected with shipping and with the ship-building yards all along the river for miles. Officers have to inspect when there is a war between two nations to see that there is nothing building for a belligerent Power.

23,934. (*Mr. Lawson.*) Who does that work of inspection; what class of officer?—The examining officers and the surveyors; the examining officers as a rule.

23,935. (*Chairman.*) I do not think we want too much detail upon that?—Then we have to deal with explosives.

23,936. All that work, of which we have got plenty of lists before us, requires a special knowledge and special experience?—Yes.

23,937. And you say that you think it is required to such an extent, that it is desirable that the controlling boards and the administration should be separate?—Yes; if it were not separate our whole service would soon bear the character of a branch to a trunk instead of being a trunk itself, and there might be a stoppage at the joining and an appeal to a head that knew nothing of the subject.

23,938. Will you kindly go on in your own way and give your reasons against the suggested amalgamation?—Yes. A great point, if I understand aright, but perhaps I may not say anything about that, is the convenience of merchants. That is a great point which, I believe, has been advanced.

23,939. Yes, we should like to hear you on that?—I am not aware that the merchants have moved in the matter at all. I have not seen that they have taken any interest in it. They merely look upon it as a departmental question; they do not seem to care about it; they seem too powerful, and think if anything took place that touched them they could take care of themselves; in fact, that they could stop it, so that they do not take much interest in it.

23,940. There are people, of course, who advocate amalgamation?—Yes, I know.

23,941. Let us take it for the present that it is advocated from the point of view of economical administration, that is to say, that the Government would save money by having a reduced staff, and at the same time it would be more efficient because there are various matters of control which would be improved. What have you to say to that?—I should be glad, if you will allow me, to take up the economical part of this. But first, I was going to say, upon the convenience to the merchants, that the Inland Revenue do not meet the merchants; they have nothing to do with merchants, they meet only the traders, some of them persons of very great influence and power, such as distillers and brewers, but still they do not meet the general mercantile body, not the exporters and importers of this country They come only to the Customs House; they do not know anything of the Inland Revenue.

23,942. (*Mr. Lawson.*) Is that in the case of tobacco?—Yes.

23,943. Why, there is the double duty; both Customs and the Inland Revenue have something to do with the levying of the duty on the tobacco; there is a double function, we will put it?—Yes.

23,944. Do not they meet the merchants in that case?—They meet the traders that have goods in bond with them to receive their duties; they do not meet them as importers at all; their dealings are with traders, many of them, I acknowledge, persons of large influence, such as distillers and brewers.

23,945. (*Mr. Cleghorn.*) You draw a distinction between the importer and the trader?—Yes. The general merchants, consignees of foreign goods, the shipowners, carriers, and agents, foreign consuls, wholesale merchants, manufacturers and exporters for statistical purposes, all have to do only with the Customs.

23,946. (*Mr. Lawson.*) What have you to do with foreign consuls?—A great deal.

23,947. In what way I want to know?—The foreign consuls represent the merchants and the agents for their countries. They take up the cause of the merchants that are interested in their countries, and they act constantly.

23,948. I know all that, but what I want to know is when and how do you come in contact with them?—We come in contact with them as representing their countries, and their merchants; we come in contact with them as regards bills of health. I have not had a note of this, but I think I could give a few instances.

23,949. (*Mr. Maclure.*) You would have more experience in that in Grimsby than you have in Glasgow, in coming in contact with foreign consuls?—Yes, many ships under foreign flags come to Grimsby.

23,950. I mean to say in reference to diseased animals, it is a part of quarantine?—Yes. I did not know the points you would take me upon, but I could get up a good many things on that head. For instance, if a sailor is taken smuggling, his consul takes his cause up most keenly. I had to do with the Greek consul in a case of this kind quite recently, and with any other nation it is the same.

23,951. (*Chairman.*) We are now upon the question to which you desired to keep yourself; the convenience of traders or merchants?—What I mean is that this vast business should be confined to a board with a sort of technical knowledge, and not to a board composed partly, probably chiefly, of Commissioners who knew little of it, and had no time to learn it.

23,952. Will you take your next point?—Economy. On this point of economy, I suppose I should confine myself chiefly to the bonded warehouse system; because there is no other point at which the two departments come in contact; they are entirely distinct, as distinct as any other two public bodies could be except at the point of the bonded warehouses.

23,953. A little more than that is said. It is said, for instance, to take Glasgow, it is quite conceivable that the one revenue officer could be the head of the whole revenue collection, both Customs and Inland Revenue?—I had not heard that that had been advanced.

23,954. It is said, moreover, that outside the work that is done under the code, under the warehouse system mainly, the respective duties of Inland Revenue and Customs officers could easily be learned by one or the other?—I can only say that there are many things in the Customs as to which there is in the Inland Revenue nothing in the least similar.

23,955. That is to say that your officers could easily learn Inland Revenue duties, and Inland Revenue officers could easily learn Customs duties in six weeks

or a couple of months, and if the duties were made interchangeable with one head it is likely that that centralisation would enable certain officers to be reduced, and that it would tend generally to a more economical administration. What do you say to that?—The whole of the Custom House officers at Glasgow are fully employed. If licenses were brought in and licenses were paid at the Custom House the licenses would be looked after and collected by a different body of men.

23,956. We are taking Excise now. Confine yourself more to Excise purposes?—With reference to the Excise work at breweries and distilleries, if the Custom House officers had time to travel to distilleries and breweries they could do the duty and assess the traders just as well as the Excise officers, I suppose, but the distances are great.

23,957. Will you take such a case as beer exported on drawback?—Yes, we do a great deal of that.

23,958. There is some difficulty, is there not, at Glasgow, with reference to beer exported to the Isle of Man. We have heard something of that?—There is a great export of beer from Glasgow; in 1887 there were shipped at Glasgow 88,528 barrels.

23,959. Is it the case that there is any sort of unnecessary duplication of work of which the traders or exporters can complain or do complain. Have any complaints been made to you?—I have never heard of any complaint except recently, when there was a complaint, which was thoroughly investigated, and we found the Customs had nothing to do with it, in which the brewer said the samples had been exchanged.

23,960. Who takes the samples?—We take the samples.

23,961. And they are analysed by the Inland Revenue?—British beer exported is analysed by the Inland Revenue; the Customs analyse imported beer. On exportation Customs have to see that it is really beer that goes away, and not water or something else.

23,962. You see everything that is exported, and of course you test everything?—Everything that is imported; we do not test the duty-free goods exported, but we do the imported.

23,963. From the point of view of the revenue, statements have been made to us by more than one witness, I think, that there is a rivalry between the two systems of administration which, however good it may be for the trader, is not particularly good for Her Majesty's revenue. It is not alleged on the side of one department more than the other, but it is alleged that there is a natural temptation to get trade and encourage traders by making things pleasant, is that at all within your experience?—I never heard of it before, and I am not aware of any instances of the kind. I could scarcely conceive such a thing.

23,964. You cannot conceive the possibility of a trader coming to you and saying, "Well, if you do not "make it a little easier for me in this way I shall "go to the warehouses of the other side"?—I never heard of such a thing.

23,965. You never heard of such a thing?—Never. I could not imagine such a thing.

23,966. (*Mr. Maclure.*) Not in connexion with facilities to the trader?—No; it is a matter of very little consequence to us; the heads of departments would put a stop to anything of that kind.

23,967. I did not apply it to the heads of departments, but I mean to say there are conveniences sometimes for an Inland Revenue warehouse over a Customs warehouse, and sometimes for a Customs warehouse over an Inland Revenue warehouse?—There was a very extraordinary thing took place at the time of the Treasury Committee of 1880 which might be worth mentioning.

23,968. (*Chairman.*) By all means give it, please?—At that time the warehouses of Glasgow were divided between the Inland Revenue and the Customs. The Customs were perfectly silent, and six of their warehouses were taken from them and put under the administration of the Inland Revenue, when some of them were considerably nearer to the Custom House than to the Inland Revenue Office; there are now 12 warehouses in Glasgow much nearer to the Custom House than the Inland Revenue Office, but the merchants have to repair to the Inland Revenue Office to do all their business.

23,969. It is evident that there is a rivalry between you and the Inland Revenue at Glasgow, at all events?—I do not know that it amounts to that. The Inland Revenue have been at Glasgow a little aggressive in the matter of warehouses. That is all I know of and on no other point.

23,970. There is a little difference of opinion, at all events, between you as to who shall be the proprietors of warehouses at Glasgow?—No; I was speaking on that subject generally, not as to Glasgow. It does not apply specially to Glasgow.

23,971. I am quite aware that it applies universally?—I will give you one or two instances.

23,972. Thank you. I do not think we require instances, because we have got instances with reference to London and Dublin and other places?—I might bring you one or two instances that, perhaps, have not been before you.

23,973. You do not agree with the statement that has been made to us that the desire to attract and keep traders satisfied with a particular department has been some injury to the Revenue?—I think it has been no injury to the Revenue. I could not imagine such a thing. I would never dream of such a thing in the Custom House, at any rate.

23,974. Have any difficulties arisen within your knowledge with reference to the interpretation of the Code?—Yes.

23,975. From the fact that the Code is administered by two departments?—The Code is very much an Inland Revenue book. We think we could simplify it very much and reduce the expenditure of the country very greatly by simplifying the Code and its accounts and its returns and bookkeeping.

23,976. There are difficulties which arise, are there not, in the interpretation of the Code by merchants and traders who have to export and import goods, and it is said there are much greater difficulties than need be, because two different boards interpret it; is there any friction in that direction?—No, I think not. We find few cases go to the Board of Customs; the officer there appeals to the surveyor, the surveyor appeals to the collector; we settle the matter amicably. There is very seldom an appeal to the Board. I only know of one appeal to the Treasury; it is now before the Treasury. It is a point on which I think the two Boards are quite agreed; but it has been a long time discussed.

23,977. (*Mr. Cleghorn.*) Have you only had occasion to appeal once to the Treasury to interpret this Code since it came into existence?—I think only once has it gone to the Treasury so far as refers to the Customs at Glasgow, and that case is now before the Treasury. It is a small point. I might detail it to you, but it would be tedious. With regard to warehouses at seaports I have noticed with reference to the question of economy, that it is a great advantage to have the warehouses in connexion with the Custom House on account of the Customs' touch with the ships. There are two or three points where that has been of great advantage, both for exports and for imports.

23,978. (*Chairman.*) But is it not the case now that, as a rule, the warehouses that are within reasonable distance of the ships are in the charge of the Customs?—Yes, that is the rule. Those that are near the water side, with very few exceptions, belong to the Customs, and those that are up town belong to the Excise. Where there is a large export of whisky, and when those large exportations of whisky are sent to the ships, the Excise have to send us accounts of them. Elaborate accounts are drawn up; they are called "despatches." If the goods came from a Customs warehouse, nothing would be required of that kind, because the ship's clearance would cover the transaction. From our warehouses we have no such document.

23,979. (*Mr. Lawson.*) Therefore there is a certain amount of labour which springs from the fact that there are a double set of warehouses and two sets of officers?—From the fact that the Excise have seaport warehouses.

23,980. Do you think it would be better in your hands?—It would avoid this labour.

23,981. In fact, you are in favour of a consolidation so far?—So far as the warehouses only. With regard to the imports the very same thing applies, or rather more as regards imports. We have several wine trading ships which arrive and discharge cargoes of wine and

Mr. J. Scott.

22 Feb. 1889.

brandy, and if the wine and brandy is removed into Excise warehouses, we have to draw out and give elaborate despatches to the Excise, which we do not require when the goods go to our own warehouses, because we have the landing officer's account on the quay.

23,982. (*Chairman.*) If your landing officer on the quay takes a sufficient account of the wines or brandies that are landed from the ship to satisfy that requirement of the Revenue, why should not that be made sufficiently legal to pass those goods into an Inland Revenue warehouse?—We are bound, I take it, to keep in our hands the original documents.

23,983. I should say you are both custodians of the public revenue and aiming at the same object?—Yes.

23,984. If wine and brandy are landed from a ship and are taken into an Inland Revenue warehouse as you say, why should not the same document that would permit those goods to go under bond into one warehouse be available whether you were in charge of warehouses or the Inland Revenue?—It is only certain consignments that come to the Inland Revenue, and we would be obliged to keep our accounts. Legal difficulties arise; our officers are sometimes called to the courts to produce our books to show whether certain goods were damaged or not, and we take it, therefore, that we should be obliged to keep our accounts ourselves. If we did not do what we do now, we should have to transcribe those accounts and send them on to the Inland Revenue.

23,985. You would have to transcribe the same thing, you would have to keep the same documents in, I will not call it the long room, but some such office of yours in Glasgow?—Yes.

23,986. Then if any portion of those goods is transmitted unto a warehouse, supposing it is in your own charge in Glasgow, you would send, would you not, to your officer there a copy of the account of those goods that were so to be transferred?—We should send to the officer at the warehouse the original account, the account of the officer on the quay, his book would go forward.

23,987. Then why should not you do the same thing whether it went to the Inland Revenue or to yourselves?—We should have to keep two books, one of them for the Inland Revenue and one for the Customs. And then there is the difficulty that the agent at the time he is putting his goods on the quay really does not know at first which they are to come to.

23,988. Then does your argument come to this, that the two warehouses in a particular district should be under one Government department?—If they are anywhere near a seaport town where the officers of the Customs are in touch with the ships.

23,989. And you would prefer that the Customs should have charge of all the warehouses in Glasgow without exception?—If it were so, it would be a public advantage; and there would be a large saving in money.

23,989*a*. (*Mr. Lawson.*) And convenience to trade?—A convenience to trade, I think.

23,990. (*Mr. Maclure.*) Take, not a great port like Glasgow, but where you were before, Grimsby. I believe in that place the whole of the warehouses are contiguous to the landing stages of the ships?—Yes, very close, and belonging to one company.

23,991. And belonging to the Manchester, Sheffield, and Lincolnshire Railway Company?—Yes.

23,992. Will you tell me whether there can be any fricton or any difficulty between the Inland Revenue and the Customs there because the whole of the property is under one ownership as you say, and the buildings are contiguous, and whether there would not be a greater economy in Grimsby if the two services were united?—I take it that the Inland Revenue at Grimsby is not a very large body. You would be creating a new office there if they came down to the docks.

23,993. Presuming the Customs should absorb the Inland Revenue, not the Inland Revenue absorb the Customs, would the Customs officers object to take the whole of that into their own hands and would they be able to do all that was required of the Inland Revenue. You have said that in quarantine and in certain other things the Customs do a certain amount of work?—Yes.

23,994. Presuming everything was amalgamated where would the friction be in a place like Grimsby or Hull?—At Grimsby there are a few breweries, and places to inspect and take the stock of the growing traders and there would be the licenses to take and the traders to look after. The same body of men could do that if they were instructed, doubtless, but I am speaking of the question of amalgamation only as far as the bonded warehouses were concerned.

23,995. (*Mr. Lawson.*) You are not in favour of keeping up the double establishment in such a place as Great Grimsby where one of the two departments has but a very small staff?—I do not know the staff of Inland Revenue officers there, but I think their work at that port could be taken over by the Customs.

23,996. Would you think that there is a distinct advantage to be gained in such a place from concentration?—Yes, and the concentration should be, I think, where the ships come in.

23,997. (*Mr. Maclure.*) Hull being practically the same, the Hull Dock Company, and the Hull and Barnsley having their warehouses there, would you apply the same thing to that town, would you say the two departments could be concentrated and united into one?—Possibly; I do not know the extent of the Inland Revenue work at Hull. The warehouses there are all under the Customs. There is the question of economy too, with regard to the experience of Customs officers. When goods are warehoused, that is after they are assessed for duty, the Customs officer has had them before, he has gauged the casks and he has weighed the goods and tared the fruit and all that before, so that when they come to the warehouse it is merely locking the door upon them. The Customs officer becomes extremely expert in the management of all this foreign merchandise, and I think on that ground alone you would work it with a smaller number of officers than the Inland Revenue could.

23,998. Having said that, as regards Hull and Grimsby there would be no practical difficulty, do you think, that there would be any material difference as regards Liverpool and Glasgow, in bringing about an amalgamation of the two, as I say, presuming the Customs was going to absorb the Inland Revenue, and not the Inland Revenue absorb the Customs?—If the merchants of the country, and the carriers and the consuls and those I have mentioned had access to the Board as they have now, and if there was not a very large element infused into that Board of Commissioners who did not understand all these matters, then I do not think the merchants would feel it.

23,999. And do you think that they might be amalgamated under those circumstances?—I never took up the question of amalgamation. I never thought very much about it, further than the bonded warehouses because the services and the duties seem so unlike in many of the duties of the Excise and the Customs excepting on the question of bonded warehouses.

24,000. (*Chairman.*) Obviously in bonded warehouses there can be no difficulty in putting them all under some one board?—No, the bonded warehouses might very well be put under one board, and I was arguing that in the case of those near the quays it would be better that they should be put under the Customs, but I was arguing it from a public point of view, not from any personal interest in the matter.

24,001. Do you think that the collector of Customs at Glasgow could undertake to be the one officer of Revenue for Glasgow?—I do not think so, he could do no more than he does now, except take money. He could take more money; he could take the money from all these bonded warehouses.

24,002. Have you many questions of difficulty to settle on the spot?—Yes, a great many, incessantly.

24,003. And much correspondence with the Board in London?—A great deal of correspondence, and the Custom House from morning to night is invaded by merchants, seamen, and masters of ships asking for advice upon points. The registry of shipping alone is a most important matter in our department.

24,004. Is all the work that you have, work that necessarily must be done by a head collector, or could you devolve some of it upon some one not so high in the service as yourself?—They would not be pleased if I attempted it. We do try that very often, but the public are not satisfied and are not pleased, but will wait outside my office for half an hour to see me.

24,005. The merchants want to see the collector of the place?—Yes, and each merchant of course thinks his

business of very great importance, and he will wait to see the collector himself, and I do not get this large correspondence I spoke of done till after the Custom House door is closed.

24,006. (*Mr. Lawson.*) May I ask whether you have large personal correspondence with the Inland Revenue officer at Glasgow?—No, the correspondence is little, not above a dozen letters a year. We confer with them upon seizures. Upon the adulteration of tobacco and the seizing of adulterated tobacco, I sometimes have a conference with the collector of Inland Revenue.

24,007. (*Chairman.*) Do you think, outside the warehousing system, but still keeping to the point of view of the public and the collection of the Revenue, that there is a little friction, to put it mildly, between the two Boards which might be got over in some way, and which it would be desirable to get over in some way?—I do not think there is any friction as regards the locality where I live, but you are speaking of the service, I presume?

24,008. I am speaking of Glasgow. Does it occur to you that the Inland Revenue might consult you more frequently than they do?—I do not think there are a great many points where they would have to do that. There are not a great many points where they touch us.

24,009. Then it is not within your experience that the Revenue suffers, or the public interests suffer, from a want of co-operation between yourself and the Inland Revenue officers at Glasgow?—I do not entertain that for a moment. I never heard of that before, and I do not give the slightest importance to it. I cannot conceive such a thing possible from a Customs point of view. I know that the Inland Revenue at the time that there was a committee in 1880 were a little aggresive in taking over those warehouses that were nearer to the Customs than to their offices. They were a little aggressive on that point, but there is no friction that I know of. We do not want to encourage traders to come to us. I think the great bulk of the traders like to come to us; they prefer to come to us.

24,010. You would probably be surprised to hear that the Inland Revenue take the opposite view, or rather, they say the great bulk of the traders prefer to go to them, but let us leave that out of the question. It is said that there are many places in the country around the coast where there exist collectors or officers fulfilling the duties of collectors at small places who might very profitably do some Inland Revenue work, or *vice versâ*; in fact that there were some places where you require an officer of standing and position who might be competent to control and manage subordinates for the collection of the Revenue generally, not only Customs but Inland Revenue, what do you think of that?—I think there are some still left, but of late years they have been very much reduced.

24,011. What do you mean by reduced; has there been an amalgamation of work. Are there many moderate ports and places round the coast where the Customs officers do work for the Inland Revenue to an increasing degree, is that the practice at all?—No, I think not.

24,012. If it is not the practice, could it be in your opinion?—I think it could be, but of late years there has been a very great reduction in that kind of office that you mean. A lower class of officer has been placed there and the reductions have been very great. The Inland Revenue have taken the Customs bonded warehouses at those small ports. The Board of Trade work, which was considered at one time to be very important and requiring an officer of a higher status than they have now discovered is necessary, has caused these places to be reduced. They are very much reduced, they have got to a very narrow compass, but still I think that a good many of the things in their immediate localities they could take, but if that question had been taken up in the year 1880, before these reductions, when there were collectors at a great many more places than there are now, they might have been made very useful.

24,013. Do you think anything could be done in that direction now?—Yes, I think a good deal could be done now.

24,014. One part of the argument of those who desire amalgamation, and I am not arguing the question or expressing a view one way or the other now myself, is that if there was an amalgamation, officers of certain rank in the service would be available to take the places and to perform the duties which are now done by collectors of two small towns not very far apart; and we have been told, for instance, that this is the case with respect to Folkestone and Canterbury, that the Inland Revenue man could come from Canterbury to Folkestone, and with practice he could be the collector at Folkestone?—Owing to Folkestone being a packet port with two passenger steamers a day, and large quantities of passengers and goods being landed there, questions requiring to be promptly dealt with frequently occur, and in my opinion the head officer if at Canterbury would be too far away.

24,015. You said you did not think it could be done at Glasgow, but do you think that at Folkestone, or ports of that size, one officer of revenue could do all the controlling and necessary work, and responsible work for collecting the revenue of a given district round there, whether it is Customs or Excise?—Yes, but I must say that the Custom House establishment at many of the smaller ports has been reduced to a minimum.

24,016. I am not referring either to one or the other existing offices, the point I put to you now, is whether the existence of the two establishments is necessary on the same place?—There is a good deal of the work that might be done by one officer.

24,017. (*Mr. Lawson.*) Then you not consider the officers' time at present is fully taken up with their statutory duties?—There have been so many reductions lately, that I think you will scarcely get an officer who has not quite sufficient to do. If the question had been taken up in 1880, before the changes, then the Customs could have taken up a good deal of the work referred to.

24,018. (*Chairman.*) I understand you to say there is still room for reduction?—In my opinion there is very little room for further reduction.

24,019. Then I understand that you do not think that there is anything so intrinsically different in the work of the two departments as to make it impossible for one head to superintend the two?—That they could be educated the one to the other I do not doubt, but still there are a great many points on which there is absolutely no similarity.

24,020. Let me go back again to Glasgow and take your own work. I suppose you necessarily cannot know very much of the work of the collector of Inland Revenue at Glasgow, but so far as you do know what he does, if you leave out of the question the amount of work and think only of the character of it, should you find any difficulty in taking over the whole of the revenue work of Glasgow to-morrow, or say in two or three months. I do not mean yourself personally, but a man in the position of collector of Customs at Glasgow?—I am obliged to say that my office is such a very heavy one that I could not take over anything more.

24,021. (*Mr. Cleghorn.*) You could not take over anything more?—Except the collection of money.

24,022. (*Chairman.*) Excuse me, I want you to confine yourself to my point. It is not the question of the amount of work, but the nature of it. Supposing the amount of trade done by your merchants was diminished unhappily by one half or more, so that half of your work was taken away from you so far as regards the amount, do you think that any person in the position of collector of Customs at Glasgow could take over the Inland Revenue work so far as the kind of work was concerned. Not the amount?—Owing to the varied nature of the duties of officers of Customs, and the little resemblance in most of them to the duties of Excise officers, it would, in my opinion, take the latter a long time to learn the Customs work, and those of them who are advanced in years would probably never be able to acquire a knowledge of that work sufficient to be of use in practise.

24,023. Have you any other point that you would like to put before us?—There is the question I referred to of the convenience of merchants. My impression is that merchants would not like amalgamation, but I think you said they rather wished it.

24,024. I do not know that I have said that?—My experience would be the other way. I think they have preferred the Customs. As regards the merchants

Mr. J. Scott. 22 Feb. 1889.

they do not come into contact with the Inland Revenue. They know only the Customs. I think the amalgamation would not be at all popular from their point of view, because of the danger that the Customs might merge into an establishment that knew nothing about their work.

24,025. What is the amount of revenue that you collect?—Over 1,000,000*l.*, taking in the duties which we collect for the Excise. Our own Customs revenue does not amount to 1,000,000*l.* We collect 208,656*l.* of Inland Revenue money, and the grand total in 1888 was 1,074,872*l.*, which was an increase of 60,000*l.*

The witness withdrew.

Adjourned till Wednesday next at 12 o'clock.

SEVENTIETH DAY.

7, Whitehall Place, S.W., Wednesday, February 27, 1889.

PRESENT:

SIR MATTHEW WHITE RIDLEY, BART., M.P., IN THE CHAIR.

MR. A. S. HARVEY.
MR. R. W. HANBURY, M.P.
MR. H. L. W. LAWSON, M.P.
MR. H. WALPOLE, C.B., *Secretary.*

Mr. ROBERT USHER called and examined.

Mr. R. Usher. 27 Feb. 1889.

24,026. (*Chairman.*) I think you represent the Scottish Malt Distillers Central Association?—Yes.

24,027. That is to say, you represent traders in all parts of Scotland who belong to the association?—Yes.

24,028. We have received a letter which was handed on to us from the Chancellor of the Exchequer last October, saying that your association desired to express their views about the question of amalgamation of the Customs and Inland Revenue; and we are glad, therefore, that you have been deputed by them to come and give their views to us. I do not know whether you have prepared a memorandum?—I have written out a few things for my own guidance.

24,029. This letter states that there is "inconvenience "as well as trouble and delay occasioned to the trade "by the Excise and Customs Departments being carried "on as at present, not only in different offices, but "under different regulations and officers"; and the letter suggests "that if the departments were combined "great advantage would ensue both to the Government "and to the trade." Perhaps I had better ask you if you would state what inconveniences and delays you suffer from?—I will give you some of these instances; of course they are merely instances that have turned up in the ordinary way of business. If whiskey is sent away, we will say, from Edinburgh to Glasgow, the Excise have to send a despatch to the Glasgow Customs about that whiskey.

24,030. You mean for export?—For export, yes. If by any chance that despatch is not delivered to the Customs in Glasgow, they can refuse to allow shipment until the despatch arrives from the Excise in Edinburgh. We have no control over that document whatever, and yet our goods may miss their ship and miss their market on account of the Excise having made a mistake, or the Customs having made a mistake, or the Post Office having made a mistake.

24,031. Supposing that there was one department, how would you get over the difficulty of a despatch failing to arrive in due course of post, because that is what it is, is it not?—The collector at present has power to allow us to ship on what is called the permit, the document that goes with the goods.

24,032. The collector of Customs of Glasgow?—Yes; but he may refuse to allow us to ship on the permit. As a matter of fact recently we had a good many cases of the despatch from no fault of ours, of course, going amissing, and the collector wrote to us to say that if the matter were not put right he would refuse to allow us to ship the goods on the permit in future. Now that is an extremely hard case for us. The difficulty with the two departments is, that you cannot put your finger on anybody. If you ask the Excise to investigate the matter, they are prepared to show you in black and white that the despatch was sent off. If you ask the Customs, the Customs are prepared to say it was not received; and they both agree in blaming the Post Office; and yet for a matter which we can do nothing to prevent, we cannot even investigate it, we must miss our ship, and perhaps miss our market.

24,033. Suppose that you, having goods to send from Edinburgh to Glasgow for export, were handed the permit from the Excise at Edinburgh, do you want that permit to accompany the goods, so that the Customs could take that permit as an authority?—The question is not about the permit. The permit goes with the goods.

24,034. Then, I understand, that notwithstanding the fact that the Customs officer at Glasgow has the permit, something more is necessary?—Yes. What I call the despatch, which is sent by post.

24,035. Can you explain what the object of that sort of double permit is?—This is the official document that they require to allow the agent in Glasgow to pass papers for the shipment.

24,036. (*Mr. Harvey.*) Would not they require that in the same way if there were one department only?—Yes, they would; but then what I say is that you would be able to find out who was to blame. At present you cannot do that.

24,037. (*Chairman.*) Does not it occur to you that the despatch might possibly go with the permit. Do you think that it is necessary to have two, and that the consignor of the goods who sends the goods, who, I suppose, is responsible for the arrival of his own goods, should be responsible also, as it is for his own convenience, for the delivery of the permit and of the despatch to the officer at Glasgow?—That, perhaps, might be so; but what I wished to show was that here was a difficulty that is occurring, and we cannot, as at present arranged, find out who is to blame; and we cannot get redress.

24,038. (*Mr. Hanbury.*) But you say that both departments lay the blame on the Post Office?—Yes, they agree to do that. It is the only way out of the difficulty.

24,039. Could not they do that even if they were amalgamated?—No; because we would be able to write to one Board, and it could be looked into.

24,040. (*Mr. Harvey.*) That is the point I want to emphasize. I want to see how your complaint has any relevancy on the question of amalgamation. Why do you think you would be better off in this particular matter, supposing there were one amalgamated Service instead of two?—Because they would not be able to shift responsibility. You see both the officers in Glasgow and in Edinburgh would be amenable to one head; and if there was anything wrong as between Edinburgh and Glasgow the heads of the department in London

would have to see that it was put right; and they would.

24,041. (*Chairman.*) Have you had occasion to write to the Board in London about the inconveniences and delays so caused when you sent whiskey for export?—We have written to the collectors in Edinburgh and Glasgow on the subject. I am not prepared to say at present whether we have written to London.

24,042. You have not carried it up to the Board?—I cannot say that.

24,043. (*Mr. Hanbury.*) But has this happened often?—It has not happened so often recently.

24,044. How many cases have you had in the past year?—Well, it was of such frequency at one time that the collector pointed out that there were three cases in one week.

24,045. Confine yourself to the last year, for instance, how many have you had?—Really I cannot answer that.

24,046. Have there been any in 1888?—I think so.

24,047. You are not able to quote any. You cannot say whether there have been half a dozen, or 20, or 50?—No; but I say that at the time the collector wrote there were three in one week.

24,048. When was that?—I think about the beginning of last year; I can easily send you his letter.

24,049. (*Mr. Harvey.*) But you never felt the grievance so much that you thought of representing it to the Board itself?—Which Board should we represent it to?

24,050. Both, or the Treasury, if you like. You did not, as a matter of fact, appeal to head-quarters?—No; because our goods were never actually stopped; but they have the power to stop them.

24,051. (*Chairman.*) I understand this letter rather to state, and I thought I understood you to say so yourself, that in many cases the delay in the shipment is so great that shipment by the vessel intended may be lost altogether?—It may be.

24,052. Of course that would be a very serious thing for the trade?—It may be, if, for instance, after the collector's letter the next shipment of goods that we sent to Glasgow had come without the despatch, the collector would have refused to allow these goods to go on board.

24,053. (*Mr. Hanbury.*) Yes; but has that ever happened?—Not in my experience. There are some other matters that I might mention. The other day we sent 500 cases and 50 casks of whiskey to Glasgow for shipment.

24,054. (*Chairman.*) You are illustrating the same point now, are you not?—The same thing. The day after we had sent them off we received a telegram from our agents in London to stop the goods. They were not to go to the person to whom it was originally intended they should go. The day after that we had 2,000 cases going to the same ship for the same port, but for a different customer, and, consequently, they were differently marked. We thought it was a very simple matter to utilize the 500 cases to help to make up the 2,000; but the Customs said that they could not allow us to change the marks of the 500 cases that were in Glasgow unless the Excise in Edinburgh sent a fresh despatch with the new mark upon it. The Excise in Edinburgh said the matter was through their books; they could not change their despatch; but they thought the Customs might have allowed them to go as they were. The consequence of that was that we had to send the 2,000 cases from Edinburgh all the way, and put the 500 cases into a warehouse in Glasgow, where they are lying yet. We have such a number of these small instances; taken by themselves I do not think they are very much; but if you have a number of things like that becomes a matter of importance. For instance, there is a case that I myself have written no less than 18 times on within the last three months. It is as follows:—Eight cases of whiskey were sent off from Edinburgh to St. Katharine Dock in London. By some mistake of the agent in London—the agent of the man to whom we had sold the cases—the address was altered, and the cases were forwarded to Queenborough. We did not know anything about this, but we received a telegram from the Surveyor of Customs at Queenborough asking us to send a fresh despatch to that port. We asked our Excise officers to do that, and they sent what they called a duplicate to Queenborough; the original despatch had come to London of course. We thought that the matter was in order, and that the cases were all shipped; but a month afterwards we received notice from the Excise, in Edinburgh, calling upon us to pay duty upon the cases which had not been delivered to their ship.

24,055. In London?—In London. We said that there must be some mistake; that the cases had been shipped so far as we knew, from Queenborough, but that the Customs there had omitted to advise the collector in London; and we wrote to our agents to ask if this was the case. Our agents replied that the goods were still at Queenborough, and that the surveyor there had refused to allow them to be shipped unless a fresh despatch was sent from Edinburgh. We replied that a fresh despatch had been sent from Edinburgh, and that there was nothing more to be done, we thought. It is a very long story. As I say, we have written 18 times. We have written to the collector of Customs in London; to the surveyor at Queenborough; to the collector of Excise in Edinburgh; and we have had 14 or 15 communications with our agents in London; and the cases are still lying at Queenborough, and we cannot get hold of them; and we have had to pay duty in Edinburgh to the Excise on account of the cases not having been produced at the Customs.

24,056. (*Mr. Hanbury.*) Did not they receive the duplicate at Queenborough?—I do not know. We cannot find out.

24,057. How would you be able to find out any better if the Excise and Customs were amalgamated? I mean to say there might be carelessness, even under amalgamation, I take it?—Yes; but then when you do have a difficulty you can go to one head. For instance, here is a case, I think, that will elucidate that. We imported a cask of rum once, and it was gauged by the Customs upon landing, and it was gauged to contain two gallons too much. We never found this out until after paying duty upon the rum. We sent the empty cask to our distillery to be filled with whiskey. The Excise have a very correct method of gauging. They simply weigh the cask first, and weigh it after it is filled, and they can tell you exactly what is in the cask. Well, they found that the cask would not contain within two gallons of what it originally had been said to contain, and that therefore we had paid duty on too much rum. As we had originally paid the duty to the Excise we wrote to the Board of Excise to remit it, to give us it back. The Board of Excise said, No; the matter is in the hands of the Customs; and so we had to write to the Customs. We hammered about that for four months, and we got back the duty in the end, but this sort of oscillation you know was going on.

24,058. (*Chairman.*) You admit, of course, that the mistake in gauging, which is much more difficult in the case of goods on import, might have occurred whether it was the Customs or the Excise that had charge of it?—Yes, certainly.

24,059. But that mistake occurred, and you give this as an instance of the circumlocution arising from the fact of there having been two offices, two heads?—Yes. Then I have another case, of somewhat the same character, Messrs. Bulloch, Lade, and Company in Glasgow, were under the Excise, and when the increase of duty was put upon wine last year they found that the Excise were charging the increase of duty upon wine which had been imported before the 10th April, cheap wine under 20*s.*; whereas the Customs were allowing that wine to be paid duty upon at the old figure without the sur-tax. They wrote to the Excise Board upon the subject and pointed it out to them, but they had to continue paying this extra duty for a considerable time, and it took them six months correspondence with the Board of Excise to get this duty back which had been wrongly charged. The explanation of that is that the two Boards have to consult each other, and the Customs originally had a note of the value of the wine, and it was very difficult to get the necessary proof from them. At present there is great difficulty in Edinburgh in getting what is called bonding accommodation warehouses. Edinburgh is under the Excise, but Leith is under the Customs. Of course there are Excise warehouses in Leith too, but principally Leith is under the Customs, and Edinburgh is under the Excise. We cannot get any more bonding accommodation in Edinburgh, which is some 2½ miles distant from Leith, because there is sufficient Customs bonding accommodation in Leith, do you see. The Customs say, "We "are not going to give up any of the bonds in Leith." There is room for 3,000 casks too much in Leith at present, and there is not room for what we want to

Mr. R. Usher.
27 Feb. 1889.

store in Edinburgh; but because there is sufficient Customs room in Leith they refuse to allow the Excise (because they have both to be consulted in this matter) to grant any more bonding accommodation in Edinburgh.

24,060. But supposing the Excise or Customs, either one or the other, had the management and the control of all the bonded warehouses, both in Edinburgh and in Leith, might not the same difficulty arise, that they would be unwilling that they should have some of their bonded warehouses at Leith standing empty?—I think the probability in that case would be, that the Excise would close some of them in Leith. At present, of course, the Customs do not like to curtail their importance in Leith. That is my opinion.

24,061. Then any regulations which would obviate that difficulty in the way of compelling the proper distribution of bonded warehouses would be sufficient, would not they?—Yes.

24,062. It would not be necessary to have one Board for that, would it?—No; it is not absolutely necessary.

24,063. Probably you would say that a great many difficulties which arose from the different management of bonded warehouses in former years have been got rid of by the process of amalgamation of the bonded warehouses, that has been going on?—Yes, I think so.

24,064. (*Mr. Hanbury.*) How long have the Customs warehouses at Leith been too large for the work of the Customs?—That I cannot say.

24,065. Do you mean to say that it is only a temporary thing, or has it been going on for some time?—No; it is not a temporary thing at all.

24,066. How long have the bonded warehouses in Edinburgh been too small for the work of the Inland Revenue?—I should think for the last three years. Of course I do not know intimately all the warehouses in Edinburgh.

24,067. (*Mr. Harvey.*) Has any complaint ever been made on that score to head-quarters?—There have been attempts made to get larger bonding accommodation in Edinburgh, new bonds. new warehouses.

24,068. What form has that agitation taken?—A man makes an application to the Board of Inland Revenue, in London, to allow him to put whiskies in a certain warehouse; and the Board just writes back to say that it is sorry it cannot allow it.

24,069. Then that man has not written up to them and said, "Why cannot I get this spare room at Leith?" There is no action of that sort taken?—No, it has never been pointed out in that way. The Board does not probably give its reason.

24,070. (*Mr. Hanbury.*) But would Leith be always convenient for the Edinburgh people?—It just means that when you buy whiskey you have to cart it five miles more than you would otherwise need to.

24,071. (*Chairman.*) Your letter refers also to the case of lost whiskey in transit?—Yes; I believe that the regulation on that subject is, that whenever whiskey has been found to have been lost in transit, notice should be sent immediately to the consignor, to the man who has sent off the whiskey. The Excise do give this notice immediately, the Customs do not; that is a discrepancy.

24,072. The letter states "the Customs still decline "to comply with this reasonable request;" that is to say, of informing the consignor of the loss of his goods in transit; "and the result is, that at the end "of months, it may be, the consignor may find that "he has been debited with the duty on deficiencies in "transit, for which, had he been timeously informed, "he might have claimed a relief from the carrier"?—Yes.

24,073. (*Mr. Hanbury.*) What do you mean by "deficiencies," that a whole cask has gone; or only that a portion of a cask has gone?—A portion of the cask.

24,074. Take, for instance, the rum in casks for the Navy, we know that that disappears from the cask after a few months, and we are told that it is the nature of the rum in casks in the Navy to disappear to a certain extent. I want to know whether that accounts for the disappearance of the whiskey?—It has either been stolen on the railway, or, owing to bad treatment, it has run out. That is all.

24,075. (*Mr. Harvey.*) Leaking?—Leaking; but then the difficulty is that if we do not get prompt notice we cannot go and claim this six months after from the railway company, and complain that the cask sent by them was found to be leaking.

24,076. (*Chairman.*) The Customs at present do not give as quick notice of that as the Excise do?—They do not.

24,077. If the regulations were made identical in the two cases, of course that would get over that difficulty so far as it goes?—Yes. Then we think that the Excise arrangements are more simple than the Customs.

24,078. Are you referring now to arrangements in the warehouses?—Yes, in warehouses and in working.

24,079. Would you give us a concrete instance to explain how it is?—Yes; if one wishes to pay duty upon a cask in a Customs warehouse, you have to go down to the Custom House with your papers and get them certified and passed there. Then you have to go and get a locker to come and open the warehouse; then you have to go and get a gauger to come and gauge your cask, and after that is done, you have to take your papers back to the Custom House to pay duty. In the Excise, you simply pay duty at the warehouse; instead of all this running about, you pay duty at the warehouse, and, of course, it is a very great saving of time.

24,080. Are you taking the case of goods imported?—Yes, but it does not matter.

24,081. In both cases goods imported?—Yes.

24,082. But in the one case taken to a Customs bonded warehouse, and in the other to an Excise bonded warehouse?—Yes.

24,083. Supposing it to be identically the same class of goods?—Yes.

24,084. In the case of the Customs, I understand you to say it is very inconvenient not being able to pay the duty in the warehouse, whereas in the Excise warehouse you can pay the Custom duty in the Excise warehouse itself?—You can pay the Customs duty.

24,085. It is a Customs duty I am talking of, goods imported. Are they ever taken to an Excise warehouse?—Yes; but the duty is paid to the Excise.

24,086. It is paid to the Excise on behalf of the Customs, is it not?—I do not know.

24,087. I thought that I had made it clear that I was asking you to direct your attention to a consignment of foreign goods consigned to you upon which you have to pay Customs duty, wherever it is paid. Could that consignment go straight into an Inland Revenue bonded warehouse for your convenience?—Yes.

24,088. Then when it is there you have to pay Customs duty upon it in the same way, or to give the bond for the duty in the same way as you would if it went into a Customs warehouse?—Yes.

24,089. But I understand the difference is, that in the case of the Customs, you have to go to the Customs to pay it; whereas, in the case of the Excise, you can pay it in the warehouse itself?—The difference being that the books of the Customs are kept at the Custom House, and the books of the Excise are kept at the warehouse.

24,090. At each warehouse?—Yes.

24,091. (*Mr. Harvey.*) Who is the official at the Excise warehouse to whom you actually pay the money?—The officer in charge.

24,092. Is there not an officer in charge always capable of receiving the money at the Customs warehouse?—They do not do it, because the officers at the Customs warehouse do not keep the Customs books. They are all kept at the Custom House.

24,093. (*Mr. Hanbury.*) The inconvenience that you mention is a detail of practice which might be remedied by the Customs, whether there is an amalgamation or whether there is not?—Yes, of course, everything could be put right, I dare say; but as a matter of fact that is how it stands; and it just means a terrible waste of time.

24,094. (*Chairman.*) Is that of frequent occurrence in your trade and the transactions of those whom you represent?—Yes; in Leith, where I served my apprenticeship, it used to take me generally about a day to do anything.

24,095. Has it been suggested to the Customs that there might be some simple way of getting over this difficulty, and to prevent all this going to and fro?—I do not know.

24,096. You have not made representations?—No, we have not. Our firm is under the Excise. We had a Customs warehouse at one time, but we do not have it now.

24,097. (*Mr. Hanbury.*) But still you say the practice is one of some standing; it has been going on for some time, and has caused inconvenience?—It is always the way.

24,098. (*Mr. Harvey.*) But you say there is a widespread feeling about the inconvenience?—I will say that everyone I have spoken to on the subject says that he would prefer being under the Excise to being under the Customs.

24,099. (*Mr. Hanbury.*) That is to say he prefers the system of the Excise to the system of the Customs?—Yes.

24,100. (*Chairman.*) Have you experienced any difficulties from the different modes of interpreting the Code by the officers of the respective Boards?—We had a case in Liverpool the other day which caused us a great deal of trouble. We sent old whiskey to Liverpool, for bottling in bond there, in ships stores by our customers. Towards the end of November we sent a good deal to various customers. Those customers used a warehouse called Yates' bond. We were very much surprised, after the whiskey had been away from our keeping for some time, to receive letters from those people who used Yates' bond to say that the Surveyor of Customs there would not allow them to put a label on the bottle stating that the whiskey was old, unless it was proved to his satisfaction that the whiskey was three years' old. The whiskey was matured whiskey, without any doubt. We thought that this was a step that ought not to be allowed. We thought that he ought not to be allowed to take this upon himself without showing his reason for it, and we promptly wrote back to our customers to ask the Surveyor to give them the regular tion under which he was acting. The Surveyor did not say anything, except that he would not allow them to go on with their work, and our customers wrote in a great state of excitement to us to give the required evidence. We said that we would not, and we wrote to the Board of Customs in London, asking them three distinct questions: asking if their officer was in order; if he was in order, what regulation he was acting under. He had written, but this is a point that is worth noticing, he had written to our Excise officer in Edinburgh a memo. asking them for proof that the whiskey was three years old. Our Excise officers asked if we would like them to reply to this memo., because they would not do it unless we specially requested them. And the reason was rather interesting. The reason was that the Customs officer in Liverpool, if he had any communication to make about the whiskey, should have written to his Board in London, who should have communicated with the Excise Board in London, and the Excise Board in London should have written down to their collector in Edinburgh to make the necessary inquiry to enable them to give the information. We said, very well, we do not wish you to reply to this memo., and the memo. was never replied to, but we wrote to the Customs Board in London on the subject, and we got a reply after a week, after telegraphing for the reply, to say that under regulation so-and-so the officer was in order. We pointed out that that regulation did not authorise the officer to name how many years old the whiskey was to be, and repeated our inquiries. In the end the Customs applied to the Excise to make the necessary inquiry in Edinburgh; and after a delay of a month, during which our people in Liverpool were delayed in the conduct of their business, and a most tremendous amount of correspondence, we got a telegram from the Customs to say that the labels would be allowed to be put upon the bottles, and the whole matter fell to the ground. Now that was a case where a Customs officer interpreted a regulation entirely wrong, entirely in an opposite sense to what the Excise had; because we were bottling about 1,500 dozens a week of the same whiskey in Edinburgh, and putting exactly the same label on.

24,101. (*Mr. Hanbury.*) And where the Board backed him up?—The Board backed him up at first.

24,102. (*Mr. Lawson.*) Did I understand you that you had to telegraph to London a week after to get a reply to your letter?—Yes.

24,103. But you had written?—We had written.

24,104. And then you telegraphed?—Yes; that is so, we generally do that.

24,105. (*Chairman.*) This whiskey was sent out from your distilleries in Edinburgh, or in Scotland, to Liverpool, with a label upon it, "Old," which label had been authorised by the Excise?—Not exactly. It was sent in casks to Liverpool.

24,106. But the casks were marked with the label "Old," I suppose, that was the description on them?—We do not label the casks. The cause of the whole mistake was originally a mistake in the despatch of the Excise; the cause of the whole business was, the whiskey was old, but it had been blended immediately previous to being sent off, it had been mixed together. Various whiskeys had been mixed together immediately previous to being sent off; and there is a column in the despatch which is headed "Date when originally warehoused." Now the Excise people, instead of correcting this heading, and saying "Date when blended," or "Date when re-warehoused," just left it standing as it was, showing the day before yesterday to be the original date of warehousing, and of course it puzzled the officer in Liverpool; but the point was that he had read the regulation entirely different.

24,107. (*Mr. Harvey.*) That is evidently an error that may happen anywhere. How would that have been obviated now, supposing you had only one service instead of two?—I would suppose that one Board would instruct its officers in a similar way.

24,108. (*Chairman.*) But it would appear as if the officer of Customs was right, and that the despatch of the Inland Revenue which gave the wrong heading was wrong; because they could not call whiskey "Old whiskey" that had been put into bottles the day before. It should have been "Blended the day before"?—He was right, so far as there being a regulation which was in force until recently, but which was cancelled the other day; a regulation which says that officers of Customs and Excise are to see that no labels bearing a misrepresentation of facts are used. He was right in that; but he was wrong in attempting to fix a standard; he had no right to do that. He could have told that the whiskey was old if he had tasted it; and again the strength would tell him.

24,109. Then what should he have done. Either he, or whoever was the responsible officer at Liverpool, should have written back to you according to that, should he not?—I do not know. I think he was just stretching his powers.

24,110. (*Mr. Harvey.*) Given the error made by the Inland Revenue authority, you do not demur to the Customs officer raising the question he did?—No, I only found out that there was this error of the Inland Revenue at the very end of the case.

24,111. What I want to get at is, wherein do you think that the Customs officer was wrong?—In fixing the age.

24,112. (*Chairman.*) In saying that it must be three years?—Yes; that was entirely beyond his powers there.

24,113. Is there an acknowledged definition, may I ask, of old whiskey, in the trade?—There is nothing acknowledged. We thought it was rather an important thing that there should not be. Lots of people think that whiskey is not fit to drink until it is 10 years old; and other people think that it is quite fit to drink within two years.

24,114. (*Mr. Hanbury.*) This evidence has been to show that the two Boards interpret the regulations differently?—Yes.

24,115. Do you maintain that the Excise Board interpreted this regulation differently from the Customs?—No, not the Board.

24,116. (*Mr. Harvey.*) Still I do not quite see now what your allegation comes to against the Customs officer?—The allegation is that he was acting beyond his powers.

24,117. (*Mr. Hanbury.*) You do not go so far as to say that even the Excise would have taken a different view of the regulations?—Oh, yes, because we bottled the same whiskey under the Excise, and we have done so for years, and always put on the label that he objected to.

24,118. (*Mr. Harvey.*) Our point is that, given the error made in the despatch by the Inland Revenue

Mr. R. Usher.

27 Feb. 1889.

authority, any other officer at the other end would be justified in raising the question he did, whether he was a Revenue officer or a Customs officer. We are only interested in these complaints in so far as they bear upon the question of one or two establishments?—Yes. He would have been justified in raising the question, although not in the way it was done.

24,119. (*Mr. Lawson.*) I understand you to say that he was acting beyond his powers in defining the term of years?—Yes, that is so.

24,120. Therefore he was not carrying out his duty, admitting the mistake in the first place of the Inland Revenue?—That is so.

24,121. He was going beyond the sphere of his powers?—Yes, he was going beyond. He would have been right practically if he had tried to find out whether the whiskey was matured whiskey; but he was entirely wrong in trying to force our customers to declare that it was three years old.

24,122. (*Mr. Harvey.*) That is an allegation that a particular Government official exceeded his powers; but do you mean to allege that that happened because there are two services instead of one?—No. What I was asked just now was could I give any instance where the two services differed; and I thought this was an instance.

24,123. (*Chairman.*) Still, in that case the only information that the officer at Liverpool had was information which, on the face of it, was incorrect?—Yes.

24,124. (*Mr. Lawson.*) At the same time, granted that, he had no right to have gone so far as he did?—No; he was going too far in any case.

24,125. (*Chairman.*) Is there any other point in reference to those regulations that you wish to put before us?—No.

24,126. (*Mr. Hanbury.*) What made the Customs Board change its mind ultimately; because you say that at first they backed up their official, and then they altered their view?—They applied to the Inland Revenue to make inquiry in Edinburgh and to satisfy them, I understand.

24,127. (*Chairman.*) Then probably the Inland Revenue satisfied the Customs that this whiskey was identical with that whiskey which you were accustomed to treat in the same way, and which really was matured whiskey?—Yes; but the point, of course, is that our customers were kept waiting for a month, and I think we had an average of two letters a day during the time that was going on.

24,128. If the same mistake had occurred in the transmission from Edinburgh to Liverpool under one Board of Revenue, do you think that there would have been that amount of correspondence?—I think not.

24,129. You think the mistake would have remedied in a quicker and more simple manner?—Yes.

24,130. Is it your experience at all that in Edinburgh and Leith, where I understand you to be particularly, there is any want of harmony in the working between the officers of the respective Boards. It has been stated generally to us sometimes that there has been such a want. Have you found that at all?—No; I have not found it in my own experience.

24,131. (*Mr. Lawson.*) Have you found any unwillingness on the part of the one department to communicate readily with the other when points of difference from time to time have arisen?—This case that I gave you of the eight cases going to Queensborough I think was very much in that way.

24,132. (*Mr. Hanbury.*) There, as I understand, you have never ascertained whether that duplicate despatch reached Queensborough, or whether it did not?—The last that we have heard on the matter was the letter that we got on Monday from the collector of Customs in London. We had written to him on the matter, and he wrote back in the end to say that the goods were in the position of being in transit, and that they had nothing to do with it; and yet from what we can learn, the surveyor of Customs, under the collector in London, was refusing to allow our friends there to bring back the goods to London or to put them on board the ship.

24,133. But the Customs denied that on the part of their surveyor?—The surveyor gave colour to what our agent stated, because when we wrote to him he said that he had sent up the letter to the collector in London, as much as to say that he had sent it on for further instruction.

24,134. (*Mr. Harvey.*) How does the thing stand now? What is the exact position of affairs now?—The exact position of affairs now is, that we have paid duty to the Excise in Edinburgh, and that we have instructed our agent in London to go and get the whiskey out of Queensborough and bring it into London to their stores, and if the surveyor makes any objection they are to show to him the collector of Customs letter that we have, and also the certificate of having paid the duty. The collector of Customs says he has no right to touch the goods, and we have paid duty on the goods, and therefore we ought to get them. Of course all these matters are rather small details, but if you have a great number of them coming every now and then in your ordinary business it is a great inconvenience.

24,135. (*Mr. Hanbury.*) That is what I want to get at. Have you a great lot of them?—Yes, everything almost that I have said has happened within the last three months.

24,136. How many cases have you been able to give us in the last three months?—I have given you one case where we have written 18 letters on the subject. That is a pretty considerable amount of trouble.

24,137. Yes, but it is all one case?—Yes, but it is a good deal of trouble, is not it?

24,138. (*Mr. Lawson.*) All these cases have a great many ramifications, I suppose?—Yes. Of course that is what we have written, but that does not count what other people have written to us.

24,139. And an amount of correspondence like that, though it might not be considerable in a Government office, in a moderately sized firm, is a matter of some importance?—Yes, especially if you take the whole thing which is not worth a 5*l.* note.

24,140. (*Mr. Hanbury.*) I understood you to represent some association?—I do.

24,141. But the instances that you give are not all the instances that that association can get together; they are simply instances within your own personal knowledge?—They are. Yet, not exactly all of them. That about the wine was by another distiller and dealer in Glasgow; about the duty being charged differently by the two Boards.

24,142. As you represent that association here, are those all the cases that this association is going to produce?—Yes.

24,143. (*Chairman.*) Is there a warehouse keepers association in Edinburgh the same as there is in Glasgow?—I do not know of one.

24,144. (*Mr. Harvey.*) From your experience of both departments, would you say that the Customs took a sterner view of its duties than the Inland Revenue?—I do not think that I could say anything of the kind. Do you mean to say that they are stricter as regards their gauging and that?

24,145. I will put it in this way. Suppose you, instead of being interested, as you are, in getting your transactions with both the Board of Customs and the officers of the Inland Revenue quickly settled, were interested in the revenue, and suppose you wanted to get the largest amount of revenue possible, have you formed any opinion as to whether the practice of the one set of officers would be more favourable to getting a large revenue than the practice of the others?—No, I think not; but I would say that if they were amalgamated there would be a very great saving in expense.

24,146. For a moment I just repeat the other question. From your experience you think that the revenue is collected as promptly and as readily and as completely by the Board of Excise as it is by the Board of Customs?—I do, certainly.

24,147. Now, then, we will go to the question of expense. Wherein do you think, so far as your observation has gone, that the amalgamation would produce economies?—At present we have a collector of Customs in Leith, and a collector of Inland Revenue at Edinburgh. One collector would do. They are pretty highly paid officers. In Glasgow there is a collector of Customs and a collector of Inland Revenue, both in one town, and one would do there too. Then, I think that a great many of the subordinate officers might be done without in the same way. You could do with fewer officers, I think, if they were under one Board. Let us suppose they were amalgamated; in Edinburgh the immediate result would be to shut up a lot of the warehouses at present

open at Leith, because they are not filled up, and the officers which are kept on at present to survey these warehouses could be done without.

24,148. (*Mr. Hanbury.*) Do you mean men are kept on to survey the empty warehouses?—Yes, I mean that. There are a certain number of officers for a certain number of warehouses, so far as I know.

24,149. (*Mr. Harvey.*) Have you looked into the matter sufficiently closely yourself as to give that opinion to us, advisedly, that there can be a distinct saving, that there can be a saving on salaries at Leith, supposing there were the united service?—No, I have not looked carefully enough into the cases.

24,150. But you do think that if you were managing both sets of warehouses, as a private individual, you would shut up, under the existing condition of things, some of the warehouses at Leith?—I should, I think; but I would probably open another at Edinburgh.

24,151. (*Chairman.*) You would probably open another at Edinburgh?—Yes.

24,152. Then there would not be much reduction of staff, would there?—It depends a great deal upon the size of the warehouse you open at Edinburgh. Of course, it would be only one warehouse; there is a great number of small warehouses dotted all over Leith, where the working of them is very expensive; it is very much more economical to work a great big warehouse, than it is a lot of little ones, when the officers have to walk a certain distance to each portion of their work.

24,153. But all these warehouses in Leith that you speak of are private property, are they not?—Yes.

24,154. Is not there sometimes very considerable difficulty in getting the proprietor of a warehouse to view the propriety of shutting up his warehouse in the same way as the Revenue Department does?—I was looking at it from the question of the saving of expense.

24,155. Very likely it is desirable to diminish the number of bonded warehouses in many places in England at present; but, probably, you are aware it is not very easy for the Government to do so?—That probably is so.

24,156. Can you give many instances where in the course of your trade and experience in Leith and Edinburgh there was duplication of work. You have told us about the warehousing and paying the duty, but can you give us instances where exactly similar work on behalf of the Government is done twice over by Customs officers on the one hand and Excise on the other, in the course of your own trade?—Twice over as regards the same goods, do you mean?

24,157. As regards the same transaction with the same goods?—I think not. To illustrate that, this, perhaps, will let you see what I understand you to mean. You mean if a cask of spirits, foreign spirits, say, is taken into a Customs warehouse it is gauged there; do you mean to say when it is removed from the Customs warehouse to the Excise warehouse the same thing was done to it again as was done originally owing to the duplicating of the work? I do not think they do as far as I know.

24,158. You do not think that there is much duplicate work?—No, I think not.

24,159. In the instance which you have just given, I understand that you would be perfectly free as the consignee of a cask of foreign spirits to send it to an Inland Revenue warehouse, if you pleased?—Yes.

24,160. Where it would pay the Customs duty and be dealt with?—Yes.

24,161. If it has to go through, dealing with the Custom House and the Excise at the instance of the consignee, of course, that is not a duplication of work; but what I mean to ask you is whether there are instances that have occurred to you in the course of your business in reference to some transaction of a consignment of whiskey, we will say, in which the work has to be done twice over by two sets of officers, from the fact that there are the two sets, the Customs and the Inland Revenue, under two Boards, because if there is not any such duplication it is rather difficult to see where the economy in the staff would be. I quite understand the warehouse question which you put; but, apart from that, has it occurred to you that there is any such duplication of work by the fact of there being two sets of Revenue officers, and that there can be any substantial reduction at Edinburgh and Leith?—No; I do not think that there is duplication as far as I know.

24,162. I do not know that this is perhaps a question that you would like to answer. Does it appear to you that these Revenue officers on the one side or the other have got much time to spare on their hands. Do they seem to be pretty fully employed?—The Inland Revenue are, I think; yes.

24,163. You deal principally with the Inland Revenue?—Yes.

24,164. I particularly kept out, as far as I was concerned, either one side or the other; but, with a view to amalgamation and the suggested economy bearing on the staff that might be effected, do you think that, at Edinburgh and Leith, you can yourself see, if you had the dealing with it, any means of reducing other than by what you save by having one collector instead of two?—Not from what I have seen myself.

24,165. Of course it does not come naturally within your sphere of knowledge?—No.

24,166. (*Mr. Harvey.*) Is it the practice of merchants to see the collector personally, very much?—Whenever we have any difficulties in the working we go to him.

24,167. From your experience, would you think that the time of the collector of Customs at Glasgow is thoroughly well filled already?—That is a question that I do not think I could answer. I do not know from my own experience.

24,168. You say I think that there could be one collector of Revenue in Glasgow instead of two?—Yes.

24,169. Does not that come to this, that a man's time already is not sufficiently occupied?—Yes, it does come to that; but I am not able to state whether his time is sufficiently occupied at present.

24,170. Still, as I understand, you have formed the opinion that the duties of the collector of Inland Revenue and of the Customs, might be filled by one man?—Yes, I have formed that opinion.

24,171. Have you had any conversation with either of the collectors at any of the ports upon the subject by any chance?—Yes.

24,172. At Edinburgh, or Leith, or Glasgow?—Yes, I saw the collector of the Inland Revenue in Edinburgh.

24,173. Are you justified in representing him as being of the opinion that he could manage to do all the collecting work. I do not say he individually, but that a representative of the Inland Revenue in the person of a collector at Edinburgh could do all the collector of Customs work at Leith also?—I think he could.

24,174. (*Mr. Harvey.*) But do you think that both the collector of the Inland Revenue at Glasgow, and the collector of the Customs also are very much personally wanted by people?—No.

24,175. It is the custom, is not it, to see them personally?—Not very often. We do not see the collector, unless we happen to have anything special. We do not see him for months.

24,176. Would you be surprised to hear that we have had evidence that the collector's time is taken up very much all day long by personal applications?—Well, I do not think that our collector of Inland Revenue in Edinburgh is so much troubled as that. I know for our own part we very seldom see him unless some special case comes up.

24,177. And you think he, as a matter of fact, could do the duties of collector of the Customs in addition to his own?—I do.

24,178. (*Mr. Lawson.*) I should like to ask you whether your own experience bears out on the whole, evidence that has been tendered to us by some of the witnesses that the Inland Revenue show a greater adaptability to the circumstances of trade than the Customs, more readiness to meet new conditions?—I think they do, and as a proof of that the dealers in Edinburgh or Leith or Glasgow that I have spoken to (and coming up as I was), I spoke to them, said that they would rather be under the Excise than under the Customs.

24,179. Have you made a point of speaking to a good many of the dealers?—I did, but I only knew that I was coming up three or four days ago.

24,180. Were they all unanimous, so far as you spoke to them?—Perfectly unanimous; there was only one opinion.

Mr. R. Usher.
27 Feb. 1889.

24,181. And I suppose the Commission must take it for what it is worth that there is a general impression in the trade from what you say that there could be a saving effected, supposing there were a consolidation of the Revenue departments?—Yes, there is a general opinion to that effect.

24,182. While at the same time your own convenience would be consulted?—I think so. It is the opinion in Scotland I should say.

24,183. In your correspondence do you find that the Inland Revenue are more accessible than the Customs?—No, neither of them are very prompt in replies.

24,184. (*Mr. Harvey.*) If they are not prompt in replies, do not they get admonished and sat upon in a place like Glasgow?—The subordinates are very prompt in replies; I refer to the Boards in London. Of course they have a great deal to do, but we generally allow three weeks for a reply to a letter.

24,185. (*Mr. Hanbury.*) What do you mean by the adaptability of the Inland Revenue, by there being greater adaptability on their part than on the part of the Customs, in what way?—We work under a great lot of regulations; we can do nothing without a regulation in support of it. I mean working in bonded warehouses. If we find a difficulty, if we take it to the Excise, we, of course, do not go to the Customs at all in these matters; but if we go to the Excise I think they are very reasonable in giving the matter every consideration, and in helping us.

24,186. Then if you do not go to both, how can you say that there is a greater adaptability on the part of one than on the part of the other?—I gave that in reply to the query put to me just now. I said that it was the opinion amongst those I had spoken to.

24,187. Do those people whom you represent, as a matter of fact, have as much to do with the Customs as with the Excise?—No, not distillers.

24,188. (*Mr. Lawson.*) Not as much, but they have a good deal?—They have a good deal.

24,189. (*Mr. Hanbury.*) You mean they have a good deal to do with the Customs?—Yes.

24,190. But you personally are not able to express an opinion one way or the other because you only personally deal with the Excise?—That is so.

24,191. (*Mr. Lawson.*) I do not understand that; I understood that you had dealings with the Customs though not to the same extent as with the Excise?—Yes, I have dealings with the Customs in this way, as far as I have to send goods out of the country.

24,192. Then you have dealings with the Customs and you have personal and immediate experience of the department, have you, or not?—Yes, but not of the Board, I have experience of the department.

24,193. (*Mr. Hanbury.*) But in answer to me just now you said that your experience, as I understood, was confined to the Excise; I only want to get out whether you have had much dealing with any of the Customs officials?—We have dealings, but not in the same way. You see our warehouses are Excise warehouses, and it is only when goods go away from us that they come under the Customs.

24,194. (*Mr. Lawson.*) Of course you are not speaking here to day individually only, but as a delegate?—Yes, and I said that all the people working under the Customs whom I had consulted are working both under the Customs and Excise, and they expressed an opinion that they prefer the Excise.

24,195. Have you experience of the small ports of Scotland?—No.

24,196. You do not know anything of the duplication of establishments in those places?—No.

24,197. (*Mr. Harvey.*) Would you say that there was a rivalry between the two departments, so far as your observation has gone?—No, I do not think so.

24,198. (*Mr. Lawson.*) You distinctly are not of opinion that there is any laxness on the part of the Excise in the collection of revenue?—Distinctly not.

24,199. (*Chairman.*) It has been suggested by some of the evidence that we have had before us that there is a natural rivalry between the two departments to do most business in fact, and that possibly one department or the other department may make things rather easier for the traders in consequence, and that that is a reason why some of the traders think it desirable that there should be two departments to set off one against the other. Is that your experience?—I have had no experience of that.

24,200. (*Mr. Lawson.*) And you are not of opinion that it is so?—I am not of opinion that it is so.

24,201. You must have had experience of the Excise, but you mean that you are not of opinion that there is a tendency towards anything of that kind?—I have had no experience of any rivalry.

24,202. (*Mr. Harvey.*) Do you think your preference for the Inland Revenue comes to anything more than this, that a man naturally likes most, the regulations of that body under which he is most accustomed to work. Do not you think that if you had been working as long under the regulations of the Board of Customs as you have under those of the Board of Inland Revenue, you would in all probability like the Board of Customs best?—What I have to say to that is that the people in Leith who were consulted and who were working both under the Excise and Customs, and who have worked, I should think, longer under the Customs than under the Excise, said that they preferred the Excise.

24,203. I should very much like to get as to what that preference for the Excise is based upon. This Commission naturally has got to take very great care with the Revenue, and the point that I want to get clear in my mind is that this greater popularity in your mind for the Excise is not to be interpreted to mean, perhaps, that the duties of the Excise are made a little too pleasant for the interests of the Revenue?—No, I do not think that the Revenue suffers; but there are a great lot of operations which are done in bond in the warehouse, such as mixing and things in that sort of category, and I believe that people who are under the Excise and Customs prefer the Excise for those reasons.

24,204. (*Mr. Lawson.*) Do you not think that the preference of those whom you represent for the Excise arises from the fact that they do their business in a more workmanlike manner?—Yes, I believe that.

24,205. (*Chairman.*) Have you anything you would like to add?—No, I think I have said all.

The witness withdrew.

Mr. Robert Brown called and examined.

Mr. R. Brown.

24,206. (*Chairman.*) You, I believe, are a large wholesale spirit merchant in Glasgow?—I am.

24,207. We understand that you have some views with reference to the suggested amalgamation of the Excise and Customs which you would like to lay before the Commission?—Yes.

24,208. Do you represent any association of traders?—I do not represent anyone but myself.

24,209. You have had conversations, probably, with other traders?—Yes; I know a good deal about it from my brother traders. I know a good deal about the working of both.

24,210. In Glasgow especially?—In Glasgow, yes.

24,211. I understand, generally speaking, you are in favour of the amalgamation of the two departments?—I am very much.

24,212. Do you deal with both departments?—I deal with both departments.

24,213. Perhaps you will, in your own way, give us the reasons you have for taking that view?—Glasgow has become a centre where there is a good deal of whiskey exported, and we want to get it done as quickly as possible because the steamers come in on Wednesday and Thursday, and then they sail again on Friday or Saturday morning, and if there is any delay we miss a steamer, especially in the Cape trade (South Africa). Any little hitch in the way of getting goods ready makes us lose a steamer for a fortnight, especially in the Customs. There is a great delay in the despatches going from the Customs to the Excise and from the Excise to the Customs.

24,214. Will you take an instance of some goods that you want to export to the Cape, say, this week, and tell

us where your inconvenience and delays would probably occur?—Suppose we wanted to ship goods. The mail comes in from the Cape to-day, and we have the orders from London on Thursday morning. Supposing I wanted to bring goods from Ireland, from Newry (and I do bring a great quantity of cases from Ireland) to ship to the Cape by Saturday morning. We could get the cases but we could not get the despatch.

24,215. You mean you could get the Inland Revenue despatch by post from Newry?—No; we could quite easily get the goods but not the despatch.

24,216. Do you mean to say that the despatch is not a necessary document in your view?—We cannot ship without the despatch at present, but if we were under the Excise we would get the despatch with the goods.

24,217. Why should not the despatch come with the goods now?—Because it has to go through the Customs to the Customs in Glasgow.

24,218. Why should not a regulation be made that the Excise despatch from Newry, or wherever the Excise officer is, who authorises the sending of those goods, come with the permit and the goods be allowed to be shipped upon that?—That is exactly what we want.

24,219. Could not that be done without amalgamation. Is not that a matter more for regulation?—You see it could not be done as it stands at present, because we have to send on despatches, making two entries from the Excise to the Customs in going out, and in the same way coming in, whereas if we were all under the Excise the despatch would come with the goods.

24,220. (*Mr. Lawson.*) Would you explain that more fully. You have to make all entries going out, you say?—Yes.

24,221. Take a concrete instance?—If we ship goods from an Excise bond just now we want to ship them, we have to make an entry, make two entries, one in the Excise for the goods going down, and another through the Customs for the same goods.

24,222. I suppose you have to enter it at the Excise because you take it out of the Excise warehouse?—To be sure, and then we have again to enter it in the Customs.

24,223. (*Chairman.*) Supposing that amalgamation took place, would there not have to be two sets of officers, one to deal with the ships at the landing place, and the other to deal with whatever warehouse it might be inside?—Certainly.

24,224. How would you escape that?—We do not want to escape that. We want to escape making the entry at the Custom House. You see we have to make two entries.

24,225. Suppose you want to clear goods for export from an Excise bonded warehouse at Glasgow, do you mean to say that you cannot now by any regulations that exist send that whiskey, supposing it to be whiskey, straight from the Excise bonded warehouse in Glasgow on to the ship?—We do send the goods; but the entry must be made at the Customs and pass through the Custom House.

24,226. (*Mr. Harvey.*) The goods come from Newry, do not they?—Yes.

24,227. Where do they go to?—They go direct to the railway station.

24,228. At Glasgow?—Yes.

24,229. Do they go on board ship?—No; they are sent down to the quay, and we cannot ship them till the despatch comes through the Custom House.

24,230. Your allegation is that your business is delayed because the despatch from the Excise officer at Newry is behind your goods. Is that so?—Yes, that is so. The Custom House, not the Excise at all; they come through the Customs.

24,231. You must explain a little more where the Customs officer comes in. Where does he come in?—The Custom House officer sends the despatch from Newry to the Custom House officer in Glasgow. If the despatches do not come in time our goods are short shipped; we often have cases of the despatch not coming forward. I will give another instance of it. Suppose a ship comes in to Glasgow, which it very often does, with a few hundred casks of rum. They have to lie on the quay till the Custom House take note of them, and then the despatch is sent up to the Excise office. It often happens to be eight or 10 days before the despatch comes up, before you can lift these casks to be stowed away.

24,232. (*Chairman.*) Is that a delay which takes place because the Customs is short handed, or why?—No, it is because they have to take the liquor away for obscuration, and there is a delay in that; whereas if it was under the Excise they could take it into a warehouse and stow it away and take the sample for obscuration at the same time.

24,233. Is not it possible now to send goods to you if you are the consignee of foreign spirits landed in Glasgow; is not it possible for you to select your Inland Revenue bonded warehouse and have your goods brought straight into that Inland Revenue bonded warehouse?—It is quite so, but that does not make any difference in the delay.

24,234. You mean that when you have got goods all arranged for and coming by a ship arriving to-day, and you want to send them to an Inland Revenue warehouse where you have other goods, you cannot have them at once when you get the despatch from a ship?—Certainly not; it will take from ten days to three weeks to clear it in that way; whereas if we do it under the Excise we could do it in a fortnight.

24,235. Why should it be done quicker under the Excise than under the Customs?—Because they have a quicker way of getting through the work. I cannot explain all.

24,236. You come now to the point. You think the Excise people do their work better than the Customs?—Certainly. I have had to leave the Customs because we cannot get the work done quick enough, and we can get it done quick enough by the Excise.

24,237. Can you give any reason for that?—The laws of the Customs; they are behind the times. They are come up a bit during the last month or two. I believe they are exerting themselves since this Commission has been sitting. They have been doing a little better than they did; but they seem to be about a hundred years behind.

24,238. That is a long way at the rate we are marching now?—Yes.

24,239. The Code is the same in the warehouses, is it not?—Our steamers are very quick, they seem not to have got rules to allow the goods to come in properly. There is something wrong in their rules.

24,240. Are there any rules that the Customs have with reference to the despatch of goods. Can you suggest how they ought to be amended?—No.

24,241. Or is it a question of men; is there an insufficient staff?—No, I think not. I think they do not do enough work. They do it in a roundabout way, and I do not think they work enough. For instance, a man gets 20 casks of rum in a day on a quay; the samples are taken from the casks of rum and they are sent up for obscuration. They cannot move these casks until the despatch comes back from the Customs to the Excise.

24,242. Do not they test the spirits for obscuration at Glasgow?—Yes, they test them for obscuration; this causes the delay in getting the despatches to the Excise warehouse.

24,243–5. Do you see any reason why things would be better if you had everything under the Excise. You must have landing officers?—Yes, you must have landing officers; but I do not see why landing officers should not be Excise officers. They would do the work; they have always done the work quicker than the Custom House officers. Of course, I do not say that the Excise are perfect; but I say they are very much more so than the Customs.

24,246. (*Mr. Harvey.*) But you think the Customs very imperfect?—I think so.

24,247. (*Mr. Hanbury.*) Is that owing to the rules or the men? Which do you complain of?—The rules and the men.

24,248. That is what I want to get at. Supposing the rules were altered, do you still say the Custom House men would not do the work?—I do not think they would.

24,249. Why?—The Excise are a select class of men. They have been used all along to work more; their instructions have been to make them work more, and everything they have done has been to make them work sharper.

Mr. R. Brown.

27 Feb. 1889.

24,250. Would you propose to get rid of the Customs men altogether?—No, I would propose to sharpen them up.

24,251. By amalgamation with the others?—Yes, and they are a great deal sharper since they have an idea that they are going to the Excise. It has really done them a great deal of good.

24,252. There is a good deal of sharpness from the mere fact of competition. Do not you think a little rivalry between the two departments might be productive of a little sharpening?—It might be; but you see there is this difficulty. There are two Boards to consult, and they just simply say, "Well, I will have "to consult my Board about this," and then it is sent away. When any little difficulty arises they say, We must consult the Board. The thing is nonsense, because our goods are lying on the quay, and we are missing a ship or two, and we do not get the facilities we ought to get. We do not want anything except despatch. That is all we want.

24,253. (*Mr. Hanbury.*) Would not they consult their Board if there was only one Board?—Yes, but it would not take so long to consult one Board as it would to consult two.

24,254. Do they as a matter of fact consult both?—They do.

24,255. Can you give any instances?—Yes; I think I can give you one. I got an order from Bombay to ship 200 cases of whiskey, the party at Bombay wanted a small neck label put on the bottle, and we asked that to be done in the Excise, and one officer read his instructions so as to say that is impossible, that cannot be done. I asked him why, and he said: "Well, you are "not allowed to open the cases to substitute one label for "another," and he read his instructions entirely wrong, because the instructions to him were that he was not to open the cases to substitute one label for another; but the instructions did not say to him that he was not to allow a third label to be put on.

24,256. Was he an Excise officer?—Yes, and he said the Customs will not pass this. He blamed the Customs for not passing this label.

24,257. You say yourself that he was the man who made the mistake?—Yes; I say that he was the man who made the mistake. The work was stopped till they consulted the Board, and in this instance the Board took about three weeks to reply.

24,258. But which Board?—Of course, we went through the Excise Board, but they had to consult the Customs Board.

24,259. As I understand, this was a mistake by an Excise officer who had to be corrected by his own Board?—He supposed he was right, you know, but three weeks after he found he was wrong.

24,260. He would have supposed he was right whether there had been one Board or two?—If there had been only one Board we should have had a quicker answer.

24,261. How do you know that?—Quite well.

24,262. Have you got any evidence. Do you know that the Customs Board were consulted as a matter of fact?—I could not be sure; but they blamed the Customs.

24,263. (*Mr. Harvey.*) This man said to you that if he had passed the label the Custom House officer would object?—Yes.

24,264. Was not it a right thing for the Custom House officer to object. It was an unsettled point?—No; certainly not. It was a reading of an instruction wrongly by two officers.

24,265. (*Mr. Hanbury.*) By two?—By two or three. There were five of them at it, and they read it all wrong, just because they thought they were right.

24,266. (*Mr. Lawson.*) Your point is not which officer is right or wrong, but the fact that two departments had to be communicated with instead of one led to the delay to which you were subjected?—Yes, three weeks' delay.

24,267. (*Mr. Hanbury.*) That is what I want to get at. Is it the fact that two departments had to be consulted?—I do not think it is the fact that they had to be, but I think they were.

24,268. But are you sure about that?—I am not sure about that. I am not sure whether they consulted the other. I was not in London, and had no opportunity of asking which Board they went to.

24,269. (*Mr. Harvey.*) Does it come to more than this: that you took a different view as to the interpretation of the regulations from that taken by a Government official, and that you were naturally annoyed by the delay occasioned?—No, I was not annoyed. I wanted to know whether we were right or not, and we went to the Board and the Board said that we were.

24,270. (*Mr. Hanbury.*) The Inland Revenue Board overruled its own officers?—Yes, that is often done; they do it, and the Customs too.

24,271. (*Mr. Harvey.*) You would not say that is any allegation against the system, would you?—No; but I would say that a new rule ought to be laid down so that an officer could not read his instructions wrongly, and so that an officer could not be allowed to read the rule two ways.

24,272. (*Chairman.*) You cannot assume that all the officers of the Government in any department should naturally be infallible, mistakes must occur?—No; but a proper rule ought to be laid down which could not be read two ways.

24,273. You mean making the rules clear?—Yes, making the rules clear, and I think the traders ought to be supplied with a copy of the rules.

24,274. Have traders any difficulty in obtaining a copy of all the regulations?—Yes, sometimes we do not get a copy of the new regulations till some time after they are out.

24,275. And therefore I understand you are strongly in favour of an amalgamation?—Yes, I am. I think that it would be better entirely under the Excise, or under the Customs. I am not caring which.

24,276. Under one department?—Under one department. I do not want to have to consult two Boards when there is anything that goes wrong, and I think the rules ought to be laid down so that they could not be misunderstood by an officer.

24,277. That the Code should be made clearer, in fact?—Yes, that the Code should be made clearer.

24,278. The Code is new—it has not been very long in operation, has it?—This is old.

24,279. There are not many points now in the Code that are any difficulty, are there?—A great many. I think the Code should be re-arranged every ten years.

24,280. How long has the present Code been in operation—it is not ten years old, I believe?—No, it is not ten years old; but some of the laws are very far back.

24,281. Would you like to amend the Code?—Yes.

24,282. That, of course, is not affected by amalgamation?—I can give you an instance where they have to go back to George the Fourth's time for a law.

24,283. If it was a good law, why should you not go back to George the Fourth?—It was a law they did not quite understand, and I do not think they quite understand it yet. I can show you a little instance of it.

24,284. (*Mr. Harvey.*) That has nothing to do, has it, with the question—the two services or the one?—Yes, it has.

24,285. (*Chairman.*) Then let us have it?—We were putting an extract from a paper called the "Australian World" in the cases, the officer objected to that going in.

24,286. (*Mr. Harvey.*) You say "putting in the cases"—will you explain where?—For an advertisement inside each case we were putting a leaflet.

24,287. (*Chairman.*) Did he object to your saying that you supplied whiskey to His Royal Highness the Prince of Wales?—No, he did not—he could not do that.

24,288. What was his objection, then?—I will tell you what his objection was. I am a co-partner with Mr. Usher, whom you have seen to-day, in a distillery in Edinburgh—it is a limited liability company. The officer objected to the word "distiller" being used. The officer took this leaflet, and he sent it up to the Board through a supervisor, not the supervisor on the bonding district, but on the warehouse district. It took them three or four weeks to find out whether I could use the word "distiller" or not, and they had to go back to the old law in George the Fourth's time, and they are not very clear yet, whether I can use the word distiller or not.

24,289. It would be a reason for making the Code clear?—Yes, that is what I give you as a reason for making the rules and laws to Excise officers perfectly clear, so that the traders can quite understand them as well as the officers; and so that no officer should read a rule differently or in two ways.

24,290. (*Mr. Hanbury.*) But what has that got to do with the amalgamation of the two Boards?—It has got to do with it in this way: that the Custom House object to the leaflet being put in, and the Excise do not. My cases would be quite liable to be stopped at the quayside. Of course I am not making this a personal thing at all.

24,291. What was the upshot of that—did they let you put that leaflet in?—Certainly; they could not hinder it.

24,292. How long were you kept waiting?—Three weeks before we got an answer to this.

24,293. (*Mr. Harvey.*) Do you mean to imply that the point that constituted the difficulty was that you could not be a distiller if you were a member of a limited liability company?—To be sure—that was the point.

24,294. There was no limited liability in George the Fourth's time, was there?—No, certainly not; and that is the very reason why the thing should be altered—that is the very reason why they should have a new law now made for these things—there was no limited liability company then.

24,295. (*Chairman.*) It is plain that it would be very desirable that the Code should be entirely unmistakeable in its regulations.—Yes. that is what I want, and there are many other little things. We get a new officer who comes down to our warehouse from a distillery or something of that sort; he is quite new, and he reads an instruction or rule quite differently to what you have been doing, and then he stops the whole working while he asks his Board how this has to be done.

24,296. (*Mr. Hanbury.*) But you would get new officers even under an amalgamated Board?—Yes—I do not object to new officers at all; but I want all new officers to understand the work.

24,297. Why would you get new officers to understand their work better under an amalgamated Board than you could under the present system?—There is the difficulty. If we get our work done in the Excise, and we get down to the quay with all the stuff arranged there, we do not want to be stopped by another Board saying: "This is not to be allowed." The Customs will allow one thing and the Excise another—that is what I am driving at.

24,298. Can you give us many instances of that—you have given us this leaflet?—That is one instance.

24,299. You have had a large experience—can you give many instances?—I could give you one or two, but I really could not bring them to my mind at this present moment. I could not pick out a particular one. This is one that struck me as being a ridiculous one to begin with, and I thought I would give it to you.

24,300. (*Mr. Harvey.*) But you would admit, would you not, that that has nothing to do with the point before us. That point may be a very foolish one for the Board to discuss, but at all events it would have been discussed, and would have taken the same time to settle whether there had been two Boards to deal with it or one?—Yes, quite.

24,301. (*Chairman.*) Have you looked at the question from the point of view of economy?—Yes, I have.

24,302. Would you state your views upon that point?—I think you will find that Custom House bonds are far more expensive to the country than Excise bonds. There is one in Greenock that has been taken over by the Customs, and they say that it has costag reat deal more to work under the Customs than under the Excise.

24,303. We have not had any evidence hitherto to that effect, but of course, if you say so on your own responsibility, that would be evidence?—I cannot say so, except from hearsay. I do not know the cost of working the Greenock Bond, but I had it from very good authority, from a collector of Inland Revenue, that it had cost more to work than the Excise Bond. Of course, that I have nothing to do with.

24,304. From your experience of Glasgow, do you think that any substantial economy would be effected in the collection of the revenue if the Boards were amalgamated?—Yes; I think you would not require so many officers.

24,305. Where would you be able to diminish your officers?—You would get more work out of your officers.

24,306. Do you say that the Inland Revenue officers are not sufficiently worked?—Yes.

24,307. Nothing like?—Nothing like. They ought to do far more work—the officers ought to work from 8 o'clock or 9 o'clock in the morning till 6 at night.

24,308. (*Mr. Hanbury.*) You told me that you complained of the Custom House officers as not being up to their work, but do you allege that the Inland Revenue officers are not fully worked?—They could do more, certainly.

24,309. You say you have got both Boards not working their officers fully?—I believe they are not hitherto working them fully. I quite believe they are not working them fully.

24,310. Why would an amalgamated Board work its officers better than these two separate Boards?—I think they work better under the Excise, and I think more work can be taken out of the Excise officers than at the present time.

24,311. (*Chairman.*) Do you think that by the present arrangements a larger number of Excise officers are kept whose time is not fully employed, not through any fault of their own, but owing to the system?—I think so.

24,312. Can you point to some concrete instance to illustrate that?—The officers at the present time do not work later than 4 o'clock. They could work quite well from 8 o'clock in the morning till 6 o'clock at night and not be overwrought.

24,313. (*Mr. Hanbury.*) When do they begin in the morning?—I think at 9.

24,314. (*Chairman.*) What kind of officers are you now speaking of?—Just the ordinary officers. the ordinary officers in a bond or going about Glasgow—the division officers.

24,315. (*Mr. Harvey.*) What time does a bonded warehouse generally close now?—4 o'clock.

24,316. Does not it come to this, that your recommendation would be that a bonded warehouse should be kept open till 6?—Yes.

24,317. That is so?—Yes. The reason that they shut at 4 in the winter time is this, that it is dark, and they fancy that you could steal or get something more out of it in the dark than in the daylight—a practice that is a hundred years old, but now-a-days they can light it up and do anything they like with it. There is plenty of work for all of us. We could get more work out of our men, but we have to close at 4 o'clock too, as they shut up at 4 o'clock.

24,318. (*Chairman.*) You are not in favour of early closing?—No. I am in favour of taking more work out of your officers.

24,319. The emoluments of your trade, you say, are rather affected by the fact that you have to close early in consequence of the bonded warehouses doing so?—Yes, to be sure. We have often to ask them for permission to keep the warehouses open to let us work late to get a ship away.

24,320. (*Mr. Hanbury.*) Are these bonded warehouses you speak of without gas?—No, with gas. They could be lit up with gas, but the rule for closing early in winter was made when there was nothing but candles or lamps used.

24,321. (*Mr. Harvey.*) Do you think there is a wdely spread feeling of dislike to the present system?—Yes, I think so. They are working better than they did.

24,322. I mean as to the hours at which the warehouses are closed. Do you think the traders and merchants generally wish to have them kept open longer?—I think they do. I think they want to get more work out of the men themselves.

24,323. (*Mr. Hanbury.*) But during the hours from 9 to 4, are the Excise officers now kept well at work?—No.

24,324. They are not?—No they are not. There is a supervisor over the officers. This supervisor has not enough power over the officers.

24,325. In what way?—He has too much work to do himself and the officers have too little. The supervisor

Mr. R. Brown. 27 Feb. 1889.

has a very great deal of work to do, and he is supposed to look after four or five officers in one band and four or five in another, and so on. That man has to trot about the whole day and do a very large amount of work, and then he has to go home and do as much. He has to account for every hour in his day.

24,326. Do you maintain that if the supervisor had got less work to do himself he would be able to supervise the men better?—To be sure; he would get the five men, or the 10 men, or the 15 men under him to do twice the work.

24,327. (*Mr. Harvey.*) If you had to pay the supervisors' salaries out of your own pocket, would you increase the number?—I would.

24,328. Would you?—Yes, and have fewer officers: I would get more work out of the officers.

24,329. But you deliberately mean to say that if you were responsible yourself for their salaries, you would have more supervisors?—Yes, I would have a supervisor to do less work and get his men to do more.

24,330. (*Mr. Hanbury.*) How many hours' work do these men do, do you suppose, in the course of the day?—The supervisor?

24,331. The men under him?—From 9 to 4 o'clock.

24,332. Nominally; but how much?—I do not know what they do; they are always there knocking about. Some are good officers and get through their work quickly; other officers do not.

24,333. (*Mr. Harvey.*) Still, of course, it is their business to be there, though there may not always be work for them to do?—Yes, from morning to night there is plenty of work for them to do; in fact, we have a great deal of difficulty in getting them to work sharp.

24,334. (*Mr. Hanbury.*) Your complaint is that, although there is this large number of men there, they do not do it sharp?—They do not do it sharp, and it would be better if the supervisor had more power over them, but if you make a complaint to the supervisor he has no power whatever; he says, "I must go to the Board," and that means eight or 10 days' notice.

24,335. Are these Excise officers you are talking of?—No, I am talking about the supervisor.

24,336. The supervisor of the Excise?—Yes.

24,337. (*Mr. Harvey.*) Does he go to the collector?—He does not go to the collector, he goes direct to the Board here.

24,338. Not through the collector?—No.

24,339. (*Mr. Hanbury.*) I want this cleared up. Does this apply only to the Customs?—No, it is the Excise I am talking about.

24,340. There are no supervisors of Customs?—No, there are no supervisors in the Customs.

24,341. Then, I ask you whether this refers entirely to the Excise?—Yes, to Excise; it is Excise I am talking about.

24,342. (*Chairman.*) With reference to the number of bonded warehouses in Glasgow, do you think they are too numerous?—No, I think not; they are too large, some of them.

24,343. Do you mean too large to manage economically?—I think so.

24,344. But as far as the convenience of traders goes, are they convenient for the trade?—Yes, pretty convenient. Of course we would all like to get private bonds if we could, but it is difficult to get them.

24,345. (*Mr. Harvey.*) You have more to do with the Inland Revenue than you have to do with the Customs evidently?—I left the Customs altogether because I could not get my work through.

24,346. I should like to go into that. What do you mean by leaving the Customs?—Not doing work through the Customs.

24,347. In what respect have you your choice as to which you shall work under?—We have the choice. We can either work under the Customs or under the Excise.

24,348. Would you say that any large number of traders besides yourself have adopted the same plan, and have left the Customs for the sake of the Inland Revenue?—I think so, because it is shown that there is a greater run upon the Inland Revenue bonded warehouses than there is upon those of the Customs.

24,349. Had you ever thought of making a representation to headquarters as against the particular body that you have left?—Never.

24,350. Would not it have been a natural thing to do if many of you have had to leave?—It is nothing to us, we go to the place where we get our work done best.

24,351. But not to complain that the people do not do your work well?—No; we really have nothing to do with the officers of the Customs nor of the Excise either. We really have nothing to do with them, nor do we want to have anything to do with them; we want to have our work simply done.

24,352. (*Mr. Hanbury.*) But you say you do not get your work done?—I never said that the Excise was perfect.

24,353. (*Mr. Harvey.*) When did you leave the Custom House to go to the Inland Revenue?—Two or three years ago.

24,354. Two or three years ago?—Yes. We deal with the Customs still, but as little as possible.

24,355. What step did you take to make that change? Did you bring yourself in contact with any particular Revenue officer?—No, none. We just found that we would get our work done quicker with the Excise than with the Customs.

24,356. Did you complain to the Customs first?—No, never made any complaint at all.

24,357. And no overtures were made to you by any Inland Revenue officer to come to them?—Oh, no; none whatever.

24,358. Do you think that the greater difficulty of dealing with the Customs which you complain of has its origin in an effort to get more revenue, to deal more justly with the interests of the Exchequer?—I think not I do not see how it could.

24,359. Do you think that so far as that is concerned both are equal?—I think so. I would be as soon in the one as the other for that part of it.

24,360. Suppose you yourself were the Chancellor of the Exchequer, from your knowledge, would you have your work all done by Inland Revenue officials or by Custom House officials?—By Inland Revenue ones, because I could get more work out of them, and they would cost the country less.

24,361. Looking exclusively at what you are going to get out of it?—Yes; I certainly would get the revenue as well in by the Excise as by the Customs, and I would get more work out of the Excise than I could out of the Customs as they are at present.

24,362. Let us understand why that is. Suppose you were put in authority over both, would your reforms be directed to their rules, or would your reforms be directed to the *personnel*—to the men themselves?—To their rules. Of course it would take some time to sharpen the men up to what the Excise are at the present time. The Custom House officers are behind.

24,363. Can you give us a date when the Revenue officers began to advance and get better?—The Custom House officials?

24,364. Your allegation is that the business is done in a more workmanlike fashion by the Inland Revenue officials, is not it?—Yes.

24,365. What would you attribute that to? We should like a reason for that view?—I really cannot tell you when it began, but such is the case.

24,366. (*Mr. Lawson.*) Has not it been for a very long time past the case?—That the Excise have been sharper?

24,367. More vigilant and more accommodating?—Yes; I think for a long time; 10 years at any rate.

24,368. (*Mr. Harvey.*) I do not think you said the Excise officers are more vigilant?—Yes they are.

24,369. That is what I want to get especially in evidence. Do you think in the interests of the revenue, utterly apart from the interests of the trader, that the work is better done by the Revenue people than by the Customs House people?—If I wanted to get something out of the Government I would certainly stop in the Customs, but I would not get the work done. As I do not want to get anything but what is right I go to the Excise and get my work done.

24,370. But you do mean to say that if you wanted to get something out of the Government you would rather go to the Customs?—Yes, I would.

24,371. (*Chairman.*) And as a Scotch trader you absolutely prefer to go to the Revenue department?—Yes, to the Inland Revenue department.

24,372. (*Mr. Hanbury.*) Give us a concrete instance of this sort of thing that you look to get out of the Government?—I do not want to get anything out of the Government. I do not say I want anything. The question put to me was if I wanted to get more.

24,373. (*Mr. Lawson.*) I suppose you would say that the Customs took an easier view of life?—Yes, they do, and more than that, I think the Excise will gauge a cask and take more out of the trader than the Customs do.

24,374. But yet the greater despatch with which their business is done compensates you, from the trading point of view only, for any greater sharpness on their part?—Yes.

24,375. (*Mr. Hanbury.*) Do you say they gauge more strictly?—Yes. I think the Excise gauge more strictly, more near the point, than the Customs do.

24,376. (*Mr. Lawson.*) I suppose that as you have expressed an opinion very freely, you would not mind saying whether one might characterise the condition of the Customs as somewhat old-fashioned?—That is it, just exactly; old-fashioned. I do not care which you make it, so long as you let the trader get his work done, and make the rules right.

24,377. (*Mr. Harvey.*) You say there had been more wisdom shown in drafting the rules of the Inland Revenue than in drafting the rules of the Customs?—I think so.

24,378. But that so far as their practice is concerned, if there had been similar wisdom in the Customs regulations as there is exhibited in the Inland Revenue regulations, you would have remained at the Customs?—Very likely I would. If I could have got my work done in the Customs, of course I would have remained with the Customs.

24,379. Quite so; but the reason why you did not get your work so well done by the Customs was, in your view, because the same wisdom has not been displayed in the drawing up of the regulations of the Customs as has been in the case of the Inland Revenue?—Just so.

24,380. (*Mr. Lawson.*) That contradicts something you said before. You said it is not only a matter of interpretation of regulations, but also that in the personal conduct of the business the Customs fall short of the Inland Revenue. Do you adhere to that?—Yes, I adhere to that. I think that the Customs officers are not so sharp as the Inland Revenue officers.

24,381. (*Mr. Hanbury.*) Although with the Inland Revenue officers, according to your account, there are 10 doing the work that five might do?—No, I did not say 10. I said that more work would be got out of the officers.

24,382. I understood you to say they took twice as long as they ought to?—Not twice as long, but if it was a private establishment there would be more work got out of them.

24,383. (*Mr. Lawson.*) You have known both departments, of course, locally, for some years?—Yes.

24,384. Do you consider that the Customs have advanced in that time?—Yes.

24,385. They have, but not so much as the Inland Revenue?—No. I can show you a letter from a firm in Leith. I asked the writer how he was working just before I came away, and told him I was coming here. He wrote to me, "We have yours of Saturday, and see "that you are to be before their honours this week as "to the Customs and Excise. They would certainly "be better to be joined, but as we do with the former "we have no cause of complaint now. Certainly, some "years ago there was too much red tape, and it took a "few hours to clear what was required, but now it is "different, and we get on very smoothly with them. "Certainly, it would save expense to the Government "if they were joined, and I am astonished this has "not been done long ago. I am, yours truly, A. "Cairns." That is an Edinburgh firm.

24,386. In your opinion there is a good deal of leeway still to be made up by the Customs?—I think so.

24,387. (*Chairman.*) In that letter there is no question of leeway; it is a question of expense rather?—Yes.

24,388. I rather want to get at this point of expense, because it is contrary to all the evidence we have had that the officers are not tolerably fully employed. How could you substantiate your idea that a fewer number of officers could do the work?—I think a fewer number of officers could do the work, and I would have a better supervision of them. I think the supervisor has far too much to do.

24,389. (*Mr. Hanbury.*) But that is in the Excise?—In the Excise. Of course I cannot speak for the Customs.

24,390. (*Mr. Harvey.*) You will allow me to point out to you that the point that we are upon is not as to your grievances against a Government department, generally upon that we might all agree with you, and might see the force of your objection. We want you to direct your mind, if you will, to these points which have reference to the union of the service. Clearly, if the service be united or remain as it is it must be better that men should work longer hours and do more work in that time so far as economy is concerned?—But I am not making any grievance against any of them, for I have no grievance against any of them; not one. I have not a grievance against any of the departments; but my opinion is that it would be better to have one Board, one set of instructions, and one set of officers.

24,391. (*Mr. Hanbury.*) Is that from the point of view of the trader, or from the point of view of the Government?—From the point of view both of the Government and of the trader.

24,392. (*Mr. Lawson.*) I understand the whole drift of your evidence is, that it would be a great convenience to the trade if you had to deal with one Board, and one set of regulations interpreted in one way?—Yes, that is so, and it would be a great saving of expense too.

24,393. What, to the trade?—No, to the Government.

24,394. Would it be a saving of expense to you? Do you think any expense is involved in the double dealing?—Yes, I think so.

24,395. You were particularly of opinion that that was the case in respect to warehousing and making entries?—Yes. You see if a cargo of rum comes in—500 or 600 casks of rum to Glasgow—the officer will gauge 20 or 30 in a day, and, therefore, it will take 10 or 12 days before he gets over this lot. Then you cannot remove that rum unless by authority from the collector, into an Excise bond. Hence there is a great expense in quay rent and several other things, whereas if you had it under the Excise you could remove it all in eight or 10 days or a fortnight.

24,396. (*Mr. Harvey.*) Then do I understand that so far as warehousing is concerned there are different regulations drawn up by the Excise from those drawn up by the Customs?—There are some slight differences, but the Customs first inform us, go over all this rum, and gauge it for the obscuration, for the strength; then the despatches are sent from the Customs to the Excise, and then the Excise take it up, but before they get that done, there are eight or 10 days delay.

24,397. Now look at that book (*handing the witness a copy of the warehousing regulations*). That seems to imply that the regulations for warehousing were identica whether for Customs warehouses or Excise warehouses?—Yes, very likely they are now.

24,398. If that be so, what does your complaint come to?—My complaint is that it is gauged for the obscuration on the quay by the Customs, instead of after it gets to the warehouses in Glasgow.

24,399. Before it comes into the Inland Revenue warehouse?—Before it gets within the warehouses at all. If we could take it direct from the quay, and put it into the Excise warehouse, and let the Excise take the strength at the warehouse for the obscuration, then we could stow it away as soon as we got it, but as it is, the whiskey or the rum is taken for obscuration on the quay, and it has to be lying there until the despatch comes from Customs, to see whether it is correct. Then the Excise gauge it when it comes in to warehouse.

24,400. (*Mr. Lawson.*) There is a double process?—There is a double process.

24,401. Which is unnecessary?—It is quite necessary to be gauged at the quay, and it is quite necessary to be gauged when it comes in, because something might have been done to it on transit, but at the same time it is not necessary to take a sample at the quay, and

Mr. R. Brown
27 Feb. 1889.

keep that stuff lying on the quay till they get to know what it is.

24,402. (*Mr Harvey.*) Is not that a question of bad administration? Without any reference as to whether that administration is of a dual or a single character, might not that be altered without in any way touching upon the general question of amalgamation?—It might be quite well.

24,403. (*Mr. Lawson.*) On the other hand, do not you consider that it springs directly from this duality of administration?—I think so.

24,404. (*Mr. Hanbury.*) How long, if the thing were properly gauged according to your view, ought it to be on the quay?—It should not be on the quay more than 10 days or a fortnight.

24,405. How long is it now, a month?—Six weeks sometimes.
